General Abbreviations

Abbreviation	Meaning
A	alto, contralto [voice]
a	alto [instrument]
AA	Associate of the Arts
AB	Alberta; Bachelor of Arts
ABC	American Broadcasting Company; Australian Broadcasting Commission
Abt.	Abteilung [section]
ACA	American Composers Alliance
acc.	accompaniment, accompanied by
accdn	accordion
addl	additional
addn(s)	addition(s)
ad lib	ad libitum
aft(s)	afterpiece(s)
Ag	Agnus Dei
AGMA	American Guild of Musical Artists
AIDS	Acquired Immune Deficiency Syndrome
AK	Alaska
AL	Alabama
all(s)	alleluia(s)
AM	Master of Arts
a.m.	ante meridiem [before noon]
AMC	American Music Center
Amer.	American
amp	amplified
AMS	American Musicological Society
Anh.	Anhang [appendix]
anon.	anonymous(ly)
ant(s)	antiphon(s)
appx(s)	appendix(es)
AR	Arkansas
arr(s).	arrangement(s), arranged by/for
a-s	all-sung
ASCAP	American Society of Composers, Authors and Publishers
ASOL	American Symphony Orchestra League
attrib(s).	attribution(s), attributed to; ascription(s), ascribed to
Aug	August
aut.	autumn
AZ	Arizona
aztl	*azione teatrale*
B	bass [voice], bassus
B	Brainard catalogue [Tartini], Benton catalogue [Pleyel]
b	bass [instrument]
b	born
BA	Bachelor of Arts
bal(s)	ballad opera(s)
bap.	baptized
Bar	baritone [voice]
bar	baritone [instrument]
B-Bar	bass-baritone
BBC	British Broadcasting Corporation
BC	British Columbia
BCE	before Common Era [BC]
bc	basso continuo
Bd.	Band [volume]
BEd	Bachelor of Education
Beds.	Bedfordshire
Berks.	Berkshire
Berwicks.	Berwickshire
BFA	Bachelor of Fine Arts
BFE	British Forum for Ethnomusicology
bk(s)	book(s)
BLitt	Bachelor of Letters/Literature

xyl	xylophone
YMCA	Young Men's Christian Association
Yorks.	Yorkshire
YT	Yukon Territory
YWCA	Young Women's Christian Association
YYS	(Zhongguo yishu yanjiuyuan) Yinyue yanjiusuo and variants (Music Research Institute (of the Chinese Academy of Arts))
Z	Zimmermann catalogue [Purcell]
zar(s)	zarzuela(s)
zargc	*zarzuela género chico*

Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A: AUSTRIA

A Admont, Benediktinerstift, Archiv und Bibliothek
DO Dorfbeuren, Pfarramt

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. l, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

Contents

N

[continued]

Nisard, Théodore [Normand, Théodule Elzéar Xavier] (*b* Quaregnon, 27 Jan 1812; *d* Jacqueville, Seine-et-Marne, 29 Feb 1888). Belgian organist and editor. He was a chorister at Cambrai Cathedral, and received his musical education there and at Douai; after attending a seminary at Cambrai he was ordained in 1835. He held a position at a Gymnasium in Enghien until 1842, when he became second organist at St Germain-des-Prés in Paris; there he was employed by an ecclesiastical bookseller to edit books of plainchant. He published many pamphlets on questions of liturgical music, as well as monographs on Lully, Ockeghem, Odo, Palestrina, Pergolesi, Rameau and others, though his most important work was probably the revision and annotation of Jumilhac's *La science et la pratique du plain-chant* (Paris, 1847). After some years he resigned his organist's post to live entirely on his writings.

WRITINGS

Manuel des organistes de la campagne (Brussels, 1839)
Du plain-chant parisien (Paris, 1846)
with J. d'Ortigue: *Dictionnaire liturgique, historique et théorique de plain-chant et de musique d'église au moyen âge et dans les temps modernes* (Paris, 1853/*R*)
Etudes sur la restauration du chant grégorien au XIXe siècle (Rennes, 1856)
Méthode de plain-chant à l'usage des écoles primaires (Rennes, 1856)
with J. d'Ortigue: *Du rythme dans le plain-chant* (Rennes, 1857)
Méthode populaire du plain-chant romain (Paris, 1857)
L'accompagnement de plain-chant sur l'orgue ensigné en quelques lignes de musique (Paris, 1860)
Les vrais principes de l'accompagnement du plain-chant sur l'orgue, d'après les maîtres des XVe et XVIe siècles (Paris, 1860)
L'archéologie musicale et le vrai chant grégorien (Paris, 1897)

BIBLIOGRAPHY

J. Combarieu: *Etudes de philologie musicale* (Paris, 1896, 2/1897), chap.2

SARAH HIBBERD

Nishimura, Akira (*b* Osaka, 8 Sept 1953). Japanese composer. He studied composition and theory to postgraduate level at Tokyo National University of Fine Arts and Music. In 1977 he won the first of his numerous prizes, winning both the Queen Elizabeth International Music Competition with *Heterophony* for string quartet (1975) and the Luigi Dallapiccola Composition Award with *Mutazioni* (1977). In 1980 *Kecak* (1979) was selected as the best work at the International Rostrum of Composers, and he won awards at the ISCM World Music Days with *Ode for Ekstasis* (1981) in 1982, then in 1984, 1988 and 1990. The Otaka Prize was awarded to him in 1988 for *Heterophony* for two pianos and orchestra (1987), and in 1992 and 1993. He was composer-in-residence of the Orchestra Ensemble Kanazawa (1993–4) and of the Tokyo SO (1994–7).

Nishimura principally employs heterophony, a characteristic device of Asian traditional music, thereby subtly transforming the intervals, rhythm and melody of his dense multi-layered textures. Though similar to the 'micropolyphony' of Ligeti, an Asian perspective informs his technique. Some works are heterophonic melodically, such as *Heterophony* (1975), and some rhythmically, as in *Kecak*; the superimposition of trills, tremolos and harmonics contributes to the more complex texture of his later works. Further information is given in K.-M. Hinz: 'Alle Töne sind die Stimme Buddhas: Akira Nishimura – ein Porträt', *MusikTexte*, no.60 (1995), 43–8 and in K. Hori, ed.: *Nihon no sakkyoku nijusseiki* [Japanese compositions in the 20th century] (Tokyo, 1999), 194–6.

YOKO NARAZAKI

Nisle [Nissle, Nüssle, Nüsslin, Nusle, Niesle]. German family of horn players and composers.

(1) **Johannes Nisle** (*b* Geislingen, 28 Feb 1735; *d* Sorau [now Żary, Poland], 22 May 1788). He was 'Hautboist', presumably playing horn, in the Duke of Württemberg's infantry from 1758. A pupil of the Strasbourg-born horn virtuoso Jean-Joseph Rodolphe, he was a court musician at Stuttgart under Jommelli from 1765, becoming principal horn there in 1767, and from 1 October 1773 to 30 October 1777 was second horn to Johann Türrschmidt at the Oettingen-Wallerstein court. Later he held posts at the courts in Neuwied, Hilburghausen (around 1785) and Meiningen. He frequently made concert tours, often accompanied by his sons. Schubart said that 'as a second horn he is virtually without an equal. His double-tongue, his crescendo, the ease with which he takes the pedal C, his facility and particularly his portamento raise him to the level of an eagle among horn players'. He composed a septet and an octet (in *A-Wgm*), formerly attributed to another member of the family.

(2) **Johann Wilhelm Friedrich Nisle** (*b* Ludwigsburg, 7 Jan or Feb 1768; *d* Stuttgart, 5 March 1839). Son of (1) Johannes Nisle. He was taught several instruments by his father and as a boy played the horn in public. From 1805 to 1835 he was first cellist at the Stuttgart court. He is sometimes confused with his brother (4) Martin Nisle.

(3) **Christian David Nisle** (*b* Ludwigsburg, 16 Oct 1772; *d* after 1839). Son of (1) Johannes Nisle. A child prodigy, he played in public at the age of five, resting the horn on the table on which he stood (Gerber, *Neues historisch-biographisches Lexikon*), and by the age of eight he had toured with his father, and at 12 he was peforming concertos by Punto. Gerber ranked Christian's playing with that of the virtuosos Punto and Dauprat, noting that he performed with the precision and flexibility of a singer. He and his brother (4) Martin served the Prince of Wittgenstein-Berleburg at Freiburg from 1798 and von Vegh at Vereb, Hungary, until 1809. In 1839 he was teaching in Münster.

(4) **(Johann) Martin (Friedrich)** [Jean Frédéric, Giovanni] **Nisle** (*b* Neuwied, 18 Dec 1780; *d* after 1861). Son of (1) Johannes Nisle. He was second horn to his brother (3) Christian David Nisle in a duo. The brothers often travelled and played triple concertos with their father. Martin studied with H.C. Koch at Rudolstadt (composition and piano), and at the University of Rostock. He went to Vienna (1806) and served von Vegh at Vereb, Hungary, with (3) Christian David until 1809. Until about 1818 he was in Catania, Sicily, where he taught, composed and founded a music school. He returned to Germany in 1821, played the viola at the Stuttgart court (until 1824), and spent periods of time in Switzerland, Berlin (1828–9), Bunzlau (1835–6) and elsewhere. He is sometimes confused with his brother (2) Johann Wilhelm Friedrich Nisle.

HORACE FITZPATRICK/THOMAS HIEBERT

Nisnevich, Sima Gerasimovna (*b* Igumen [Cherven′], province of Minsk, 20 Jan/2 Feb 1914; *d* Minsk, 5 March 1985). Belarusian musicologist. After graduating in physics and mathematics at the University of Belorussia (1936), she studied composition, and historical and theoretical disciplines with Aladau at the Conservatory of Belorussia (1935–41). On returning to Minsk, after her evacuation to the Urals during World War II, she taught the history of music at the Conservatory of Belorussia from 1944 to 1983, becoming a senior lecturer in 1974. She also worked for the Belarusian Academy of Sciences' Institute of Ethnography and Folklore and was actively involved in the Belarusian Union of Composers. Her main

areas of study were the distinctive features of professional Belarusian music and the interpretation of folklore in Belarusian operas, ballets and symphonies. Other areas of interest included music education. She wrote a number of music textbooks and programmes for lecture courses, and much of her published work, for example the anthology of Belarusian musical literature (1959–61) and the history of Belarusian Soviet music, of which she was co-author (1971), was intended for use in colleges and universities. She also prepared scholarly editions of Belarusian traditional music, including *Zhartouniye pesni* ('Humorous Songs', 1974) and *Pesni pra kakhannye* ('Songs about Love', 1978). Her brother, the critic Izidor Gerasimovich Nisnevich (*b* Minsk 8/21 Dec 1914; *d* Minsk, 25 Oct 1977) wrote a number of portraits of professional musicians, including *Tat'yana Lopatina* (Moscow, 1962), *Grigory Romanovich Shirma* (Moscow, 1964, 2/1971) and *Kampazitar Nestar Sakalouski* ('The Composer Sakalouski', 1969). A complete list of his publications can be found in *Nisnevich, I.G.: Muzïkal'no-kriticheskiye stat'i* ('Nisnevich: Musical and Critical Articles'), ed. T. Dubkova (Leningrad, 1984).

TAISIYA SHCHERBAKOVA

Nissen, Constanze. *See* MOZART family, (4).

Nissen, Georg Nikolaus (*b* Haderslev, 22 Jan 1761; *d* Salzburg, 24 March 1826). Danish diplomat and music historian. After academic studies (1778–81) he became authorized agent of the General Post Office in Copenhagen in 1781. He entered the diplomatic service in 1792, and was assigned to Vienna as Danish *chargé d'affaires* in 1793. Four years later he befriended Mozart's widow Constanze, whom he assisted in selling and publishing Mozart's scores; he married her in 1809, in Pressburg (now Bratislava) Cathedral, proving a devoted husband and father to Mozart's two sons. After serving for ten years in Copenhagen he retired in 1820 to Salzburg, where he began collecting materials (now in *A-Sm*) for his *Biographie W.A. Mozarts: nach Originalbriefen, Sammlungen alles über ihn Geschriebenen, mit vielen neuen Beylagen, Steindrucken, Musikblättern und einem Facsimile* (Leipzig, 1828 [*recte* 1829], suppl. 1828 [*recte* 1829]; 2/1849; Fr. trans., 1869). This was the first major biography of the composer. Nissen was aided in his task by the Salzburg choir director Anton Jähndl (1783–1861) and the Altötting organist and composer Maximilian Keller (1770–1855). After Nissen's death Constanze commissioned the unstable Dresden physician and music bibliophile Johann Heinrich Feuerstein (1797–1850) to complete the work. It made public many hitherto unknown documents and details of Mozart's life from oral testimony, including from his wife and sister-in-law, and has served as a basic source ever since. Unfortunately it is problematic: large sections are taken from earlier

accounts, often of dubious reliability, and it contains contradictions and errors. The letters it quotes were selected and censored. Whether Nissen or Feuerstein was responsible for its failings is unclear; the supplement is almost certainly the work of the latter.

RUDOLPH ANGERMÜLLER/WILLIAM STAFFORD

Nissen, Hans Hermann (*b* Zippnow, nr Marienwerder [now Kwidzyn], 20 May 1893; *d* Munich, 28 March 1980). German bass-baritone. He studied in Berlin and made his début in 1924 at the Grosse Volksoper, Berlin. The next year he was engaged by the Staatsoper in Munich, where he remained until 1967. He sang Wotan and Hans Sachs at Covent Garden in 1928 and 1934, and appeared in the Wagnerian repertory at Chicago (1930–32) and the Metropolitan (1938–9). He sang Hans Sachs at Salzburg in 1936–7 and at Bayreuth in 1943, and made guest appearances in Paris, Milan, Vienna, Berlin and elsewhere. In addition to Wagner roles, his repertory included Renato, Amonasro, Barak, Borromeo (*Palestrina*) and Orestes. Although his voice was not large, it was firm and evenly produced, and was used with great artistry and refinement. Among his recordings is a warm account of Hans Sachs in Böhm's 1938 recording of Act 3 of *Die Meistersinger*.

HAROLD ROSENTHAL/ALAN BLYTH

Nissle. *See* NISLE family.

Nîthart. *See* NEIDHART 'VON REUENTAL'.

Nitrowski. Polish family of organ builders, probably of Slovak extraction. Jerzy Nitrowski (*b* *c*1605; *d* after 1673) worked on the organ at St Andrew's, Olkusz, from 1631 to 1633. In 1632 he finished the organ (still extant) in St James's, Lewocza, begun between 1625 and 1628 by Hans Hummel of Nuremberg or Coburg; between 1638 and 1641 he built an organ in St Mary's, Kraków (also attributed to Józef Nitrowski). In 1662 (as 'Jerzy of Danzig') he built the organ in Gniezno Cathedral and in 1672–3 he and his son Andrzej (*b* *c*1640; *d* 1697) built an organ in St Mary's, Danzig (now Gdańsk), for 7500 florins. Johann B. Held was one of his pupils.

Andrzej Nitrowski worked on a large organ in St Mary's, Sandomierz (now the cathedral), between 1694 and 1697; this instrument, completed in 1698 by Mateusz Brandt from Toruń, had three manuals, pedals and 51 stops, and was well known outside Poland. His brother Daniel Nitrowski (*b* *c*1635; *d* after 1683) built the organ in Pelplin Abbey between 1674 and 1680 (with assistance from Wulf of Malbork; *see* WULF, JAN), worked in Danzig around 1683, and in that year built a new organ in Frauenburg (now Frombork) Cathedral. The Nitrowski family built numerous instruments in the northern Polish style, using mutations and reeds alongside an appropriate number of diapason chorus and foundation stops. Most of their organs are notable for fine casing and carving.

HANS KLOTZ/JERZY GOŁOS

Nittauff [Nittau, Nietow, Nitthauf], **Gottlieb** (bap. Stockholm, 11 May 1685; bur. Göteborg, May 1722). Swedish organist and composer. He was the son of court trumpeter Johan Nicolaus Nittauff, who emigrated to Sweden from Germany in the 1670s in the service of Gustav Wrangel. There is evidence that as a boy Nittauff performed under Gustav Düben at the Swedish royal court; thus the composers in the Düben Collection, particularly Buxtehude, may have been early influences. He was hired in 1705 at the Jakobskyrka in Stockholm; the church council minutes record that he had studied in Hamburg with 'a great master' who is not identified. Although it could have been Reincken, stylistic comparison and circumstantial evidence point rather to Vincent Lübeck. Nittauff became organist at Göteborg Cathedral in 1710 and died there in 1722. His known works, all for organ, consist of seven short preludes, probably intended as improvisational models, and two prelude and fugue pairs which display aspects of the North German *stylus phantasticus* (all ed. J. Sheridan, Bibliotheca organi sueciae, ii, Stockholm, 1996).

JOHN SHERIDAN

Nivers, Guillaume Gabriel [Guilaume] (*b* ?Paris, *c*1632; *d* Paris, 30 Nov 1714). French organist, composer and theorist. He came from a prosperous family; his father, a

'bourgeois de Paris', was farmer to the bishop. He married in 1668 and had one son. Nothing is known about his musical training, though he is assumed to be the Guillaume Nivers who received the MA degree from Paris University in 1662. He became organist of St Sulpice in the early 1650s and retained the post until his death. To it he later added three other remunerative positions: on 19 June 1678 he was named one of the four organists of the royal chapel; in 1681 he replaced Du Mont as master of music to the queen; and in 1686 he was given charge of the music at the Maison Royale St Louis, the convent school at St Cyr for young ladies of noble birth. Despite some friction with the school's founder, Mme de Maintenon, documented in her correspondence, he continued in this last post in association with Moreau and Clérambault until his death, establishing and conducting chants and motets in the chapel and participating as harpsichordist in various dramatic productions, notably Racine's *Esther* and *Athalie*. His will, dated 1711, gives a detailed picture of the comfortable circumstances of his last years and of his piety and devotion to the church.

Nivers' three *Livres d'orgue* were the first published works to establish the distinctive styles and forms of the French organ school of the late 17th and early 18th centuries, and most subsequent publications seem to have been modelled on them. The distinction of this school lay in its unique fusion of three diverse practices: those relating to the Catholic liturgy, to current fashions in secular music and to the well-developed and highly uniform French classical organ. All of Nivers's pieces are relatively brief versets intended for alternation with the choir in the divine service. They are either arranged in suites according to the eight church modes (books 1 and 3), or based on the plainsongs of mass, *Te Deum* and various hymns and sequences in current use (book 2). Among the forms of the individual pieces the cantus firmus movements, preludes and fugues suggest the traditional counterpoint of the church, while the duos, *récits*, diminutions and dialogues reflect the secular realms of the dance, instrumental solo or vocal *air*. All the pieces are plentifully supplied with the *agréments* or embellishments developed by composers of lute and harpsichord music; yet all are also designed to exploit the distinctive colours of the French organ, whether the full-organ qualities of the *plein jeu* or *grand jeu*, the colourful solo qualities of the Trompette, Cornet, Cromorne, Vox humana and Tierce, or the sparkling alternation of different banks of sound in dialogue or echo effects. The prefatory material is among the most valuable of the period; it discusses modes, embellishments, fingering, touch, tempos and register.

Nivers is less remembered today as a composer of sacred vocal music and an editor of Gregorian chant. His work on plainchant falls within the context of Catholic reform, which favoured the re-use of ancient Gregorian chant in various forms. He was one of the most important musicians involved in this movement, as a reviver composer, theorist and pedagogue. His comprehensive knowledge of ancient Gregorian chant inspired him to write in a multiplicity of styles, including the purest Gregorian style, following 17th-century criteria (e.g. chants for Cluny) a form of plainchant ornamented and using leading notes in the style of Du Mont's plainchant masses (e.g. most of the pieces in the books written for nuns); and a monodonic chant with a distinctive free and variable rhythm, including ornaments and textual repetitions, named 'chant varié' or 'motet' (e.g. some pieces for St Cyr or for nuns, and the Lamentations of 1704). He also wrote motets for one and two treble voices with continuo, which in their use of *agréments* and irregular recitative-like rhythms, are representative of a French style still relatively unaffected by Italian influence.

Nivers' theoretical works, highly regarded in his day, are still of great interest. The *Traité de la composition* was widely known outside France and was highly spoken of by Brossard in the 18th century. A succinct practical treatise, its topics include intervals, modes, cadences, part-writing and fugue. Of his two books on Gregorian chant the longer *Dissertation* is of interest because it offers a 17th-century aesthetic of plainsong (which partly explains his own editions of it) and gives detailed documentation of the role of the organ in the liturgy. Finally his brief treatise on continuo playing, one of the first on this subject to be published in France, is a useful guide to the accompaniment of motets, and plainchant 'with wisdom and modesty'.

ALMONTE HOWELL/CÉCILE DAVY-RIGAUX

Nixa. English record company. It was formed in 1950 by Hilton Nixon, a New Zealand businessman. Initial releases were 78 r.p.m. records of popular music from the Paris-based Pacific company, but a recording of two Scarlatti sonatas, played in the Tausig arrangement by Monique de la Bruchollerie, and some choral items sung by Les Chanteurs de St Eustache were also released. In 1951 Nixa started to release Pacific recordings on LPs and classical material from US companies such as Bach Guild, Concert Hall Society, the Haydn Society, Lyrichord, Period, Polymusic, Renaissance and Urania. In late 1952 the first original Nixa recordings were made and these, two Vivaldi concertos for viola d'amore with Harry Danks and the London Ensemble, and Haydn's symphonies nos.49 and 73 conducted by Harry Newstone, were released in 1953. A joint arrangement with the Westminster label produced outstanding recordings of Holst's *The Planets*, Walton's *Belshazzar's Feast* and Vaughan Williams's orchestral pieces, all conducted by Sir Adrian Boult, as well as recordings conducted by Hermann Scherchen and Artur Rodzinski. In 1956 Nixa was taken over by Pye Radio, becoming the Pye Record Company.

JOHN SNASHALL

Nixon, Marni [McEathron, Margaret Nixon] (*b* Altadena, CA, 22 Feb 1930). American soprano. After studying singing and opera with Carl Ebert, Jan Popper, Boris Goldovsky and Sarah Caldwell, she embarked on a varied career, involving film and musical comedy as well as opera and concerts. She has appeared extensively on American television, dubbed the singing voices of film actresses in *The King and I*, *West Side Story* and *My Fair Lady*, and acted in several commercial stage ventures. Her light, flexible, wide-ranging soprano and uncanny accuracy and musicianship have made her valuable in more classical ventures, and have contributed to her success in works by Webern, Stravinsky, Ives, Hindemith and Goehr, many of which she has recorded. Her opera repertory includes Zerbinetta (*Ariadne auf Naxos*), Mozart's Susanna, Blonde and Constanze, Violetta, La Périchole and Philine (*Mignon*), performed at Los Angeles, Seattle, San Francisco and Tanglewood. In addition to giving recitals, she has appeared with orchestras in New York (under Bernstein), Los Angeles, Cleveland, Toronto, London and Israel. She has taught at the California Institute of Arts (1969–71) and joined the faculty of the Music Academy of the West, Santa Barbara, in 1980.

MARTIN BERNHEIMER/R

Nizhinsky, Vaclav [Vatslav Fomich] (*b* Kiev, 5/17 Dec 1889; *d* London, 8 April 1950). Russian dancer and choreographer. *See* BALLET, §3(i).

Nizhniy Novgorod. Russian city. It is the largest city in Russia after Moscow and St Petersburg. In remote times music there was represented by folksongs, especially those of the barge haulers, bellringing and chant, and old chant traditions were preserved by the Old Believers, who were especially strong in the area. Between 1811 and 1853 productions at the Shakhovskiy theatre marked the beginning of public opera, ballet, drama and musical theatre in the city, and there were concerts in the houses of noblemen and intellectuals. The home of Aleksandr Dmitriyevich Ulïbïshev – writer, music critic and author of the first biography of Mozart published in Russia – was particularly celebrated: the Nizhniy Novgorod Music Society occupies his house on Provyantskaya Ulitsa. Balakirev, who spent his childhood and adolescence in the city, attended Ulïbïshev's soirées and maintained links with the place after his move to St Petersburg.

In 1873 a branch of the Russian Music Society was opened on the initiative of Nikolay Rubinstein; it arranged ten symphony concerts each year as well as evenings of chamber music. The development of the city's cultural life, including concerts and theatre productions, relied to a large extent on the annual fairs, which became more active in the late 19th century as a result of the growth in industry and trade. For the opening of the All-Russian Exhibition of Arts and Industry, in the summer of 1896, a new theatre was constructed. The opera troupe of Savva Mamontov came on tour to this theatre, and Chaliapin sang there. D.A. Slavyansky's choir, the Vladimir buglers and a symphony orchestra under the direction of Voytsekh Glavach also took part in the fair concerts. Glavach played the organ too: in the summer of 1896 a Walker organ was installed for one season in the concert hall as a fair exhibit. In the period 1900 to 1910 the orchestra of the Moscow Conservatory came on tour under the direction of Vasily Safonov and Koussevitzky's orchestra performed Skryabin's Piano Concerto (with the composer as soloist) during a summer tour along the Volga. Among choirs, that founded by the merchant and patron of the

arts, V. Rukavishnikov, and directed by N.I. Sokolov, was well known in the 1880s, and later the A.A. Krivaus and the I.N. Kazantsev choirs became noted. In music education the most important improvement came in the 1870s, when music classes were opened at the local branch of the Russian Music Society (later transformed into a music school). For almost half a century the classes were headed by the composer and conductor Vasiliy Yul'yevich Villoing, whose students included Lyapunov. There were also a few private music schools, the most influential of which in the early years of the 20th century was that of V.M. Tsaregradsky.

After 1917 cultural life changed in accord with Soviet policy. The fair was abolished, the churches destroyed, and as a consequence the traditions of choral singing disappeared. In 1932 the city was renamed Gor'kiy, after the writer born there. During the 1930s permanent state music institutions were organized: the opera house (1935) and a Philharmonia (1937), under whose auspices a symphony orchestra was created, with S.L. Lazerson as its permanent director. The opera house included in its repertory the works of Aleksandr Kas'yanov, a follower of Balakirev who was the founder of the local school of composition. A boys' choir began life in 1946 and was later headed by L.K. Sivukhin. At this time too a conservatory was set up (an organ was fitted in the concert hall in 1960), and a branch of the Union of Composers was established in 1951 (it later became the Upper Volga regional organization), its members including Kas'yanov and Nesterov.

The Khrushchyov thaw greatly enlivened the musical life of the city; a series of Sovremennaya Muzïka (Contemporary Music) festivals was organized with the help of Rostropovich and I. Gusman, who for many years directed the Philharmonia orchestra. The festival devoted to Shostakovich in 1964 was an especially important event, when works that had been proscribed during the Stalinist period were played. The city became known as a centre for contemporary music: the première of Schnittke's First Symphony took place there as did a Schnittke festival at the end of the 1980s. But development was limited by the fact that the city was closed to foreigners in the mid-1960s. Not until 1991 was it reopened, at which time the city and its streets regained their historical names and the fair was reinstituted. In the 1990s the most notable cultural events were the international festivals symbolically named Russkoye Iskusstvo i Mir (Russian Art and the World).

TAMARA NIKOLAYEVNA LEVAYA

Nketia, J(oseph) H(anson) Kwabena (*b* Mampong, 22 June 1921). Ghanaian ethnomusicologist. He was educated at the Presbyterian Training College in Akropong (1937–41) and later studied linguistics and social anthropology at the School of Oriental and African Studies in London (1944–6). He gained music degrees from Trinity College of Music and Birkbeck College, London (BA 1949). He was a lecturer at the Presbyterian Training College in Akropong (1942–4, 1949–52), director of the Institute of African Studies at the University of Ghana, Legon (1965–80), professor of music at UCLA (1968–83) and Andrew Mellon Professor of Music at the University of Pittsburgh (1983–91). Since 1993 he has been director of the International Centre for African Music and Dance.

Nketia's earliest writings focussed on the traditions of his own society, the Akan. Although he also composed, it was his scholarly work that attracted attention in Europe and America. In his first major project, *Funeral Dirges of the Akan People* (1955), he developed an interdisciplinary methodology. During the 1960s and 70s, his writings provided an important insight into research on Africa and the diaspora. In the 1980s, he began to investigate the practical issues of music and musical life and paid increasing attention to theoretical and methodological issues.

JACQUELINE COGDELL DJEDJE

Nō. Japanese theatrical form. *See* JAPAN, §VI, 1.

Noack, Fritz (*b* Greifswald, Germany, 25 Sept 1935). American organ builder of German origin. He was apprenticed to Rudolph von Beckerath (1954–8) and worked later as a journeyman with Klaus Becker and Ahrend & Brunzema. He emigrated to the USA in 1959, working first for the Estey Organ Co., then for Charles Fisk, and opening his own workshop in Lawrence, Massachusetts, in 1960. He then moved to Andover, Massachusetts, and in 1970 the Noack Organ Co. Inc.

established its base in Georgetown, Massachusetts. Noack's work has been almost exclusively with mechanical-action organs, and although his background is German, he has also assimilated aspects of the American tradition. Influenced initially by Bauhaus ideas, his case designs tend to be simple, balanced, and musically functional in accordance with the *Werkprinzip*. His more important organs include those in Unity Church, St Paul, Minnesota (1965), Brandeis University (1967), Trinity Lutheran Church, Worcester, Massachusetts (1967), the Emma Willard School, Troy, New York (1970), Ardmore Methodist Church, Winston-Salem, North Carolina (1978), the Presbyterian Church, Beckley, West Virginia (1979), the Wesley Memorial Methodist Church, Savannah, Georgia (1985), and Christ the King Lutheran Church, Houston, Texas (1995). The last-named was one of the first modern organs to be built in the 18th-century central German style. He has also built positive organs, regals and compact practice organs. In 1983 he completed a substantial restoration of an organ by Hook (1864) at Mechanics Hall, Worcester.

Nobility Opera. The name sometimes given to the London opera company active, in rivalry to Handel's company, from 1733 to 1737, initially at Lincoln's Inn Fields Theatre, later at the King's Theatre. *See* LONDON, §IV, 3.

Nobilmente (It.: 'nobly', 'majestically'; adverb from *nobile*: 'noble'). A direction used both as a tempo designation and as a mark of expression in the works of Elgar but few other composers. It appears on a sketch (at the Elgar Birthplace) for 'Nimrod' in the 'Enigma' Variations and on the published score (1899) of Elgar's piano transcription, but not in the orchestral full score published some months later. Its first appearance on one of his printed orchestral scores is in the overture *Cockaigne* (1901), and he used it often after that. Vaughan Williams used it in his film score for *Coastal Command* (1942), almost certainly with the Elgarian style in mind. Nobility in music is an ideal that has been favoured only by particular composers at particular times, so the history of this word is otherwise scattered. An early example is in François Couperin, who several times gave the direction *noblement sans lenteur* (nobly without being slow).

See also TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS, MICHAEL KENNEDY

Noble, Dennis (William) (*b* Bristol, 25 Sept 1899; *d* Jávea, Alicante, 14 March 1966). English baritone. He studied in London with Dinh Gilly before making his début with the British National Opera Company in 1924 as Silvio. He was soon elevated to the international seasons at Covent Garden, where he appeared regularly until 1939. His roles included both Figaros, Rigoletto, Germont (to Ponselle's Violetta), Tonio, Valentin and a much praised Amonasro. He also sang leading parts in the premières of operas by British composers. In the 1947–8 season he reappeared at Covent Garden as Massenet's Lescaut and Escamillo. He was the first, and markedly effective, soloist in Walton's *Belshazzar's Feast*, and was an alternately fiery and dejected exponent of Elijah. His firm, easily produced tone, emphasis on a consistently true line and gift for placing words naturally on it were enhanced by his excellent stage presence. He was equally adept at projecting comedy, heroism, pathos and tragedy as his many recordings, made for Columbia and HMV, amply confirm. Most notable among them are the extracts from *Rigoletto* and *La traviata*, arias from *Faust* and *Pagliacci* and solos from *Elijah*, all of which show Noble's exemplary articulation and definition of tone and text.

ALAN BLYTH

Noble, (John) Jeremy (*b* London, 27 March 1930). English critic and musicologist. He was educated at Aldenham School and at Oxford, where he read Greats (1949–53). He studied music independently, specializing at first in English music of the Renaissance but later ranging more widely, with Venetian music of the 16th and 17th centuries and Josquin des Prez among his main interests. From the mid-1950s he contributed music criticism and reviews to various periodicals, and in 1960 he was appointed a music critic on the staff of *The Times*. He relinquished that post in 1963 to take a research fellowship at Birmingham University and in 1966 went to teach at the State University of New York at Buffalo (spending 1967–8 in Florence as Fellow of the Harvard Institute for Renaissance Studies). He returned to London in 1970, becoming music critic of the *Sunday Telegraph* in 1972, but resumed teaching in Buffalo in 1976 until he retired and returned to London in 1995. His research has been directed mainly towards the music of Josquin and his contemporaries (he became a member of the board of the new Josquin edition in 1994), as well as its historical background, and the history of the Office of the Antonine Order from the 12th century onwards. Although only a fraction of his research has been published, the breadth and depth of his knowledge and his generosity towards fellow scholars have made him an important participant in late 20th-century musicology.

STANLEY SADIE

Noble, Ray(mond Stanley) (*b* Brighton, 17 Dec 1903; *d* London, 2 April 1978). English bandleader, arranger and composer. He studied classical piano but developed an

interest in dance music, serving as house conductor for HMV records from 1929 and attracting attention with the recordings of his New Mayfair Dance Orchestra (1930–34), particularly those with the singer Al Bowlly. He moved to the USA to direct his own band at the Rainbow Room in New York (1935–7), then went to Los Angeles and worked as a bandleader and radio personality into the 1950s. In the jazz field Noble's significance was as a catalyst rather than as a performer. His own arrangements and performances were generally of 'sweet' dance music, and his major compositions were highly successful romantic ballads such as *Goodnight, sweetheart* (1931), *Love is the sweetest thing* (1932), *The very thought of you* (1934), *The Touch of your Lips* (1936), and *I hadn't anyone till you* (1938). However, his New York band, assembled by Glenn Miller (who also provided its more jazz-oriented arrangements, and thereby discovered his own distinctive way of writing), included such musicians as Pee Wee Erwin, Charlie Spivak, Sterling Bose, Johnny Mince, Bud Freeman, Will Bradley and Claude Thornhill. Noble's instrumental composition *Cherokee* became the theme tune of Charlie Barnet's band (1938); as a familiar test piece for jazz musicians in the early bop style, Charlie Parker, among others, used its structure as the basis for new compositions, including *Koko*.

ANDREW LAMB/ALYN SHIPTON

Noble, (Thomas) Tertius (*b* Bath, 5 May 1867; *d* Rockport, MA, 4 May 1953). English church musician and composer. From 1881 he was organist of All Saints, Colchester, whose rector housed him and supervised his education. He entered the RCM in 1886 to study with Parratt, Bridge and Stanford, and he joined the staff there on completing his studies. In 1889 he left Colchester to become organist of St John's, Wilton Road, London, and he was then assistant organist to Stanford at Trinity College, Cambridge (1890–92). Later appointments as organist and choirmaster took him to Ely Cathedral (1892–8), York Minster (1898–1912) and St Thomas's, Fifth Avenue, New York (1912–47). This last was an important post, since the church had recently been rebuilt with the aim of establishing cathedral-like liturgical conditions. It was Noble's task to establish the musical traditions: a magnificent organ was installed under his supervision and a choir school was founded. Besides music for the Anglican liturgy his compositions include secular choral works, incidental scores, orchestral pieces and chamber music.

J.A. FULLER MAITLAND, H.C. COLLES/DUNCAN J. BARKER

Noblement (Fr.). *See* NOBILMENTE.

Noblet, Charles (*b* Abbeville, 26 April 1715; *d* Paris, 26 Oct 1769). French organist, harpsichordist and composer. A second cousin of Pierre Février, he was organist of Ste Catherine, Abbeville from 1728 until 1737 before taking up the post of harpsichordist at the Ecole de Chant of the Paris Opéra on 1 September 1737. While filling these positions, he was made organist also to several Parisian convents and parishes: the church of the Mathurins (1 October 1738), Ste Madeleine-en-la-Cité (1 March 1739), Ste Opportune (19 September 1742) and the church of the Jacobins in the rue St-Honoré (1 July 1761), occupying these posts until his death. His elder sister Marie-Geneviève Nicole Noblet (1712–*c*1800) often acted as his substitute. On 1 April 1739 he replaced Chéron as harpsichordist to the Opéra, retaining that post until 1 April 1768. He was also extremely active as a teacher; his pupils included Mlle Du Guesclin, the Comte de St Florentin and Princesse Pignatelli. In 1753 he was vigorously attacked in J.-J. Rousseau's *Lettre sur la musique française*. Of his compositions, only his collection of harpsichord pieces (1757) is outstanding; they are in a rather conservative style except for some pieces such as *Les bouffons*, which irresistibly conjures up the *opera buffa*.

ÉRIK KOCEVAR

Nobre, Marlos (*b* Recife, 18 Feb 1939). Brazilian composer, pianist and conductor. A student of the piano and theory, he graduated from the Pernambuco Conservatory in 1955 and from the Ernani Braga Institute in 1959, and then studied composition under Koellreutter (1960) and Guarnieri (1961–2) in São Paulo. In 1959 he received his first composition prize in the competition *Música e músicos do Brasil* held by Radio MEC, and subsequently he was

awarded over 30 prizes in national and international competitions, ranging from the Broadcast Music Award (New York, 1961) to the UNESCO prize (1974) for *Biosfera*. A fellowship from the Rockefeller Foundation took him to the Instituto Torcuato di Tella in Buenos Aires, where he familiarized himself with the newest techniques and studied with Ginastera, Messiaen, Dallapiccola and Malipiero (1963–4), gaining the Master's degree in composition. He has made little use of electronic music, though he studied it with Asuar in Buenos Aires and Ussachevsky at the Columbia-Princeton Center (1968). Some of his best-known early compositions, such as *Variações rítmicas* and *Ukrinmakrinkrin*, date from this period in Buenos Aires.

Returning to Rio de Janeiro he worked as music coordinator of the Guanabara Tourism Secretaiat (1965), then after studying with Bernstein, Goehr and Schuller at the Berkshire Music Center, Tanglewood (1969), he held numerous positions in Brazilian musical life. Among these are general coordinator of the Brazilian Music Council of UNESCO (1970, 1990s), music director of Radio MEC, general secretary of the Brazilian Musician's Union (1972), director of the National Institute of Music of the Brazilian National Foundation for the Arts (1976–9) and president of the Brazilian Academy of Music (1985–91) and the International Music Council of UNESCO (1986–7). He has received commissions from the Brazil SO (1973–6), the Goethe Institute, Radio Suisse Romande and the Spanish Ministry of Culture (1992); he was composer-in-residence of the Brahms-Haus (1980–81) and received a Guggenheim Fellowship (1985–6). He has held visiting professorships at Indiana University (1981), Yale (1992), the Juilliard School (1996) and the University of Arizona (1997). His work has been recognized through the Order of Merit (Brasília, 1988), the Order of Rio Branco (1989) and the Ordre d'Arts et Lettres (France, 1994). Nobre has conducted such orchestras as the Suisse Romande, the Orchestre Philharmonique de Radio-France and the Royal Philharmonic, London.

His eclectic academic background is paralleled by influences from different periods and styles of music. The influence of Bartók and Lutosławski can be seen in his juxtaposition of diatonic folk material with dissonant harmonies, polyrhythmic structures, rhythmic drive, textual effects and non-traditional scales. A national identity is evident in all his works, though as he does not rely on patterns from folk and popular idioms his music cannot be seen as nationalistic. The development of his musical language went through several phases, from tonal to modal, polytonal and atonal. *Variações rítmicas* was the first work in which he combined serial methods with typically Brazilian rhythms; in *Ukrinmakrinkrin* he first used aleatory procedures. Subsequently he made extensive use of serialism (e.g. *Canticum instrumentale*) and aleatory techniques (e.g. *Concerto breve* and *Mosaico*). By the late 1980s he began to rely more frequently on tonal formal structures and on a combination of traditional and contemporary elements.

GERARD BÉHAGUE

Nobutoki, Kiyoshi (*b* Osaka, 29 Dec 1887; *d* Tokyo, 1 Aug 1965). Japanese composer. After studying the cello (1906–10) then composition and conducting (until 1915) at the Tokyo Music School he went in 1920 to Germany to study with Georg Schumann for two years. Returning to Japan, he taught at the Tokyo Music School (1923–32) and was elected to the Japanese Arts Academy in 1942. Before World War II he was a leading composer of songs and choruses, but after the war he virtually gave up composition and withdrew to a quiet retirement, particularly because of his feeling of responsibility for his involvement in Japanese militarism: his *Umi yukaba* ('If I go to the ocean', 1937) became the most popular military song of the period and his cantata *Kaidō tōsei* ('Along the Coast, Conquer the East', 1940) was written to commemorate the 2600th anniversary of the foundation of Japan. His music combined a conventional German compositional technique with a typically Japanese subtlety of expression. His 1925 translation of Franz Wüllner's *Chorübungen der Münchener Musikschule* (Munich, 1876) has become the most popular textbook of vocal pedagogy in Japan. In 1964 he received the Order of Cultural Merit.

MASAKATA KANAZAWA

Nocetti [Noceti, Nuceti], **Flaminio** (*b* Parma; *d* Parma, in or after 1618). Italian composer and organist. He must have been active as a musician by about 1600 since Scipione Cerreto mentioned him in his *Della prattica musica* (Naples, 1601/*R*). From the title-pages of his publications it can be deduced that at least from 1603 to 1618 he was organist of the Benedictine abbey of S Giovanni Evangelista, Parma, and he dedicated some of his music to members of the Farnese family, rulers of Parma. As a composer he is known only for sacred music, much of it for eight voices or other comparatively large numbers of voices. (N. Pelicelli: 'Musicisti in Parma nel secolo XVII', *NA*, x (1933), 116–26, 314–25)

ARGIA BERTINI

Nocturnae orationes (Lat.). *See* NOCTURNS.

Nocturne (Fr.; Ger. *Nachtstück*). A piece suggesting night, usually quiet and meditative in character, but not invariably so. The Italian term NOTTURNO occurs frequently as a title in 18th-century music, but the French form of the word was not used until John Field applied it to some lyrical piano pieces written between about 1812 and 1836. The first three were published in Leipzig in 1815, two of them having been published in 1812 with minor differences as 'Romances'. Field's nocturnes are historically important as antecedents of Chopin's. The writing is clearly idiomatic, exploiting the sounds available on the newer pianos; the sustaining pedal, in particular, enabled Field to expand the range of the harmonic accompanying patterns beyond those of the Alberti bass, which of necessity lay under the hand. The melodies of his nocturnes transferred to the keyboard the cantilena of Italian opera, to which he had been exposed in Russia in the early 1800s (ex.1). According to Liszt, who wrote a preface to the first collected edition of Field's nocturnes (Leipzig, 1859), they 'opened the way for all the productions which have since appeared under the various titles of Songs without Words, Impromptus, Ballades, etc., and to him we may trace the origin of pieces designed to portray subjective and profound emotion'.

Although the emotional range of most of Field's nocturnes is not wide, and the phrase structure sometimes tediously predictable, the restrained elegance of his musical language and imaginative keyboard figuration made a great impression on subsequent Romantic composers, especially Chopin, who admired both Field's playing and his compositions. Nocturnes were composed by most pianist-composers of the time, including Liszt (whose famous *Liebesträume* song transcriptions were subtitled 'nocturnes'), Schumann (*Nachtstücke* op.23), J.B. Cramer, Czerny, Kalkbrenner, Thalberg, Henri

Ex.1 Field: Nocturne no. 5

Bertini and Theodor Döhler among them. Chopin's 21 nocturnes, however, hold a pre-eminent place in the history of the genre. The celebrated Nocturne in E♭ op.9 no.2 is perhaps the most similar to Field's nocturnes, showing the influence of two of his nocturnes in the same key in both melody and accompaniment patterns. It was, however, Field's Nocturne no.4 in A major, with its agitated, harmonically more complex, central section, that proved more inspirational for Chopin's expansion of the form in his op.9 no.3 and later pieces.

Chopin's nocturnes (especially op.48 no.1) display an intensity well beyond the range of Field and a high degree of melodic invention (ex.2). His remarkable harmonic sophistication, too, is often couched in keyboard textures of a contrapuntal complexity that never seems redundant or forced. Moreover, several diverge from Field's basic *ABA* formal outline. The otherwise suave op.32 no.1 in B major ends unexpectedly in B minor with an abrupt, recitative-like coda that appears in emotional terms to contradict all that has gone before, while op.15 no.3 in G minor is in a highly unusual *AB* form with no recapitulation of the initial material.

Although the apogee of the pianistic nocturne was reached with Chopin, it continued to be a popular genre. French composers were particularly attracted to the form: Fauré wrote 13 nocturnes, and Satie, d'Indy and Poulenc contributed to the repertory. Liszt's late works include the nocturne *En rêve* (1885) and celebrated nocturnes were also composed by Glinka, Balakirev, Tchaikovsky (op.10 no.1 in F major and op.19 no.4 in C♯ minor), Rimsky-Korsakov (Nocturne in D minor), Skryabin and Grieg (Notturno in C major op.54 no.4). Nocturnes were also written for orchestra; a well-known example is in

Ex.2 Chopin: Nocturne op.55 no.2

Mendelssohn's incidental music for *A Midsummer Night's Dream*, where the tone-colour of the horn is used, as in the 18th-century notturno, to evoke the image of night. Bizet wrote an unpublished nocturne for orchestra, and Debussy's *Trois nocturnes* (*Nuages, Fêtes* and *Sirènes*, the last with a female wordless chorus) are among the finest achievements of French impressionist music; *Fêtes*, a vigorously rhythmic and extrovert piece, considerably expands the usual associations of the term 'nocturne' to portray nocturnal festivities.

In some of the works already mentioned the effusive lyricism that had characterized many of the nocturnes of Field and Chopin was replaced by an attempt to capture the fevered visions and dreams of the night or to evoke its natural sound world in musical terms that may be very far from those of the drawing-room. Schumann's *Nachtstücke* illustrate this change of emphasis, which was pursued much further by 20th-century composers such as Hindemith in his *Suite '1922'* for piano (1922), Vaughan Williams in *A London Symphony* (1912–13; revised 1920), Britten in the nocturne of his *Serenade* for tenor, horn and strings (1943) and Lennox Berkeley in the slow movement of his Divertimento in B♭ (1943). In the suite for piano *Out of Doors* (1926) Bartók displayed an extraordinary sensitivity to the sounds of nature in the movement entitled 'The Night's Music' with its quiet, blurred cluster-chords and imitations of the twittering of birds and croaking of nocturnal creatures.

MAURICE J.E. BROWN/KENNETH L. HAMILTON

Nocturns (Lat. *nocturni, nocturnae orationes*). The Night Hours of the DIVINE OFFICE. Before the 1971 simplification of the Roman Breviary, the night Office of MATINS (or Vigils) was composed of three nocturns for double or semi-double feasts, and one nocturn for simple feasts or ferias. In an Office of three nocturns, each nocturn has three psalms with antiphons and three lessons with responsories. An Office of one nocturn normally has nine psalms and three lessons. At Easter and Pentecost the traditional night Office consists of a single nocturn with three psalms and three lessons. The monastic Office differs from the Roman Office in the arrangement and composition of the nocturns. Double feasts have an Office of three nocturns, but the first two of these have six psalms and four lessons each; the third has three Old Testament canticles and four lessons. The monastic ferial (or weekday) Office is composed of two nocturns, each of six psalms; after the psalms of the first nocturn three lessons are recited in winter and one in summer. (*See also* LITURGY OF THE HOURS.)

MARY BERRY

Noda, Teruyuki (*b* Mie, 15 June 1940). Japanese composer. He studied composition to postgraduate level with Ikenouchi and Yashiro at the Tokyo National University of Fine Arts and Music. Distinguishing himself while a student, Noda won first prize in the Japan Music Competition in 1963 with the Sinfonia, was commissioned by the Japan Philharmonic SO for the Symphony no.1 and won a prize with his Choral Symphony. These works are characterized by the organized relationship of motifs and his mastery of Western orchestration. In the choral work *Shi-sha no sho* (1971) he employs techniques which include voiceless sounds and clusters built up from subdivided parts. Noda led Shin-shin kai, a group of composition disciples of Ikenouchi, between 1974 and 1984. He won the Italian Broadcasting Corporation award with *La piano tombe dans la mer* (1974). In the Otaka Prize-winning Piano Concerto (1977), the String Quartet (1986) and *Rhapsodie adriatique* (1988) Noda exquisitely balances a classical consistency with a brilliant and expressive performing style. His sense of dramatic pacing is displayed in the *nō* play *Takayama Ukon* (1997). Further information is given in K. Hori, ed.: *Nihon no sakkyoku nijusseiki* ('Japanese compositions in the 20th century', Tokyo, 1999), 196–8.

YOKO NARAZAKI

Nodari, Giovanni Paolo (*b* ?Brescia; *d* after 1620). Italian composer. He was a Benedictine monk of the Congregazione Fiesolana and in 1620 was working at Bressanone, on one of the transalpine routes from northern Italy to southern Germany. His output consisted mainly of church music in the concertato style, most of it contained in a volume each of vesper psalms, motets, and *Magnificat* settings based on the eight Gregorian tones. The latter publication (1620), which offers plenty of textural and rhythmic variety, shows that he was well versed in the reasonably modern idiom of provincial northern Italy. He could write pleasant melodies, but his harmonic sense was wayward, and the music consequently lacks a feeling of direction.

JEROME ROCHE

Node. A point, line or surface which, in a vibrating body, is at rest. *See* ACOUSTICS and SOUND, §10.

Noe, Stephen. *See* NAU, STEPHEN.

Noeane formulae. The Western name for syllables sung in association with Byzantine *echēmata*. *See* ĒCHOS, §2.

Noehren, Robert (*b* Buffalo, NY, 16 Dec 1910). American organist, organ builder and composer. He studied under Gaston Dethier at the Institute of Musical Art, New York, and under Lynnwood Farnam at the Curtis Institute of Music, Philadelphia (1930–31), and served as organist and choirmaster at churches in Buffalo and Grand Rapids, Michigan. He received the BMus degree from the University of Michigan in 1948. After wartime service he taught from 1946 to 1949 at Davidson College, North Carolina, and in 1949 he moved to the University of Michigan in Ann Arbor, where he served as university organist and professor of music until his retirement in 1976. Well known as a recitalist, recording artist and organ builder, he played extensively at home and abroad, and has studied many historic European instruments. He designed and built many organs including those in St John's Roman Catholic Cathedral, Milwaukee, the First Unitarian Church, San Francisco, and the First Presbyterian Church, Buffalo. He holds an American patent for a combination action that controls all pistons by a punched data-processing card. Noehren wrote numerous articles for professional journals and among his compositions are two sonatas for organ.

VERNON GOTWALS/R

Noel [Noe]. *See* BAULDEWEYN, NOEL.

Noël (Fr., from Lat. *natalis*: 'of birth' or *novus*: 'news'). Like the English 'nowell' or 'nouell', the French 'noël' (or Burgundian 'noé') was used as an expression of Christian joy, especially during Christmastide. Since the 15th century the term has designated non-liturgical, strophic verse of popular character written in the vernacular or in patois and often sung to the tunes of chant, popular songs or dances.

The tradition of popular hymns or canticles for Christmas and other Christian feasts is ancient and most probably stems from sung celebrations at pre-Christian festivals. Christmas tropes appeared in the liturgy from the 9th century (e.g. *Puer nobis nascitur – resjoissons nous aujourd'hui*) and by the 13th century were affected by the popular chanson, especially in the increasingly lay liturgical drama. Although the plainchant repertory provided melodies, the shepherd scenes favoured in medieval mystery and miracle plays were often treated in a popular vein. In 13th-century France the Christmas song *Hui enfantez fu li fiz Dieu* was sung to the melody of the *Letabundus*, but the Anglo-Norman *Seignors, or entendez à nus* is of more secular inspiration. Macaronic Christmas songs, using Latin and patois (e.g. *In dulci jubilo*) or the vernacular (e.g. *Célébrons la naissance–Nostri Salvatoris*), were more frequent in the 14th century, when the first polyphonic settings are found (e.g. Adam de la Halle's three-voice rondeau *Dieus soit en cheste maison*). While the related carol flourished in England in the 15th century, often using the joyful exclamation 'noël' in its burden (refrain), Christmas pieces are rarely found in the Burgundian or Netherlandish polyphonic repertories. (There is a four-voice piece by Busnoys which repeats the word 'noël' as its sole text.) But towards the end of the century many collections with French texts appeared in both printed and manuscript sources (the latter include Louis XII's book of noëls by Jehan Tisserand – *F-Pn* fr.2368 – and *Pn* fr.2506 and *Pa* 3653).

During the 16th century there was an astonishing proliferation of printed collections: the contents of *Les grans nouelz nouveaux reduitz sur le chant de plusieurs chansons nouvelles* (Paris, Pierre Sergent, n.d.), *Les grans noelz nouveaulx composez sur plusieurs chansons tant vielles que nouvelles* (Paris, n.d.), *Les noelz nouveaulx reduys sur le chant de plusieurs chansons* (Paris, n.d.) and *Les noelz nouvellement faictz & composez en l'honneur de la nativité de Jesuchrist* (n.p., n.d.) reappear in numerous similar collections. These noëls enjoyed a long vogue and provided models for similar anthologies published at Lyons, Paris, Le Mans and Geneva, or newly composed collections by S. Bedouin, Christofle de Bordeaux (Paris, 1581), François Briand (Le Mans, 1512), Jehan Chaperon (Paris, 1538), Jean Daniel (*c*1525–30), Nicolas Denisot (1545 and 1553), L. Le Moigne (Paris, 1520), M. Malingre (*c*1540), Nicolas Martin (Lyons, 1555) and L. Roux (Angers, 1582). In addition to strophic pieces in popular style (with or without refrain) on the subject of the Nativity, some collections include New Year songs (*aguillanneux*). Translations of traditional Latin hymns (e.g. *A solis ortus cardine*, *Ave maris stella*, *Conditor alma siderum*, *Mittit ad virginem*, *Rex mundo gloriae*, *Ut queant laxis* and *Veni Redemptor gentium*) were sung to metrical versions of the original plainchant melodies.

Other liturgical or trope melodies were proposed as *timbres* (e.g. *Kyrie fons bonitatis* for *Kyrie le jour de noël*), but more frequently secular chanson melodies from both popular and polyphonic sources were suggested, occasionally with two or three alternative possibilities. Many noëls in fact paraphrase secular chanson texts, in the manner of the *chanson spirituelle*, following the same verse structure (sometimes interposing the word 'noël' as a refrain) and retaining or lightly modifying the first line for recognition. For example, Briand, Le Moigne and others begin different noëls with 'Réveillez vous cueurs endormis' (the first line of Janequin's *Le chant des oiseaux*). Chaperon's *Noels* (1538) are all modelled on secular poems (including single-stanza *épigrammes* by Clément Marot and King François I) found in recently published polyphonic settings (e.g. by Sandrin, Sermisy and Peletier). So too is a nativity play by Barthélemy Aneau, *Chant natal contenant sept noelz ... composez en imitation verbale et musicale de diverses chansons* (Lyons, 1538). Another sequence of noëls by Aneau following the Christmas story in dialogue is the *Genethliac Noel musical et historial ... pars vers et chants divers* (Lyons, 1558), which includes newly composed music for four voices by Didier Lupi Second, Goudimel and others.

Although the noëls of the organist Jean Daniel (Maître Mitou) were published with texts alone, a few 16th-century noël collections include music. The *Noelz nouveaulx* by Briand published in 1512 include four whose first stanzas are notated for two voices (one of which is 'le plainchant'); the remainder propose suitable *timbres*. The anonymous *Fleur des noelz nouvellement notés en choses faictes* (Lyons, *c*1535) contains 22 pieces, the first ten of which include notated tenors. The 13 *Cantiques du premier advènement de Jésuchrist* by Nicolas Denisot were printed with monophonic melodies at Paris in 1553. The *Noelz & chansons nouvellement composez tant en vulgaire françoys que savoysien dict patoys* (Lyons, 1555) by the Savoyard musician Nicolas Martin include 16 noëls (eight in French and eight in patois), all preceded by notated monophonic melodies. Other collections of noël texts in patois survive, as in *Noelz nouveaulx en poetevin* (Paris, n.d.).

In his *Recherches de la France* (Paris, 1571), Etienne Pasquier described noëls as 'chansons spirituelles faictes en l'honneur de nostre Seigneur'; he explained that in his youth it was customary for every family to sing them each evening but that the tradition survived only at Christmas eve, when children and adults sang them in the streets and in church during the offertory at Midnight Mass. They had figured in the Mass at Christmas since the late 12th century; during the 16th century polyphonic Christmas motets were composed for the professional choirs of the larger churches and courts (e.g. Jean Mouton's *Noé, noé, psallite noé*, Francesco de Layolle's *Noé, noé, noé*, Sermisy's *Noé, noé, magnificatus est rex pacificus* and *Noé, quem vidistis pastores* and Le Heurteur's *Noé, noé, noé, hodie natus est Christus*; the exclamation 'Noé, noé' recurs in *Hodie Christus natus est*, set by Marenzio, G.M. Nanino, Rore, Palestrina, Sweelinck and others). Vernacular noëls also figure occasionally in collections of polyphonic chansons (e.g. Costeley's five-voice *Or est venu Noé*, 1570) and *airs* (e.g. Pierre Bonnet's eight-voice *Nouel en dialogue* beginning 'Bergers je vous fay scavoir', 1585); Du Caurroy's *Meslanges*, published posthumously in 1610, includes fifteen noëls for four or five voices.

Inexpensive editions of popular anthologies of anonymous noël texts, with suggested *timbres*, continued to proliferate throughout the 17th and 18th centuries; the title *Bible des noelz* (first used by the Lyons printer Benoit Rigaud in 1554) recurs frequently, as does the old repertory. But more collections appear in the regional patois of the Auvergne, Brittany, Bresse, Burgundy, Gascony, Le Mans, Poitou and Provence; several minor poets specialized in the genre: Jacques Brossard, Jean le Houx, Natalis Cordat (in Auvergnat dialect), François Colletet, Nicolas Saboly (in Provençal), Françoise Pascal and Jean Chapelon during the 17th century; La Monnoye and Aimé Piron (in Burgundian), G.M. Pellégrin and Antoine Peyrol (in Provençal) during the 18th. No 17th-century printed collections survive with notated music, although a few manuscript sources include melodies; arrangements of these melodies survive in art music such as Marc-Antoine Charpentier's *Messe de minuit*, Sébastien de Brossard's *Missa quinti toni pro nocte Die festi natalis Domini* (1700) and Jean-François Le Sueur's *Messe-Oratorio de Noël* and in instrumental transcriptions. The *Chants des noëls anciens et nouveaux*, printed for solo voice and basso continuo by Ballard in 1703, notate old *timbres* as well as new ones from the contemporary vaudeville repertory. The 18th-century texts are also more updated with topical references than those of the 17th century and are often completely new.

Contrafacta of *airs de cour* and other secular pieces by G.G. Gastoldi, Guédron and La Tour are found in *Amphion sacré* (Lyons, RISM 1615[7], for four or five voices) and by Gabriel Bataille, Antoine Boësset and Antoine Moulinié in *Le despouille d'Aegipte* (Paris, 1629[7]). The Ballard press also issued anonymous four-voice settings of noëls in *Airs sur les hymnes sacrez, odes & noels, pour chanter au catéchisme* (Paris, 1623[4], repr. 1655[2]) and in *Cantiques spirituels et noëls de différents auteurs* (Paris, 1699[1], for solo voice and basso continuo); one noël for two voices by Denis Macé was included in his *Cantiques spirituels* (Paris, 1639) and several by Artus Aux-Cousteaux in his two sets of *Noëls et cantiques spirituels* (Paris, 1644). No original vocal settings from the 18th century are known, and in the 19th century they took the form of the *romance* (e.g. Augusta Holmés) or operatic air (Adolphe Adam's *Minuit, chrétiens*). The subsequent interest in folk music and poetry revealed the importance of the noël to the popular tradition; 20th-century examples, such as Georges Migot's *Noël pour chant ou quatuor a cappella* (1954), reflect this simplicity.

Just as the greater liturgical freedom of Midnight Mass permitted the singing of noëls from the late 12th century, so too in the second half of the 17th century did it provide the organist with the opportunity to introduce variations on the currently popular tunes. Numerous keyboard transcriptions have survived by Lebègue (1676), Nicolas Gigault (1682), C. Geoffroy (*c*1690), Raison (1714), J.-F. Dandrieu (*c*1720), Daquin (*c*1745), Michel Corrette (1753), Balbastre and J.-M. Beauvarlet-Charpentier (*c*1783). The vogue affected instrumental ensemble music at the same time; thus Charpentier arranged noëls for four instruments and basso continuo as well as for solo voices, choir and instruments. Lalande arranged 19 pieces as two suites under the title *Symphonies des noëls*. C.-H. Gervais followed with a suite for seven instruments and basso continuo, and Corrette with five *Concertos de noel* (*c*1730–50) for flute, violin and musette (the fourth adding a viol and basso continuo). The latter, like E.P. Chédeville's collection of noëls for two musettes or vielles (hurdy-gurdy), reflect the mid-18th-century attitude as expressed in Rousseau's definition of noëls (*Dictionnaire*, 1768): 'Tunes intended for certain canticles which the people sing at Christmas: these types should have a rustic and pastoral character consistent with the simplicity of the words and of the shepherds who were supposed to have sung them while paying homage to Christ in the crib'. The writing for oboes and horns in Gossec's two orchestral *Suites de noëls* (*c*1774) reveal the same rustic spirit, as does Balbastre's *Recueil de noëls formant 4 suites avec des variations pour le clavecin ou le fortepiano*, whose contents imitate the sounds of musettes and horns. With the French Revolution the genre fell from favour but was revived by the Schola Cantorum in Paris in the late 19th century with more symphonically conceived examples for organ by Franck and Guilmant (four books, 1886), followed in the 20th century by Tournemire (*12 noëls anciens pour orgue*, 1938).

FRANK DOBBINS

Noëlli, Georg (*b* ?Amsterdam, 1727; *d* Ludwigslust, Mecklenburg, 24 Sept 1789). Portuguese composer and pantaleonist. He studied the pantaleon with its inventor, Hebenstreit, counterpoint with Geminiani and with Martini at Bologna, and composition with Hasse at Dresden. During April and May 1752 and September 1757 a 'Mr Noel(l)' was listed as a composer and performer on the 'cymbalo' at the New Haymarket Theatre in London where, according to Schilling, he became a friend of Handel. In 1765 he was court musician at Brunswick, and in 1766, according to Pohl, a 'Noel, Spieler des Pantaleon' appeared again in London. In 1775 he met C.P.E. Bach at Hamburg. From 1776 until his death he was *Cammermusikus* and pantaleonist to Duke Frederick of Mecklenburg-Schwerin at Ludwigslust, where he performed on a new pantaleon purchased for him and played the violin, viola and cello in the chamber orchestra. As a pantaleon virtuoso, he made tours to France and Italy in 1782 and to Sweden and Denmark in 1778–9, turning down a lucrative offer from the Swedish court to remain there. In 1786 he travelled to Münster in Westphalia; he made his last visit to Hamburg in 1789.

Gerber called him 'the greatest and almost only master' of the pantaleon; his improvisational ability was considered by his contemporaries comparable to that of W.F. Bach. Of his compositions a *Pastorella* and Sonata in C for harpsichord, violin and continuo survive in manuscript (*D-SWl*). Breitkopf published a sinfonia in *Musikalisches Magazin in Sonaten, Sinfonien, Trios und änderen Stücken für das Klavier bestehend*, vii (Leipzig, 1765); other sinfonias, quartets and trios, mentioned by Gerber, are lost.

ROBERT STEVENSON

Noer, Embie C. (*b* Cirebon, Java, 1955). Indonesian composer. Self-taught as a composer, his career started when he began creating music for shows by Teater Kecil ('Small Theatre'), a group led by his brother, the director Arifin C. Noer. He has become one of the foremost composers of music for the theatre in Indonesia. In 1979 Noer wrote the music for the film *Yuyun Pasien Rumah Sakit Jiwa* ('Yuyun, a Patient in a Mental Hospital') and in 1982 won the Citra trophy at the Indonesian Film Festival for *Serangan Fajar* ('The Dawn Attack'); both films were directed by his brother. Noer's theatre compositions from the 1980s and 90s often feature traditional percussion instruments. His works aim to blend a Western musical aesthetic with traditional music, especially that of his native region of Cirebon. The most striking example of this is the group of pieces *Teknotarling* (1994), in which Noer collaborated with traditional musicians from Cirebon who play Tarling music, itself an amalgam of Western and traditional Cirebon music deriving its name from gui*tar* and su*ling* (bamboo flute); he added an electronic keyboard to the ensemble. Noer's works are strongly influenced by the Islamic culture of Cirebon.

FRANKI RADEN

Noetel, Konrad Friedrich (*b* Posen [now Poznań], 30 Oct 1903; *d* Berlin, 9 April 1947). German composer. He studied engineering and law, and began musical training in 1925, first in Hanover and from 1927 in Königsberg. Most important among his studies were those with Hindemith during the early 1930s at the Berlin Hochschule, where he taught from 1936 until his death. Noetel remained in Germany during the war years, but only after the overthrow of the Nazi regime was he made professor. His predilection for polyphony and his traditional approach to form recall, respectively, Reger and Brahms, but from a tonal standpoint his music shows a distinct affinity with and indebtedness to Hindemith. Noetel's style, however, has an individuality in which a degree of late Romantic expressiveness plays a part.

GEORGE W. LOOMIS

Noferi, Giovanni Battista (*d* London, 26 Feb 1782). Italian violinist and composer. He spent most of his working life in London, where his op.1, a set of violin sonatas with continuo, was published in 1757. Three years later he was living in Cambridge, publishing his op.2 with a dedication to his 'friend and master', the violinist Felice Giardini; he also played in Norwich. By 1762 he had returned to London, leading a charitable benefit there, but his career was largely that of an orchestral violinist, with only rare appearances as a soloist. He did, however, promote benefit concerts most years from 1774 to 1781, with prestigious performers from the Bach-Abel circle; and he achieved a modest reputation for his pleasantly tuneful compositions. In 1777 he was engaged by the King's Theatre as a composer of ballet music, which he sometimes accompanied on the guitar; and for the 1781–2 season he was advertised as 'leader for the dances'. But

on 20 February 1782 he suffered a stroke during a public rehearsal of a new ballet, and he died a few days later.

WORKS

all published in London unless otherwise stated

Sonatas, vn, bc: 8 in op.1 (1757); 6 in op.2 (Cambridge, 1760); 6 in op.8 (1765); 6 in op.11 (*c*1770)

SIMON McVEIGH

Nogueira, Ilza (*b* Salvador, Bahia, 25 Dec 1948). Brazilian composer and teacher. She graduated in literature (1971) and music (1972) from the Federal University of Bahia, where she studied the piano with Pierre Klose and composition with the Swiss-Brazilian composer Ernst Widmer. In 1972 she received a German government fellowship to study with Mauricio Kagel at the Hochschule für Musik, Cologne. She was appointed to teach music at the Federal University of Paraíba in 1978. From 1982 to 1985 she pursued doctoral work in composition at the State University of New York at Buffalo under the supervision of Lejaren Hiller and in 1990 was a postdoctoral fellow at Yale University. Since 1985 she has been an associate professor at the Federal University of Paraíba. As a researcher, she has focussed on the work of her teacher Widmer. Her earlier compositions (1969–78) are characterized by the use of extra-musical and electro-acoustic materials; later works (after 1982) reflect her contact with serialism and set theory. She is the author of a number of articles and papers on musical theory and analysis.

CRISTINA MAGALDI

Nohl, (Karl Friedrich) Ludwig (*b* Iserlohn, 5 Dec 1831; *d* Heidelberg, 15 Dec 1885). German writer on music and editor. After education at the Duisburg Gymnasium, he studied law, in accordance with his father's wishes, at the universities of Bonn, Heidelberg and Berlin, and, at the last of these, music under S.W. Dehn and Friedrich Kiel. In 1853 he entered the Prussian Civil Service as referendarius, but in 1856 he became ill and had to undertake a journey to France and Italy. He returned to Berlin in 1857 and continued his musical studies under Kiel. In 1858 he finally abandoned law and settled at Heidelberg, receiving the degree of Doctor of Philosophy in 1860. In the following year he went to Munich, where in 1865 Ludwig II appointed him an honorary professor in the university. In 1872 he returned to live in Heidelberg, where he taught music history and aesthetics until his death; he died on 15 December 1885, not 16 December as is given in some sources.

In his time, and up to the 1920s, Nohl's name was widely known, principally for his popular works on Beethoven and Mozart, but also for his editions of their letters and of those by other composers. Nohl's biographies included discussions of the music and, in the case of Liszt whom he knew personally, of reminiscence. His collections of letters and reviews reflect his wide interests in composers' attitudes and contemporary reception of new works, and his book on chamber music (dealing with Haydn, Mozart and Beethoven) reveals his interest in the process of listening. His extreme devotion to Wagner, to whom he dedicated his major Beethoven study as 'the master of masters', led him to misinterpret the development of music drama before Wagner (in his *Gluck und Wagner*).

WILLIAM BARCLAY SQUIRE/MICHAEL MUSGRAVE

Noire (Fr.). *See* CROTCHET (quarter-note); *quart* is also used. *See also* NOTE VALUES.

Nōkan. Transverse bamboo flute, with seven fingerholes, of the Japanese *nō* theatre. It is also used in dance music (*nagauta*), off-stage music of the *kabuki* theatre (*geza*) and some folk musics. The *nōkan* resembles the *ryūteki* in many ways (the internal metal weight, the bark wrapping, the lacquered bore etc.), and it is assumed that it developed from the *ryūteki*, although this development cannot be charted historically. But the *nōkan* is of a much more complex construction. It is about 40 cm long and is fashioned not from a single tube of bamboo but from three to six short lengths joined together. In addition, some older flutes were made from lengths of bamboo which had been split lengthwise into several segments and then reassembled – possibly to adjust the bore, but the reason is not known for certain. The type of bamboo used is *medake* (*Nipponocalamus simonii*). The *nōkan*'s most distinctive feature (of unknown origin) is the *nodo* ('throat'), a short tube inserted in the bore between the mouth-hole and the nearest fingerhole; it causes the

overblown octave to be sharp at the lower end and flat at the top. On a typical flute the internal diameter is approximately 11 mm at the *nodo* and 16 mm near the closest fingerhole, tapering again to 11 mm at the lower end.

Since the *nōkan* does not share a melody with another instrument or with the voice there is less need for a pitch standard than there is with the *ryūteki*, and individual flutes may vary somewhat both in basic pitch and in interval structure. This variation is not, however, related to the differences in schools of performers. A typical range is about *b–f♯‴*. Visually the most obvious distinctions between these two types of flute are that the red lacquer of the *nōkun*'s bore extends to the surface through the fingerholes, and that the ornament (*kashiragane*) embedded in the left end is generally of metal in the case of the *nōkan* but is embroidered on a red ground in the *ryūteki*.

Nōkan technique features many cross-fingerings (unlike the *ryūteki*), constant delicate ornamentation and pitch gliding; the execution of these features varies both between schools and among individuals within each school. The repertory consists of several dozen named pieces with specific uses, as well as some less fully structured pieces; much of it falls into stock phrases of one or more eight-beat bars. In *nagauta* and *geza* music one flautist is in charge of both the *nōkan* and another transverse flute, the *shinobue*. *Nō* pieces are used especially in plays and dances derived from *nō* plays but also, for example, to set an elevated mood; the pieces are of necessity greatly truncated. In certain local festival musics several less well-made (i.e. cheaper) *nōkan* may be used together to play simple melodies.

DAVID W. HUGHES

Nola [Nolla], **Giovanni Domenico da** [Giovanni Domenico del Giovane da] (*b* Nola, between 1510 and 1520; *d* Naples, May 1592). Italian composer and poet. As a founding member of the Accademia dei Sereni (1546–7), he fraternized with Neapolitan nobles including the celebrated lutenist, Luigi Dentice, and the Marchese della Terza, patron of Lassus. Nola was *maestro di cappella* at the SS Annunziata, Naples, from 1 February 1563 until his death. Recognized as an expert in the art of vocal ornamentation by Giovanni Camillo Maffei (*Lettere*, 1562), he taught singing to the girls at the Annunziata's *ospedale* and to the deacons of the seminary. His earliest publications, two books of *Canzoni villanesche* (1541), contain a total of 31 *villanesche* and 11 mascheratas. They were well received by other composers, including Donato, Lassus, Perissone, Scandello, Waelrant and Willaert, all of whom arranged some for four voices. In his parodistic treatments of deceitful love, Nola skilfully recreated dialectal speech patterns, drawing liberally upon local proverbs. The poetic forms are remarkably similar to those of an anonymous *villanesca* book (RISM 1537[5]), although the musical styles are different. Nola's *villanesche* are characterized by lively points of imitation and passages of contrasting speeds, juxtaposed with humorous intent. Parallel 5ths, more frequent in the mascheratas, are in the *villanesche* normally confined to phrase endings. The *napolitane* of the 1560s are constructed in compact melodic phrases, lacking the sequences and varied repetitions of the earlier style, and contain longer chains of 5ths. The poems are gentler in tone (indicative of the transition to the canzonetta), and show a preference for changing rhymed couplets, e.g. *ABB/CDD/EFF/GHH*. Benacci published an undated book of Nola's poems which are identical in form and subject matter to those he set in the 1560s.

Nola's madrigal book of 1545 contains 29 compositions of which 22 are settings of Petrarch: one madrigal, six canzoni and 15 sonnets. Expressive dissonances such as false relations and delayed resolutions are precisely indicated by the careful application of accidentals. The textures are mainly imitative but with a homophonic orientation that indicates attention to text accentuation and meaning; repetition of the final phrase is common. The *note nere* style predominates and *passaggi* are used for descriptive and ornamental purposes: a characteristic device is a sharply rising scale. In his second book of five-voice madrigals Nola returned to *alla breve* writing. This volume contains six settings of Petrarch sonnets divided in the usual two *partes*. Some of his madrigals are notable for their advanced harmonic language, for example *Giunta m'ha amor* (1562[7]). The madrigals Nola contibuted to Barrè's anthologies (suggesting connections with Rome if not residence there) have a freely declamatory quality. One text he set in this *arioso* style, *Tosto che'l sol si scopre in oriente* (1555[27]), is cited in a Neapolitan chronicle as a popular song.

DONNA G. CARDAMONE

Noli, Fan [Theofan] **Stilian** (*b* Ibrik-Tepe, nr Adrianople, 6 Jan 1882; *d* Fort Lauderdale, FL, 13 March 1965). Albanian composer, writer and politician. His early energies were directed towards the Albanian independence movement. He championed its cause first in Egypt and then in the USA, where he became a priest (1908) and later a bishop (1919) in the Albanian Orthodox Church. In 1920 he headed the delegation which successfully gained admittance for Albania to the League of Nations. He served briefly as foreign minister in the Albanian government of Xhafer Ypi in 1922 and, after the overthrow of the Ahmed Zogu regime in 1924, was prime minister for six months. After Zogu's return to power, he went into exile, settling in 1932 in the USA, where he became head of the Albanian Orthodox Church. In the years 1935–7 he studied composition at the New England Conservatory.

Although Noli's literary output has been amply studied, his work as a composer is less well known: his secular compositions were not performed or recorded in Albania until the 1980s. Nonetheless, works such as *Skënderbeu* and *Gaspari i varfër* ('Poor Gaspar'), more neo-classical than late Romantic in style, reveal him as one of the most technically accomplished Albanian composers active in the first half of the 20th century. His colourful and intelligent essay on Beethoven drew praise from George Bernard Shaw, Sibelius and Thomas Mann among others.

GEORGE LEOTSAKOS

Nollet [Noleth, Nolet, Noletto, Nolletto] (*fl* 1538–46). North European composer, active in Italy. His works, all madrigals, were included in anthologies published from about 1538 to 1546. One four-voice madrigal, *S'io potessi mirar*, is printed at the beginning of the second part of Antonfrancesco Doni's *Dialogo della musica* (RISM 1544[22]); Doni remarked via the interlocutor Claudio Maria Veggio that he was 'delighted with this quite perfect little madrigal', swearing 'that it is the work of Nolet'.

DON HARRÁN

Nomura, Yosio (Francesco) (*b* Tokyo, 8 Oct 1908; *d* Tokyo, 4 Feb 1994). Japanese musicologist. After his graduation from Tokyo University in 1932 he spent two years as a postgraduate student and at the same time studied music privately under Kiyosuke Kanetsune and Shōhei Tanaka. He began lecturing at Sophia University, Tokyo, in 1934, later becoming professor (1946–59); he also taught musicology at Tokyo University (1949–69), Ueno Grakuen College, Tokyo, and Hiroshima University. He served as the chairman of the musicology department at the Tokyo Geijutsu Daigaku (Tokyo National University of Fine Arts and Music) (1959–72) and became director of the college's art museum in 1972. He later became the president of Tōhō College of Music (1984–93). A specialist in aesthetics, the comparative study of religions and religious music, he was particularly interested in Gregorian chant and its history. He was an active member of the Japanese Musicological Society, of which he was president from 1971 to 1976.

MASAKATA KANAZAWA

Nomos (Gk.; plural *nómoi*). One of the genres of ancient Greek music. Descriptions of specific *nomoi* in Greek literary sources suggest a complex style that came to be associated with virtuoso performers. Proclus's *Useful Knowledge* associates the term with one of his many epithets for APOLLO, Nomimos, and provides a brief history of the genre: Chrysothemis the Cretan, wearing a splendid robe and playing the kithara in imitation of Apollo, was the first to sing a solo *nomos*; TERPANDER, using heroic metre, was the first to perfect the *nomos*, while ARION of Methymna, who was both poet and kitharode, expanded it; PHRYNIS OF MITYLENE introduced innovations in the *nomos*: he combined the hexameter with a free metre and used more than seven strings; later, TIMOTHEUS gave it its current arrangement.

Stylistic generalizations about the *nomos* are difficult, but four types can be identified: two that are sung to the accompaniment of a kithara or an aulos and two that are

performed by a solo kitharist or aulete. The earliest type is the kitharoedic, a *nomos* sung to the accompaniment of a kithara. Although attributions vary from source to source, Pseudo-Plutarch's *On Music* (1132c–1135c; on the authority of Heraclides Ponticus, Glaucus of Rhegium and Alexander) refers to Terpander as the one who first named a number of the kitharoedic *nomoi* and organized music in Sparta. The first kitharoedic *nomoi* were in dactylic hexameters, but other complementary rhythms were also employed. There may have been some repetition of text. Proclus states that the *nomos*, in contrast to the dithyramb, used the Lydian *harmonia* and was 'relaxed in an orderly and magnificent manner and in its rhythms'. *Nomoi* sung to the accompaniment of an aulos, auloedic *nomoi*, began to be composed somewhat later by Clonas and Ardalus of Troezen. Pseudo-Plutarch credits Clonas with the invention of the auloedic PROSODION but is uncertain whether to choose Clonas or Ardalus as the first to compose auloedic *nomoi*.

Nomoi for solo instruments were a later development, undoubtedly reflecting the rising prominence of a professional class of artist. The Pythic Nomos (described in Strabo's *Geography*, ix.3.10; cf Pollux, *Onomasticon*, iv.78, 84), an auletic *nomos*, portrays the contest of Apollo and the Python in an extended five-part composition for solo aulos, the music itself highly descriptive or evocative. Auletic *nomoi* and the fourth type, the kitharistic *nomos*, were introduced at the Pythian games in 586 and 558 BCE (Pausanias, *Description of Greece*, x.7.4). Pseudo-Plutarch names POLYMNESTUS OF COLOPHON, OLYMPUS THE MYSIAN, Mimnermus and SACADAS OF ARGOS as particularly skilled composer-performers and refers to the famous Polykephalos Nomos (also attested by Pindar, *Pythian*, xii), which he is uncertain whether to attribute to Olympus or Crates; the Chariot Nomos, attributed to Olympus; the Cradias Nomos, attributed to Mimnermus; the Trimere Nomos, attributed perhaps to Sacadas, perhaps to Clonas; and the Orthios Nomos, associated with Polymnestus. According to the Aristotelian *Problems* (xix.15), the *nomos* was intended for virtuoso performers, and as their function was to imitate and exert themselves, it had become long and diverse, with the music constantly changing to suggest the dramatic action of narrative. Since instrumental *nomoi*, at least in some cases, were based on well-known subjects such as the contest between Apollo and the Python, familiarity assisted listeners in identifying the actions suggested by the music.

Nomoi were extended compositions, organized in several sections. Pollux's *Onomasticon* (iv.66) names seven parts to the Terpandrean *nomos*: *eparcha*, *metarcha*, *katatropa*, *metakatatropa*, *omphalos*, *sphragis* and *epilogos*. Each of these terms is based on common terminology used in other contexts: *eparcha* and *metarcha* suggest that the *nomos* begins with a statement of rules, perhaps the basic tuning and rhythm to be employed; the *katatropa* and *metakatatropa* suggest a first and second development on this material; the *omphalos* must be the central point of the composition; the *sphragis* is surely the conclusion in which the poet refers to himself and 'seals' the composition; and the *epilogos* is some sort of coda.

Unlike some other technical musical terms, *nomos* is also a term of general usage that means 'law', 'custom' or 'convention'. This complex of meanings enables Plato to develop several musico-political analogies in the *Republic* (iv, 424c: 'One must be cautious about changing to a new type of music as this risks a change in the whole; the modes [*tropoi*] of music are never moved without movement of the greatest constitutional laws') and the *Laws* (vii, 799e: 'our songs are our laws'). The relationship between civic law and the *nomos* may be more than a literary device employed by Plato. The Aristotelian *Problems* (xix.28) propose that the *nomoi* were so called because the preliterate peoples set their laws to music for mnemonic purposes, while Aristides Quintilianus (*On Music*, ii.6) states that the *nomoi* were certain pieces established by law for use in specific private festivities and public sacred feasts. Pseudo-Plutarch (1133b–c), by contrast, simply asserts that the term was applied to certain pieces because they were based on a particular tuning that had to be maintained throughout. In any case, the term conveys the sense of a piece of music fixed and unalterable.

Of all the composers of *nomoi*, TIMOTHEUS of miletus is the best known and most notorious. The surviving portion of his *Persians*, which won the competition at the Athenian games (probably some time between 420 and 416 BCE), affords a clear view of the literary style and character of the later *nomos*. As an account of the battle of Salamis, the *nomos* provides opportunity for vivid description, word-play and the capacity of the Greek language for onomatopoeia. Two short passages may be taken as typical:

> ... and the sea was shingled o'er with swarming bodies reft of the sunlight by failure of breath, and with the same were the shores heavy laden; while others sat stark and naked on the island-beaches, and with cries and floods of tears, wailing and beating their breasts, were whelmed in mournful lamentation, and called upon the land of their fathers, saying: 'Ho, ye tree-tressèd dells of Mysia, save me out of this place to whence the winds did bring us; else never shall the dust receive my body. (104–19; Edmonds, p.317)

The rhythm shifts constantly from line to line, and even within the lines, evoking the anguish, disorder and tempestuousness of the scene. The language itself changes in sound from the sibilants of the narrative passage, which describes the sea and the shore with 17 sigmas in ten lines, to the chattering cry of the defeated, which contains thirteen dental mutes – taus, deltas and thetas – in five lines. In the second passage, Timotheus demeans the Persian enemy by having him speak barbarously in a fractured syntax when he is captured by a Greek soldier:

> ... then writhing and clasping the foeman's knees he would thus inweave the Greek and Asian tongues, marring the clear-cut seal-stamp of his mouth with tracking down the Ionian speech: 'I me to thee how? and what to do? me come again nohow; and now brung me here this way my master; no more, father, me no more come this way to fight, but me not move; me not to you this way, me that way unto Sardy, unto Susa, home Ecbatana. My great God, Artemis, over to Ephesus will protect. (157–73; Edmonds, p.321)

The surviving lines of the papyrus include a section in which the poet claims to have revolutionized music; this is almost certainly an example of a *sphragis* and an *epilogus*:

> But O Great Healer [le Paean] to whom we cry, exalter of a new-made Muse of the golden kithara, come thou to aid these hymns of mine. For the great and noble and long-lived guide of Sparta, that people that teems with the blossoms of youth, dings me and drives me with the flare of censure, for that I dishonour the more ancient music with my new hymns. Yet do I keep no man, be he young or old or my own compeer, from these hymns of mine; 'tis the debauchers of the ancient music, them I keep off, the tune torturers who shriek as long, and shrill as loud, as any common crier. In the beginning did Orpheus, son of Calliopè, beget the tortoise-shell lyre of the varied Muses on

Mount Pieria; and after him, great Terpander, born of Aeolian Lesbos at Antissa, yoked the Muse in ten songs; and now Timotheus opens the Muse's chambered treasury of many hymns and gives kithara-playing new life with eleven-stroke metres and rhythms, nursling he of Miletus, the town of a twelve-walled people that is chief among the Achaeans.

But to this city I pray thee come, thou far-darting Pythian with the gifts of prosperity and a peace abounding in orderliness for an untroubled people. (215–53; Edmonds, pp.323–25, adapted)

According to Satyrus's *Life of Euripides*, the prelude to this *nomos* was written by EURIPIDES himself, and it has generally been supposed that Timotheus influenced Euripides' style. If this is so, and if the surviving musical fragments from Euripides' *Orestes* and *Iphigenia in Aulis* are accurate representations of the original music for these plays, they may also provide some evidence for Timotheus's musical style. This would have been a style in which the music itself filled out rhythmic patterns not immediately apparent in the text, modulated frequently and in some cases to rather distantly related *tonoi*, and made use of disjunct leaps and unusual chromatic inflection. Unfortunately, the music for the *Persae* does not survive.

The hymn, paean, *nomos* and dithyramb represent the four most important musico-poetic types in Greek culture. As central to the celebration of the gods in various religious and civic festivals, they provided both a means for the cultural heritage to be preserved, interpreted and communicated, and a mirror of the current social and religious structure of Greek life. This dual role led to an ostensible paradox: each generation regarded the musico-poetic types as sufficiently important to be employed, expanded and developed, while at the same time viewing innovations and departures from tradition with suspicion. In fact this is not paradoxical; rather, it is an expression of the vitality and resilience of these compositional types, continuing over many centuries.

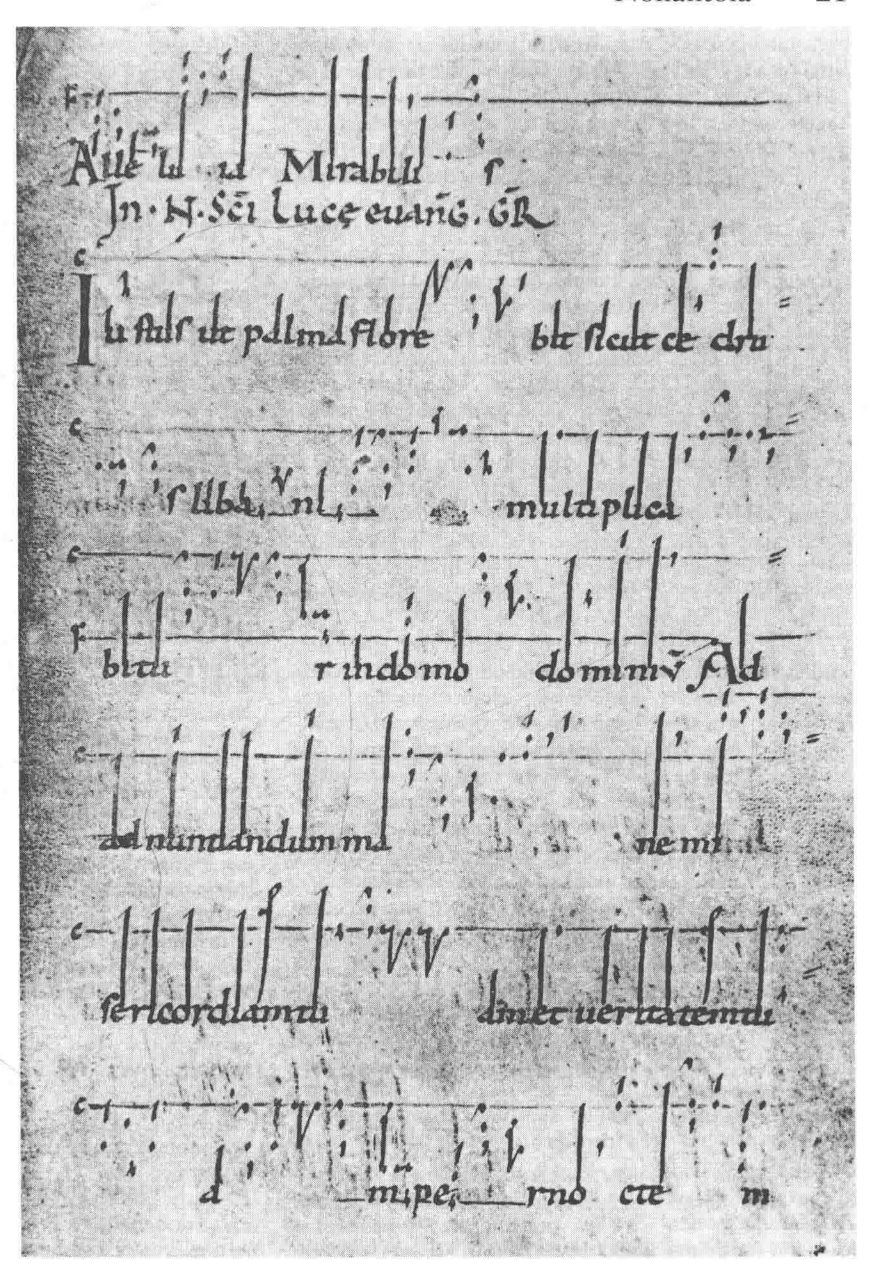
THOMAS J. MATHIESEN



Nonantola. Site of the former Benedictine monastery of S Silvestro in the Lombard kingdom outside Modena. With Monte Cassino, it was one of the most important monastic centres of medieval Italy.

Nonantola was founded about 752 by St Anselm of Nonantola, formerly Duke of Friuli, and endowed by Aistulf, King of the Lombards (reigned 749–56). In 753 the oratory and altar were consecrated to SS Peter and Paul by Sergius, Archbishop of Ravenna, and shortly afterwards Anselm was appointed the first abbot by Pope Stephen II. In 756 the relics of Pope Sylvester I (reigned 314–35) were transferred from Rome to Nonantola, and the abbey received its present dedication.

Anselm spent the period from 760/61 to 773, during the reign of Desiderius, Aistulf's successor, in exile at Monte Cassino. In 774 he returned with a number of manuscripts which formed the nucleus of the important medieval library at Nonantola. Anselm died in 803 and was buried in the church; he was succeeded by a number of Lombard abbots with Germanic names. In 885 the body of Pope Adrian III (reigned 884–5) was buried at the abbey. After a major fire, a reconstruction of the church of S Silvestro was begun in 1015. Until 1083 the abbey was controlled by the emperors; resident abbots replaced absentee appointees in 1044. Documents in the Zürich Central Library (*CH-Zz*) and the St Gallen monastery library (*SGs*), edited by Schmid, contain the names of 1144 monks who had lived at Nonantola up to the 11th century; during this tranquil period, the monastery prospered as a monastic and cultural centre, and its possessions extended as far as Constantinople.

Decline set in during the 14th century. In 1411 the abbey came under the protection of the Este family, and in 1449 regular monastic life there ended with the death of the last regular abbot, Gian Galeazzo Pepoli. With the appointment of his successor, Abbot Gurone d'Este, by Pope Nicholas V in a bull dated 11 June 1449, Nonantola became an abbey 'in commendam', and it was thereafter directed by a long line of commendatory abbots. A reform was instituted by the Cistercians with the appointment of Abbot Giulo Sertorio in 1514, and a seminary was constructed by St Charles Borromeo, an abbot, in 1567. In 1768–9, Pope Clement XIII and Duke Francesco III of Modena suppressed the Cistercian rule. Tiraboschi's important history of the foundation appeared in 1784–5. In 1812 Pope Pius VII united the abbey of Nonantola with Modena; secularized in 1866, it was again restored as an abbey *nullius* with the archdiocese of Modena in 1926. Since 1928 it has had its own minor seminary and has served 31 local parishes.

The extensive collection of manuscripts which made up the medieval library of S Silvestro has been largely dispersed, although five inventories of manuscripts have

Nonantolan neumes: cantatorium, 11th–12th century, notated by Silvester (Nonantola, S Silvestro, f.85r; from PalMus, 1st ser., ii, 1891, pl.15).

survived from before the Cistercian reform. These inventories contain important information about the early musical sources. The oldest such 'catalogue' (*I-Bu* 2248, ff.1*v*–2) is in fact a list of 40 volumes acquired by the monastery during the abbacy of Rodolfo I (1002–35). A catalogue dated 1166 (*Rn* 1568, ff.62*v*–63) lists 61 items. In the catalogue of 1331, 185 manuscripts are described in detail; the catalogue of 1464 contains 255 entries, and the catalogue of 1464–90 lists 237 manuscripts. These last three catalogues are now in the abbey library. Among important liturgical books from the abbey are the so-called 'Sacramentary of Nonantola' (now *F-Pn* lat.2292), copied at St Denis near Paris about 875 for use at Nonantola, and 'The Psalter of Nonantola' (now *I-Rvat* lat.84), dating from the 11th century. Although the 1464 catalogue contains an important table of musical manuscripts, including ten described as 'sequentiale', nine as 'graduale' and four as 'antiphonarium', only four major plainchant sources, fully noted, survive from the abbey; all of them seem to date from the late 11th or early 12th century. They are as follows: *I-Bu* 2824 (106ff), a troper with proses; *NON* 1 (116ff; see illustration), a cantatorium; *Rc* 1741 (192ff), a troper and proser (published in facsimile by G. Vecchi, 1955); *Rn* 1343 (Sess.62) (81ff), a kyriale, troper-proser and processional. Another manuscript described in the 1331, 1464 and 1464–90 catalogues is *Ra* 123 (268ff), an early 11th-century gradual, processional and troper-proser which originated at Bologna rather than Nonantola. Moderini has identified 18 additional manuscripts containing Nonantolan musical notation. Of these 18, only a Gospel book (now in the abbey) with a notated Holy Saturday 'Exultet' is

indisputably from S Silvestro. The remaining manuscripts cited by Moderini either come from Venice or Verona, or are fragments of unknown origin, some of which may have been used in Modena and Milan. Among this latter group is a tonary in Nonantolan notation (*Rc* 54, ff.107–108*v*) which is based on a Reichenau model, according to Huglo (*Les tonaires*, Paris, 1970, p.41).

Certain particular saints were venerated at Nonantola, and the names of these patrons are frequently found in collects, tropes, proses, litanies, calendars and the sections of the liturgical books containing the Proper of the Saints: St Sylvester (feast day, 31 December), Pope Adrian III (8 July), St Anselm of Nonantola (3 March) and SS Senesius and Theopontius (21 May), whose relics were transferred from Treviso to Nonantola in the 10th century. Another characteristic of the Nonantolan liturgical use is the special commemoration of other northern Italian saints: St Alexander of Bergamo (26 August), SS Nazarius and Celsus, martyrs of Milan (28 July), St Possidonius of Mirandola, north of Modena (16 May), St Proculus, venerated at Bologna (1 June), St Prosperus of Reggio (24 November), St Syrus of Pavia (17 May and 9 December) and St Zeno, Bishop of Verona (12 April).

The three tropers are of special significance for chant studies. Their contents are rich, including not only tropes for both Ordinary and Proper chants of the Mass (including prosulae), sequences and processional chants, but also four *confractoria* (antiphons sung during the breaking of the bread in the Eucharist, a genre otherwise known from Ambrosian, not Gregorian chant) and 18 *antiphonae ante evangelium* (for the procession carrying the Gospel book to the pulpit, likewise a non-Roman practice). Among the tropes and sequences are a number of pieces from beyond the Alps (e.g. sequences with texts by Notker of St Gallen), and because Nonantola adopted diastematic notation at a relatively early date, the Nonantolan manuscripts in many cases provide the earliest transcribable versions of these pieces. (For discussion of the multifaceted repertory see Borders and Brunner; their editions also include complete inventories of the tropers: see pt 1, xiv–xxxi.)

No Renaissance polyphonic choirbooks from the Abbey of S Silvestro have been identified.

Nonat, Joseph Waast Aubert. *See* NONOT, JOSEPH WAAST AUBERT.

None (Lat. *nona*, *hora nona*, *ad nonam*). One of the LITTLE HOURS of the DIVINE OFFICE, recited at about three o'clock in the afternoon, or at the 'ninth hour'. *See also* LITURGY OF THE HOURS.

Nonesuch. American record label. It was founded by Elektra in 1964 as a low-priced classical and world music label. It began by licensing recordings of music of the Baroque and earlier periods from European labels such as Club Français du Disque and Tono Zürich (Concert Hall). Under the direction of Teresa Sterne, it then began an adventurous programme of new recordings of American avant-garde composers such as George Crumb and Morton Subotnick, as well as issuing recordings of little-known 18th-century works, including symphonies by Haydn and J.C. Bach. Joshua Rifkin was the musicological adviser. After Sterne left at the end of 1969, its programme was reduced. The Explorer series was devoted to non-Western music. Rifkin played the piano music of Scott Joplin and conducted his influential, innovatory version of J.S. Bach's Mass in B minor using one voice to a part. With the advent of the compact disc Nonesuch became a full-priced label. The parent firm was acquired by Warner Records, and that company's later acquisition of Teldec and Erato made Nonesuch a component part of the firm's strong presence in the classical market.

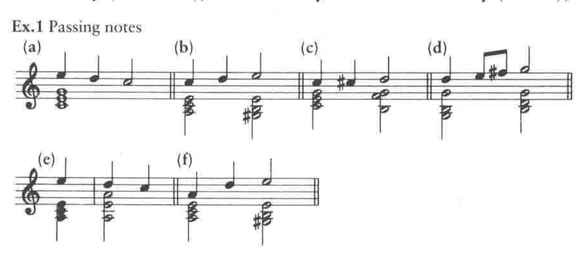
JEROME F. WEBER

Nonet (Fr. *nonette*; Ger. *Nonett*; It. *nonetto*). By analogy with the sextet, septet and octet, the term 'nonet', first used early in the 19th century, denotes a composition in the nature of chamber music for nine solo instruments. While in works by such composers as Haydn (HII: 9, 17 and 20) and Ignace Pleyel (B111) the addition of 'a nove stromenti' or 'à neuf instruments' specifies the size of the ensemble required in connection with such generic terms as divertimento, serenade or sinfonia concertante, in 1813 Louis Spohr was the first to mention the number of instruments employed in the actual title of a piece of music. His popular *Grand nonetto* op.31 to some extent defines the constituents of the ensemble still regarded as standard today: flute, oboe, clarinet, horn, bassoon, violin, viola, cello and double bass. Two works by Clementi for the same combination of instruments, both

entitled *Nonetto* (WO30 and WO31), cannot be dated, but since they were never published they had no influence.

Spohr's outstanding nonet, which brings out in an exemplary manner the qualities of each instrument 'in accordance with its character and nature' (as requested by Johann Tost, who commissioned it), inspired other composers to write nonets of their own. They included Louise Farrenc (op.38, 1849), Georges Onslow (op.77, 1851), Franz Lachner (1875), Joseph Rheinberger (op.139, 1884), C.V. Stanford (Serenade op.95, 1905), René Leibowitz (Chamber Concerto op.10, 1944) and Tilo Medek (Nonet in Nine Movements, 1974). Within the nonet repertory, already a small one, the nonets of Josef Bohuslav Foerster (op.147, 1931) and Alois Hába (entitled *Fantazie*: op.40, 1931, and op.41, 1932) form a separate line of tradition closely connected with the Czech Nonet; Martinů dedicated his 1959 Nonet to the ensemble on its 35th anniversary. Nonets for string instruments have been written by Nicolai von Wilm (op.150, 1911) and Copland (1960), and nonets with piano were composed by Jan Bedřich Kittl (perf. 1836, lost) and Henri Bertini (op.107, 1845).

Further works for nine instruments other than the classic Spohr ensemble have been written, particularly in the 20th century, but have not as a rule been described by their composers as nonets. In addition, their texture is often more reminiscent of a concerto or symphony, and breaks the chamber music mould, for instance in works by Milhaud (chamber symphony *Le printemps* op.43, 1917), Egon Kornauth (*Kammermusik* op.31, 1924), Krenek (*Sinfonische Musik* for nine solo instruments op.11, 1922), Bruno Stürmer (Suite op.9, 1923), Villa-Lobos (Nonet with percussion and chorus, 1923) and Webern (Symphony op.21, 1928, and Concerto op.24, 1931–4).

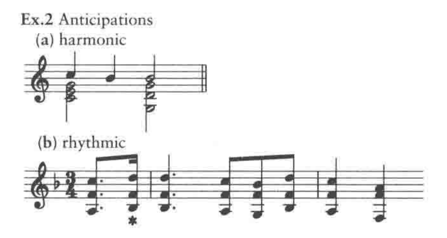


For bibliography *see* CHAMBER MUSIC.

MICHAEL KUBE

Non-harmonic note. In part-writing, a note that is not consonant with the other notes of the chord with which it is sounded and must therefore be 'resolved', usually by step, to a note that is consonant. Non-harmonic notes are in a sense melodic ornaments, and many of the names used to describe them have been borrowed from the terminology for ornamentation (e.g. appoggiatura, *broderie*, *Vorschlag*). The following discussion is intended to clarify the meaning of the most important of these names as they are now used.

A passing note or passing tone (Ger. *Durchgang*) leads from one note to another in a single direction and by conjunct motion, supported either by a single or changing harmony (ex.1*a–b*), diatonically or chromatically (ex.1*c*),



Ex.1 Passing notes

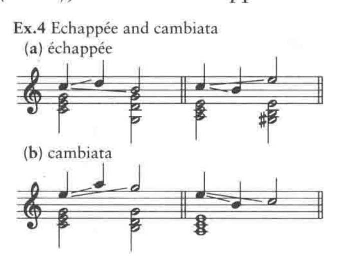
by itself or in pairs (ex.1*d*). Some writers restrict the term 'passing note' to unaccented notes only, preferring to call all accented non-harmonic notes appoggiaturas (see below); the expression 'accented passing note', however, is an acceptable description of ex.1*e*. Occasionally 'free passing note' is used for an unaccented non-harmonic note approached by leap and resolved in the same direction by step (ex.1*f*).

An anticipation is an unaccented note that belongs to and is repeated in the chord that immediately follows it (ex.2*a*). This term has been extended to include the notion

Ex.2 Anticipations

of 'rhythmic anticipation', whereby the entire harmony on a strong beat is stated on the preceding weak beat, for instance at the beginning of the Minuet from Schubert's Octet in F (outlined in ex.2*b*).

An auxiliary note (Fr. *broderie*; Ger. *Hilfsnote*) ornaments a 'main note' that lies a half or whole step above or below it by being approached from and returning to the main note, either singly (ex.3*a*), or in groups of two

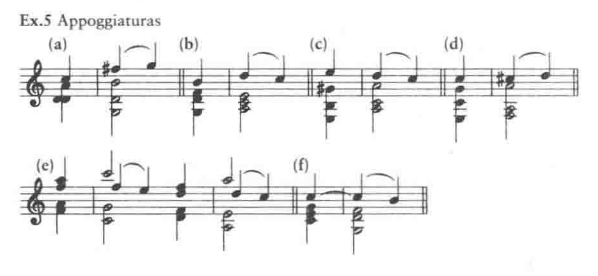


Ex.3 Auxiliaries

or three notes that may be said to form an 'auxiliary chord' (Ger. *Hilfsklang*; ex.3*b*). Auxiliary notes are sometimes referred to as 'neighbour notes' or 'neighbouring notes' but some writers following Schenker in his *Der freie Satz* (1935) restrict the lower neighbour to the note lying a half-step below the main note. In German the term *Nebennote* refers not only to the auxiliary note but to any other non-harmonic note that is approached from its main note by step.

Some unaccented non-harmonic notes intervene in a melodic resolution but, unlike the passing note or the anticipation, are not contained in the interval circumscribing the resolution. When such a note is approached in the direction opposite that of the resolution it is called an 'échappée' (ex.4*a*), and when it is approached in the same

Ex.4 Echappée and cambiata



direction – that is, when the resolution is 'overshot', so to speak – it is called a 'cambiata' (ex.4*b*). The term NOTA CAMBIATA is often confused with 'cambiata' when it is used as a noun; it would be preferable to restrict the former to a particular group of configurations in which

an unaccented non-harmonic note is quitted by downward leap of a 3rd.

Any non-harmonic note that occurs on a relatively strong beat is an appoggiatura (Fr. *appoggiature*; Ger. *Vorschlag*), though it is generally understood that the note must be articulated on that beat, as in ex.5*a–e*; when it is tied over, as a consonant note, from the previous chord (ex.5*f*) it is called a SUSPENSION (Fr. *suspension*; Ger. *Vorhalt*; It. *sospensione*). An appoggiatura is often approached by leap, either in the same direction as the resolution (ex.5*a*) or the opposite one (ex.5*b*); or it may be an accented passing note, diatonic (ex.5*c*) or chromatic (ex.5*d*). When it occurs in the previous chord as a consonant note but is not tied over, it is called a prepared appoggiatura. Because they are accented, appoggiaturas form the most expressive category of non-harmonic notes.

Ex.5 Appoggiaturas

Ex.6 Verdi: *Aida*, Act 4, 'O terra addio'

Moreover, they usually tend towards a specific note of resolution and thus create an expectation which is fulfilled in their resolution; the simplest diatonic resolution, for instance that of the leading note to the tonic, becomes the most vivid of melodic progressions when approached by leap and presented in a strong-to-weak rhythmic position, as in ex.6.

WILLIAM DRABKIN

Non-harmonic relation. *See* FALSE RELATION.

Noni, Alda (*b* Trieste, 30 April 1916). Italian soprano. She studied in Trieste and Vienna, making her operatic début as Rosina at Ljubljana in 1937. After performances at Zagreb, Belgrade and Trieste, she joined the Vienna Staatsoper in 1942 and sang such roles as Despina, Norina, Gilda, Oscar and Zerbinetta, which she recorded in 1944 in a performance of *Ariadne auf Naxos* in honour of Strauss's 80th birthday. In 1946 she made her London début at the Cambridge Theatre as Norina. She appeared at La Scala from 1949 to 1953, making her début as Carolina (*Il matrimonio segreto*) and also singing Armidoro (Piccinni's *La buona figliuola*), Papagena, Zerlina and Nannetta during the 1950 visit of La Scala to Covent Garden. With Glyndebourne Opera at the 1949 Edinburgh Festival she sang Oscar, and at Glyndebourne itself (1950–54) Blonde, Despina and Clorinda (*La Cenerentola*), which she recorded. Her other recordings include Adina and an irresistibly vital Norina. She excelled in comic roles and her repertory, which included operas by Cherubini, Auber and Wolf-Ferrari, displayed to advantage her limpid and attractive coloratura soprano.

Nono, Luigi (*b* Venice, 29 Jan 1924; *d* Venice, 8 May 1990). Italian composer. A leading figure in the postwar European avant garde, he asserted his independence from that circle in the late 1950s, exploring a passionate social and political commitment through the most advanced technical means, electronics especially. While political messages are less explicit in his works from the late 1970s onwards, he sought in his last decade, through an extreme concentration of musical material and a meticulous attention to sound itself, modes of listening and performing which would embody on a more intimate level the same ethical concerns with perception, communication and human interaction.

1. Life and works. 2. Compositional theory and practice.

1. LIFE AND WORKS. Born into a family of artists – his grandfather Luigi was a painter and his uncle Ernesto a sculptor – Nono took an interest from an early age in cultural history and art. His interest in music was encouraged by his parents, who were amateur musicians and who owned a sizable collection of recordings. From 1943 to 1945 he studied composition with Malipiero at the Venice Conservatory, where there was an emphasis on vocal polyphony and the madrigal tradition, as well as an awareness of the music of the Second Viennese School, Stravinsky and Bartók. Nono's experiences of the war, of the Nazi occupation and the Resistance were fundamental to his general development, while musically his meeting with Maderna was critical; from 1946 onwards they forged a long-lasting association. A small community of musicians grew up around them in Venice who, through the examination of the contrapuntal, harmonic and formal foundations of European art music, aimed to develop a new musical language. Their main point of reference was Dallapiccola, who belonged to the preceding generation of Italian composers and with whom Nono developed a relationship of reciprocal esteem and friendship in 1947. The group shared in particular a desire to discover and learn from the Second Viennese School.

In 1948 Nono and Maderna took part in Scherchen's conducting course in Venice, following which they worked together for the publishers Ars Viva. For several years Scherchen became their mentor, and through private lessons (at Rapallo, 1952–3) Nono studied further the compositional techniques of Bach, Beethoven, Schoenberg and Webern. On Scherchen's recommendation he was accepted as a student on the 1950 Darmstadt summer course, at which the first performance of his *Variazioni canoniche sulla serie dell'op.41 di Schönberg* provoked contrasting reactions. In Darmstadt he attended classes given by Varèse, whose influence became progressively more apparent in his work. Until 1959 – the year of his controversial lecture *Geschichte und Gegenwart in der Musik von heute* – he continued to take part at the Darmstadt courses (from 1957 as a teacher), during which many of his compositions were performed for the first time and important discussions and meetings took place. He came into contact there with members of the Schoenberg school, in particular the violinist Rudolf

Kolisch, with whom he collaborated on the composition of his *Varianti*; in 1955 he married Schoenberg's daughter, Nuria. The Darmstadt summer courses confirmed Nono's leading position and, together with Boulez and Stockhausen, he became a key figure in the European avant garde.

Nono's musical technique and artistic stance developed not only through contact with the international musical community, but also from works and figures in other cultural fields. His friendship and later collaboration with the painter Emilio Vedova, his study of the theatrical ideas of Meyerhold, Piscator and Josef Svoboda, his exposure to the philosophical and political thought of Gramsci and Sartre, and the poetry of García Lorca, Neruda, Eluard, Pavese and Ungaretti were of crucial importance at that time. From these poets Nono took the texts for his vocal works of the 1950s : *Tre epitaffi per Federico García Lorca*, *La victoire de Guernica*, *La terra e la compagna* and *Cori di Didone*. In the last two of these, and in the unquestionable masterpiece of his first decade's work, *Il canto sospeso* (1955–6) to texts by condemned prisoners of the European Resistance, Nono made use of a new style of singing which involves the fragmentation of the text and its attachment to musical structures which vary from a single line to diverse types of textural layering. Nono's intense involvement in the social issues of his time gave rise to a style in which sound and text are inextricably linked; in which the work takes a firm hold in the 'real' world, as a kind of a historical record. Increasingly, Nono used texts with political references (he had in 1952 become a member of the Italian Communist party), culminating in the stage piece *Intolleranza 1960* which, at its first performance in Venice (1961), provoked protest and uproar. It represented a turning-point, not only because for the first time it made concrete Nono's ideas for a new form of music theatre which he had been developing in the 1950s, but also because it revealed the extent of the political conflict in which the composer felt himself involved: racial intolerance, fascist violence, exploitation of the working classes, and the struggle for freedom and independence in developing countries.

Nevertheless, Nono must still have felt his means of musical expression to be insufficiently developed to articulate these ideas; for immediately after *Intolleranza 1960*, he turned to work almost exclusively with electronics. In the RAI Studio di Fonologia in Milan he began work on a new stage composition, which was to evolve into a series of uncategorizable works. The first was *La fabbrica illuminata* (1964) for female voice and tape, the tape part comprising sounds recorded in a factory, workers' voices, a choir and the soloist herself (originally Carla Henius). *A floresta è jovem e cheja de vida* (1966) and *Y entonces comprendió* (1969–70), among other works, went to confirm certain fundamental aspects of Nono's musical thought: the use of vocal material, with singers and actors chosen for their particular timbre and quality of gesture; interaction between live voices and their *alter ego* on tape; amplification to highlight aspects of the sound which would otherwise be difficult to perceive; diffusion of the sound from different points in space; and, last but not least, the employment of texts which document contemporary history. These works represent an avant-garde stance which, abandoning traditional musical narrative and grammar, employs the most advanced technical means in order to expose the structures of political power.

The 1960s witnessed intense confrontation between the theory and the practice of Marxism, and Nono played a significant role in these events. In 1965 he realized a tape score for the play *Die Ermittlung* by Peter Weiss; the following year he worked on material for Living Theatre; 1967 saw his first long trip to Latin America where he met the leading figures of cultural and political opposition; and in 1968 he collected materials from the student protests in Paris, which are used in *Musica-manifesto no.1*. The texts Nono employed during this period together create what amounts to a map of socialist culture: from Fidel Castro, Che Guevara, Karl Marx, Rosa Luxemburg, Bertolt Brecht and Malcolm X, to revolutionary documents from various continents. Nono's theatre piece *Al gran sole carico d'amore* (1972–4) – in which events from different epochs are fused together under the common theme of women's struggle for liberation – is both the synthesis and conclusion of his openly declared political position.

With the string quartet *Fragmente–Stille, an Diotima* (1979–80), he seemed to be entering a more private phase in his career, focussed on more abstract musical concerns. But although Nono worked with new ideas in this and subsequent pieces he did not abandon the fundamental aesthetic and technical issues of the previous decades. For example, form constructed from a discontinuous series of fragments – with which Nono had experimented for the first time at the end of the 1950s in the orchestral *Diario polacco '58* – was now brought to the fore, with a considerable reduction in the length and dynamic level of what might be described as sonorous islands, amid a scenery of silence. There continued, too, the conception of the performer as a source of individual material, developed through collaborative exchange with the composer (in the 1970s this way of working had, with Pollini, given rise to *Como una ola de fuerza y luz* and *. . . sofferte onde serene . . .*). And Nono remained convinced of the need for technology in the process of musical creation. Indeed, the themes of violence, oppression and utopian tension had not disappeared either, only now they were no longer dealt with on a historical or documentary level, but rather on an individual level, taking on a quasi-ontological significance. Two factors, in particular, contributed to the characteristic features of this period: Nono's meeting with the philosopher Massimo Cacciari, and his work at the Experimentalstudio der Heinrich-Strobel-Stiftung in Freiburg. The eclectic thought of Cacciari – strongly influenced by Hölderlin, Nietzsche, Rilke and Walter Benjamin, and also by the study of myth and Jewish mysticism – became an inexhaustible source of inspiration. The texts for Nono's pieces were now formed from collections of fragments of literary and philosophical writing undertaken in collaboration with Cacciari; while in the Freiburg studio he worked closely with a team who were mastering the most advanced techniques for transforming sound in real time and diffusing it in space. His concept of 'composition' broadened, now taking into account the internal evolution of sound and its spatial trajectory. The most important project born out of the Freiburg experiments and his collaboration with Cacciari was *Prometeo* (1984), a large-scale work which represented a new stage in the development of that form of music theatre which, from

the time of *Intolleranza 1960* onwards, Nono had defined as *azione scenica*. However, during the composition of *Prometeo* every narrative, scenic and visual element was eliminated; there remained only a gigantic wooden structure, the shape of which resembles the keel of a boat, but whose function is that of a gigantic resonating case which the architect Renzo Piano planned for the interior of the church of S Lorenzo in Venice. Nono defined *Promoteo* as a 'tragedy of listening', alluding on the one hand to Greek tragedy with its *stasimons* and choruses and on the other to a drama which unfolds within sound itself. During the composition of the work he also turned at times to various shorter compositions for voices, a small instrumental ensemble and live electronics: *Quando stanno morendo* (*Diario polacco no.2*), *Guai ai gelidi mostri* and *Risonanze erranti*. The same years also saw the appearance of two major pieces for full orchestra – *A Carlo Scarpa architetto, ai suoi infiniti possibili* and *No hay caminos, hay que caminar . . . Andrej Tarkowskij* – in which conceptions of sound requiring the use of computers are re-thought on a purely acoustic level.

2. Compositional theory and practice. Nono's output reflects a continuous and coherent evolution in compositional technique, which goes beyond the controversial developments of 1959 (his polemical lecture against the Darmstadt circle) and of 1980 (the explicit emphasis on the internal dimensions of music). His notion of sound as a complex event with its own internal mobility, a notion that emerges explicitly in his last decade, is already evident in the early works which established his international reputation. These pieces, often discussed under the rubric of 'integral' serialism, bear the trace of the contrapuntal techniques of the Franco-Flemish school, which he had studied, and their influence on the dodecaphonic canons of Webern and Dallapiccola. However, even in his first work, the *Variazioni canoniche*, the principle of canon is varied to such an extent that it is no longer recognizable, even while it continues to serve as a basic structure. Variation, meanwhile, is redefined as a structural procedure involving the progressive transformation of the note row's motivic content, using permutations of both pitch and duration (these parameters now being placed on an equal footing).

For a while Nono worked more intensively on the idea of the row as initial material, leading to ever-changing melodic-harmonic groupings. In *Tre Epitaffi per García Lorca*, *Due espressioni* and *La victoire de Guernica*, he also experimented with the serial development of rhythms from popular tradition, especially Spanish. However, the risk of a disparity between the compositional principles in operation and the material used – which, though fragmented and re-arranged, was still 'recognizable' – soon became a cause of dissatisfaction. *Incontri* announces his move to a more abstract, integrated kind of construction: durations and dynamics are linked together serially, and timbres, registers and textural density become fundamental musical parameters. In the essentially 'physical' concept of continuously evolving 'sound complexes', driven by a carefully designed macrorhythmic profile, the piece displays significant evidence of Varèse's influence. With *Il canto sospeso* Nono reached the climax of his maturing process. The nine movements which comprise the work are all rigorously organized according to serial principles, though the number of elements, and how they are combined, varies from piece to piece. Starting with a limited nucleus – an all-interval row and a Fibonacci sequence – diverse results emerge, the nature of which depends directly on the meaning of individual texts and the dramaturgy of the work as a whole. Melodic splintering, in particular, marked by sharp contrasts of register and dynamics, introduces a new kind of signifying relationship between word and sound. In the instrumental and vocal compositions which immediately followed – *Varianti*, *Cori di Didone*, *La terra e la compagna*, *Diario polacco '58*, *Sarà dolce tacere*, and *Ha venido: canciones para Silvia* – serial techniques are no longer used to generate new material but instead to determine the internal articulation of the sound aggregates. For example at the beginning of *Varianti*, a single pitch is varied using a sequence of changing instruments and dynamics: a *Klangfarbenmelodie* in miniature in which a kind of polyphony is created within the sound which endows it with extraordinary energy. These methods form the beginnings of the late orchestral compositions of the 1980s, such as *A Carlo Scarpa architetto, ai suoi infiniti possibili*, in which Nono worked extensively with single pitches, varying them by means of microtonal inflections, different combinations of timbre and texture, and spatial mobility.

Nono's humanistic outlook was formed out of an insatiable curiosity for the viewpoints and methods of other artistic genres (theatre, literature, painting, architecture and cinema) and a strong interest in all human forms of communication (from the workplace to politics, from philosophical thought to the mythical and religious sphere): he believed that art is never exhausted in its technical capacity, that it reflects the totality of human experience. His entire body of work from *Il canto sospeso* onwards can be seen as an attempt to provide a satisfactory answer to Sartre's question, 'Why write?'; the Sartre-like reply, while varied in its musical expression over the course of time, was 'in order to fulfil our duty to produce the world'. This is the source of Nono's socio-political stance, completely at odds with that of, say, Eisler or his contemporary Henze. It was not for him a question of reproducing in music the emotions of suffering, scorn, anger, rebellion, desire and love of which the texts speak, or to which the titles of instrumental compositions refer; rather, it was the idea of formulating on a musical level, in the unshakable unity of sound, issues for which humanity demands urgent resolution: 'To listen is to know'.

Fired by the conviction that all artistic activity must be motivated by ethical and political considerations, Nono considered that, for a piece to make an impact on reality, the composer must be familiar with the most advanced musical techniques of his age. The compositions in which Nono dealt explicitly with political issues thus became those in which he experimented most with electronic technology. In *A floresta é jovem e cheja de vida*, for example, the voices of a soprano and several actors, the sound of sheets of copper being struck and the multiphonics of a clarinet are transformed in the studio by means of a set of modulators and filters; the same sound sources interact live with the tape, creating situations of tension and resolution which redefine on a new semantic level texts from Fidel Castro, Patrice Lumumba, an anonymous student from the University of California, a South Vietnamese soldier, an Angolan guerrilla and Italian

manual workers. In *Quando stanno morendo (Diario polacco no.2)* texts by Russian poets, including Blok and Chlebnikov, serve as catalysts to portray experiences in prison and exile in countries under the Soviet regime. This was also the first of Nono's major works to treat voices and instruments in performance by means of a coordinated system of live electronics – involving delay, reverberation, harmonic spectrum modification and control of the movement of sound in space.

In his last decade, Nono saw his use of technology as having a positive role with regard to cultural, and hence social, emancipation. Nevertheless many commentators have continued to view the period quite differently, as one of individualism and the metaphysical; Nono's image of Utopia redefined through his own concepts of 'other ways of listening' and 'possible infinities'. These last works not only call for a new attitude to sound perception, but also require that spaces in which we listen, notation, the attitude of the performer and the whole conception of compositional work be changed. The position of performers and listeners was altered by placing individual instrumentalists or orchestral groups in different parts of the hall, while the fluctuating interior of the sound could now be controlled entirely through computer programmes, realized through collaboration with technicians. Such programming was adapted to every new environment, and this called for a new flexibility in musical notation, as well as the most sensitive understanding of the performers who – with their continuous micro-variations in pitch, dynamic and timbre – both act in and react to the overall sound production. There is now no longer a principal performer, but each member of the team, including the technicians, forms part of a larger reciprocally-acting mosaic of members. Virtuoso players are required, but not in the traditional sense of an athletic display of numerous notes and complex rhythmic figures; instead there is a sort of 'static' virtuosity, calling for concentration, control of the most subtle oscillations in sound and the ability to interact with the other ensemble participants. A work is thus no longer the product of a solitary composer, but the result of a continuous exchange of ideas within the triangle of composer–performer–technician. At the end of his artistic pilgrimage, Nono was still as rigorous and tireless in his experimentation as at the start. He tackled head-on many of the most salient questions of musical language of his time, and in so doing, opened up new horizons in composing and listening. He occupies a position at the very forefront of 20th-century music.

WORKS

STAGE

Il mantello rosso (ballet, 3, T. Gsovsky, after F.G. Lorca), Berlin, 1954
Intolleranza 1960 (azione scenica, 2, after idea by A.M. Ripellino, various texts), Venice, 1961; rev. as Intolleranza 1970 (1, new scene with text by J. Karsunke), Florence, 1974
Die Ermittlung (incid music, P. Weiss), tape, Berlin, 1965, rev. as concert work Ricorda cosa ti hanno fatto in Auschwitz, 1966
Al gran sole carico d'amore (azione scenica, 2, Nono), 1972–4; Milan, 1975
Prometeo (tragedia dell'ascolto, M. Cacciari), 1981–4, Venice, 1984, rev. 1985
Also stage productions of various concert works

CONCERT WORKS WITHOUT ELECTRONICS

Variazioni canoniche sulla serie dell'op.41 di A. Schönberg, chbr orch, 1950
Composizione no.1, orch, 1951
Polifonica – monodia – ritmica, fl, cl, b cl, sax, hn, pf, perc, 1951
Tre epitaffi per Federico García Lorca, 1951–3: 1. España en el corazón (García Lorca, P. Neruda), S, Bar, small chorus, insts; 2. Y su sangre ya viene cantando, fl, chbr orch; 3. Memento: romance de la guardia civil española (Lorca), spkr, speaking chorus, chorus, orch
Due espressioni, orch, 1953
Il mantello rosso, suite no.2, orch, 1953 [after ballet]
Il mantello rosso, suite no.1, S, B, chorus, orch, 1954 [after ballet]
Liebeslied (Nono), chorus, insts, 1954
La victoire de Guernica (P. Eluard), chorus, orch, 1954
Musica da scena per William Shakespeare: Was ihr wollt, fl, cl, tpt, gui, perc, 1954, unpubd
Canti per 13, 13 insts, 1954–5
Incontri, 24 insts, 1955
Il canto sospeso (letters of Resistance fighters), S, Mez, T, chorus, orch, 1955–6
Varianti, vn, ww, str, 1957
La terra e la compagna (C. Pavese), S, T, chorus, insts, 1957–8
Cori di Didone (G. Ungaretti), chorus, perc, 1958
Piccola gala notturna veneziana in onore dei 60 anni di Heinrich Strobel, 14 insts, 1958, unpubd
Composizione no.2 (Diario polacco '58), orch, 1958–9
Ha venido: canciones para Silvia (A. Machado), S, 6 female vv, 1960
Intolleranza 1960, suite, S, chorus, live or recorded orch, 1969
Sarà dolce tacere (Pavese), 8 solo vv, 1960
Canti di vita e d'amore: sul ponte di Hiroshima, 1962: 1. Sul ponte di Hiroshima (G. Anders), S, T, orch; 2. Djamila Boupachà (J.L. Pacheco), S; 3. Tu (Pavese), S, T, orch
Canciones a Guiomar (Machado), S, 6 female vv, insts, 1962–3
Da un diario italiano, 2 choruses, 1964
Voci destroying muros (various), 4 female vv, speaking vv, chorus, orch, 1970 [partly reworked in Ein Gespenst geht um in der Welt]
Ein Gespenst geht um in der Welt (K. Marx, C. Sanchez, H. Santamaría), S, chorus, orch, 1971
Siamo la gioventù del Vietnam (anon., G. Federici), unison vv, 1973
Fragmente–Stille, an Diotima, str qt, 1979–80
¿Donde estàs, hermano?, 2 S, Mex, A, 1982
A Carlo Scarpa architetto, ai suoi infiniti possibili, orch in micro-intervals, 1984
No hay caminos, hay que caminar . . . Andrej Tarkowskij, 7 inst groups, 1987
'Hay que caminar' soñando, 2 vn, 1989

CONCERT WORKS WITH TAPE

Omaggio a Emilio Vedova, tape, 1960
La fabbrica illuminata (G. Scabia, Pavese), Mez, tape, 1964
Ricorda cosa ti hanno fatto in Auschwitz, tape, 1966
A floresta è jovem e cheja de vida (G. Pirelli, etc.), S, 3 spkrs, cl, bronze sheets, tape, 1966
Per Bastiana Tai-Yang Cheng (L'oriente è rosso), orch, tape, 1967
Contrappunto dialettico alla mente, tape, 1967–8
Musica-manifesto no.1, 1968–9: 1. Un volto e del mare (Pavese), vv, tape; 2. Non consumiamo Marx, tape
Musiche per Manzù, tape, 1969
Y entonces comprendió (C. Falqui), 6 female vv, chorus, tape, elecs, 1969–70
Como una ola de fuerza y luz (J. Huasi), S, pf, orch, tape, 1971–2
Für Paul Dessau, tape, 1974
Notturni-albe, pf, tape, 1974–
. . . sofferte onde serene . . ., pf, tape, 1976
Frammenti da Al gran sole carico d'amore (Nono), 3 S, Mez, 2B, SATB, orch, tape, 1976
La lontananza nostalgica utopica futura, madrigale per più caminantes con Gidon Kremer, vn, tape

CONCERT WORKS WITH LIVE ELECTRONICS

Con Luigi Dallapiccola, 6 perc, live elecs, 1979
Das atmende Klarsein (R.M. Rilke), SATB, b fl, live elecs, 1981
Io, frammento dal Prometeo (M. Cacciari), 3 S, SATB, b fl, b cl, live elecs, 1981
Quando stanno morendo (Diario polacco no.2) (M. Cacciari, after C. Miłosz, E. Ady, V. Chlebnikov and B. Pasternak), 2 S, Mez, A, b fl, vc, live elecs, 1982
Omaggio a György Kurtág, A, fl, cl, tuba, live elecs, 1983, rev. 1986
Guai ai gelidi mostri (M. Cacciari), 2 A, va, vc, db, fl, cl, tuba, live elecs, 1983
A Pierre (Dell'azzurro silenzio, inquietum), cb fl, cb cl, live elecs, 1985
Risonanze erranti (Liederzyklus a Massimo Cacciari), Mez, fl, tuba, 5 perc, live elecs, 1986, rev. 1987

Caminates . . . Ayacucho (G. Bruno), Mez, fl, SATB, SATB, org, 3 inst groups, live elecs, 1986–7
Post-prae-ludium no.1 'per Donau [eschingen]', tuba, live elecs, 1987

MSS in Archivio Luigi Nono, Venice

GIANMARIO BORIO

Nonot [Nonat, Nonotte, Notot], **Joseph Waast Aubert** (*b* Arras, 12 Feb 1751; *d* Paris, 24 Aug 1840). French organist and composer. He exhibited great musical talent at an early age. His father, an engraver for Etats d'Artois, was against a musical career for his son, but while visiting Paris Joseph had the opportunity to play for the celebrated organist Leclerc, who was so impressed that he persuaded the father to allow Nonot to remain and study in Paris. Nonot later returned to Arras, where he was organist at St Géry from 1768 to 1783. During the Revolution he may have emigrated to England but later he was in France. Nonot is said to have excelled at accompanying from a full score and at improvising at the keyboard. It is likely that some of his later years were spent in Arras; one of his masses was performed in 1837 by the Philharmonic Society there.

WORKS

all published in Paris

ETHYL L. WILL

Non-quartal harmony. A term used to describe the harmonic syntax of some 15th-century music in which the vertical interval of a 4th does not appear except as a discord. Non-quartal style is common in three-part music of the generation from about 1450 to 1500, and may be seen as providing a strong contrast with the fauxbourdon style which is made up largely of parallel 6-3 chords (*see* FABURDEN and FAUXBOURDON).

While the elimination of vertical 4ths may be seen as a novel and revolutionary phenomenon in the second half of the 15th century, it is really a result of the contrapuntal ideals of the 14th- and 15th-century composer combined with the spread of the total ambitus. Fundamental to the music of this period is the counterpoint between the tenor and the discantus: these parts must always form a satisfactory whole, obeying the laws of discant as explained by the theorists. In any 15th-century music the contratenor can be taken away and the remainder is contrapuntally self-sufficient. So the tenor and the discantus could rest on the octave or 5th and move in parallel 6ths or 3rds. A vertical 4th, however, was a discord and could appear only between the contratenor and one of the other parts; if the contratenor lay above the tenor note it would inevitably often form a 4th with the discantus. But after 1450 composers began increasingly to keep the contratenor in a range below that of the tenor while retaining the basic discant relationship between tenor and discantus (ex.1). In such circumstances the contratenor

Ex.1 Du Fay: *Du tout m'estoie*, c1450

could not form a 4th with either part without producing a second-inversion triadic form – something that was unacceptable in 15th-century music. Essential vertical 4ths are therefore entirely absent. Such music consequently contains no first-inversion triads except in open position (e.g. at the cadence marked in bar 2 of ex.1).

In the 16th century three-part music became rarer and the importance of the contrapuntal self-sufficiency of the discantus–tenor duet was soon forgotten. But when Reese remarked that without the altus Isaac's *Innsbruck, ich muss dich lassen* 'would be entirely non-quartal' he meant simply that the discantus and the tenor retained their 15th-century relation.

DAVID FALLOWS

Noone, Jimmie [Jimmy] (*b* Cut Off, nr New Orleans, 23 April 1895; *d* Los Angeles, 19 April 1944). American jazz clarinettist and bandleader. After playing the guitar as a youth, he took up the clarinet at the age of 15. In 1913–14 he substituted for and then replaced Sidney Bechet in Freddie Keppard's band; later, with Buddy Petit, he led the Young Olympia Band (1916). Noone left New Orleans for Chicago in 1917 and toured the Midwest with Keppard's Creole Band until it broke up in spring 1918. After returning briefly to New Orleans, he left the city permanently in autumn 1918, travelling with King Oliver to Chicago, where they joined the band led by Bill Johnson at the Royal Gardens. Noone left the Royal Gardens in 1920 to join Doc Cook's Dreamland Orchestra, with which he played until 1926. During this period he recorded 20 sides for Gennett, Okeh and Columbia.

Noone's most important and influential period began in autumn 1926 when he took up residence at the Apex Club in Chicago. Here he led his own five-piece group, Jimmie Noone's Apex Club Orchestra, which eventually included Earl Hines on piano. With this group he made a classic series of recordings in 1928. During the 1930s, except for engagements in New York in 1931 and 1935, Noone remained in Chicago leading small groups at various clubs. In the early 1940s he was taken up by the New Orleans revival movement and joined Kid Ory, Zutty Singleton, Jack Teagarden and others in club jobs and recording sessions in San Francisco and Los Angeles. Shortly before his death, he joined an all-star revival band organized for Orson Welles's CBS variety show.

Noone, along with Bechet and Johnny Dodds, was one of the most significant New Orleans reed players, and a vital link between the older New Orleans style of clarinet playing and the Chicago swing manner. His musical style was influenced by his fellow African American teachers and colleagues in New Orleans, especially Bechet. Later, in Chicago, his formal study with Franz Schoepp, a classically trained clarinettist, helped give him a secure command of all three clarinet registers. His expressive performance of blue notes and solo breaks is nowhere better illustrated than in his four recordings on the Columbia label with Oliver's band from October 1923. His later Apex Club recordings of *I Know that you Know*, *Four or Five Times* and *Apex Blues* (all 1928, Voc.) set a new standard for post-New Orleans ensemble playing. These recordings use the New Orleans ensemble style with a revised orchestration: alto saxophone as lead instrument, clarinet providing embellishments and a three-piece rhythm section, with Hines often supplying a third independent line with his 'trumpet-style' right hand. In this role he sometimes improvised complicated contrapuntal melodies; especially impressive are the sumptuous-sounding, fast and clean arabesques that Noone wove in the clarinet's mid- to lower register.

RICHARD WANG

Noordsche balk (Dut.: 'Nordic beam'). The Dutch name for the various zithers of the Low Countries, either made of, or having the appearance of, the lengths of Scandinavian deal known as 'Nordic beams'. (For further information see H. Boone: 'De Hommel in de Lage Landen', *Brussels Museum of Musical Instruments Bulletin*, v, 1975; special issue, incl. Eng. and Fr. summaries. *See also* ZITHER.) □

Noordt [Noort, Noord, Oort, Oord]**, van.** Dutch family of musicians. It included Sybrand (bur. Amsterdam, 28 Dec 1654), schoolmaster and carillonneur in Amsterdam and the three discussed below.

(1) **Jacobus** [Jacob] **van Noordt** (*b c*1616; *d* 29 Dec 1680). Composer, flautist, organist, harpsichordist and carillonneur, son of Sybrand van Noordt. He was organist of Amsterdam's Nieuwezijdskapel (1639–52) and of the Oude Kerk (1652–79) after the death of Dirck Sweelinck. His daughter Johanna (*c*1648–66) was married in 1665 to the organist, carillonneur and composer Dirck Scholl. He is represented by nine recorder solos in the collection *'t Uitnement Kabinet*, ii (Amsterdam, 1649, 2/*c*1655).

(2) **Anthoni van Noordt** (*b c*1619; bur. Amsterdam, 23 March 1675). Composer and organist, brother of (1) Jacobus van Noordt. He was organist of the Nieuwezijdskapel at Amsterdam (1652–64) and of the Nieuwe Kerk there (1664–73). His only known works were printed in *Tabulatuur-boeck van psalmen en fantasyen* (Amsterdam, 1659; the only known copy is in *PL-Kj*; MS copy by A.G. Ritter, 1882, *NL-DHgm*; ed. in UVNM, xix, 1896, 3/1976; psalms only ed. P. Pidoux, Kassel, 1954). It contains ten psalm settings (nine with variations) and six fugal fantasias in the style of J.P. Sweelinck. These works show a mature technique and contrapuntal mastery and demonstrate that almost 40 years after his death the tradition founded by Sweelinck was still alive in the Netherlands and that it was not only his German pupils who carried it forward. The *Tabulatuur-boeck* is also important for its unusual notation: the notes to be played by the hands are distributed over two six-line staves (so-called Anglo-Dutch notation); with two exceptions the pedal notes are printed under the lower staff in German organ tablature.

(3) **Sybrandus** [Sybrand] **van Noordt** (bap. Amsterdam, 10 Aug 1659; bur. Amsterdam, 25 Feb 1705). Organist, harpsichordist and composer, son of (1) Jacobus van Noordt. He was organist of the Oude Kerk, Amsterdam (1679–92), and of the Grote Kerk, Haarlem (1692–4), where he was also carillonneur. He then returned to Amsterdam, where he assisted Claes Noorden and Jan Albert de Grave in the Amsterdam bell and gun foundry in or after 1694. His portrait was engraved in 1702 by Peter Schenck (not, as sometimes said, a brother of the composer Johannes Schenck). His only surviving compositions are a set of virtuoso *Sonate per il cimbalo appropriate al flauto & violino* (Amsterdam, *c*1701, 2/*c*1705/*R* as *Mêlange italien*). The first is for treble recorder and continuo (ed. W.H. Thijsse, Hilversum, n.d.; ed. R. Verhagen and J. Silvis, Amsterdam, 1978); the second, for violin and continuo, also appears as no.3, arranged for two violins; and the last is for harpsichord alone (ed. in W.H. Thijsse, *Oud-Nederlandsche speelmuziek*, xiv, The Hague, n.d.; ed. H. Brandts Buys, The Hague, n.d.). This sonata in an almost Vivaldian idiom, is the most interesting of the set, and the first solo harpsichord sonata composed in the Netherlands.

RANDALL H. TOLLEFSEN/JOHAN GISKES

Noorsaid, Irwan [Iwang] (*b* Jakarta, 26 July 1967). Indonesian composer and performer. After studying music at an early age with his father, the jazz trumpeter Said Kelana, he began piano lessons at the age of eight and jazz studies at fifteen. In the 1970s and 80s Noorsaid played in the well-known band run by his family, The Kids, and often gave piano recitals. In 1994 he formed an experimental jazz group named Sketsa ('Sketches'), in which elements of traditional Sundanese percussion music are placed in a jazz context.

Noorsaid's success in creating this new idiom signified the beginning of a new phase in the development of jazz in Indonesia, and contributed to his prominence in the Indonesian experimental jazz scene. With this group he has also collaborated with visual artists to create multimedia jazz performances. As well as his work with Sketsa, he has joined with Indonesian pop musicians to form Gelombang Putih ('White Wave'), an experimental group featuring music with an environmental theme.

FRANKI RADEN

Nopitsch, Christoph Friedrich Wilhelm (*b* Kirchensittenbach, nr Nuremberg, 4 Feb 1758; *d* Nördlingen, 22 May 1824). German composer and organist. As a youth he studied the organ, harpsichord and composition with several well-known musicians, including Johann Siebenkäs and G.W. Gruber (both in Nuremberg), Joseph Riepel (Regensburg), Eberhard Beck (Passau), and Georg Benda and Anton Schweitzer (both in Gotha). Although he was the youngest of the 18 applicants for the post of organist and music director in Nördlingen in 1781, he was awarded the position and remained there for the rest of his life. From 1800 he was also Kantor of the Nördlingen Gymnasium.

Nopitsch was praised by his contemporaries as an excellent organist and a gifted composer (Schubart; *GerberL*). He composed in many different genres, but few of his works were published. His lied collection (published in 1783) features works by Bürger and other well-known poets, but also includes two poems by Nopitsch himself; his lieder are short, strophic and often quite lyrical. A singing method, published in 1784, reflects his work as a teacher.

WORKS

Vocal: [18] Bürgers, Ramlers, Graf Stolbergs u.a. Gedichte in Musik gesetzt (Nördlingen, 1783); Klaggesang an mein Klavier auf die Nachricht von Minettens Tod (C.F.D. Schubart) (Augsburg, 1783); 1 lied in Musikalische Monatsschrift für Gesang und Klavier (Stuttgart, *c*1784); Ariette, 7vv, wind insts (Augsburg, *c*1790), cited in Mlynarczyk; Orat, 1787, cited in *GerberL*; Gesänge zum Papagoy (A. von Kotzebue), S, orch, *D-NL*; chorales, 4vv, added to Choralbuch, *NLk*; 1 lied, *Ngm*; comic op, cant., sacred pieces, cited in Nopitsch

RAYMOND A. BARR

Nor, Stephen. *See* NAU, STEPHEN.

Norbert, Frank. *See* SCHULTZE, NORBERT.

Norblin (de la Gourdaine), Louis (Pierre Martin) (*b* Warsaw, 2 Dec 1781; *d* Connantre, 14 July 1854). French cellist. He was the son of the French painter and engraver Norblin de la Gourdaine, who emigrated to Warsaw and married a Pole. Norblin went to Paris to enter the Conservatoire in 1798 and was awarded a *premier prix* when he graduated in 1803. He joined the orchestra of the Théâtre Italien in 1809; from 1811 to 1841 he was principal cellist of the Opéra. He succeeded Levasseur at the Conservatoire on 1 January 1824 and retired in 1846, being in turn succeeded by Franchomme.

Norblin had an equally high reputation as a quartet player and as a soloist. He was a member of the Baillot Quartet, and with Habeneck founded the Société des Concerts du Conservatoire in 1828. He taught many distinguished players including Chevillard and Franchomme, as well as one whose lesser ability as a player took him no further than the orchestra of the Opéra-Comique – Jacques Offenbach.

Norblin's son, Emile (*b* Paris, 2 April 1821; *d* Paris, 1880), studied with his father; he was a successful player, but chose teaching as his principal career.

LYNDA MACGREGOR

Norcombe (Nercom, Nercome, Nercum, Norcome, Nurcombe, Nurcome), **Daniel** (*b* ?1576; *d* Brussels, 1655). English composer and instrumentalist. No evidence has been found of Norcombe's birth in 1576 (see *DNB*), nor of John and Daniel Norcombe identified by Fellowes as lay clerks at St George's Chapel, Windsor. A 'Nurcombe' (no Christian name) was appointed minor canon at St George's before 1595; he was dead by 3 March 1624. Daniel Norcombe was appointed lutenist to Christian IV of Denmark in 1599 with an annual salary of 350 daler, but in 1601 he fled from Copenhagen with an English colleague, John Maynard. Travelling through Germany and Hungary pursued by emissaries of the Danish king, they reached Venice. From 1602 until his death in 1655, Norcombe served the Archduke Albert in Brussels as a viol player. He composed numerous sets of divisions on various grounds, which circulated in England. Most are formed of two strains (the first ending away from the tonic) with a single division after each strain. *Cormacks Almane* and *Sir Thomas Brooks Pavin* (the latter anonymous but probably by Norcombe) are dances rather than grounds, but show the same pattern of divisions following each strain. The fine madrigal *With angels face* in *The Triumphes of Oriana* (RISM 1601[16]) may be by the elder (Daniel) Norcombe.

ANDREW ASHBEE

Nordal, Jón (*b* Reykjavík, 6 March 1926). Icelandic composer, pianist and teacher. He studied theory with Victor Urbancic (1940–45) and later enrolled at the Reykjavík College of Music, where he studied the piano with Árni Kristjánsson and composition with Urbancic and Jón Thórarinsson. After graduating in 1949, he continued his studies at the Zürich Conservatory with Walter Frey (piano) and Willy Burkhard (composition). He also studied in Paris and Rome, and participated in the summer courses at Darmstadt (1956–7).

In 1957 he became a teacher of piano and theory at the Reykjavík School of Music. He was appointed principal of the school in 1959, and held the post until 1992. In 1959 he also co-founded the group Musica Nova, and served as its first chairman. He was elected a member of the Royal Swedish Academy in 1968. He was made a Knight of the Order of the Falcon in 1978 and a Grand Knight in 1993.

Despite his relatively small output, Nordal is widely considered to be one of the most important Icelandic composers of his generation. His earliest works, including the suite *Systur í Garðshorni* ('The Sisters of Garðshorn', written at the age of 19), are in a tuneful, nationalistic style. The works composed under the tutelage of Thórarinsson in the late 1940s show the influence of Hindemith (Concerto for Orchestra). During his years of study on the continent, serialism became a prevalent feature of his style, and in the orchestral *Brotaspil* ('Play of Fragments', 1962), he used serial methods to determine both pitch and (to a certain degree) rhythm. The work's unsuccessful reception led to a radical rethinking of his musical language, and a rejection of strict serial techniques. Four years later, he re-emerged with the Adagio for flute, piano, harp and strings; its combination of free atonality and pensive lyricism marks it as the first work of his mature style.

Although he can scarcely be described as a nationalist composer, Nordal's occasional use of parallel 5ths reminiscent of Icelandic *tvísöngur* marks several of his works with a national stamp. A rare use of actual folk material occurs in *Choralis* (commissioned by Rostropovich and the National SO, Washington), which quotes the enigmatic *Lilja*, a well-known Icelandic folksong. His pensive musical language rarely gives much occasion for virtuosity or brilliant effects. In his Cello Concerto (1983), the lyrical qualities of the solo instrument and strings are contrasted with occasional agitated outbursts of brass and percussion.

Since the early 1980s, his output has been dominated by choral and chamber works, all of which show an increasing depth of expressive content. His choral works, often characterized by slow-moving homophony and

harmonies based on root position triads with added pitches (most often major or minor 2nds), have been particularly successful. *Óttusöngvar á vori* ('Matins in Spring') adds settings of medieval and modern Icelandic poetry as a framework for its mass movements (Kyrie, Sanctus, Agnus Dei), while the Requiem is a deeply felt, elegiac setting (which sets only the Introitus). His particularly successful string quartet (1996–7) consists of a central scherzo section (marked by percussive homophony and irregular metric groupings) framed by extended slow movements in the introspective vein so characteristic of the composer.

ÁRNI HEIMIR INGÓLFSSON

Nordblom, Johan Erik (*b* Uppsala, 13 April 1788; *d* Uppsala, 26 Dec 1848). Swedish singer, teacher and composer. In Uppsala he was a pupil of J.C.F. Haeffner, whom he succeeded both as *director musices* of the university orchestra and as organist of the cathedral. However, he preferred to work in Stockholm, where he often sang at concerts as a bass soloist and where he also taught singing. His singing tutor (1836–40) was used in all the Swedish secondary schools. His instrumental works have remained unpublished, but his solo songs and songs for men's chorus (e.g. *Härliga land*) were greatly admired. He became a member of the Swedish Royal Academy of Music in 1827. His daughter Johanna Maria (1827–1909) was also a distinguished singer; she married the composer P.A. Ölander.

FOLKE BOHLIN

Nordenstrom, Gladys (Mercedes) (*b* Pokegama Township, MN, 23 May 1924). American composer. She studied singing, the trumpet and the piano before enrolling at Hamline University in St Paul, where she studied composition with Krenek (BA 1946, MA 1947). In the summer of 1946 she also studied philosophy and literature at the University of Minnesota. She married Krenek in 1950 and moved with him to Los Angeles; they settled in Palm Springs in 1966. She composed independently of him, though they discussed the texts of their vocal works in detail. Her compositions are all atonal and highly expressionistic. Her *El Greco phantasie* (1965) is a strict 12-note work in which the row is constantly rotated, while the spirit of Webern informs the tightly knit and intense *Elegy for Robert F. Kennedy* (1968) and *Work for Orchestra no.3* (1975). Electronic sounds are combined with organ in *Signals from Nowhere* (1973). She has received several commissions and her works have been performed in America and Europe.

GARRETT BOWLES

Nordentoft, Anders (*b* 1957). Danish composer. He studied composition at the Royal Danish Academy of Music in Copenhagen with Nørholm and Abrahamsen, and also studied with Nørgård in Århus. In addition he has received a diploma in the violin from the Royal Danish Academy of Music. His breakthrough came with the work for chamber orchestra *Entgegen* (1985). With the setting of texts by Sylvia Plath, in *The Shadow of this Lip …* for soprano, violin and piano (1988–90), he began to write more melodiously. This has gradually led to a more lyrical tone, which seeks delicate sensations and shimmering progressions. He has said that he aims to write music which is 'both fantastic and ordinary. … My music is not concerned with idyll vis-à-vis disasters, or with absolute blackness vis-à-vis jubilation. Rather it explores the moderate but also expressive and infinitely faceted universe of friendship'. This aesthetic is found in the cello concerto *Sweet Kindness* (1996), *Distant Night Ship* (1996) for orchestra and the ensemble work *Hymne* (1996). His musical idiom no longer works on the basis of polarized quantities, as his works of the latter half of the 1980s had done. In *The City of Threads* (1994), *Zenevera sesio* (1992) and *Hymne*, Nordentoft, who is primarily a composer of instrumental music, works with two time elements: one he calls 'nutid' (the present), expressed in the melodic movement which propels the

music; the other is a kind of 'evig-tid' (eternity), which in *Zenevera sesio* is expressed through the flowing movements of the strings, in *Hymne* through a constant circling around individual notes, and in *The City of Threads* it is the repeated note and the sustained sound of the closing that expresses this element of 'evig-tid' which here represents the unchangeable in man.

His works have received increasing interest from outside Denmark. Several of his works have been conducted by Oliver Knussen, and Nordentoft has received commissions from such ensembles as Capricorn, the London Sinfonietta and the Joachim Piano Trio.

WORKS

Orch: 4 Songs (K. Sørensen), Mez, orch/pf, 1980; Born, 1986; Distant Night Ship, 1996

ANDERS BEYER

Nordgren, Pehr Henrik (*b* Saltvik, 19 Jan 1944). Finnish composer. He graduated in musicology from the University of Helsinki in 1967, continuing as a research assistant (1965–70). He studied composition privately with Kokkonen (1965–9) and at Tokyo University of the Arts with Yoshio Hasegawa (1970–73). Since then he has been active at Kaustinen, composing his chief works for the Ostrobothnian Chamber Orchestra.

Despite sporadic use of 12-note technique, Nordgren is strongly pluralistic in style. In his earliest works (Agnus Dei, 1970, *The Turning Point*, 1972) he claims he used 'a melodic-polyphonic cluster technique' akin to Ligeti's, but in later works, too, he has reverted to a texture made up of many strands (Cello Concerto no.1, *TRANSE-CHORAL*, Symphony no.2). This texture is a contrast to the allusions he creates of, for example, 'pure' triads and folk music elements. His 'kaleidoscopic' art of combining styles is strongest in the First Symphony. A Japanese element can be sensed in *Kymmenen balladia japanilaisiin kauhutarinoihin* ('10 Ballads to Japanese Ghost Stories') and the works for traditional Japanese instruments (*Autumnal Concerto*, 2 quartets). In them Nordgren does not, however, use Asian melodic motifs, since he does not tend to borrow timbres (i.e. instruments) and constructions at the same time. Nor is folk melody quoted in *Taivaanvalot* ('The Lights of Heaven'), scored for ethnic instruments ranging from a *kantele* to goat's horns. By contrast, the piano concerto, in connection with which Nordgren began to speak of the 'Deus ex machina effect' of pure triads, imitates both the *kantele* and the Oriental pentatonic. In addition to the cantata *Beavi, áhçázan* ('The Sun, My Father') on Sami themes, the opera *Den svarta munken* ('The Black Monk') and the TV opera *Alex* are among Nordgren's main works. The texture grows thinner and polyphonic in *Pelimannimuotokuvia* ('Portraits of Country Fiddlers') and the Symphony for Strings, the fiddlers' themes becoming less prominent and the style eventually becoming more uniform. In the 1980s folk music appears in Nordgren's compositions again and again, this time in weighty chorales woven to form a dense texture (Violin Concerto no.3, Concerto for Strings, Cello Concerto no.2). New music techniques hold little appeal for Nordgren, the overall impression of whose music is intensive and intimate and, especially in the later works of repetitive texture (String Quartets nos.4 and 5), elegiac and melancholy.

MIKKO HEINIÖ

Nordheim, Arne (*b* Larvik, 20 June 1931). Norwegian composer. He started out as an organ and theory student at the Oslo Conservatory (1948–52), but later turned to composition, studying with Karl Andersen, Bjarne Brustad, Conrad Baden and Holmboe. He also studied *musique concrète* in Paris (1955) and electronic music in Bilthoven

(1959). Nordheim was one of Norway's first composers to turn towards postwar modernism, and he is among the most internationally recognized. His honours include the Nordic Council Music Prize for *Eco* in 1972, Italia Prize for *The Descent* in 1980, the Honorary Prize of the Norwegian Cultural Council in 1990, and the Henrich Steffens Prize (Hamburg) in 1993. He has also played an important organizational role in Norwegian musical life as a member of a number of organizing committees and councils; in 1997 he was elected an honorary member of the ISCM.

Although Nordheim draws strongly upon contemporary compositional techniques, he is also influenced by earlier music. His link with tradition is evident not least in the dominent existential themes of solitude, death, love, and landscape – themes already present in the early song cycle *Aftonland* (1959), a setting of poems by Pär Lagerkvist, which brought him national recognition. But this work also points ahead toward the new sonorities and free atonal style which were to dominate his works in the 1960s and early 1970s. The orchestral *Canzona* (1961) announced Nordheim internationally, and is representative of his more radical, mature style. It draws inspiration from Giovanni Gabrieli's *canzone*, employing space as an independent parameter in the wandering movements of motifs across the orchestra. Another notable work from this period, perhaps Nordheim's most avant-garde composition, is *Eco* (1968), a monumental oratorio of human suffering, which uses poems by Salvatore Quasimodo. As so often this work is highly expressive, playing on dramatic contrasts between extended soprano solo lines and sonorous blocks in the choirs and instrumental ensemble.

In the 1960s Nordheim devoted much of his attention to electronic music, one of the first in Scandinavia to do so. He would often combine acoustic sources with electronics, as in the masterly *Epitaffio* (1963) for orchestra and tape, which fully demonstrates his refined sense of tone colour. The orchestral sound, dominated by metallic percussion instruments and clusters of 'light and dark at the same time', is inspired by electronic sonorities, and vice versa. The transition between the two media is almost imperceptible, the orchestra at one stage cross-faded with an electronically processed choral version of Quasimodo's poem *Ed è sùbito sera*. Nordheim's orchestral cluster technique is related to the Polish School of Lutosławski and Penderecki, and his Polish orientation also led to his frequent visits, between 1967 and 1972, to the Studio Eksperymentalne of Polish Radio in Warsaw, where many of his most important electronic works – among them *Solitaire*, *Pace* and *Lux et tenebrae (Poly-Poly)* – were realized. The common denominator of these compositions is the human voice, which is often radically transformed electronically.

Musical time is another major issue addressed in Nordheim's electro-acoustic experiments. In *Lux et tenebrae*, for example, six sound-structures of different length are superimposed, the layers continually being displaced in relation to each other. In *Floating* (1970) Nordheim transferred this idea to the orchestral medium, the slowly evolving constellations of motifs producing a simultaneous sensation of stasis and development. Later works, such as the important ballet *The Tempest* (1979), vary this technique by layering different tempos. *The Tempest* is typical of the works of the late 1970s and early 1980s, in which vocal compositions predominate, some closely related. In particular *Doria*, *The Tempest*, *Tempora noctis*, *The Descent*, *Aurora* and *Wirklicher Wald* have a distinct neo-romantic tendency. However, the earlier neo-expressionistic sonorous masses are still present, if in a background role. Since the early 1980s Nordheim has also composed a number of works for small and large orchestra – such as *Tenebrae*, *Boomerang*, *Monolith* and the Violin Concerto – in which he again draws on expressionism, as well as employing contrapuntal and canonic techniques to build up sonorous blocks. While these procedures in the early 1970s led to massive textures, in which the individual parts tended to melt together, their later usage tends to be more restrained, the music more transparent and melodically distinct. Furthermore, in those works which feature a solo instrument, the melodic component is enhanced by dialogue between soloist and ensemble.

Nordheim has gradually established a position as Norway's 'national composer', since 1982 living in Grotten, the honorary residence of the Norwegian state. This role has led to celebratory works, such as music for the opening of the 1994 Winter Olympic Games in Lillehammer. For the same event he composed *Draumkvedet*, based on a medieval Norwegian epic poem, while to mark the millennium of the city of Trondheim in 1997, his towering oratorio *Nidaros* was given its première in Trondheim Cathedral.

HALLGJERD AKSNES

Nordheimer. Canadian firm of music publishers, dealers and piano manufacturers. It was established by Abraham and Samuel Nordheimer, who, having emigrated from Germany to New York in 1839, opened a music shop in Kingston in 1842 and moved to Toronto in June 1844. By 1845 they had issued Joseph Labitzky's *The Dublin Waltzes*, the earliest engraved sheet music in Canada. Despite provision for copyright protection under Canadian law, many of the firm's early publications were engraved in New York and registered there by agents; Nordheimer did not choose to begin registering works in Canada until 1859. That year the firm became the only Canadian member of the Board of Music Trade of the USA, and nearly 300 of its publications were included in the Board's catalogue (1870).

A. & S. Nordheimer, as the company was first known, issued the usual reprints of popular European songs and piano pieces, as well as new works by such Canadian residents as J.P. Clarke, Crozier, Hecht, Lazare, Schallehn and Strathy. Publications registered between 1846 and 1851 include plate numbers, but there is evidence that they were added to the plates after the first issue. Numbering resumed in the 1880s and continued after the firm changed its name, to Nordheimer Piano & Music Co., in 1898. But the highest numbers of both sequences do not even approach the number of publications issued between 1845 and 1927, of which about a thousand have been located. Nordheimer was by far the largest music publishing firm in 19th-century Canada.

Nordheimer began its piano operations in about 1845 as agents for US piano manufacturers including Stodart & Dunham in New York and Chickering in Boston. It established its own factory in 1890 and produced upright and grand pianos of high quality – 21,500 by 1927 when the business was taken over by Heintzmann & Co., which kept the Nordheimer name for some styles until 1960.

After Abraham's death in 1862, Samuel was president of the firm until 1912, succeeded by his nephew Albert who retired in 1927. Branches were established at various times in Hamilton, London, Ottawa, St Catharine's, Montreal, Quebec and Winnipeg. The Nordheimers were active also as impresarios, opening concert halls in Montreal and Toronto.

MARIA CALDERISI

Nordica [Norton], **Lillian** [Lilian] (*b* Farmington, ME, 12 May 1857; *d* Batavia, Java [now Jakarta, Indonesia], 10 May 1914). American soprano. She studied with John O'Neill at the New England Conservatory, graduating in 1876. Engaged by Patrick Gilmore, she made her concert début with his band (September 1876), then toured America – and, in 1878, Europe – with the ensemble; her London début was at the Crystal Palace (21 May 1878). She left Gilmore to study with Sangiovanni in Milan; he coined her stage name and arranged for her operatic débuts – as Donna Elvira in *Don Giovanni* (Teatro Manzoni, Milan, March 1879) and as Violetta (Teatro Guillaume, Brescia, April 1879). She sang in St Petersburg (1880–82) and continued summertime studies in Paris with Sbriglia; she also studied Marguerite (*Faust*) and Ophelia (*Hamlet*) with Gounod and Thomas, making her

Lillian Nordica as Cherubino in Mozart's 'Le nozze di Figaro', Act 1

Paris Opéra début in the former role (22 July 1882). In 1882 she married Frederick Gower, who disappeared three years later in the midst of their divorce proceedings. Nordica's American operatic début, as Lillian Norton-Gower, was at the New York Academy of Music as Marguerite (26 November 1883). It marked the beginning of a long association with Mapleson, with whose company she also made her Covent Garden début (12 March 1887).

Nordica subsequently sang at Drury Lane (1887), Covent Garden (1888–93) and the Metropolitan Opera, where she made her début as Leonora in *Il trovatore* (27 March 1890). In the 1890s she turned her attention to Wagner. After extensive coaching by Cosima Wagner, she sang Elsa in the first production of *Lohengrin* at Bayreuth in 1894. At the height of her Metropolitan Opera career (1893–1907) she was known primarily as a Wagnerian. In 1896 she married a Hungarian tenor, Zoltan Dome, whom she divorced in 1904. Between 1897 and 1908 she sang at the Metropolitan and with the Damrosch-Ellis Company (1897–8), at Covent Garden (1898, 1899, 1902), and with Hammerstein's Manhattan Opera Company (1907–8). From 1908 Nordica devoted herself to concert performances; her final appearance with the Metropolitan was in December 1909. That year she married George Washington Young; they lived in Ardsley-on-the-Hudson, New York. Nordica's final operatic appearance was in Boston (March 1913); shortly afterwards she embarked on a world concert tour. In December the steamer on which she was travelling struck a reef off New Guinea; Nordica contracted pneumonia, from which she later died.

Alhough not a strong actress, Nordica had a rich voice and a remarkable coloratura range. She knew 40 operatic roles in English, Italian, German, French and Russian. A resolute and shrewd – but also generally good-natured – individual, she owed her stature as a great Wagnerian soprano to hard work, constant study and determination. Late in her career she became a strong proponent of opera in English; she was also an ardent suffragist and had an unfulfilled dream of establishing a Bayreuth-like American Institute for Music.

KATHERINE K. PRESTON

Nordiska Musikförlaget. Swedish music publishing and retailing firm. It was founded in Stockholm in 1915 as a subsidiary of the Danish publishing house Hansen; the co-owner and director of the firm was Sven Scholander. From its inception the enterprise had both publishing and retailing interests and it is now a major company in both respects. As a publishing house Nordiska Musikförlaget has constantly worked in association with large European publishers such as Peters and Sikorski, as well as its sister companies Hansen (Copenhagen), Norsk Musikforlag (Oslo), Chester (London) and Wilhelmiana (Frankfurt); it is a representative for the orchestral music of Universal Edition, Ricordi, Schirmer and other firms.

In its publishing and promotion of Swedish and Scandinavian composers Nordiska Musikförlaget has had a considerable influence on Swedish musical life. The catalogue includes works by Stenhammar, Rangström, Nystroem and Hilding Rosenberg; during the 1960s and 70s the firm began to publish the works of Pettersson, Bäck, Hemberg, Werle, Lars Edlund, Bo Nilsson, Morthenson, Sven-David Sandström and many others. It also issues a substantial amount of educational music and popular music. In 1988 the firm was taken over by Music Sales, then sold to Fazer of Helsinki which was itself acquired by Warner Music International in 1993.

INGER GUSTAVSSON

Nordisk Copyright Bureau [NCB]. *See* COPYRIGHT, §VI (under Denmark).

Nordmann, Marielle (Isabelle) (*b* Montpellier, 24 Jan 1941). French harpist. In 1958 she graduated from the Paris Conservatoire harp class of Lily Laskine, with whom she later toured and recorded as a harp duo. Her enthusiastic advocacy of the works of Elias Parish Alvars led to first performances in France of his op.91 (Cannes, 1985) and op.98 (Besançon, 1989) concertos, and a subsequent CD recording with the Strasbourg PO. In the late 1990s her concern with popularizing the harp led to tours with her successful multimedia presentation *La Harpe Apprivoisée*, and since 1995 she has organized annual Journées de la Harpe at Arles. Marielle Nordmann was appointed Chevalier des Arts et des Lettres in 1996, and a Chevalier of the Légion d'Honneur in 1998.

ANN GRIFFITHS

Nordoff, Paul (*b* Philadelphia, 4 June 1909; *d* Herdecke, North Rhine-Westphalia, 18 Jan 1977). American composer and music therapist. He studied the piano with Samaroff at the Philadelphia Conservatory (BM 1927, MM 1932) and composition with Goldmark at the Juilliard School. In 1960 he received the degree of Bachelor of Music Therapy from Combs College. He was head of composition at the Philadelphia Conservatory (1938–43), a teacher at Michigan State College (1945–9) and professor of music at Bard College (1948–59). Among the awards he received were two Guggenheim Fellowships (1933, 1935) and a Pulitzer Music Scholarship. Nordorff was a crusader for the newer trends in contemporary music, but his own style remained tonal, consonant and lyrically Romantic. Until 1959 he was a 'conventional' composer; thereafter he devoted his attention to music therapy for handicapped children, a discipline whose theory and practice he established in the USA.

RUTH C. FRIEDBERG

Nordqvist, (Johan) Conrad (*b* Vänersborg, 11 April 1840; *d* Charlottenlund, 16 April 1920). Swedish conductor, organist and composer. After beginning his career as a military musician, he studied at the Swedish Royal Academy of Music. From 1859 he worked as a viola player (later violinist) in the Hovkapellet (opera orchestra), advancing to chorus master in 1876. He was appointed court conductor in 1885 and first court conductor in 1892. From 1888 to 1892 he was also director of the Royal Opera and was instrumental in saving it from financial ruin during the 1880s. Among his other posts were those of military music director of the Jönköping regiment (1864–74), organist at the Storkyrka in Stockholm (from 1875) and conductor of the Stockholm Musikförening (1886–9). He was a music teacher at two Stockholm schools, and he taught harmony at the conservatory (1870–72, 1880–1900) and ensemble and orchestral playing (1910–16).

As a composer of theatre and ballet music, piano pieces, band music and other occasional pieces Nordqvist was of slight importance, although his funeral march for Karl XV (1872) is well known. His work as a conductor, with particular success in Mozart and French *opéra comique*, and as director of the Royal Opera, made him one of the central figures in the Swedish musical life of his time. He was elected a member of the Swedish Royal Academy of Music in 1870.

ANDERS LÖNN

Nordqvist, Gustaf (Lazarus) (*b* Stockholm, 12 Feb 1886; *d* Stockholm, 28 Jan 1949). Swedish composer and organist. He studied the organ, the piano and composition at the Stockholm Conservatory (1901–10) and was a pupil of Willner in Berlin (1913). He was organist of the Adolf Fredrik Church, Stockholm (1914–49) and principal organ teacher at Wohlfart's music school (1926–49). From 1925 until his death he also taught harmony at the conservatory, where in 1944 he was appointed professor. His best-known works are among the *c*200 solo songs, in a lyrical and moderate late Romantic style; he also composed cantatas and other choral works, religious music, a violin sonata and pieces for the piano and organ.

ANDERS LÖNN

Nordraak [Nordraach], **Rikard** (*b* Christiania [now Oslo], 12 June 1842; *d* Berlin, 20 March 1866). Norwegian composer. As a child he studied with Herman Neupert, a music dealer and publisher, and composed some little piano pieces. His father intended him to become a businessman and at 15 he was sent to Copenhagen for training; however, he was able to take lessons from the Danish singer and composer C.L. Gerlach, and in 1859 continued his studies in Berlin, where he became a pupil of Theodor Kullak (piano) and Friedrich Kiel (composition). After only six months he had to return to Christiania, where he studied for two years under Rudolph Magnus; during this period he became a member of the Nye Norske Selskab (New Norwegian Society), where he met L.M. Lindeman and Ole Bull, and came under the influence of the new national movement in art and literature. His op.1, four dances for piano, was published at this time.

In 1861 Nordraak returned to Berlin and his former teachers and worked there for two years. In 1864 he went to Copenhagen, where, with Grieg, C.F.E. Horneman and Gottfred Matthison-Hansen, he founded the music society Euterpe, whose aim was to perform works by young Scandinavian composers. At this time several of Nordraak's works (some with texts by his cousin Bjørnstjerne Bjørnson) were published: *Romancer og sange* op.1*a*, *Fem sange* ('Five Songs') op.2, the incidental music for Bjørnson's *Maria Stuart i Skotland* and the Norwegian national anthem *Ja, vi elsker dette landet* ('Yes, we Love this Land'), which was first sung on 17 May 1864, Norway's national day, and quickly became a popular favourite. He went to Berlin again in 1865 and spent the rest of his short life there.

Nordraak's importance in Norwegian music history lies mainly in the strong national fervour, the love of Norwegian folk music, and the passionate belief in the future of Norwegian music which he was able to generate in his contemporaries, especially his friend Grieg. Grieg, who composed a funeral march to Nordraak's memory, wrote about their first meeting:

> I will never forget this impression. Suddenly it seemed as if a mist fell from my eyes and I knew what I wanted. It was not exactly the same as what Nordraak wanted, but I believe the way to myself went through him.

In his short lifetime Nordraak's compositions were necessarily few; according to Grinde:

> it was only natural that some of them bore the marks of an inexperienced composer. All the same, his best works bear witness to an astonishing maturity and indicate that his artistic personality was already clearly defined. Of Grieg's contemporaries he is the only one whose style is independent of Grieg's. He had not only developed more quickly than Grieg, but in an entirely different direction.

Nordraak's music is simple: his melodies are usually diatonic, sometimes based on triads; his harmonic language is artfully economical. What he sought was purity and clarity, not complexity of sound or effect. His direct approach is perhaps most evident in the songs, whose form is nearly always strophic, with the piano accompaniment playing a subordinate role.

KARI MICHELSEN

Norena, Eidé [Hansen-Eidé (neé Hansen), Kaja Andrea Karoline] (*b* Horton, nr Oslo, 26 April 1884; *d* Lausanne, 19 Nov 1968). Norwegian soprano. She studied with Ellen Gulbranson in Oslo, where she made her début as Cupid (Gluck's *Orfeo*) in 1907. She sang at the Nationale Theater in Oslo (1908–18) and then at the Swedish Royal Opera, Stockholm; in 1924 she was engaged to sing Gilda at La Scala. She first appeared at Covent Garden in 1924 and was a regular visitor to London where her Desdemona (1937) was especially distinguished. At the Paris Opéra (1925–37), her roles included the Queen of Shemakha (*The Golden Cockerel*), Marguerite de Valois (*Les Huguenots*), Mathilde (*Guillaume Tell*) and Ophelia (*Hamlet*). Norena sang at the Metropolitan (1933–8), making her début as Mimì, and also in Vichy and Monte Carlo, where her Marguerite de Valois and Juliette were much admired. In Amsterdam she sang the three heroines of *Les contes d'Hoffmann*. Her lovely voice, sincere feeling and restrained, impeccable style are preserved on recordings of her Violetta, Desdemona, Marguerite de Valois and Juliette. (*GV*; L. Riemans; R. Vegeto)

HAROLD ROSENTHAL/ALAN BLYTH

Nørgård, Per (*b* Gentofte, 1932). Danish composer and theorist. From the age of 17 Nørgård studied privately with Vagn Holmboe, later entering the Royal Danish Conservatory, Copenhagen, where he completed his studies with Holmboe and Høffding. He subsequently studied privately with Boulanger in 1957. He became active as a teacher in his own right in the late 1950s, with appointments at the Odense Conservatory in 1958 and at the Royal Danish Conservatory in 1960. In 1965 he left Copenhagen for the Århus Conservatory, where he established an important class in composition which attracted many of the leading Danish composers of the younger generation (including Abrahamsen, Rasmussen and Sørensen). He retired from the conservatory in 1994.

Nørgård came to prominence as a composer relatively early. His first acknowledged works, which he completed at the age of 19, are in a contrapuntal, freely chromatic tonality closely related to Holmboe's work of the period. By the time he composed Symphony no.1 'Sinfonia Austera' (1954), the influence of Holmboe had been

Per Nørgård

partly supplanted by that of Sibelius, whose later symphonies proved crucial to Nørgård's compositional development. In the mid-1950s Nørgård corresponded with Sibelius, dedicating his *Sånger från Aftonland* (1956) to the Finnish master. It was the sense of 'endless unfolding' in Sibelius's later music which was especially important to Nørgård, and this feeling is equally apparent in Nørgård's own symphony, where it complements the techniques of continuous metamorphosis that he had learnt from Holmboe. This symphony, along with *Konstellationer* (1958) for string orchestra, performed at the 1959 ISCM Festival, which also uses the metamorphosis technique, established Nørgård as the leading Danish composer of his generation. Around this time Nørgård described his main psychological stimulus as 'the universe of the Nordic frame of mind' – a concept he later admitted was rather nebulous, but which may be felt in the sonority as much as the form of the works of this period. Like Holmboe's *Sinfonia Boreale* (Symphony no.6), which he acknowledged as an important influence, Nørgård's works up to 1960 showed a distinct preference for a hard, clean, austere orchestration, even to the point of a certain roughness of texture and spacing. In any case his sonorities deliberately lack the warmth of those of mid-century French or Italian composers, favouring high and low registral extremes.

In 1960, together with his contemporaries Norhølm and Gudmundsen-Holmgreen, Nørgård attended the Cologne ISCM Festival, where he heard first performances of such pieces as Stockhausen's *Kontakte* and Kagel's *Anagramma*, in addition to pieces by Boulez and Berio. All three Danes were profoundly affected by what they heard, and their period of 'Nordic isolation' came to an abrupt end. Although Nørgård did not embark upon a period of total serialism, his music did suddenly branch out into a far more discontinuous and disjunct style, involving elements of strict organization in all parameters, some degree of aleatoricism and controlled improvisation, together with an interest in collage from other musics. The use of collage is at its most extreme in the opera *Labyrinten* ('The Labyrinth', 1963), and the ballet *Den unge mand skal giftes* ('The Young Man to be Married', 1964–8), works whose turbulent surface could not have been further from the objective contrapuntalism of the decade before. Nørgård's constructivist explorations culminated with the composition of *Fragment VI* (1959–61) for six orchestral groups, which won the Gaudeamus Prize in 1962. Though the work had clearly impressed a jury which included such figures as Stockhausen, Boulez and Krenek, Nørgård was disaffected with it, realizing that none of the precise calculation he had devised during its composition was perceptible to the listener, and promptly withdrew the piece from his official catalogue. He has since remained intensely sceptical of constructive compositional devices which bear no direct relationship to audible reality.

Nørgård's music underwent a further change in the mid- to late 1960s, with his increased preoccupation with the acoustical properties of sounds and their perception. Two large orchestral pieces from this time, *Luna* (1967) and *Iris* (1966–7), explore dense orchestral textures in a manner analogous to Ligeti's music from the same period, but with a far greater degree of consonance in the harmony, often deriving from the natural harmonics of the overtone series. The first movement of *Voyage into the Golden Screen* (1968–9) consists solely of two such overtone series, tuned a quarter-tone apart. This results in complex 'beats' between the closely adjacent frequencies, and its rich, slowly evolving texture, curiously similar to the music of Scelsi (whose music Nørgård did not know at that time) make it an important forerunner of the European SPECTRAL MUSIC of the 1970s and 80s.

The second movement of *Voyage* explores another form of gradual evolution derived from Nørgård's so-called 'infinity series', which he had discovered as early as 1959 and which was to prove crucial to his output in the 1970s (see Kullberg, 'Beyond Infinity', in Beyer, ed., 1996). The infinity series is organized such that it contains a number of replicas of itself, both in original and inverted forms. These replicas occur on different levels and (if the series is projected using equal note values) at different speeds. For example, taking every fourth note of the series gives the original series at a quarter speed, while taking the odd-numbered notes in the series gives the inversion of the series at half speed. Since it is evident that each of these forms will equally contain further similar magnifications of the series themselves, the series can be adjudged infinitely complex in its layering potential. In Nørgård's Second Symphony (1970), an extrapolation of the second movement of *Voyage* onto a duration of nearly half an hour, the entire pitch content is derived from the infinity series, with different layers of the orchestra assigned different magnifications of the series. For example, for much of the piece the horns play the original series at quarter speed, whilst the strings have much slower expansions, creating slow-moving drones. As in *Voyage*, the slowest speed is marked by the piano and bells, which play every 256th note, forming a very slow version of the original series in transposition. All of these layers operate in relation to (and in pitch unison with) the original series, which is played on the flutes in quavers.

For his Third Symphony, completed in 1975, Nørgård devised analogously infinite systems for harmony (based on the overtone series and its inversion, the undertone series) and for rhythm (based on the proportions of the golden section as unfolded in the Fibonacci series) to form a total musical system concerning every aspect of a work, from large-scale form to the smallest details. Nørgård himself calls this type of composing 'hierarchical', to signify its perpetual evolution in complementary, related layers, each of which represents augmented or diminished versions of each other in time. The results are surprisingly consonant, due to the emphasis on the overtone series, and at times sound close to conventional tonality. As if to acknowledge this, Nørgård includes in the coda to the symphony a complete quotation of Schubert's song *Du bist die Ruh'* as one strand in a typically multi-layered hierarchical texture. Nørgård stands very far removed, however, from the neo-romantic trends which sprang up in central Europe around this time: his aim is in no way nostalgic, even though he acknowledges as compositional tools the fullest range of harmonic and melodic types, from the most consonant and conjunct to the most dissonant and abrupt.

Nørgård's hierarchical period lasted until the end of the 1970s, with the opera *Siddharta* (1974–9), towards the end of which, for dramatic reasons, the harmony and order of this technique are dramatically destroyed. The music of the following decade was dominated by a return to greater overt disorder of texture and form, and a focus

on climates of great emotional and psychological instability. In part this may be attributed to Nørgård's encounter with the writings and paintings of the Swiss schizophrenic artist Adolf Wölfli, who was active in the first part of the century. Nørgård's fascination with this creative outsider produced a complete change in his style, in which an almost expressionist fondness for emotional extremes became the dominant feature, with ordered systems such as had characterized his previous music relegated to the background. His Fourth Symphony bears a subtitle from Wölfli, 'Indian Rose Garden and Chinese Witch's Lake'; its sharply polarized two-movement form typifies the twin extremes of the title, although elements from each movement penetrate the other. In addition to numerous smaller Wölfli-inspired pieces throughout the 1980s, Nørgård also composed a chamber opera, *The Divine Circus* (1982), which explores the artist's painful life-history in metaphorical form.

Although Nørgård has never returned to the extreme order of his infinite systems as an end in itself, he has in more recent compositions displayed a renewed concern for construction and patterning both in pitch and rhythm. His most prominent recent technical innovation is an elaborate set of melodic patterns he terms 'tone lakes', similar to the infinity row but working in several directions simultaneously. Elements from such a pattern form an important feature in the revolving bell-like permutations of *Tintinnabulary* (String Quartet no.6, 1986) and also feature as a central element in his most experimental work to date, the Fifth Symphony (1986–90). This ambitious single-movement work is perhaps the most daring Nørgård has yet attempted, a highly unpredictable and episodic set of apparently disconnected fragments which repeatedly run off either extreme of the orchestra's range into inaudibility. When these fragments finally cohere it is into one of the densest and most terrifying orchestral tuttis in his output, making passing reference to the turbulent conclusion of his First Symphony before vanishing suddenly into a final silence.

As he moved towards his eighth decade Nørgård's style remained in a state of evolution and change, prompted by his ceaselessly enquiring mind and his firm belief that composing must be an essentially exploratory activity. Meanwhile the overriding constant in his output remains his devotion to the Sibelian ideal of continuously unfolding melodic lines in simultaneous evolution and, along with that – despite his fondness for abrupt change and highly volatile forms – an easily identifiable lyrical gift which makes his style one of the most personal in contemporary music.

WORKS

DRAMATIC

Ops: Labyrinten [The Labyrinth] (B. Nørgård), 1963, Copenhagen, Royal Theatre, 2 Sept 1967; Gilgamesh (Nørgård), 1971–2, Århus, 4 May 1973; Siddharta (Nørgård and O. Sarvig), 1974–9, rev. 1983, Stockholm, 18 March 1983; Det guddommelige Tivoli [The Divine Circus] (Nørgård, after A. JULIAN ANDERSON

Norgate, Edward (*b* Cambridge, Feb 1581; *d* London, bur. 23 Dec 1650). English organist, heraldic artist and possibly instrument maker. He was the son of Robert Norgate (*d* 1587), Master of Corpus Christi College, Cambridge. Subsequently Norgate's mother married Nicholas Felton, later Bishop of Ely, in whose house he was brought up. Norgate went to London, where he served the king in numerous capacities.

In 1611 he was granted the office of tuner of the king's virginals, organs and other instruments jointly with Andrea Bassano until the latter's death in 1626. He is usually referred to as Keeper of the Organs, and payments were made to him for building a new organ at Richmond (£120 in 1639) and at various times between 1629 and 1641 for repairing the organs and virginals at other royal palaces. These payments may have been for arranging and overseeing the work rather than for carrying it out himself. During this period he held the post alone, but in 1642 it was granted jointly with his son Arthur, thereafter 'to the longer liver of them'. With the onset of the Civil War this arrangement had no practical consequences; but although Arthur survived the Restoration, the post passed to John Hingeston (2 July 1660).

Norgate was also reputed a fine organist. On 25 March 1646 Sir William Swann (an amateur musician living in Holland) wrote to Constantijn Huygens: 'yesterday wee have bin in our devotions ... in the presence of one Mr Northget, a great lover of musike and a verre good organist ... he is one of the kings servants, clarke of the signet office, and one of his May[tes] heraults, and verre well knowen to Mr Laynier'. He was made Windsor Herald (in 1633), and for most of his working life he was engaged in writing and illuminating royal patents, diplomatic correspondence and other documents. He travelled a good deal: to Brussels as an agent for the purpose of buying pictures for the queen's cabinet at Greenwich, and to Italy on a similar errand for the Earl of Arundel. His first wife, Judith Lanier (sister of Nicholas Lanier), must have died before 1619, for in that year he married Ursula

Brighouse. In May 1632 a warrant for an allowance of 15s. a day was made to Norgate towards 'the diet and lodging of Signior Antonio Van Dike and his servants, to begin from April 1st last' for the duration of Van Dyck's stay.

IAN SPINK

Nørholm, Ib (*b* Copenhagen, 24 Jan 1931). Danish composer. He began piano studies at the age of nine and organ lessons at the age of 15. In 1949 he composed a chamber opera based on Andersen's *Sneglen og rosenhaekken* ('The Snail and the Rose Tree'). In the following year he entered the Royal Danish Conservatory in Copenhagen, where he studied theory with Holmboe, history with Hjelmborg, and form and analysis with N.V. Bentzon and Høffding. Between 1954 and 1956 he completed examinations in theory and history, teaching, church music and organ performance. He was music critic for the Copenhagen newspaper *Information* (1956–64) and became assistant organist at Elsinore Cathedral in 1957. He began teaching part-time at the Copenhagen Conservatory in 1961. In 1964 he was appointed organist at the Bethlehems kirken, Copenhagen, and also teacher of theory and history at the conservatory in Odense, becoming later a lecturer there (1967–73). He was then appointed lecturer in theory at the Copenhagen Conservatory, and was professor of composition from 1981. He was head of the Danish section of the ISCM (1973–8, board member from the early 1960s) and a member of Statens Kunstfond (1971–4). Awards he has received include the Lange-Müller Stipendium, the Axel Agerbys Mindelegat, the Carl Nielsen Prize (1971) and the Anckerske Legat. He was knighted in 1981.

The earliest works by Nørholm, who achieved recognition with his Symphony no.1 op.10 (1956–8), were in the Danish lyrical and tonal tradition which evolved in the post-Nielsen modernist era. He began, however, to participate in the debate which arose between composers of the Danish tradition and those who wished to meet the challenge of the international avant garde. He joined the group of young Danes who, on Nørgård's initiative, met periodically from 1959 to analyse music by such composers as Boulez and Stockhausen. Together with other members of Nørgård's group, Nørholm attended the ISCM Festival in Cologne in 1960, an event which made a deep impact upon him. In 1960 and 1962 he also attended the international summer courses in Darmstadt. As a board member of the ISCM section, he was involved in the Fluxus festival in Copenhagen in 1962 which further impressed him.

These experiences led him to try out different techniques during the following decade: predetermined serialism (the 'tabular' Trio, 1959), structuralism and sonorism (*Fluctuations*, 1962, awarded the Gaudeamus Prize in 1964), graphic notation (*Relief II*, 1963), aleatory features and the use of extra-musical implements (*Directions: inconnue*, 1962–4, for solo violin with mechanical toys). This last was a preliminary study for the television opera *Invitation til skafottet* ('Invitation to a Beheading', 1965, broadcast 1967), based on Nabokov's novel; in its stylistic diversity it can be seen as the starting-point for Nørholm's 'pluralism' (or postmodernism, at a time when this term had not yet been coined). The work's librettist was Paul Borum, who for the following three decades was Nørholm's partner in the creation of several text-based compositions. With works like *Strofer og marker* ('Stanzas and Squares', 1965 and 1966) and *Flowers from the Flora of Danish Poetry* (1966) Nørholm became associated with the 'new simplicity' movement in Denmark at that time; the simplicity of the compositions was a reaction against the excessive intricacy of some avant-garde works. His string quartets from 1966, *From my Green Herbarium* and *September–October–November*, on the other hand, tended towards pluralism in their application of the collage principle to a blending of different styles.

In spite of its links with these fashionable trends, Nørholm's music maintained its personal touch of expression. His central work from 1971, the 55-minute-long Second Symphony *Isola bella*, commissioned and first performed by the Danish RSO, was a full-scale embodiment of Nørholm's experience that different stylistic expressions, contrary to later postmodern belief, were equally involving. Ranging from pure naivety to complex, avant-garde sophistication, they served as what Nørholm described as 'an experiment to create a whole musical life'. This was achieved not by the use of pastiche but by structural differentiation, involving an array of tonal techniques – ranging from use of the major/minor modes to dodecaphony – as immediately perceptible symbols of expression.

Similar utilization of stylistic diversity in a programmatic context is found in the two subsequent symphonies, *A Day's Nightmare* (1973), describing the 'general existential neurosis' of modern daily life, and *Modskabelse* ('Decreation', 1978–9), with solo vocalists and two choruses, based on texts by Borum on the genesis of man and the universe, and on the evolution of human knowledge. In this huge cantata, however, the obvious juxtaposition of styles is superseded as a formal principle by the use of strict procedures of construction. This had also been the case in works such as the chamber opera *Den unge park* ('The Young Park', 1970), in which the continuous conversation between schematically drawn characters is carried by a leitmotif technique in a contrapuntal setting. A similar technique is at play in the following opera, the *Garden Wall* (1976), whereas *Sandhedens Haevn* ('Truth's Revenge', 1985), after a marionette comedy by Blixen, is based mainly on intuitively created material.

This constant shifting between construction and intuition is the driving force in Nørholm's creativity, and is also a source of continuing renewal. Thus, while a personal stylistic synthesis based on what might be called 'integrated bitonality' is apparent in some works, for example the Violin Concerto (1971) or the Fifth and Ninth Symphonies (1980 and 1990 respectively), a more eclectic tendency is present in other compositions, especially the long series of works that continue the tradition of Danish vocal lyricism, from *Summer Sceneries* (1967) through to *Elverspejl* ('Elf's Mirror', 1996). The programmatic function of pluralism within a symphonic context, still prominent in the Sixth Symphony ('Moralities', 1981), has since then been replaced by the interplay between soloist and orchestral individuals, groups and tutti in the series of solo concertos (this was already inherent in the Second Symphony). Again, attempts at stylistic categorization are constantly undermined by

unexpected twists even within the smallest chamber pieces, such as the sudden use of a train whistle in the unprogrammatic piece for solo cello *In the Middle of Darkness* (1994), reminiscent of *Direction: inconnue* of 30 years earlier. In the programme note for his Seventh Symphony 'Ecliptic Instincts' (1982) Nørholm relates this continuing change of direction to 'the deep-rooted European restlessness, as an acceptable condition for our equally inexhaustible dynamism'.

WORKS

STAGE AND ORCHESTRAL

Operas: Sneglen of rosenhaekken [The Snail and the Rose Tree] (chbr op, after H.C. Andersen), 1949; Invitation til skafottet [Invitation to a Beheading] (TV op, P. Borum, after V. Nabokov), op.32, 1965, Danish Television, 1967; Den unge park [The Young Park] (chbr op, I. Christensen), op.48, 1969–70; The Garden Wall, op.68, 1976; Sandhedens Haevn [Truth's Revenge] (chbr op, J. Heiner, after K. Blixen), op.95, 1985

Orch: Theme and Variations, op.1, str, 1955; Sym. no.1, op.10, 1956–8; Fluctuations, op.2, 34 str, 2 hp, hpd, mand, gui, 1962; Relief I–II, op.27, 23 insts, 1963; Serenade to Cincinnatus, op.28, chbr orch, 1964; Exile, op.29a, 1964; Relief III, op.29b, 1964; After Icarus, suite, op.39, 1967; Isola bella (Sym. no.2), op.50, 1968–71; Vn Conc., op.60, 1971; A Day's Nightmare (Sym. no.3), 1973: Skyggen [The Shadow], suite, op.59, 1974; Heretisk hymne, op.62, 1975; Idylles d'Acopalypse, sinfonietta, op.79, org, orch, 1980; Elementerne [The Elements] (Sym. no.5), op.80, 1980; Moraliteter [Moralities] (Sym. no.6), op.85, 1981; Ekliptiske instinkter [Ecliptic Instincts] (Sym. no.7), op.88, 1982; Spirales, accdn conc., op.97; Sankornets topologi [Aspects of Sand and Simplicity], op.102, str; At Høre Andersen [Hearing Andersen], op.104, 1987; With Open Eyes, vn conc., op.109, 1989; Tro og Laengsel [Faith and Longing] (Sym. no.8), op.114, 1990; The Sun Garden in Three Shades of Light (Sym. no.9), op.116, 1990; Traernes skønhed og hvordan den opretholdes [The Beauty of the Trees and How To Maintain It] (Vn Conc. no.2), op.126, 1992–3; Va Conc., op.130, 1993–5; Galleri, Conc. for 2 Mar and Orch, op.133, 1994; Olympiade (Org Conc. no.2), op.142, 1996

VOCAL

Choral: 4 Songs, op.3a, 1955; 3 Madrigals (H. Rasmussen), op.11, 1957; St Olai Festival Versicles, op.20, solo vv, chorus, wind, orch, 1959; 3 Songs, op.21, male vv, 1959; Kenotafium (A. Pedersen), op.23, 1v, chorus, orch, 1961; Apocryphal Songs, op.24, 1v, chorus, insts, 1960; Sacrifice (Borum), op.34, 1966; Summer Sceneries (A. Oehlenschläger), op.40, solo vv, chorus, orch, 1967; 3 Songs (S. Kierkegård), op.46, male vv, 1969; Jongleurs-69, op.47, solo vv, chorus, loudspkr v, ensembles, orch, 1969; Light and Praise, op.55, solo vv, chorus, orch, 1971; Days' Nightmare I–II, opp.57–8, solo vv, chorus, orch, 1971; Songs, op.59, equal vv, 1971; Proprium Missa Dominicae Pentecoste, op.71, vv, 2 chorus, wind, orch; Modskabelse [Decreation] (Sym. no.4), op.76, vv, chorus, orch, 1978–9; Americana, op.89, chorus; Lux secunda, op.91, vv, chorus, orch, 1984; 8 Mini-Motetter, op.96, chorus; Øjet [The Eye], op.106, chorus; Guds Hus's Bjerg [The Mountain of God's House], op.112, chorus, 2 trbn, perc, org, 1990; Julesorgen og -glaeden [Sorrow and Joy of Christmas], op.117, chorus, 4 cym, org, 1991; Mine danske kilder [My Danish Wells], op.128, chorus, 1994; Fuglene [The Birds], op.129, fl, cl, vc, chorus, 1994; Danskerens natur [The Character of the Dane], op.132, 1996; Elverspejl [Elf's Mirror], op.141, solo vv, chorus, orch, 1996

Solo vocal: 3 Songs (Rasmussen), op.3b, S, pf, 1955; Salvum me fac, op.5, S, org, 1955; 3 Songs (R. Browning), op.6, 1955; 3 Songs (P. Lagerquist, V. Ekelund, E. Leino), op.8a, S, pf, 1956, orchd as op.8b; 3 Songs (Rasmussen), op.14b, pf, 1957; 3 Songs (Pedersen), op.30, Mez, 6 insts, 1965; Flowers from the Flora of Danish Poetry, op.36, 1v, pf, 1966; Tavole per Orfeo, op.42, Mez, gui, 1967–9; 5 Songs (Borum), op.44, S, gui, perc, 1968; 3 Songs, op.54, A, pf, 1971; 6 Songs (Borum), op.64, S, pf, 1975; 3 vinterimpressioner, op.75, Mez, pf, 1978; Lys, 5 digte af Inger Christensen [Light, 5 Poems by Inger Christiansen], op.78, S, fl, hp, perc, vc, 1979; Frase-Parafrase, 3 duets, op.81, S, T; Whispers of Heavenly Death, op.103, S, gui, 1987; Dybet og Lyset [Deep and Light], op.119, S, A, fl, org, 1991; Mac Moon Songs I, op.125, S, fl, perc, 1993; Tribut, op.138, reciter, vn, gui, 1995; Mac Moon II, S, cl, pf, 1995; Tell All the Truth (E. Dickinson), 5 songs, op.139, T, pf, 1995

CHAMBER AND INSTRUMENTAL

For chbr ens: In vere (Str Qt no.1), op.4, 1955; Trio, op.13, cl, vc, pf, 1957; Mosaic, op.15, fl, str trio, 1958; Music for Rec, op.16, rec ens, 1958; Pf Trio, op.22, 1959; 5 Impromptus (Str Qt no.2), op.31, 1965; From my Green Herbarium (Str Qt no.3), op.35, 1966; September–October–November (Str Qt no.4), op.38, 1966; Prelude to my Wintry Morning, op.52, fl, pf qt, 1971; Preludes to a Wind Quintet, op.53, wind qnt, 1971; Str Qt, op.65, 1976; De fynske katarakter [The Funen Cataracts], op.66, ob, cl, bn, vn, va, vc, db, pf, 1976; Contrast-Continuum, op.70, 4 fl, 1977; Conc. (Primus inter pares), op.72, va d'amore, 9 insts; Skygerne frosner [The Cladows Are Frostening], op.73, str qt, 1978; Essai prismatique (Trio no.2), op.77, vn, vc, pf, 1979; Modlyd [Backlight], op.82, fl, hp, va, 1980; Before Silence, 3 studies, op.83, 3 fl, 1980; Haven med stier der deler sig [The Garden with Paths that Separate], op.86, 8 insts, 1982; Purple to the People, op.90, ob, eng hn, trbn, va, vc, db, pf, perc, 1984; Den ortodokse drøm [The Orthodox Dream], op.92, fl, vc, hpd, 1984; En passant (Str Qt no.7), op.94, 1985; Lerchenborg akrostikon, op.98, S, str qt, 1986; A Touch of Mortality, op.99, ob, 4 vn, 2 va, vc, db; Essai réfléchi (Trio), op.100, cl, vc, pf, 1986–7; Medusa's Skygge [Medusa's Shadow], op.105, fl, va, vc, gui, 1987; Memories (Str Qt no.8), op.107, 1988; A Patchwork in Pink, op.109b, sax qt, pf, 1989; 2 studier og et intermezzo, op.113, 4 trbn, tuba, 1990; Øjeblikke [Moments], op.118, cl, tpt, vc, pf, 1991; Vejledning for den gyldne hamster [Instructions for the Golden Hamster], op.121, 4 tpt, 2 hn, 3 trbn, euphonium, tuba; Sax Qt, op.122, 1992; Tolv minutter af deres tid [12 Minutes of your Time], oktet, op.124, fl, cl, tpt, hp, pf, vn, va, vc, 1992–3; Ludite, op.135, rec, vn, gui, vc, 1994; Qt 9 'Hvad de spillede hos Waage Petersen, da Weyse var taget hjem' [What They Played at Waage Petersen's, after Weyse Went Home], op.137, str qt, 1994

For 1–2 insts: Rhapsody, op.2, va, pf, 1955; Tombeau, op.7, vc, pf, 1956; Sonata, op.12, vn, pf, 1956–7; Variants, op.19, vn, pf, 1959; Direction: inconnue, op.26, vn, toys, 1962–4; Sonata, op.41, accdn, 1967; Vignettes to the Little Prince, op.43a, fl, 1968; Suite, op.43b, fl, 1968; In Spring when Snow Is Falling, op.45, vc, perc, 1969; Theme and 5 Variations, op.61, vn, 1971; Controversies, op.63, gui, org, 1975; Sonata, op.69, gui, 1976; So to Say, op.74, fl, perc, 1978; Immanens, sonata, op.87, fl, 1982; Tea for Tuba, op.101, tuba, 1986; Sommer, Sonata no.2, op.110, gui, 1989; Cries of Spring, sonatine, op.123, fl, pf, 1992; In the Middle of Darkness, A Nightmare for Solo Vc, op.131, vc, 1994; A Path of Snow and Creaking, A Winter Work for Hpd, op.134, 1994; Praeludier for guitar, op.136, 1995

Org: Sonata, op.9, 1956; Concertino, op.17, 1958; Inquiries-Persuasions, op.49, 1970; Lys og skygge [Light and Shade], op.111, hp, org, 1989; Sonata, op.127, ob, org, 1993

Pf: Strofer og marker [Stanzas and Squares], 2 cycles, opp.33a–b, 1965, 1966; Signaturer fra en provins, op.51, 1970; Discourse on Time, op.84, 1980–82; Turbulens laminar, op.93, 1984; Cyclus i een sats [Cycle in One Movt], op.120, 1991

MOGENS ANDERSEN

Noricus, Johannes. *See* AGRICOLA, JOHANNES.

Noringer, August. *See* NÖRMIGER, AUGUST.

Noris, Matteo (*b* Venice; *d* Treviso, 6 Oct 1714). Italian librettist. He wrote for all the principal Venetian theatres and his works, many of which were set more than once, were dramatically effective. In the 1670s and 80s he was closely associated with the Teatro di SS Giovanni e Paolo and the Teatro S Giovanni Grisostomo, both owned by the Grimani family. In 1686 the government castigated those responsible for mounting Pollarolo's setting of Noris's *Il demone amante, ovvero Giugurta*, which was deemed offensive on religious grounds and had to be revised. For five years after the scandal, Noris wrote librettos for Florence and Genoa, but none for Venice. In 1692 he began writing principally for the Teatro S Salvador. He wrote two librettos, *Attilio Regolo* (1693) and *Tito Manlio* (1696), for the Grand Prince Ferdinando de' Medici's theatre at his villa in Pratolino, as well as a *festa teatrale*, *Il greco in Troia*, celebrating the prince's marriage in 1689. It was not until 1697, after the successful restaging of *Tito Manlio* at the S Giovanni Grisostomo, that he began to write once again for the Grimani. By the 1690s Coronelli included him in a list of poetry instructors, along with Apostolo Zeno, Francesco Silvani and others. He died at an advanced age and was buried in the parish church of S Leonardo, Treviso.

Many of his works of the 1680s, in particular *Il re infante* and *Penelope la casta*, were stupendous affairs. Noris sought novel subjects and used them imaginatively: in his prefaces from the 1690s onward he vigorously attacked the promulgators of imitation, deriding those who borrowed from classical and neo-classical works. In spirit, Noris's work has much in common with 17th-century Spanish drama.

HARRIS S. SAUNDERS

Norlind, (Johan Henrik) Tobias (*b* Vellinge, 6 May 1879; *d* Stockholm, 13 Aug 1947). Swedish musicologist. He studied with Adolf Sandberger at the University of Munich and with Oskar Fleischer, Johannes Wolf and Max Friedlaender at the University of Berlin. In 1903 he was appointed lecturer at the Borgarskola, Tomelilla, and later director (1907–14). He received a doctorate in 1909 from the University of Lund; his thesis was a study of Latin student songs in Sweden and Finland during the Middle Ages and Reformation. In 1919 he became director of the Musikhistoriska Museet, Stockholm; he also taught music history at the conservatory from 1918 to 1945 and was headmaster of the Borgarskolas folkhögskola, Stockholm (1919–31). He was the secretary of the Swedish section of the IMS (1901–14) and became a member of the Swedish Royal Academy in 1919. He was president of the Swedish Musicological Society and was the editor of *Svensk tidskrift för musikforskning* (1919–25 and 1943–4).

Norlind made a substantial contribution to Swedish musicology; his *Allmänt musiklexikon* became a standard reference work. His studies of Swedish folk music and instruments are particularly important. He was also interested in the instruments of other cultures; his *Systematik der Saiteninstrumente* (1936–9) describes and classifies 'zither' and 'keyboard' instruments from all parts of the world.

M. ELIZABETH C. BARTLET

Norman, Barak (*b* 1651; *d* London, 1724). English maker of string instruments. He was an important and prolific maker whose work spans the end of the supremacy of the viol (by which instrument he achieved his greatest fame) and the growth in popularity of the violin family in England. Apprenticed in the Guild of Weavers in 1668, he probably received instruction in instrument making from Richard Meares, and his viols are the epitome of the elegant English style of the period. Beautifully made

'Division viol' by Barak Norman, London, 1692 (Royal College of Music, London)

instruments, in the style of Meares, their elegant form is often richly decorated with elaborate double purfing and floral patterns, including his own monogram. The decoration also extends to the fingerboard and tailpiece, which on surviving examples are intricately inlaid. The arched fronts were made in the distinctive English manner, from several bent staves jointed together. The heads are magnificently carved, but frequently an open scroll of very pure form is used instead. The varnish is slightly thinner and harder than is found on the best English work of the 17th century. The earliest known instrument by Norman is a bass viol dating from 1679 (Berlin, Musikinstrumenten-Museum). Early patrons were the Pleydel-Bouverie family of silk merchants; a Norman bass viol of 1691, probably commissioned from the maker, remains in their family collection at Longford Castle, Wiltshire. First established in Bishopsgate, close to Meares, Norman later moved to premises in St Paul's Churchyard, at the sign of the 'Bass Viol' or 'Bass Violin', an address previously occupied by Francis Baker, also a viol maker.

Around the turn of the century Norman became more interested in making violins, violas and, particularly, cellos. The latter are among the earliest examples of the English cellos that were to be so well thought of during the 18th and 19th centuries. They are often on a slightly small model, but with strong, full archings and a rich brown varnish. Like the viols, they are readily identified by the 'BN' monogram inlaid in purfling in the centre of the back.

The somewhat rarer violins and violas are also fine and effective instruments, covered with a fine red varnish and strongly influenced by contemporary Cremonese work. These were probably made by other craftsmen in the workshops, since there is little similarity in workmanship with the viols. The distinctive small-cornered model shows some similarity to violins by Christopher Wise, a neighbour in Bishopsgate, and Joachim Tielke, the celebrated Hamburg maker, both active in the last decades of the 17th century. Some violins and violas attributed to Norman were, in fact, reconstructed from viol parts by later hands.

About 1715 the violin maker Nathaniel Cross became involved in the business, and after Norman's death in 1724 he took over the workshop, which continued to produce instruments with the joint label of Norman and Cross. The stock of the business was auctioned in 1730, but the workshop of the 'Bass Violin' was subsequently acquired by Robert Thompson, a prolific violin and cello maker.

JOHN DILWORTH

Norman, Jessye (*b* Augusta, GA, 15 Sept 1945). American soprano. She studied at Howard University, the Peabody Conservatory and the University of Michigan (with, among others, Pierre Bernac and Elizabeth Mannion). She won the Munich International Music Competition in 1968 and made her operatic début in 1969 at the Deutsche Oper, Berlin, as Elisabeth (*Tannhäuser*), later appearing there as Countess Almaviva. Further engagements in Europe included Aida at La Scala and Cassandra at Covent Garden, both in 1972. The following year she returned to Covent Garden as Elisabeth. For her American stage début she sang Jocasta in Stravinsky's *Oedipus rex* and Purcell's Dido with the Opera Company of Philadelphia (1982); she appeared first at the Metropolitan Opera in 1983, once again as Cassandra. Other roles she has sung include Gluck's Alcestis, Strauss's Ariadne, Madame Lidoine (*Dialogues des Carmélites*), Emilia Marty (*The*

Makropulos Affair), the Woman (*Erwartung*), Bartók's Judith, and Wagner's Kundry and Sieglinde.

Norman has a commanding stage presence; her particular distinction lies in her ability to project drama through her voice. Her opulent and dark-hued soprano is richly vibrant in the lower and middle registers, if less free at the top; although her extraordinary vocal resources are not always perfectly controlled, her singing reveals uncommon refinement of nuance and dynamic variety. Her operatic recordings include Countess Almaviva, Haydn's Rosina (*La vera costanza*) and Armida, Leonore, Euryanthe, Verdi's Giulietta (*Un giorno di regno*) and Medora (*Il corsaro*), Carmen, Ariadne, Salome and Offenbach's Giulietta and Helen. As her many discs reveal, she is also a penetrating interpreter of lieder and *mélodies*, at her finest in the broader canvases of Mahler, Richard Strauss (whose *Vier letzte Lieder* she has recorded with distinction) and Debussy.

MARTIN BERNHEIMER/ALAN BLYTH

Norman, John (*fl* ?1509–45). English composer. He has been identified with the John Norman who, according to an 18th-century account, was organist and master of the choristers at St David's Cathedral, Pembrokeshire, during the period 1509–22. The John Norman who joined the London Fraternity of St Nicholas in 1521 may be the same man, as may a clerk of St Thomas's Chapel, London Bridge (1528–34), and a clerk of Eton College (1534–45). Only three works by Norman are known to have survived. The Compline antiphon *Miserere mihi, Domine* (*Gb-Lbl* Add.5665; ed. in Miller) has the proper plainsong as a cantus firmus in breves, surrounded by two very florid voices: the result is somewhat similar to Taverner's *Audivi vocem*, but less effective. A five-voice *Missa 'Resurrexit Dominus'* (*Ob* Arch.f.e.19–24, olim Mus.Sch.e.376–81; ed. in EECM, xvi, 1976) has the Easter antiphon of that name as cantus firmus. The style is broadly similar to that of Taverner's large-scale works, but less imaginative texturally and tonally. Norman's Marian votive antiphon *Euge dicta sanctis oraculis* (*Cu* Peterhouse 471–4, lacking the tenor) has greater character and variety than his Mass, and is a little more ornate, with a more controlled and purposeful floridity than is achieved in *Miserere mihi, Domine*.

HUGH BENHAM

Norman, (Fredrik Vilhelm) Ludvig (*b* Stockholm, 28 Aug 1831; *d* Stockholm, 28 March 1885). Swedish composer and conductor. He showed an early talent for improvisation at the keyboard and for composition, and as a child began his study of the piano with Theodor Stein and Jan van Boom, and of composition with A.F. Lindblad. His first publication (1843) was a book of songs composed at the age of 11. After his father's death, which left him poor, interest shown by the Crown Prince Oskar, Jenny Lind and others enabled him to continue his musical education at the Leipzig Conservatory (1848–53) under Hauptmann, Moscheles and Rietz. Through the mediation of Schumann, two of his piano pieces were published in 1851.

In 1858, a few years after his return to Stockholm, Norman was appointed teacher of composition at the conservatory, remaining in that post until 1861, when he became conductor of the royal orchestra. His role in the enrichment and expansion of the city's musical life was also evident from his work for the *Tidning för theater och musik*, which from 1859 he edited with A. Rubenson and F. Hedberg, and from his founding, in 1860, of the Nya Harmoniska Sällskap, whose orchestra he conducted until 1878. After that he occupied himself with the establishment of the Musikförening and of the royal orchestra's subscription concerts, which formed the basis of the later Konsertförening. He was also active as a pianist, most notably during the 1860s as accompanist for the violinist Wilma Neruda, to whom he was married from 1864 until their divorce in 1869. He returned to the conservatory in the early 1870s to teach composition and the piano. He was elected a member of the Royal Swedish Academy of Music in 1857.

As a composer Norman was in the Leipzig Classical-Romantic tradition; his works reflect the influence of Mendelssohn, Gade and of Schumann, his early champion, as well as that of Franz Berwald, whose cause Norman supported in articles about Berwald's chamber music and by conducting the first performance of his Fourth Symphony. Norman's output includes three symphonies and a variety of chamber music in all forms; it is distinguished by excellent taste and craftsmanship, but, though fluent and accomplished, his art tends to be more drily academic and less distinctively personal than that of Berwald or Stenhammar.

WORKS
(*selective list*)

printed works published in Stockholm unless otherwise stated

VOCAL

Rosa rorans bonitatem, cant., Mez, chorus, str, op.45 (1878)

Humleplockningen [Hop-Picking], cant., solo vv, chorus, orch, op.63 (1884)

ROBERT LAYTON

Norman & Beard. *See* HILL, NORMAN & BEARD.

Normand, Marc-Roger ['Cuoprin', 'Coprino'] (*b* Chaumes-en-Brie, bap. 30 Dec 1663; *d* Turin, 25 Jan 1734). French organist, active in Italy. He was the son of Elisabeth Couperin and Marc Normand, and may have studied in Paris with his uncle, Charles Couperin (ii). He moved to Turin in 1688 and worked as harpsichord master to the princesses of Carignan. In the same year he took part, as harpsichordist, in Carisio's opera *Amore vendicato*. He proceeded to serve the King of Sardinia and became known as Cuoprin or Coprino. He was appointed second organist in 1699 and succeeded Francesco Ugo as *Organiste de la Chapelle Royale et controleur de la musique* in 1720, also becoming *valet de chambre* to the queen mother in 1723. In 1725 he married Jeanne Constance de La Pierre, granddaughter of the composer Paul de La Pierre, and on 9 April 1726 he was naturalized as a subject of the King of Sardinia. He was thanked by Couperin in the preface to *Les nations* (1726) for having sent him scores of Italian music, perhaps the works of his Turin colleagues, especially Francesco Michele Montalto, precentor of Turin Cathedral.

MARIE-THÉRÈSE BOUQUET-BOYER

Normand, Théodule Elzéar Xavier. *See* NISARD, THÉODORE.

Normandin [La Grille], **Dominique** (*b* Paris, *c*1640; *d* Paris, *c*1717). French singer and theatrical impresario. A grandson of Le Bailly, Normandin sang in court performances from 1663 onwards. In 1675, as one of the king's musicians, he obtained a privilege from Louis XIV to give theatrical performances with large marionettes of his own invention. In 1676 he staged the *tragicomédie* of *Les Pygmées* in Paris, probably at the Théâtre du Marais, and then a *tragédie enjouée* entitled *Les Amours de Microton ou les charmes d'Orcan*, with ballets, theatrical machinery and stage sets. These works for marionettes, performed by singers hidden underneath the stage, were so successful and displayed so many similarities with Lully's *tragédies en musique* that Lully himself had them banned in 1677, even though he was related to La Grille (their wives were cousins). Normandin's 'Théâtre des Pygmées' or 'Opéra des Bamboches' anticipated the Opéra-Comique in staging parodies of operas.

JÉRÔME DE LA GORCE

Nörmiger [Nöringer, Noringer], **August** (*b* ?Dresden, *c*1560; *d* Dresden, 22 July 1613). German organist and keyboard intabulator. Presumably he was the son of Friedrich Nörmiger, court organist at Dresden until his death in 1580. August Nörmiger occupied the same post from 12 December 1581 until his own death. After Hassler's death Nörmiger supervised the construction of the organ which he had designed for the Schlosskirche. According to a notice of 1592 he gave daily keyboard lessons to Prince Christian II and to Princess Sophie, daughter of Duke Friedrich Wilhelm of Saxony; in 1598 he compiled a keyboard tablature for Princess Sophie, then aged 11. This manuscript, once housed in the Staatsbibliothek Preussicher Kulturbesitz (now part of *D-Bsb*) and later in *D-Tu* Mus.40 098 (olim Z 89), is now housed in Kraków, Biblioteca Jagiellońska (*PL-Kj*).

The collection opened with 77 Lutheran chorales in simple settings with the melody in the top line. Coloration was absent, but Nörmiger used motivic repetition in the lower voices. The chorale melodies found here generally remained in use through the 17th and 18th centuries. Also, their arrangement in the manuscript followed the church calendar. A second section of 39 German sacred and secular songs employed considerable ornamentation. The final section consisted of 94 dances (pavans, galliards, passamezzos etc) with sparse coloration. The presence of voice crossings, awkward leaps and parallel perfect intervals may indicate that these pieces were arrangements of other music. The scope of Nörmiger's anthology provides a glimpse of keyboard music and dance accompaniments popular at the Saxony court about 1600.

CLYDE WILLIAM YOUNG

Noronha, Francisco da Sá (*b* Viana do Castelo, 24 Feb 1820; *d* Rio da Janeiro, 23 Jan 1881). Portuguese composer and violinist. Being largely self-taught, he emigrated to Brazil in 1837 and toured south America. Subsequently, he appeared in New York and Philadelphia (1846–47), London and Leeds (1854) and Portugal. Although the most significant part of his performing career ended around 1860 he continued to play in public until his death. He was director of the S Januário (1852) and Fénix Dramática (1880) theatres in Rio de Janeiro, and also of the Oporto Teatro Baquet (1861, 1875). These appointments resulted in a vast repertory of comic operas, operettas and vaudevilles on Portuguese texts.

Noronha was the first Portuguese composer to write operas based on literary works by national writers. The librettos of *Beatrice di Portogallo* (1863) and *L'arco di Sant'Anna* (1867), inspired by Almeida Garrett's works, have many characteristics in common with those of his mid-19th-century Italian contemporaries, but the choice of Pinheiro Chagas's Brazilian novel *A virgem de Guaraciaba* for the libretto of *Tagir* (1876) seems to reflect the influence of Carlos Gomes's *Guarany*. Considered by his contemporaries as a creator of a Portuguese melodic style with authentic folk characteristics, his music is strongly influenced by the Italian operatic tradition.

LUISA CYMBRON

Norovbanzad, Namjiliin (*b* 1931, Dundgov' (Middle Gobi), central Mongolia). Mongolian *urtyn duu* (long-song) singer of the Borjigin Khalkhas. She learnt to sing from her 'second mother', the renowned singer Tavhai, who acted as midwife at her birth. Initially she performed *giingoo*, the ritual song performed by child jockeys before horse-racing, and her talent soon became evident. She then became a member of the cultural 'club' at the centre of her district. She won a gold medal at the International Youth and Students Festival held in Moscow in 1957 and in the same year became a member of the National Ensemble of Folksong and Dance (*Ulsyn Ardyn Duu Büjgiin Chuulga*) in Ulaanbaatar, where she remained for over 30 years. Norovbanzad delivers long-songs in a wonderfully powerful soaring voice. In addition to Central Khalkha, which became the 'national' theatre style during the communist period, she is able to perform in the grand *aizam* style e.g. in *Övgön Shuvuu* ('Old Man and Bird') and in the more detailed and precise Borjigin Khalkha style e.g. *Altan Bogdyn Shil* ('At the Peak of Altan Bogd') (*see* MONGOL MUSIC, §1(i)). She has gained many awards and titles for her skill including National Meritorious Artist, People's Artist and the National Honorary Award of Excellence. She has performed in over 20 different countries including the USA, Europe and Japan.

CAROLE PEGG

Norrington, Sir **Roger (Arthur Carver)** (*b* Oxford, 16 March 1934). English conductor. He was a choral scholar at Cambridge University, studied conducting with Boult at the RCM and began his musical career as a tenor. In 1962 he made his conducting début with the Heinrich Schütz choir, which he founded and with whom he made numerous recordings of repertory from the 17th and 19th centuries. From 1969 to 1982 he was musical director of Kent Opera, demonstrating his dramatic flair and the breadth of his taste in over 40 works, ranging from Monteverdi (including his own edition of *L'incoronazione di Poppea*) to Britten and Tippett. He made his début with Sadler's Wells Opera in 1973 (*Le nozze di Figaro*) and at Covent Garden in 1986 (Handel's *Samson*). He has also conducted opera in Florence, Venice, Vienna, Berlin, Paris and Amsterdam.

Norrington founded his own period orchestra, the London Classical Players (LCP), in 1978 and with them extended the concept of 'period performance' – orchestral size, seating and playing style – into the 19th century. With the LCP he made recordings of Haydn and Mozart (including *Die Zauberflöte*) and a prizewinning cycle of Beethoven symphonies, and reached into the core of the orchestral repertory of the Romantic era, through Berlioz,

Roger Norrington, 1985

Weber and Schumann to Wagner, Bruckner and Smetana. He invariably applied principles of scholarly research in seeking out original manuscripts and discovering therein hitherto unknown or ignored information about tempos (as in Bruckner's Third Symphony), phrasing and even octave transpositions of wind parts (in current editions of Smetana's *Má vlast*). More recently, in performances and recordings with the LPO, he has applied the same principles to embrace symphonies by Vaughan Williams. The LCP was disbanded in 1997 and its work taken over by the Orchestra of the Age of Enlightenment. Norrington has also been acclaimed for his performance and study weekends on London's South Bank devoted to the music of a single composer. He was musical director of the Bournemouth Sinfonietta from 1985 to 1989, and has conducted widely in Europe and the USA, where his posts have included musical director of the Orchestra of St Lukes and chief conductor of the Camerata Academica Salzburg and the symphony orchestra of the SDR. He was created a CBE in 1990 and knighted in 1997.

GEORGE PRATT

Norris, Thomas (*b* Mere, Warminster, bap. 15 Aug 1741; *d* Himley Hall, Staffs., 3 Sept 1790). English tenor, organist and composer. He was a chorister at Salisbury Cathedral under John Stephens and received encouragement in his singing career from the philologist James Harris, MP, who lived in the close. He appeared as a solo soprano at Oxford in 1759 and at the Three Choirs Festivals of 1761 and 1762. On 9 October 1762 he made his début at Drury Lane singing in Act 2 of Steele's *The Conscious Lovers*. On 22 October he sang the soprano part of Daphnis in Harris's pasticcio afterpiece *The Spring*, which had previously been performed at Salisbury. The work was not a success and Norris gave up drama. Harris advised him to settle at Oxford, where on 19 October 1765 he matriculated at Magdalen College. On 12 November that year his exercise, an orchestral anthem *The Lord is King*, was performed for the BMus degree. On 16 December 1766 he was appointed organist at St John's College on the death of William Snow. In 1767, after the death of Henry Church, he was appointed lay clerk of Christ Church and on 5 November 1771 was admitted lay clerk of Magdalen College. In 1776 he succeeded Richard Church as organist of Christ Church. He held all four posts simultaneously. He was also a regular singer of songs and arias, predominantly by Handel, in weekly miscellaneous concerts held in the Music Room up to the year of his death. His only published orchestral work, his 6 Simphonies, op.1 (London, *c*1772), is dedicated to John, Earl of Sandwich, to whom he acknowledges 'many favours conferr'd upon the Author'.

Norris was a popular tenor and had regular engagements beyond Oxford. He performed at the Three Choirs Festivals from 1766 to 1788, the York Oratorios in 1769 and 1770, the February Oratorios at Drury Lane from 1770 to 1774 and in performances of *Messiah* at the Foundling Hospital in 1774 and 1775. He was a principal tenor at the Handel Commemorations in Westminster Abbey, 1784–7. His last appearance was at the Birmingham Festival in August 1790; he died ten days afterwards at Himley Hall, the seat of his patron Lord Dudley and Ward. 'Verses on the sudden Death of Mr Norris' by A. Seward of Lichfield, and an obituary notice, where he is mistakenly called Charles Norris, were printed in the *Gentleman's Magazine* of September 1790. A portrait of Thomas Norris, engraved by John Taylor, was published in 1777.

WORKS

6 Simphonies, 2 vn, 2 ob, 2 hn, va, b, op.1 (London, *c*1772)
8 Solo Songs, 1v, hpd (Oxford, ?1795)

ROBERT J. BRUCE

Norris, William (*b* *c*1669; bur. Lincoln, 15 July 1702). English composer and cathedral singer. As a chorister of the Chapel Royal he sang at the coronation of James II in 1685. In 1686 he became a junior vicar at Lincoln Cathedral, where he was appointed Master of the Choristers in 1690.

Norris was one of several capable minor composers to grow up under John Blow's tutelage at the Chapel Royal. His St Cecilia's Day ode *Begin the noble song* is an extended work in which only the outermost sections are in the tonic (C major) or the tonic minor, intermediate movements being in A minor, F, D, and G minor. Norris's verse anthems, accompanied by organ alone, are tonally less adventurous although later examples consist of strongly differentiated contrasting sections; almost all survive in an incomplete partbook set (*GB-LI* 2–4, olim 311, 48–9), copied between 1686 and 1703. Several are found in partbooks from other cathedrals and in manuscript scores such as *GB-Lbl* Add.30932 and Add.31444/5, respectively in the hands of Daniel Henstridge and James Hawkins, and *Lbl* Harl.7340, part of Thomas Tudway's collection. The treble solo anthem *Blessed are those that are undefiled* was published without its brief chorus passages in Walsh's *Divine Harmony* (London, *c*1731) and, in a different version, in William Pearson's *The Second Book of the Divine Companion* (London, after 1722). Norris also wrote two 'chanting services' in which the full sections are set to a repeated Anglican chant.

ROBERT THOMPSON

Norsk Musikforlag. Norwegian firm of music publishers. It was established in Oslo on 1 January 1909 through the merger of two existing firms, Carl Warmuth (founded *c*1843) and Brødrene Hals (1847), with Hals and the Danish publishers Wilhelm Hansen as owners. Hals sold its shares to Sigurd Kielland and Anders Backer-Grøndahl in 1929, and the latter took over Kielland's share in 1938. The present managing director is Leif Dramstad.

The merger of Warmuth and Hals led to the incorporation of several established Norwegian music publishers into Norsk Musikforlag, including Edvard Winther, Hermann Neupert, Lindorff & Co., A.M. Hanche, Johan D. Behrens and Petter Håkonsen. In 1925 the publisher Oluf By was acquired, and in 1975 Norsk Notestik with their predecessors J.A. Røsholm and Haakon Zapffe. Thus the greater part of the practical production of Norwegian music found itself under one roof.

In recent years Norsk Musikforlag has concentrated on educational and contemporary Norwegian music. Among composers whose work has been published by the firm are Pauline Hall, D.M. Johansen, Sverre Jordan, Valen, Hovland, Finn Mortensen, Nystedt and H.S. Saeverud. Since its establishment Norsk Musikforlag has maintained its position as the largest music publisher in Norway. The company also operates a large department for musical instruments.

KARI MICHELSEN

Norsk Musikkforskerlag (Norwegian Musicological Society). Norwegian organization, founded in 1964 with the aim of promoting Norwegian musicological research, primarily through encouraging members to publish the results of their work in the society's yearbook, *Studia Musicologica Norvegica*. This publication contains articles in Norwegian, German and English. Members of the society participate in the Nordic Musicological Congress, normally held every four years in a different country, and some are involved in writing a new history of Norwegian music (to be published in five volumes, 1999–2003). Presidents of the society have been Olav Gurvin, Finn Benestad, Ola Kai Ledang, Nils Grinde, Gunnar Rugstad, Arvid O. Vollsnes, Owain Edwards, Idar Karevold and O.K. Sundberg.

OWAIN EDWARDS

North, Alex (*b* Chester, PA, 4 Dec 1910; *d* Los Angeles, 8 Sept 1991). American composer and conductor. After attending the Curtis Institute, where he studied the piano with George Boyle, he won a scholarship (1929) to the Juilliard School. He also studied on scholarship at the Moscow Conservatory (from 1933) and went on to serve as music director of the German Theatre Group and the Latvian State Theatre. He was the only American member of the Union of Soviet Composers, from which he received commissions for two choruses and a set of piano variations. In 1935 he returned to the USA and taught music for dance at Finch, Briarcliff, Sarah Lawrence and Bennington colleges. In New York he studied composition with Copland and Toch and composed ballet scores for Martha Graham, Hanya Holm and Agnes de Mille. In 1939 he went to Mexico as music director for the Anna Sokolow dance troupe, and while there he studied with Revueltas and conducted concerts at the National Palace of Fine Arts in Mexico City.

During World War II North served as a captain in the US Army; he organized therapeutic programmes for veterans and scored more than 80 documentaries for the Office of War Information. In 1946 his *Revue* for clarinet and orchestra was performed by Benny Goodman with the City Symphony of New York under Leonard Bernstein. He continued to compose for the theatre, particularly ballet scores, and after the success of his music for Elia Kazan's production of Arthur Miller's *Death of a Salesman*, Kazan invited him to write for the film version of Tennessee Williams's *A Streetcar Named Desire*. This, the first jazz-based symphonic score to be written for a film, brought North wide acclaim, and in the 1950s he became a leading Hollywood composer.

North made no stylistic distinction between his film music and his works in other genres; his entire output is

grounded in the traditions of symphonic and chamber music. Fundamentally dramatic in conception, though often not emotionally demonstrative, his works include moments of light and dark, violent dissonance and gentle lyricism or resignation. Although he used large symphonic forces to excellent effect (notably in the film scores for *Spartacus* and *Cleopatra*), he often wrote for smaller ensembles (as in *The Bachelor Party* and *Who's Afraid of Virginia Woolf?*). He was adept at integrating jazz elements (as in *A Streetcar Named Desire*, *The Long, Hot Summer* and *The Rose Tattoo*) and, like Bernard Herrmann, preferred to exploit timbre, affect and understated stylistic references, rather than referential themes and leitmotivic networks.

CLIFFORD McCARTY/DAVID NEUMEYER

North, Francis, 1st Baron Guilford (*b* Kirtling, Cambs., bap. 2 Nov 1637; *d* Wroxton, Oxon., 5 Sept 1685). English lawyer, amateur musician and philosopher, elder brother of ROGER NORTH. He was educated at King Edward VI Free Grammar School, Bury St Edmunds, and St John's College, Cambridge (1653), where he learnt to play the viol, possibly with John Lilly, whom he later patronized in London. Admitted to the Middle Temple (1655) and called to the bar (1661), he was King's Counsel (1668), Solicitor General and Knight (1671), Attorney General (1673), Chief Justice of the Court of Common Pleas (1675) and Lord Keeper of the Great Seal (1682). Roger North and John Evelyn both characterized him as skilful in languages, music, painting and the 'new' (i.e. experimental) philosophy. As well as being a competent viol player, he enjoyed singing, and apparently transcribed and studied a number of Italian songs. He also composed some music, some of which survives (consort music, a 3, *GB-Ob*, b pt only; other consort music, Thomas North's private collection, Rougham, Norfolk). He appears to have known Purcell, with whom he made music on at least one occasion.

During his lifetime the science of musical acoustics emerged gradually from the coincidence theory, which provided the first physical explanation of consonance and dissonance based on the coincidence of motion of vibrating strings. In his version of this theory, North was concerned with the coincidence of motion (pulses) in the air and as perceived by the mind. He devised an 'ocular scheme' to represent the dependence of pitch on frequency. He also provided hints for a new theory of harmony, afterwards developed by Roger North, showing that individual chords function in relation to a chord root or 'fundamental' and within a tonality or 'key'. These contributions are preserved in his *A Philosophical Essay of Musick Directed to a Friend* (London, 1677; pubd anon.), a short tract printed under the auspices of the Royal Society. The tract was advertised in the society's *Philosophical Transactions* by its president, William, Viscount Brouncker, who probably was the 'so great a Philosopher and Musician' and 'Friend' to whom the tract was addressed (the two men adopted similar divisions of the monochord).

Prior to publication, North, through his father, sent a query 'about motion' to Robert Hooke, who replied directly to North on 12 and 26 November 1676. Hooke was already working on an experimental device for creating a frequency, and he used this device to provide an aural demonstration of North's 'ocular scheme'. After publication and in compliance with a request from North's brother, John, Isaac Newton gave his opinion of the tract in a letter dated 21 April 1677. Newton identified the central problem of the coincidence theory: that it does not consider phase relations of the sounding 'waves'. He also dissented from North's assertions that sound is produced in 'the Torricellian vacuum' and that the medium of sound is not the gross particles of air but particles of a middle nature between those of the air and the ether. The wider context of these assertions, which have implications

for musical acoustics, is to be sought in the controversies that began in the 1600s over interpretations of barometric and hydrostatic phenomena.

MARY CHAN, JAMIE C. KASSLER

North, Nigel (*b* London, 5 June 1954). English lutenist and guitarist. He attended the GSM from 1964 to 1970 and from 1974 to 1975, and the RCM from 1971 to 1974. He studied the classical guitar with John Williams and Carlos Bonell, the viol with Francis Baines and the lute with Michael Schäffer in Germany (1976). Since 1973 he has performed with many leading ensembles, including the Early Music Consort of London, the Academy of Ancient Music and the English Concert. His distinguished solo career began with a Bach recital at the Wigmore Hall in 1977, and Bach's music has remained central to his repertory; a series of solo Bach recordings made in the 1990s has been particularly influential. North is equally well known as an accompanist and continuo player, and his book *Continuo Playing on the Lute, Archlute and Theorbo: a Comprehensive Guide for Performers* (London, 1987) is considered indispensable. He was a professor of lute at the GSM and has published editions of lute music by Byrd and Ferrabosco.

STEPHEN HAYNES

North, Roger (*b* Tostock, Suffolk, 1651; *d* Rougham, Norfolk, March 1734). English lawyer, writer, philosopher, historian of music and amateur musician, younger brother of FRANCIS NORTH.

1. Life. 2. Philosophy.

1. LIFE. He was the youngest child of Dudley, 4th Lord North, and Anne (*née* Montagu), and lived for some years in his grandfather's house at Kirtling, Cambridgeshire. Falling ill to infection with gastric and encephalitic symptoms (*c*1657), he was educated privately and then at the free schools of Bury St Edmunds and Thetford. He entered Jesus College, Cambridge (30 October 1667), where he was tutored by his brother John. A second illness terminated his university studies. He was admitted to the Middle Temple, London, on 21 April 1669, and on 29 May 1674 he was called to the bar. His public appointments included Steward to the See of Canterbury (1679), King's Counsel (1682), the Duke of York's Solicitor General (1684) and the Queen's Solicitor General (1685) and Attorney General (1686). On 16 January 1676 a fire broke out in the Middle Temple, after which North resided with his brother Francis. The fire led to an acquaintance with Christopher Wren, who was invited to design the new cloisters (30 November 1680); the design of the Great Gateway (which still gives access to the Temple from Fleet Street), long thought to be Wren's, was by North himself. After the Revolution of 1688, when North was forced to resign from public life, he moved to a house in Covent Garden leased from the estate of Peter Lely. Here he sorted through the papers of his brother Francis, wrote notes and animadversions on some of them, and commenced his 'scribbling' on music and other subjects. In 1692, after the funeral of his brother Dudley, he began remodelling his estate in Rougham, Norfolk (purchased 1690). On 26 May 1696 he married Mary, daughter of Sir Robert Gayer, and of their seven surviving children, the second son, Montagu, became custodian of North's manuscripts and his first editor. From these manuscripts we learn that music was 'the exercise' of North's youth; that he was 'imprest by the continuall use of it, in the family of my education'; and that it 'hath ever since bin my companion, and delight in all my solitudes as well as societys'. Therefore, 'I may be alowed to have no small esteem for it; as a man of honour loves his freind as such tho not esteemed by others' (*Cursory Notes of Musicke*, p.1 of edn).

Some of North's activities as a music lover are preserved in his literary masterpiece, *Notes of Me* (*c*1698). Written after the loss of his brothers as well as his public appointments, this text includes a poignant assay of whether suicide is lawful, thus giving a clue to North's reasons for 'idiography' (his term, *General Preface*, p.78 of edn). His self-portrait is modelled in part on the *Essayes* of Michel de Montaigne (1533–92), whose irony had darkened North's father's melancholy. North's tone is not consistently dark, however; rather, his 'drye mock' is that of one who, standing aside from events, writes with moderation occasionally embellished by exaggeration, as he tries to cast a beam of light on his own life, for example: 'I became as I thought a master of composition, which was a great pleasure; and I essayed some compositions of three parts, which I cannot commend' (*Notes of Me*).

North drew his data from events within his personal knowledge and experience, but his judgement of these events illuminates contemporary musical life generally, including music in entertainment, in education, in performance and in technology. From North's grandfather's time, music had served as a harmonizing influence within country households. As his father wrote: 'Of pastimes within dores Musick may challenge [religion as] the next place to Study, and it is more sociable, for it entertains many at the same time' (*GB-Lbl* Add.32523, f.6*v*). The North household, therefore, included one or more resident music masters, who, in North's youth, were John Lilly (theorbo), Henry and George Loosemore (organ) and John Jenkins (viol). With the last, North also studied the principles of music and composition. Since teacher and pupil became close friends, Jenkins probably encouraged North's interest in educational methods; for example, that beginners in music 'should be trained as in manufacture trades, first taught to provide the material and then to put it together, and lastly to finish it' (*Notes of Me*). In this comparison North emphasized productivity; however new methods were coming into vogue that emphasized

receptivity: the beginner was to be cultivated like a plant, the principles of his or her education being derived from materials placed before his or her senses. Still other social changes were underway, as resident music teachers were replaced by itinerant ones; and as private consorts of viols were becoming less fashionable than public concerts with violins. In 1709 North's own children had music lessons with a 'rare harpsi[c]ordiere' (*Lbl* Add.32501, f.60), no doubt François de Prendcourt, whose treatise North copied and subsequently put under critical scrutiny. Between about 1674 and 1685 North himself performed in a weekly music meeting of gentlemen amateurs and professionals that included the violinist Nicola Matteis (i), whose virtuosic playing so impressed North that he was prompted to examine and put to critical test the new bowing techniques and ornamentation by comparison with older practices. The word 'vibrato' had yet to be coined; and North provided an early description, representing the practice as a wavy line, because he was unable to find the appropriate nomenclature (*Notes of Me*).

These and other changes made North keenly aware of the need for printed scores. To this end, he sought to reduce the expense of copperplate engraving (introduced *c*1683) by urging composers to learn reverse writing and, then, to buy and etch copperplates themselves. As a demonstration, North engraved in score 'a sonata or two' and gave the plate to the music publisher, John Carr, 'but found none to follow the industry of my example' (*Notes of Me*, p.89 of Jessop edn). This took place when North was treasurer of the Middle Temple (*c*1682–4), in which capacity he invited the organ builders Bernard Smith and Renatus Harris to submit designs for a new organ for the Temple Church. The successful tenderer, Smith, afterwards built North's organ (*Lbl* Add.32531, f.1), which was set up in the long gallery at Rougham when North was completing his first systematic treatise on music (*Cursory Notes of Musicke*, p.1 of edn).

2. Philosophy. North's writings on music fall within the Augustan tradition of a wit who exercises judgement in commenting on the contemporary scene. This tradition was the seedbed for the emergence of historiography generally, including the music historiography that he was the first to produce during the closing years of his life. But North also turned his thoughts 'with more than ordinary intentness to search of truth in the way of phisicks' (*Cursory Notes of Musicke*, p.1 of edn). Hence, his critical 'examen' includes both the science and the art of music. In these two domains North was innovative in at least four ways: before Vaucanson (1738), he understood how certain wind instruments produce sound; before Diderot (1748), he elaborated a physics of beauty that stressed activity, not the matter, in things as having ontological significance; before Rameau (1722), he developed a theory of harmony as individual chords that function in relation to a chord root and within a key; and before Hawkins (1776) and Burney (1776–89), he rejected the traditional explanation that music was a gift of the gods or God or that it was invented by Jubal or Tubalcain, outlining instead a naturalistic theory of the origin of music and arguing that historical change comes chiefly through new musical ideas and new musical technology.

North's chief innovation, however, was epistemological, since before Helmholtz (1863–77) he sought the origin of music in empirical consciousness by arguing that such knowledge grows out of simple sense perception by way of repetition (association) and subconscious inference, and by stressing that an important part of sensory knowledge derives from movement, since 'actions of the body are, as I may say, mentally performed, [and] the imagination will follow use' (*Lbl* Add.32531, f.17). To develop this type of epistemology, North treated music as a form of communication involving the motion of sound generators, the motion of the medium of sound and the motion within the perceiver. To show how music conveys emotion and meaning, he analysed it in terms of disorder, which provides a measure of uncertainty (*Cursory Notes of Musicke*). As a piece of music unfolds, the listener acquires certain expectations from memories of previous cultural knowledge. When those expectations are momentarily frustrated, such as in a delayed cadence or extended embellishment, the attentive listener becomes more engaged and consequently more receptive to an emotional or meaningful response. This type of theory is what we now call 'information theory', since it stresses the importance of uncertainty in musical communication and the probabilistic nature of musical style.

In about 1698 North's starting-point was a coincidence theory, in which pitch is related to rates of vibration (frequencies) of the source of sound. When pulses of air produced by different pitches coincided frequently in agreement, concord occurred and was heard; but when pulses coincided infrequently or broke in on one another, the result was discord. The direct cause of concord was thus related to a physical phenomenon that provided a natural, or rational, connection between pulses and harmony. But if data is communicated as a composition of pulses, how is musical knowledge possible? To answer this question, North conceived the mind as a computer that, in sensation, processes pulses subconsciously by counting. If pulses strike us faster than we can count, the mind collects them into larger units or pitches. But pitches do not merely exist at the moment they are heard, they also endure in memory and relate to what came before and what follows after. Memory, therefore, accepts or rejects a pitch as harmonically functional by a process of comparison. Once stocked with data from sensation and memory, imagination produces new ideas by means of a rudimentary probabilistic mechanics of combinations and permutations, whereby pitches change their position and arrangement, as, for example, in chord inversions.

The origin of musical knowledge, and the condition of its possibility, is the intuition of time that underlies the act of counting. But musical knowledge itself depends, for art, on acquired memories and, for science, on 'a stock of collected truths'. Thus, harmony is not in the world of eternal ideas, as the Platonists supposed, but in 'a musicall ear' that has acquired ideas of consonance, 'as if such were so many distinct essences' (*Lbl* Add.32549, f.94*v*). Take musical memory away, and nothing is left but pulses. North thus rejected the Platonic notion of harmony or beauty as a 'sort of divine stamp' on our nature, as well as the Cartesian spatial model of memory as an instantaneous impression on wax. Instead, he relied on a temporal model of memory as a vibrating string, when he wrote (*Lbl* Add.32537, f.93):

> any one ... may trye, and by a world of instances, find that after he hath heard one note, some that follow, will not agree so well as others, but after the former note ceaseth the memory of it makes as exquisite discord or concord as if the two sounded together. Which would make one think that memory is a sort of vibration, as the sound of a string after it is toucht, continues, so the sence being toucht continues to

vibrate as the string; and thereby memory of a former, and of a present sound, make harmony or discord, by actual agreements or disagreements as divers sounds together.

By conceiving memory as temporal and mind as computational, North revealed his indebtedness to Hobbes, even though he described Descartes as 'the most transcendent genius' (*Lbl* Add.34546, f.213*v*). But North also asserted: 'I am not a Cartesian in the sense of the academicks so as blindly to idolize him, but am glad as they are (but with more civility) to use him' (*Lbl* Add.34546, f.221*v*). As this statement indicates and as his writings demonstrate, North was a philosophical descendant of Cicero and eclecticism, even though the convictions that guided his eclectic procedure led him to adopt positions attributable either to Descartes or to Hobbes (or to their followers).

Some of these positions may be traced in North's thinking about musical thinking that began about 1698 and continued to about 1733, when he produced some 2000 pages of sketches for, as well as three different versions of, his theory of musical cognition. These pages are not mere rewritings; rather, they reflect his belief that knowledge acquisition in science and art is dynamic: knowledge of natural truth grows by hypothesis and experiment, whereas knowledge of beauty grows by convention and use. But science and art are not measured by 'one man's caprice ... but [by] the agreement of many, and the best' (*Lbl* Add.32531, f.47), so that the criterion of truth and beauty is intersubjectivity. Science and art are thus integral to North's theory, the importance of which has been obscured by scholarly practices that fragment his thought, ignore his intentions or value historiography above other types of writing. But when North chose knowledge of natural truths for his special diversion and study, he was confident that such knowledge (*Lbl* Add.32546, ff.194–194*v*):

is what [human] nature leads directly to, and advanceth in us by continuall degrees more or less from the first opening our eys in the world, to the finall closing them againe. And hath so little relation to fraud or profit as scarce corruptible that way, but is courted for its owne sake purely ... [and] in its cours, as auxiliary, takes in a reasonable skill in all other arts whatsoever, so that a profest naturalist may not without blushing, be absolutely ignorant of any thing.

This was his apology 'for the bold a[d]ventures' to be met with in his papers.

WRITINGS

those devoted solely to music; all MSS, in GB-Lbl unless otherwise stated; for further details see Hine, Chan and Kassler (1986), Chan, Kassler and Hine (1988) and Chan and Kassler (1989); biographical writings listed in the bibliography also contain references to music

EARLY PERIOD (c1698–c1707)

preparatory writings

Some Notes upon an Essay of Musick [by F. North] *printed, 1677, by way of comment, and Amendment* (Add.32531), ff.42–52*v*
Vossius de viribus Rithmi (Add.32531), ff.53–8*v*
Memorandums as to the phisicall solution of this theory [of Francis Roberts] (Add.32549), ff.34*v*–5
Some memorandums, concerning Musick (Add.32532), ff.1–26*v*

completed theory

Cursory Notes of Musicke (Rougham, Norfolk); ed. M. Chan and J.C. Kassler (Kensington, NSW, 1986)

MIDDLE PERIOD (c1708–c1720)

preparatory writings

Untitled on the theory of sound and music (Add.32537), ff.66–109*v*
Sound (Add.32537), ff.110–32*v*
Of Sounds (Add.32537), ff.133–48*v*
Frags., some titled, on the theory of sound and music (Add.32537), ff.149–241*v*

completed theory

Short easy, and plaine rules to learne in a few days the principles of musick, and chiefly what relates to the use of the espinette harpsicord or organ (Add.32531), ff.8–23*v* [F. de Prendcourt's tracts, with North's commentary]
The Theory of Sounds taking rise from the first principles of action that affect the sence of hearing, and giving phisicall solutions of tone, harmony and discord, shewing their anatomy, with the manner how most instruments of musick are made to yeild delicious, as well as triumphant sounds, with intent to leav no mistery in musick untoucht (Add.32534), ff.1–82*v*
An Essay of Musicall Ayre: Tending chiefly to shew the foundations of melody joyned with harmony, whereby may be discovered the native genius of good musick, and concluding with some notes concerning the excellent art of voluntary (Add.32536), ff.1–90

LATE PERIOD (c1721–c1730)

preparatory writings

Theory of Sounds shewing, the genesis, propagation, effects and augmentations of them reduced to a specifick inquiry into the cripticks of harmony and discord, with eikons annexed exposing them to occular inspection (1726, Add.32535), ff.1–73*v*
The Musicall Grammarian or a practick essay upon harmony, plain, and artificiall with notes of comparison between the elder and later musick, and somewhat historicall of both (Add.32533), ff.1–151*v*
Untitled frag. (Add.32537), ff.1–65*v*

completed theory

Theory of Sounds shewing, the genesis, propagation, augmentation and applications of them ... with eikons annexed esposing them to occular inspection (1728, Add.32535), ff.74–149
The Musicall Grammarian being a scientifick essay upon the practise of musick (1728, *GB-H* R.11.xliii), ff.1–147*v*; ed. M. Chan and J.C. Kassler (Cambridge, 1990)

JAMIE C. KASSLER

North American Indian music. *See* AMERINDIAN MUSIC and UNITED STATES OF AMERICA, §II, 4.

Northcott, Bayan (Peter) (*b* Harrow on the Hill, 24 April 1940). English music critic and composer. He read English at Oxford (BA 1962) and worked as an English teacher (1964–70). Musically self-taught up to this point, he studied composition with Alexander Goehr and Jonathan Harvey at the University of Southampton (BMus 1971) and then became a music critic for the *New Statesman* in 1973 and the *Sunday Telegraph* in 1976; in 1986 he was appointed chief music critic of *The Independent* and throughout his career he has contributed regularly to *Music and Musicians*, *Tempo* and the *Musical Times*. From 1987 to 1994 he was a member of the management council of the Holst Foundation, for which he now acts as a consultant and he was made a director of NMC Recordings in 1991.

During Northcott's early years as a critic, he concentrated on 20th-century music, especially postwar British and American music. In his later writings, he has broadened his interests to include the whole Western art music tradition. His numerous concise and germane articles on the music of contemporary composers have for three decades informed a wide audience of significant developments in modern music. He began composing in the late 1970s and many of his pieces comprise reworkings of classical procedures in his own terms; for example, his Sonata for solo oboe op.1 (1978) is a study in how a single line can variously imply its own accompaniment, after the example of Bach's solo sonatas. Other major works include *Hymn to Cybele* (1983), Sextet (1985), commissioned and performed by the Fires of London, Concerto for Horn and Ensemble (1996), and *Ave Regina Celorum/Alleluia* (1997), composed for the Gothic Voices and performed for the first time to critical acclaim at the Cheltenham Festival in 1997.

ROSEMARY WILLIAMSON

Northern Ireland. For a discussion of the musical traditions of Northern Ireland, *see* BELFAST and IRELAND.

Northern Sinfonia Orchestra. Chamber orchestra founded in 1961 in NEWCASTLE UPON TYNE.

Norton, (George) Frederic(k) (*b* Salford, 11 Oct 1869; *d* Holford, Somerset, 15 Dec 1946). English composer and baritone. He was educated at Manchester Grammar School, studied singing with Francesco Paolo Tosti and, in 1894, joined the Carl Rosa Opera Company, taking such roles as Valentin (*Faust*) and Devilshoof (*The Bohemian Girl*). By the early 1900s he had progressed to reciting monologues on the variety stage and had also written some light songs and stage works. His childrens' play *Pinkie and the Fairies* made some mark at His Majesty's Theatre, London, in 1908, but nothing to presage the huge success of the musical comedy *Chu Chin Chow*, which opened at the same theatre on 31 August 1916 and ran for a record 2238 performances. The work was an oriental pantomime, in which Norton himself would occasionally take the role of Ali Baba. The show's escapism and wistfully nostalgic tunes, produced at the lowest point of World War I, exactly matched the needs of troops home on leave. Today, its music seems texturally basic, and even at the time was criticized for lacking inspiration; yet the Cobbler's Song went into the repertory of most bass-baritones, and was sung worldwide. No other Norton stage work found comparable success, but the gentle lilt and piquant chromaticisms of his barcarolle *La siesta*, in both orchestral and piano versions, achieved great popularity for a time.

WORKS
(selective list)

all theatres in London

Stage: The Water Maidens, 1901; Pinkie and the Fairies (fairy play, 3, W. Graham Robertson), His Majesty's, 19 Dec 1908; What Ho! Daphne, 1913; Chu Chin Chow (a musical tale of the East, 3, O. Asche, after: Ali Baba and the Forty Thieves), His Majesty's, 31 Aug 1916 [films: 1923, 1934]; Pamela (comedy with music, 3, Norton and A. Wimperis), Palace, 10 Dec 1917; Teddy Tail (children's play), 1920

Contribs. to: Orpheus in the Underground [after Offenbach] (op, 2, Norton, A. Noyes and H. Tree), His Majesty's, 19 Nov 1911; The Passing Show (revue), 1915; Flora (comedy with music, 3, H. Grattan, D. Burnaby and J. Heard), Prince of Wales, 12 March 1917

Instr: La siesta, barcarolle, pf (1925) [later orchd]; Funeral of a Spider (int)

Many songs, incl. Thyme and Lavender (W.G. Robertson), 6 songs

GEOFFREY SELF

Norton, Lillian. *See* NORDICA, LILLIAN.

Norvo, Red [Norville, Kenneth] (*b* Beardstown, IL, 31 March 1908; *d* Santa Monica, CA, 6 April 1999). American jazz xylophonist and vibraphonist. After touring with a marimba band in the late 1920s he joined Paul Whiteman's orchestra. Mildred Bailey, the singer in the band, became his first wife, and from 1936 to 1939 they led a small orchestra in New York. Norvo joined Benny Goodman's sextet in 1944, at which time he changed permanently to the vibraphone. He was a soloist with Woody Herman's First Herd (1946), and he toured with Billie Holiday. During the 1950s he led trios with guitar and double bass, one of which was an outstanding cool-jazz ensemble with Tal Farlow and Charles Mingus (1950–51). In 1959 he toured there with Goodman. He toured there again in 1968 and 1969, but during the 1960s and 70s he worked mainly in Nevada and California. Several albums with famous swing musicians announced his return to the international arena, and in the 1980s he toured Europe regularly.

In the early 1930s, with Whiteman and later with his own ensembles, Norvo proved himself an exceptional improviser on the xylophone, a previously neglected instrument in jazz. He usually played the vibraphone without vibrato, almost like a xylophone. His improvising, strongly influenced by Teddy Wilson's piano style, suffered an occasional rhythmic stiffness at fast tempos, but was outstanding on such jazz ballads as *Ghost of a Chance* (1945, Baronet), recorded during a concert at Town Hall in New York. As a bandleader Norvo preferred delicate sounds. In the 1930s he led a drummerless sextet (trumpet, tenor saxophone, clarinet, xylophone, guitar, double bass) and an orchestra noted for its subtle approach to swing. In 1936–7 this orchestra specialized in the performance of highly praised arrangements by Eddie Sauter, in particular *Remember* (1937, Bruns.), which has an outstanding solo by Norvo. Norvo later brought his concern for clarity and restraint to the trio with Farlow and Mingus, as may be heard on *Move* (1950, Dis.). Among the leading musicians of the swing era, he was unusually successful in making a transition to the bop style.

BARRY KERNFELD

Norway (Nor. Norge). Country in Scandinavia. The kingdom of Norway came under Danish rule in 1380; the Norwegians seized independence and wrote a new constitution in 1814, but the Kiel treaty forged a union with Sweden in the same year. In 1905 Norway again became a sovereign state.

The oldest archaeological finds of musical objects are bronze *lurs* (long curved trumpets probably used in cult processions or for signalling) from 1500–500 BCE, found both at Revheim in the west and Brandbu in the east, and bone flutes. Wooden musical instruments were found in the excavation of Viking ships dating from around 850 CE. A lyra-shaped harp from Numedal and a sheep-bone fipple flute from Bergen survive from the 14th century. Wood carvings in stave churches of the Middle Ages depict the ancient Norse harp, apparently a kind of lyre, and a sculpture in Nidaros Cathedral (Trondheim) shows a fiddler with a string instrument, probably the old Norse *fidla*. The Edda, bard poems and the sagas mention the *lur* as a military instrument, and the *fidla*, *gigia*, harp, pipe and trumpet were the instruments of the *leikarar* (jongleurs).

I. Art music. II. Traditional music.

I. Art music

Christianity, introduced in the 10th century, brought Gregorian chant to Norway. The celebration of the life of King Olav (*d* 1030), the national saint, created a new liturgy and brought pilgrims and church music from central Europe. Olav's cathedral (begun 1075) in Nidaros (now Trondheim) was an important centre; the archbishopric of Nidaros, established in 1152/3, comprised Norway, Iceland, Greenland, the Faeroe Islands, the Orkneys and the Western Isles of Scotland. A manuscript of around 1230 from the Orkneys contains the Hymn to St Magnus, the earliest example of polyphonic music (two parts, mostly parallel 3rds) from Scandinavia; no evidence has been found of polyphony used in Norway itself during the Middle Ages. During the 12th century cathedral schools teaching Gregorian chant were established in Trondheim, Oslo, Bergen and Stavanger. The *Missale nidrosiense* (Copenhagen, 1519) and the *Brevarium nidrosiense* (Paris, 1519) suggest that the Norwegian liturgy was fully elaborated by the end of the 15th century. With the arrival of the Reformation in Norway (1537), much diminishing the importance of Nidaros, and with the king, court and capital far away in Copenhagen, Norway lacked a major centre of cultural activity. Nevertheless some cities thrived; as fish, pelts and timber were exported from medieval times and mining was established in the 16th and 17th centuries, communications improved with central Europe, the Netherlands and England. The larger cities employed organists from the 14th century and municipal musicians by around 1600. The latter worked in large districts and could earn considerable income by sub-contracting their responsibilities. The king tended to bestow these privileges on his own musicians in Copenhagen, who then brought Danish, German and Dutch musical traditions to Norwegian cities. The Danish-Norwegian kings themselves visited

Norway infrequently; their officials there were mostly Danish, though some Norwegians were educated in Denmark and came back as civil servants or clergy. Few Norwegian composers are known from this period; Caspar Ecchienus (*fl* late 16th century) and Johann Nesenus (*d* 1604, active in Göttingen) are among the earliest Norwegian composers of polyphonic music known by name. Most public musical events took place in churches and used music by foreign composers.

During the 18th century various private societies were formed for entertainment, including theatre and music. Members performed themselves, sometimes with visiting musicians. The oldest such society still in existence is the Musikselskab Harmonien in Bergen, its orchestra (now the Bergen PO) established in 1765. J.D. Berlin, whose family were active in Trondheim as performers and teachers, wrote the first Danish-Norwegian music textbook, *Musikalske elementer* (Trondheim, 1744).

The brief independence of 1814 encouraged the movement for a national Norwegian culture. The local traditions of the inhabitants of the mountains and valleys, including their music, became the subject of intense interest for the upper classes. Depictions of national costumes were popular, poetry and stories were written down, songs transcribed and traditional fiddlers invited to the capital. Some foreign composers, among them G.J. Vogler, began to quote or imitate traditional Norwegian music in their works; Waldemar Thrane was the first Norwegian to do this, in his Singspiel *Fjeldeventyret* ('Mountain Adventure'), which was also the first Norwegian opera. Enthusiastically received, it had its première in 1825 in Christiania (now Oslo), and was given in Bergen and Trondheim soon afterwards. One of the most visible champions, in Norway and abroad, for Norwegian culture was the virtuoso violinist and composer OLE BULL. He used traditional music in his compositions and improvisations, gave concerts together with musicians playing the Hardanger fiddle and dancers in national costume, and established in Bergen the Nationale Scene (1850), the first theatre to use Norwegian rather than Danish as its main language.

During the first half of the 19th century there was no academy of music or conservatory in Norway; the only music education available to the general public was undertaken by the bands of the military services. Otherwise, young musicians studied abroad, some in Paris – among them Thomas Tellefsen, a pupil and friend of Chopin – and some at the Leipzig conservatory (established 1843), notably Halfdan Kjerulf, Edvard Grieg and Johan Svendsen, all of whom later developed a strongly national Norwegian idiom in their compositions. From the 1840s there was a steady increase in the number of professional musicians and musical organizations, and a great movement in the founding of male choirs, beginning among students and spreading to artisans, clerks and labourers. Every notable Norwegian composer of the period wrote for male choir. Later in the century mixed choirs also flourished and there were large choral festivals; nationalist ideology permeated the choral movement and its music, adding force to the country's slow struggle towards freedom.

Beginning in 1841 the musician and scholar L.M. Lindeman published a number of books of piano or vocal arrangements of traditional Norwegian tunes he had collected. These became a major source for composers. Kjerulf, Grieg and Svendsen arranged and quoted the melodies and dances in their works; they also developed their own idiomatic uses of the music's characteristic tonal, melodic and rhythmic features, and the stylistic traits of the resulting compositions came in turn to be regarded as typically Norwegian. Grieg was inspired by the nationalist enthusiasm of Ole Bull and of the young composer Rikard Nordraak (who composed the Norwegian national anthem, 'Ja, vi elsker dette landet'). Grieg's Norwegian 'colour' appealed not only to Norwegian audiences but to those abroad, helped by the Romantic notion of his music stemming from the exotic and unspoilt country on the border of Europe. Towards the century's end the composer Johan Peter Selmer was noted for making his own use of the Norwegian idiom. Music in Norway was also responding to other influences. Agathe Grøndahl (also a well-known pianist) wrote songs and piano music reminiscent of an earlier Romantic style. Christian Sinding's chamber music and symphonic works, and Gerhard Schjelderup's operas, earned their reputations abroad. By the end of the century improvements in church music were evident, helped by Lindeman's establishment in 1883 of an organ school in Christiania which in 1894 became a fully-fledged conservatory.

Around the time of World War I, while a number of older composers such as Johan Halvorsen were continuing in a Romantic tradition, the younger generation returned from Berlin and Paris with ideas on different kinds of modernism. Some wished to keep contact with the national musical idiom but without slavishly following Grieg's example. This tension between the modern and the national resulted in some interesting music between the wars. Among the leading radicals were Fartein Valen, a lyrical atonalist, and Pauline Hall, who began as a kind of Impressionist; neither ever wrote music that could be called characteristically Norwegian, whereas Ludvig Irgens-Jensen used traditional and modal idioms. David Monrad Johansen, Harald Saeverud, Geirr Tveitt and Klaus Egge also included traditional elements in their works; Eivind Groven collected traditional melodies, mostly Hardanger fiddle tunes, and integrated them into his compositions.

Between the world wars musical life in Norway changed rapidly. Music became part of the curriculum in all schools and a score of school bands and state and municipal orchestras were organized. Recorded music and radio spread the influence of jazz and popular music of Anglo-American origin, partly at the expense of German waltzes and operetta, but also at that of 'classical' concert music. Young composers after World War II rejected Romantic music, and inasmuch as the Nazis had made sinister use of elements of traditional Norwegian culture, 'national' music was not in vogue. Composers went to Paris or Darmstadt to study. Various types of neo-classicism were dominant, and a few composers tried 12-note techniques. From around 1960 influences also came from eastern Europe, particularly Poland. The resulting pluralism persisted through the rest of the century. In the 1950s a revitalization of church music began. Composers central to this were Knut Nystedt and Egil Hovland. Both were also noted for their secular music, and together with the radical Finn Mortensen and the more moderate Johan Kvandal they opened the way for modernist tendencies coming from the rest of Europe and the USA. The Norsk Jazzforbund was founded in

Oslo in 1953. Maj and Gunnar Sønstevold were the leading composers of film music, the latter also a champion of electric instruments and electronic music. Arne Nordheim won acclaim for his multimedia work and music for television and the stage. Edvard Fliflet Braein and Antonio Bibalo were among the most prominent composers of theatre music, both enjoying success abroad.

Around 1970 some modernist composers such as Kåre Kolberg and Alfred Janson embarked on a 'new simplicity', joined by younger composers including Ragnar Søderlind. The teachings of Finn Mortensen brought out different styles in Magne Hegdahl, Olav Anton Thommesen and Lasse Thoresen. Among the younger generation, Håkon Berge (*b* 1954), Cecilie Ore (*b* 1954), Rolf Wallin (*b* 1957), Nils Henrik Asheim (*b* 1960), Asbjørn Schaathun (*b* 1961) and Gisle Kverndokk (*b* 1967) have won recognition abroad.

From the early 1970s the government pursued an active policy on music. A new pedagogical structure was set up, comprising every age from pre-school to adult. Most communities have their own music schools, and each region its conservatory and teachers' college that includes music education. The State Academy of Music was established in 1973. Music education and research at university level have broadened, and music libraries and collections (including those of traditional music) improved. The national government funds the symphony orchestras of Oslo and Bergen and the National Opera (established 1959, based in Oslo), and joins the county governments in supporting a further five orchestras, a few contemporary music ensembles and a score of festivals. Some smaller groups and chamber orchestras are funded by the Norwegian Cultural Council. NorConcert (founded in 1967 as Rikskonsertene) is a state agency responsible for producing and supporting concerts and other musical events all over the country, giving priority to music for young people and producing teaching materials in coordination with concerts. The Norwegian Music Information Centre documents and distributes Norwegian music, including scores and recordings.

II. Traditional music

Through the centuries economic and political circumstance have fostered close connections and interdependence between Norwegians, the peoples of neighbouring Scandinavia and other European countries adjoining the North Sea. It is no surprise therefore that Norwegian culture in general, and folk music traditions in particular, give evidence of comprehensive cultural connections and integration with other nations of the area. Nevertheless, in some respects Norwegian folk music displays striking uniqueness in rhythm, tonality and structure, the result of diverse local processes of fusion of new musical ideas,

instruments and techniques with older, indigenous musical idioms. This is particularly true for fiddle music identified with traditional courting and athletic dances which, in some areas, survived the influence of the dominant waltz and polka genres of the 18th and 19th centuries. Early vocal music genres and performing styles which have survived over time sufficiently to illuminate important historical connections and developments, have since the 1970s been the object of growing interest and revival.

1. Sources, archives and anthologies. 2. Vocal music. 3. Instruments and instrumental music.

1. SOURCES, ARCHIVES AND ANTHOLOGIES. Apart from some scattered material remnants, early sources are practically non-existent. Little folk music was collected before L.M. Lindeman, encouraged by the national romantic movement, began comprehensive work in 1848. Although he collected primarily with practical uses in mind and published much music in arranged forms, his fieldwork throughout several decades was of a remarkably high standard for his time, and his manuscripts (around 1500 items) remain an important folk music source. Other collections of the epoch were limited to particular local traditions such as that of O.T. Olsen for the northern area and K.D. Stavset for the north-western part of the country. A second wave of collecting began about 1900; O. Sande, Catharinus Elling and Erik Eggen continued to concentrate on vocal music, as Lindeman had done, while O.M. Sandvik also gave attention to the violin music of the eastern valleys. At about the same time several competent Hardanger fiddle players such as Arne Bjørndal, Truls Ørpen and Eivind Groven began collecting and transcribing their own intricate music. Nearly all the important folk music manuscripts are in the University of Oslo library.

The few recordings made before 1945 include a series of gramophone records, principally of Hardanger fiddle music, produced over several decades from 1900, and a few hundred wax cylinders of vocal and fiddle music, made between 1912 and the 1930s by R. Berge, K. Lieström, Sandvik and C. Leden. With the introduction of the tape recorder, collecting was intensified and sound archives were established, first by the Norwegian Broadcasting Corporation (the NRK), then by the Norsk Folkemusikkinstitutt (now the Norsk Folkemusikksamling, University of Oslo, with affiliated archives in Trondheim and Bergen). At Tromsø Museum there is an archive of folk music from northern Norway, including the Lappish districts. Altogether sound archives contain about 750,000 recorded items. In addition a substantial number of recordings are stored in various local archives. A representative collection of ten CD recordings (329 items), based on the NRK archive, is available on Grappa (GRCD 4061–70). Also available is a substantial and increasing number of cassette and CD recordings of authentic folk music by contemporary performers.

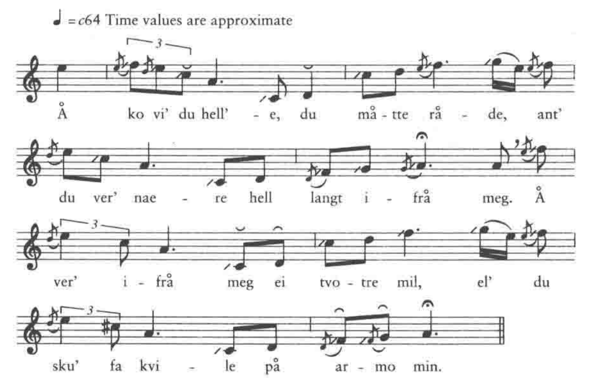
Transcriptions of music for the Hardanger fiddle (covering western Norway and adjoining mountain valleys to the east and south) is published in Gurvin and others (1958–81), altogether seven volumes containing around 2000 dance tunes (*slåttar/-er*: song; *slått*: sing). The anthology provides an extensive musical survey of a continuing instrumental tradition in different tuning and metre (6/8, 2/4, 3/4). The edition includes previously published tunes. Transcriptions of instrumental pieces for ordinary violin from the eastern valleys and further north are published in Sandvik and Nyhus. An anthology of four volumes containing about 1900 meticulous transcriptions of dance tunes in duple and triple metre is published by Sevåg and Saeta (1992–7). The volumes also contain general information about local traditions and aspects of style and performance. Sandvik's collection (1960–64) contains religious folksongs based on Danish-Norwegian hymn writers of the 17th and 18th centuries. In a thorough study Gaukstad presents the folksong repertory collected from the district of Valdres, arranging the material according to literary genres and further grouping it into series of musical variants. In his commentary on the 440 musical items he traced musical parallels in other parts of Norway and elsewhere. An increasing number of monographs on the history of local traditions and biographies of outstanding performers (e.g. Buen; E. and J. Kjøk) constitute valuable sources of information. A general introduction to Norwegian and Saami folk music, edited by Aksdal and Nyhus, contains a set of individual studies covering a wide range of topics.

2. VOCAL MUSIC. Compared with other parts of Europe, Norway does not seem to be particularly rich in early genres. Well-documented types are songs related to animal husbandry, lullabies, religious folktunes, medieval ballads and tunes to metrically standardized poetry known as *stev* (see below). Ledang (1967) discusses characteristics of vocal performance style.

The impressive cattle-calls known as *lokk* are seldom heard in their original context; however, a number have been recorded. In its complex form the *lokk* is a composite of shouting, singing and talking, in an order which may have been established by function. In 20th-century versions the performer, generally a woman, may first address the cows by shouting some introductory words in a deep chest voice, e.g. *koma då, båne, å stakkare* ('come now, child, poor thing'), call them by name, using wide vocal leaps, and lastly vocalize melismatically, often as high as *e‴*; the more archaic of these melismas contain many unusual intervals. These calls, whose prototype was possibly once common to cattle-raising people throughout Europe, are of interest both for their style of performance, a marvellous display of melismatic vocal technique and carrying power, and for the possibly apotropaic function of calling the cows by name. Evidence of considerable variation within the general style indicates that the genre also provided rich scope for individual creativity. Studies by Moberg (1955) and Johnson (1986) of the Swedish *lockrop*, a tradition basically similar to the Norwegian *lokk*, contribute significantly to our knowledge about the genre. The *lokk* and melodic calls known as *huving*, *laling*, *gukko* etc., used by herders to communicate over long distances, are genres particularly associated with transhumant pastoralism in the mountains. Lullabies and nursery rhymes, a vanishing tradition, were common all over the country. The simplest melodies are found among the lullabies of some south-western districts. Their range is normally limited to a 4th or 5th with a 3rd as nucleus, but they exhibit great melodic and rhythmic flexibility within the frame of a few common melodic formulae (Greni, 1960).

Religious folktunes form the largest category of vocal music collected in Norway; they reflect the strong religious movements that gripped the country in the 18th and 19th centuries, frequently to the exclusion and detriment of

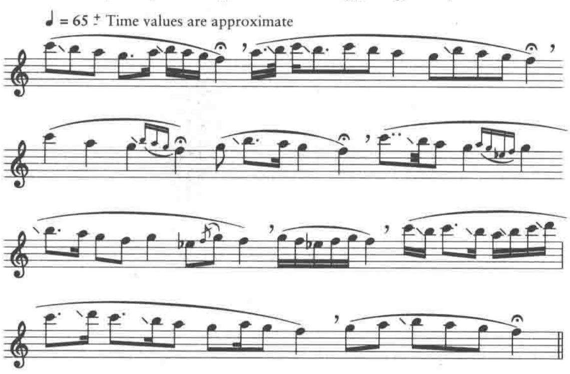
other forms of musical expression. Differences in style probably indicate chronological periods rather than regional variation. Major or minor melodies from the late 19th century onwards are easily identifiable, although parts of the repertory show clear signs of a traditional re-creative process. Many tunes have retained their 'modal' character and are partly syllabic, partly melismatic. Lindeman made the earliest documentation of melismatic singing; his chief informant, A.E. Vang from Valdres, sang him 86 liturgical hymns to texts by the Danish Protestant hymnist Thomas Kingo. This repertory, and probably the song style as well, could be traced back three generations to a famous church singer of the same parish, almost to the time of Kingo himself. Many of the tunes are also based on melodies in Kingo's *Gradual*, but differ considerably from the model due to their melismatic character and 'free' rhythm. Characteristically duple and triple values are grouped in an irregularly changing pattern which approximates an additive metre, sometimes dependent on, sometimes independent of, the textual structure. Later collections have proved this song style to be a survival, but widely dispersed and vital enough to have been set to religious texts of 19th-century origin. Parallels have been found in the Faeroes, Denmark and Sweden, but the origin of the style has not been determined. Greni (1956) demonstrates how melodies of early Protestant hymnals are transformed by the folk tradition to constitute sets of clearly distinct local variants.



The strong position of religious folktunes until the mid-20th century was partly due to extra-liturgical religious practice in domestic settings. While many of the tunes appeared in early hymnals, there must also have been extensive local composition of melodies for favourite texts. For example, the religious poems of the great Danish hymnist H.A.B. Brorson, published without melodies and of little consequence to Danish religious folksong, evoked an immense response in rural districts of Norway, producing a wealth of settings (with more than 300 registered) many of which are related as variants.

The medieval ballad exists only as a survival. Pan-Scandinavian in character, it is singular in the class of truly epic folksongs. Most traditional ballad tunes were collected in the county of Telemark before 1875 and form an interesting contribution to rural musical heritage. Ballad texts have been a matter of importance to folklorists who conventionally distinguish chivalric and mythical poetry about giants and trolls. The musical material, however, has not so far been thoroughly studied by musicologists. The ballad, historically a dance song (from the Latin *ballare*, to dance), once widespread in western Europe, became extinct a long time before the rise of folk music research. Dance-songs (*folkeviseleik*) in present Norway are choreographed revivals inspired by the living Faeroese tradition and associated with the liberal youth movement.

The *stev* is a type of Norwegian popular poetry known in two forms, the *gammelstev* (old *stev*) and the *nystev* (new *stev*). The former is closely related to the ballad in metre and rhyme but occurs mostly in single stanzas, and has a more rigid four-line structure of 4 + 3 + 4 + 3 accented syllables, which is identical with the 13th-century Icelandic rhyme *ferskeytla*. The collected text material either provides words of wisdom and ethics or appeals to a sense of humour. However, irrespective of poetic content the tunes are all recognizable as variants of those associated with the famous visionary ballad *Draumkvedet*. The *gammelstev* was probably common until about 1800 when superseded by the *nystev* which flourished until the middle of the 20th century, particularly in the Setesdal district where it still thrives. Its textual form is four lines of two nearly identical couplets. Its melodic material includes a variety of pentatonic pitch patterns rarely found in other genres. The material also includes the true 'tumbling strain' as defined by Sachs (*The Wellsprings of Music*, 1962) and melodies based on chains of 3rds. The range varies from a 4th to a 12th (ex.1). The *stev* songs are performed in a seemingly parlando-rubato style with considerable scope for individual variation, but closer scrutiny reveals an asymmetrical rhythmic mode whose basic unit consists of two unequal beats, the shorter followed by the longer. Evidently this comparatively young poetic genre has assimilated musical elements of considerable age and variety. Sandvik's booklet (1952) on melodies from Setesdalen contains a representative collection of *stev* melodies. With the exception of some smaller survey studies, the material has not so far been the object of thorough and systematic musicological analysis (Sevåg, 1987).



3. Instruments and instrumental music. A great variety of instruments such as rattles, bullroarers, clappers and whistles which had practical or magical functions have been almost totally forgotten. Wind instruments with reeds are generally scarce. Bagpipe music does not exist in folk tradition, but the instrument is mentioned in a couple of historical sources. In a local dictionary of 1646 from Sunnfjord the dialect term *Belg-Pijpe* is translated *Secke Pijpe* (bagpipe) while in 1849 a named person from Valdres was supposed to have played bagpipes at a festival in Christiania (Oslo). Pictorial illustrations of bagpipes cannot be taken as evidence as they might have been borrowed from other cultures. The main single-reed instruments are the *halm-pipe* (an idioglot straw pipe) and the animal horn, with a reed of juniper wood bound on to the narrow end which is cut obliquely. This use of separate single reed predates any possible influence from the modern clarinet, but its distribution suggests that it is not prehistoric, possibly not even medieval. The lips do not touch the reed in performance. The modern clarinet became common in

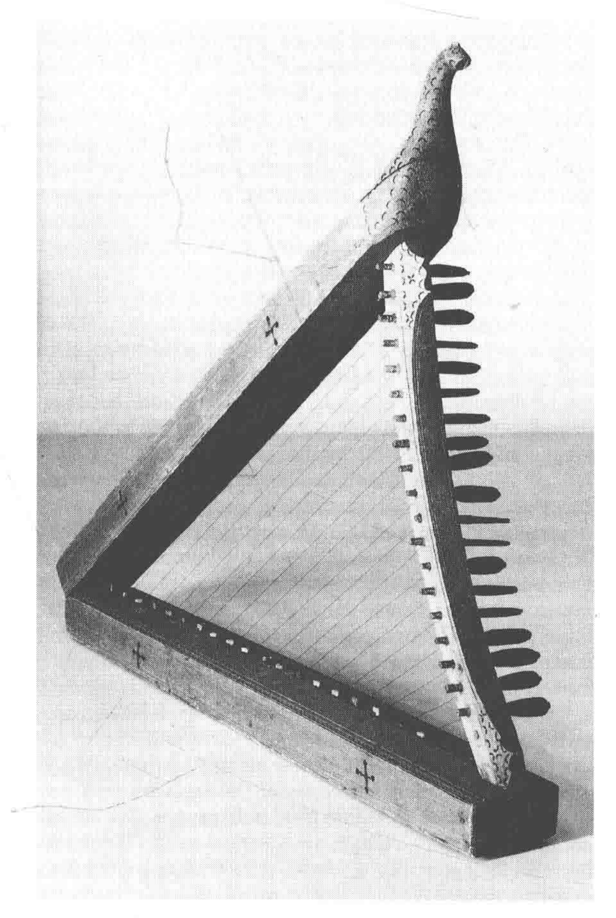
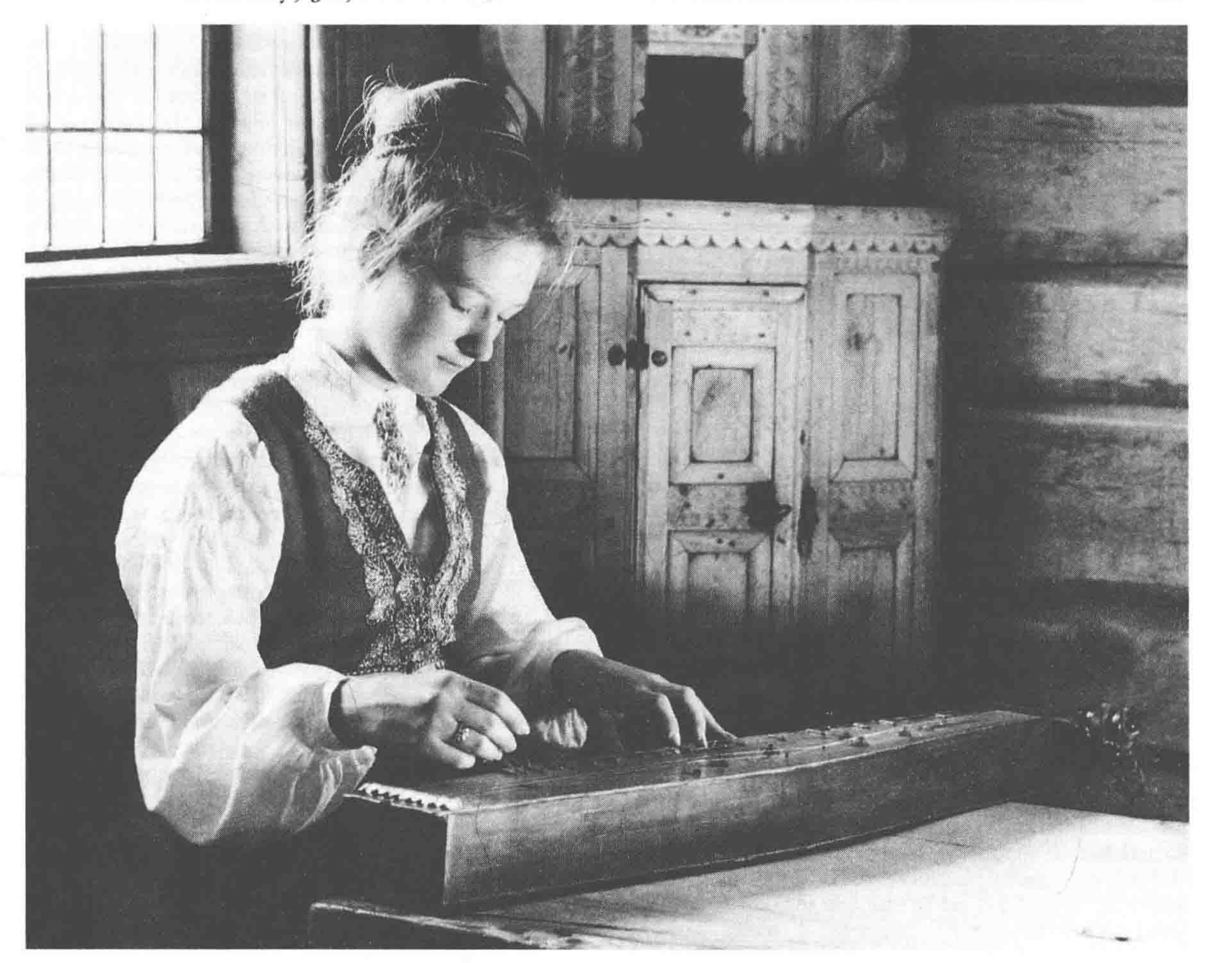
many districts after 1800, primarily as a dance instrument, often played with fiddle or drum (Aksdal). Double-reed instruments are even more rare: apart from the dandelion stalk, only the bark oboe has been used, made by winding up a long strip of bark and fitting it with a double reed made from a short, narrow tube of bark, thinned out and pressed together at one end.



The more varied lip-reed family consists of wooden trumpets (*lurs*) and animal horns; they have had many practical purposes including being played by herdsmen to scare away wild animals and round up cattle, a practice which ended in the late 19th century. Of the several types of *lur*, short ones (30 to 40 cm) are made from a piece of wood hollowed out to give a comparatively wide conical bore; only the fundamental can be sounded. Longer ones (60 to 200 cm) are made by splitting a piece of wood, hollowing out the two halves and fitting them together again. Most longer *lurs* (90 to 150 cm) have a range similar to the bugle's while the longest (150 to 200 cm) were generally played in a very high register, their melodies resembling those played on the large alphorns in other parts of Europe (ex.2). Animal horns with finger-holes appear to have been used in prehistoric times in Scandinavia. As Sevåg (1967, 1972, 1973) has noted, most of the more recent horns have three or four finger-holes and their range is rarely more than a 5th.

Horns made out of wood or animal horn have traditionally been particularly associated with mountain herding and used as alternatives to the vocal *lokk* and *huving* mentioned above.



Norwegian flutes are all of the fipple type, ranging from one-note whistles of bark and bone (used by trappers to imitate animals) to fully developed recorders. Some medieval bone flutes with finger-holes survive; similar types were made and used until about 1900. Imported recorders appeared in the countryside probably around 1700 and were imitated locally as long as shepherds used such instruments (i.e. until *c*1930). Although the decorative appearance of the Baroque recorder recurs in almost all the home-made flutes, their folk origin is obvious: all are made in one piece; the finger-holes are of equal size and mostly equidistant; the bore and finger-holes are often burnt after the boring; no two instruments, even by the same maker, are exactly the same length. Despite their apparently extensive use until the 20th century, almost no traditional flute music has been transcribed or recorded. The *seljefløyte* (a long, overblown willow-bark flute without finger-holes) attracted special interest from the 1920s, when Groven suggested that it fundamentally influenced the intervallic and melodic structure of Norwegian folk music as a whole, a scarcely tenable hypothesis which nevertheless initiated and influenced a considerable amount of research.

The jew's harp existed in Norway from the Middle Ages and continued to enjoy respect as a folk instrument until the mid-20th century. Today it is the object of growing interest. It was normally played by men, and the repertory consisted mainly of dance-tunes. Among the few recordings of various local styles, and among living sources, most show a remarkable technique. Patterns of strokes on the vibrating metal tongue, generating legato/portamento effects and complex syncopating rhythms, are generally analogues with typical features of the fiddler's bowing. Ledang (1972) concluded from a study of its acoustics that the jew's harp, usually classified as an idiophone, might as well be classified as a free aerophone.

Evidence of medieval string instruments is scarce. A seven-string lyre from Numedal, probably late medieval, is the only specimen of its kind. A single medieval sculpture on a cornice of Trondheim Cathedral indicates that bowed lyres (*stråkharpa* in Swedish), surviving in eastern Finland and among the Swedish-speaking population of Estonia at the turn of the century, were once widely distributed throughout Scandinavia (Anderson). Of the eight harps preserved in museums, all are crudely made with 12 to 19 strings, and a few date from the period 1681–1776 (fig.1). All performance tradition is

1. Harp with 19 strings from Østerdal, 1776 (Norsk Folkemuseum, Oslo)

2. *Helle Sandvik playing the langeleik in an old Valdres house at the Norsk Folkemuseum, Oslo*

extinct, although literary evidence (*c*1600) suggests that the harp was a folk instrument and was possibly played as such in parts of Norway during the late Middle Ages. Apparently it was last played in Østerdal in the early 19th century.

The *langeleik*, a type of zither, resembles the *Scheitholt* of Praetorius's time, having only one melody string and between three and seven drone strings. It was apparently well established in both town and country districts around 1600, and until the mid-19th century was the most common instrument for domestic rural entertainment. Thereafter it rapidly became obsolete except in Valdres, where an unbroken tradition persists and has enabled thorough documentation of *langeleik* music. The playing technique differs considerably from that of similar instruments outside Norway: the middle three fingers of the left hand stop the melody string, and also rapidly strike (on ascending) and pluck (on descending) the notes between the rhythmic plectrum strokes of the right hand (fig.2). The melodic idiosyncrasies of *langeleik* music may be related to this technique. The tuning of the *langeleik* is interesting: contrary to expectation, the spacing of the frets on early specimens shows no pattern of large and small intervals, and comparison of several examples shows that the scale patterns cannot be reduced to a single formula. In the 1920s, when the problem of scale, mode and neutral tones was the focus of much Norwegian research and discussion, Eggen attempted an evaluation of *langeleik* scales; Sevåg (1974), using a greater number of early instruments, concluded that from a large number of *langeleik* scales a heptatonic scale structure with a relatively fixed framework of tonic, 5th and octave can be abstracted. Other intervals vary as much as 60 cents, but no interval is smaller than a somewhat short three-quarter-tone. This suggests an early idiom of scale and mode which Sevåg termed anhemitonic heptatonism, but the theory needs to be verified by analysis of recorded material, preferably vocal, in which the flow of melody is relatively unrestricted. Despite the long-established dominance of the diatonic system, a small group of recorded folksingers has an authentic archaic singing style which seems to conform in almost every detail to the 'laws' of anhemitonism and variability.

The violin became the main folk instrument in Norway during the 18th century. Historical and material sources, however, indicate that violin-like, and possibly earlier types of bowed instruments, were known in Norway before 1600. Fiddle music, however, developed in two different directions, based on two types of instrument: the normal violin, used throughout most of the country, and the *hardingfele* (HARDANGER FIDDLE), played principally in western Norway from Hardanger to Sunnfjord and in

the central Norwegian valleys. This distribution has remained fairly consistent. While the demand for violins was mainly satisfied by imported instruments, the Hardanger fiddle was built solely by Norwegians, of whom merely a handful were professional after about 1860. It generally differs from the violin in a wealth of ornamental detail, short neck and fingerboard, long f-holes specially cut to cause the two edges to overlap on different planes, and sympathetic strings (fig.3). Fiddles with sympathetic strings, introduced by Hardanger craftsmen about 1700, or possibly half a century earlier, obtained great popularity to both the north and east of Hardanger, accounting for their name. These early instruments and those dating before 1860 are characterized by their outline (generally narrower and more angular than that of Italian violins, and with a comparatively long lower part), by their highly arched belly and back and their straight or slightly tilted neck.

Evidently many of these construction details and other characteristics such as their ornamentation reflect early violin history: when the Hardanger craftsmen, although familiar with the modern violin, based their production on these earlier forms and principles of construction, they were no doubt responding to the traditional demands of the market. Essential features such as the short neck (appropriate to a finger technique which requires only the first position) and the flat fingerboard and bridge (adapted to a style of playing involving a sustained drone and a technique where movements from high to low strings require relatively small vertical modifications of the bowing right arm) suggest that the Hardanger fiddle was a local adaptation to an indigenous musical idiom. This hypothesis is supported by the fact that an archaic instrumental technique survives not only in Setesdal, where the Hardanger fiddle was first introduced around the turn of the century, but even in places such as Østerdalen and Gudbrandsdalen where the modern violin rather than the Hardanger fiddle is played. Thus both fiddle traditions seem to have shared fundamental instrumental techniques and stylistic features associated with dances whose development pre-dates the introduction of the modern violin by at least two or three centuries (Sevåg, 1971; Blom, 1985).

The earlier duple-time dances are called *halling*, *gangar* and *rull*; those in triple time include the *springar*, *springleik*, *pols* and *rundom* (all couple dances). Such definitions in terms of duple and triple time are conventional but limited. 'Triple-time tunes', as well as the *halling*, an athletic men's dance, are found in most districts, whereas the couple dances, *gangar* (also named *halling* in some areas) and *rull* are known only in a few Hardanger fiddle districts. Here the earlier genres outnumber the later, partly owing to the conservative policy of the fiddlers' organizations during the mid-20th century. In some of the eastern valleys where the violin is played, part of this repertory survives. In general, however, folk violinists have extensively modernized both the repertory (including the waltz, polka and *rheinländer*) and the style of playing. The simple drone style has given way to plain bowing of the single melody or else to a partly diaphonic style which combines the drone element with elements of common triadic harmony as in the Røros tradition (Nyhus).

The harmonic and tonal aspects of Hardanger fiddle music are more intriguing and should preferably be examined in terms of the drone style of playing (Hopkins, 1986; Sevåg, 1971). Combined with different tuning patterns, this approach gives each tune or group of tunes a characteristic, favoured tonal and harmonic character. Within a particular piece all four strings are frequently used as variable drones below or above the melody. As a consequence the dominant effect of one particular tonic centre is weakened. Moreover, this movable drone technique is frequently expanded by stopping melody and drone string simultaneously with the first finger, causing surprising harmonic effects.

Both fiddle traditions apply the scordatura principle and groups of *slåttar* within repertories are classified in terms of patterns of tuning. Sources indicate that the retuning of instruments was common during weddings, with each tuning having particular ceremonial significance through functional association with the sequence of ceremonial activities. The two traditions also share modal and harmonic characteristics, while their rhythms abound in small but significant 'irregularities' typical of Norwegian folk music in general. There is, however, a marked structural difference between the two with regard to dance-tunes in 'triple time'. Hardanger fiddle tunes tend to be structurally similar to the *gangar* and *halling* type, in particular the sequencing of repeated and transformed two-bar motifs, e.g. *AA'ABB'ACC'DED'E'EF'*. Violin tunes normally have a symmetrical form based on four-bar phrases in binary form *AA' BB'*, also called two-part song form. Likewise, patterns of bowing are markedly different.

Duple-time dance-tunes, considered to be the oldest surviving dance music genre in Scandinavia, show characteristic and predictable cycles of bowing, which for '6/8 tunes' have been referred to by composers such as Grieg in terms of a frequently changing hemiola pattern. A small group of such tunes with the exceptional tuning *f–d'–a'–e''* (ex.3) is typical by virtue of its most subtle and complex 'syncopation'. The musical accents, following asymmetrical bowing patterns, combine units of two and three quavers into variously composed groups of six, nine or 12 quavers e.g. 2 + 2 + 3 + 2 + 3 eighths, in strong

(b) ... etc

3. Søren Nomeland in Setesdal costume playing a Hardanger fiddle made in Telemark

contrast to and often syncopated against the fiddler's regular foot-stamping in 3/8 time.

Ex.3 also illustrates the equally unusual tonal and modal character of these tunes. The form, like the rhythm, is based on a number of recurring formulae combined in various, often asymmetrical patterns. The asymmetry which occurs in 'duple-time' tunes is generally considered to be the result of structure and phrasing. Metrical asymmetry is a typical feature of 'triple time' dance tunes found in all areas of the country (except the fjord districts of western Norway). These asymmetries vary and while they cannot be reduced to precise quantitative relationships within a measure, they tend to occur in a 5–7–6 pattern. What is predictable is that any shortened beat is inversely proportional to the lengthening of the subsequent beat, a principle directly related to the metrical structure of accompanying dance movements (Blom, vii, in Gurvin and others, 1958–81). In addition, as a result of the particular practices of local dance traditions, the first beat tends to be shortened in some districts, lengthened in others.

Variety in terms of structure and style often has historic precedent, but owing to the lack of reliable documentation, hypotheses about historical processes can only be speculative. What can be said is that in terms of rhythm and metre, the *springar* of western Norway are structurally identical to the *gangar*, but are significantly lighter and faster. In both, the duration and stress of dance-steps and beats are identical. However, as neither follows regular melodies or rhythmic rules which conform to duple- or triple-time metres, it is misleading to classify them in this way. Other 'spring dances' follow different asymmetrical three-beat structures which affect the composition of their melodic themes. Dance history would seem to indicate that such patterns relate to the assimilation of continental dances possibly as early as the 16th century. It is thus considered likely that the *springar* of the western fjords (in common with the *gangar* and *halling*) is an older form which enjoyed widespread popularity in the past.

Norwich. City in England. Traces of human habitation from 2000 BCE have been found at Norwich, nearby Caistor St Edmund was an important British settlement in the early Roman period, and the Danes sacked the Saxon burgh early in the 11th century; but the only remaining evidence of the practice of music in early times has been found at Bergh Apton, 11 km south-east of the city; it is a 7th-century lyre unearthed from a grave, and a reconstruction is displayed in the Castle Museum. Norwich rose to become one of the kingdom's major cities, but since Elizabethan times has been only a provincial centre.

1. Sacred music. 2. Bells. 3. Waits. 4. Orchestral concerts. 5. Choral and operatic societies. 6. Festivals. 7. The University of East Anglia.

1. SACRED MUSIC. The East Anglian see was transferred in 1095 from Thetford to Norwich, where a Benedictine priory with 60 monks was established a year later, the cathedral being consecrated as its church in 1101. The Norwich Customary, dating from the mid-12th century but reflecting earlier liturgical and ritual practice derived from Fécamp and developed over the years, makes many references to singing. It was regulated by a precentor, and boys took part in services on certain feasts.

Documents record payments to an organist, one Adam, in 1333, and to lay singers from that period onwards. From the 14th century there is also evidence of the existence of capable organ builders and menders in Norwich. For a special function in 1381 both the great and the choir organs were placed in the Lady Chapel, and a screen was erected between 1446 and 1472 with a rood-loft and organ. Organs damaged by fire in 1469 and 1510 were repaired or replaced. A new organ installed for Queen Elizabeth's visit in 1578 was damaged when lightning struck the cathedral in 1601, and its 1607 replacement was destroyed when the cathedral was looted in 1643. At the Restoration Richard Plumm of Bury, possibly re-using parts of the earlier instrument, constructed an organ that was replaced by a new three-manual one by Harris in 1689. Byfield built the next organ in 1759. It was renovated by Bishop in 1833, and then replaced in 1899 with a Norman & Beard instrument. After its partial destruction by fire in 1938, Norman & Beard rebuilt it in 1940–41; the case, designed by Stephen Dykes, was constructed in 1950. In 1969 significant tonal changes were made to the organ, and a cymbalstern was added to the west side of the case. The cathedral also possesses a Sneztler organ; it was restored in 1955, but has not been maintained in playing condition.

At the dissolution of the monasteries in 1538 Norwich was refounded as a secular cathedral; its establishment included eight minor canons, six lay clerks and eight choirboys. The latter were to be trained by a master of the choristers who was originally required to serve as organist too. Osbert Parsley (1511–85), a composer of church music and instrumental pieces, appears to have served as a chorister before the dissolution and as a lay clerk afterwards. Thomas Morley, who had probably been a cathedral choirboy, was master of the choristers from 1583 to 1587 before leaving to further his career in London. William Cobbold (1560–1639), who harmonized five tunes in Thomas East's *Whole Book of Psalms* (1592) and composed *With wreathes of rose and laurel* for *The Triumphes of Oriana*, became cathedral organist in 1595. Richard Carlton, who wrote some church music, of which only fragments remain, and a collection of consciously backward-looking madrigals as well as also contributing to *The Triumphes of Oriana*, was a minor canon and master of the choristers in the late Elizabethan and early Jacobean periods. The more significant cathedral organists in the 17th century were Richard Gibbs, Richard Ayleward, formerly a chorister at Winchester, Thomas Pleasants and James Cooper, who had been a lay clerk since 1679.

Signs of change may be seen when in 1720 Humphrey Cotton (1693–1749) became organist, for he was less exclusively concerned with cathedral music than his predecessors, and more interested in music in the city of Norwich. Thomas Garland (1731–1808), who had been born in the cathedral close and studied under Maurice Greene, showed signs of continuing in the same direction, particularly in the earlier part of his 59-year tenure at the cathedral (from 1749 to 1808). Garland arranged a number of charity services and other events, mainly with

performances of Handel's music, in the last quarter of the 18th century.

By then the fine Perpendicular church of St Peter Mancroft, near the commercial and civic centre, had also started playing an important role in Norwich music. In 1707 an earlier organ was replaced by one built by Renatus Harris. Though repaired and enlarged by G.P. England in 1802, it was replaced by a three-manual organ by W. Hedgeland in 1875. As this proved unsatisfactory, a four-manual instrument by Hele of Plymouth was installed in 1912. In 1984 Peter Collins provided St Peter Mancroft with a handsome instrument, especially suited to Baroque music, that is placed on a cantilevered gallery at the west end of the church.

It was at St Peter Mancroft that Humphry Cotton gained his initial experience, as did both Edward Miller (1735–1807), composer and organist and antiquarian of Doncaster, and John 'Christmas' Beckwith. The son and grandson of cathedral lay clerks, Beckwith continued his studies of music in Oxford under William Hayes, who appears to have widened his horizons. Ozias Linley, sixth son of the composer of stage works, came to Norwich for a minor canonry in 1790 and wrote a number of anthems. Beckwith became a major influence in the growth of the charity concert movement in Norwich while serving in succession to his father after 1794 as organist at St Peter Mancroft. In 1808 he moved on to the cathedral, but died barely a year later. He was succeeded first by his son, then by Zechariah Buck (1798–1879).

Organist from 1819 to 1877, Buck had to respond to the halving of the number of minor canons under the 1840 Cathedrals Act; the number of lay clerks gradually fell too, which probably accounts for the decision to use two boy altos from 1863 to the end of the century. Though Buck was a poor performer and a negligible composer, he had several pupils, such as A.H. Mann and A.R. Gaul, who went on to distinguished careers. He gained a reputation as a trainer of boy choristers, whom he taught to sing in a florid style.

On Buck's retirement, a new policy seems to have been initiated at the cathedral. Despite local protests the claims of Edward Bunnett were passed over, though this former chorister was a prolific composer of undemanding church music and an accomplished performer, who combined his duties at St Peter Mancroft with the post of city organist. The chapter, after making two unsatisfactory appointments, found a suitable candidate in Dr Frank Bates (1856–1936). As well as maintaining high standards at the cathedral and overseeing the rebuilding of the organ in 1899, Bates recognized that his mission extended beyond the cathedral close to include the encouragement of choral and orchestral music-making in the city and county. Heathcote Statham, organist from 1928 to 1966 and the composer of much well-crafted church and organ music, followed Bates's example in the interpretation of his role. Brian Runnett, a brilliant recitalist, combined his duties at the cathedral with teaching at the University of East Anglia for three years until his death in a road accident in 1970. Michael Nicholas, organist from 1971 to 1988, founded the Norwich Festival of Contemporary Church Music in 1981.

Sarah Glover, born in Norwich in 1786, attracted attention through her work with the choir of St Laurence's church, of which her father was rector, and devoted her life to elaborating and teaching a sol-fa system, later developed by others into Tonic Sol-fa, in order to encourage the congregational singing of metrical psalms in parts. The deconsecrated city-centre church of St Peter Hungate, which became a museum of ecclesiastical art in 1936, houses a collection of instruments used in church bands and an instrument developed to help teach Sarah Glover's sol-fa system.

From the Reformation onwards Norwich was a leading centre of Puritanism and Dissent. It was the first home of the Separatists under Robert Browne, who was imprisoned by the bishop in 1583. The earliest collection of Baptist church music, Edward Trivett's *Hymns and Spiritual Songs*, was published there in about 1772. John Taylor, minister of the Victorian Octagon Chapel, published *A Collection of Tunes* for use there in about 1750.

2. Bells. Bellringing (and in the late medieval period bell-casting) has flourished in Norwich, a cathedral city with some 50 churches. The Norman Clocher, in the western part of the cathedral close, survived the dissolution by less than half a century, but the cathedral retains five bells apparently dating from 1469 and possibly made from metal salvaged after the fire six years earlier. Most of the parish churches also possess bells, of which the oldest is the 14th-century bell at St Laurence's. St Peter Mancroft's ring of 12 bells is particularly admired. Hung at the top of the tower of the 1938 City Hall, the Gillett & Johnston bell is a civic tribute to Norwich traditions in campanology.

3. Waits. For some centuries the town waits provided musical entertainment in Norwich, taking a prominent part in civic ceremonies. The earliest document referring to the waits is dated 1288, and collars and badges (now displayed in the Guildhall) testify to their corporate existence in 1535. Until 1570 the waits took part in mystery plays and regularly played outside the Guildhall on Sunday evenings. In 1572 their stock of instruments comprised two trumpets, four sackbuts, three hautboys and five recorders. In 1589 five or six of the Norwich waits accompanied Drake on his Lisbon expedition, and only two survived. In 1599 William Kemp, after praising the waits for their skill on viols and violins, as well as wind instruments, remarked that every one of them could serve as a singer in any cathedral, and some of them probably were lay clerks, or at least assisted as music copyists. In the 18th century, when they are said to have lived in the Old Music House in King Street, they continued to give public concerts and played at assemblies and on civic occasions until disbanded in 1789. Samuel Cooke, the blind organist of St Peter Mancroft from 1748 to 1780, was a city wait for 40 years.

4. Orchestral concerts. In the early 18th century instrumental concerts were given for a time in the Guildhall and, for a longer period, in the great rooms of various inns. In the second half of the 18th century the architect and entrepreneur Thomas Ivory built the centrally located Assembly House (1754) and Theatre Royal (1758), which were occasionally used for recitals and concerts. There was also the 'room' held by Bosoly (or Bosoley), Francis Christian senior and his son (who were fashionable dancing-masters). The younger Christian opened a new room near St Michael-at-Plea in 1770, sometimes called the 'music room'. Concerts were held too in several of the city's pleasure gardens in the 18th

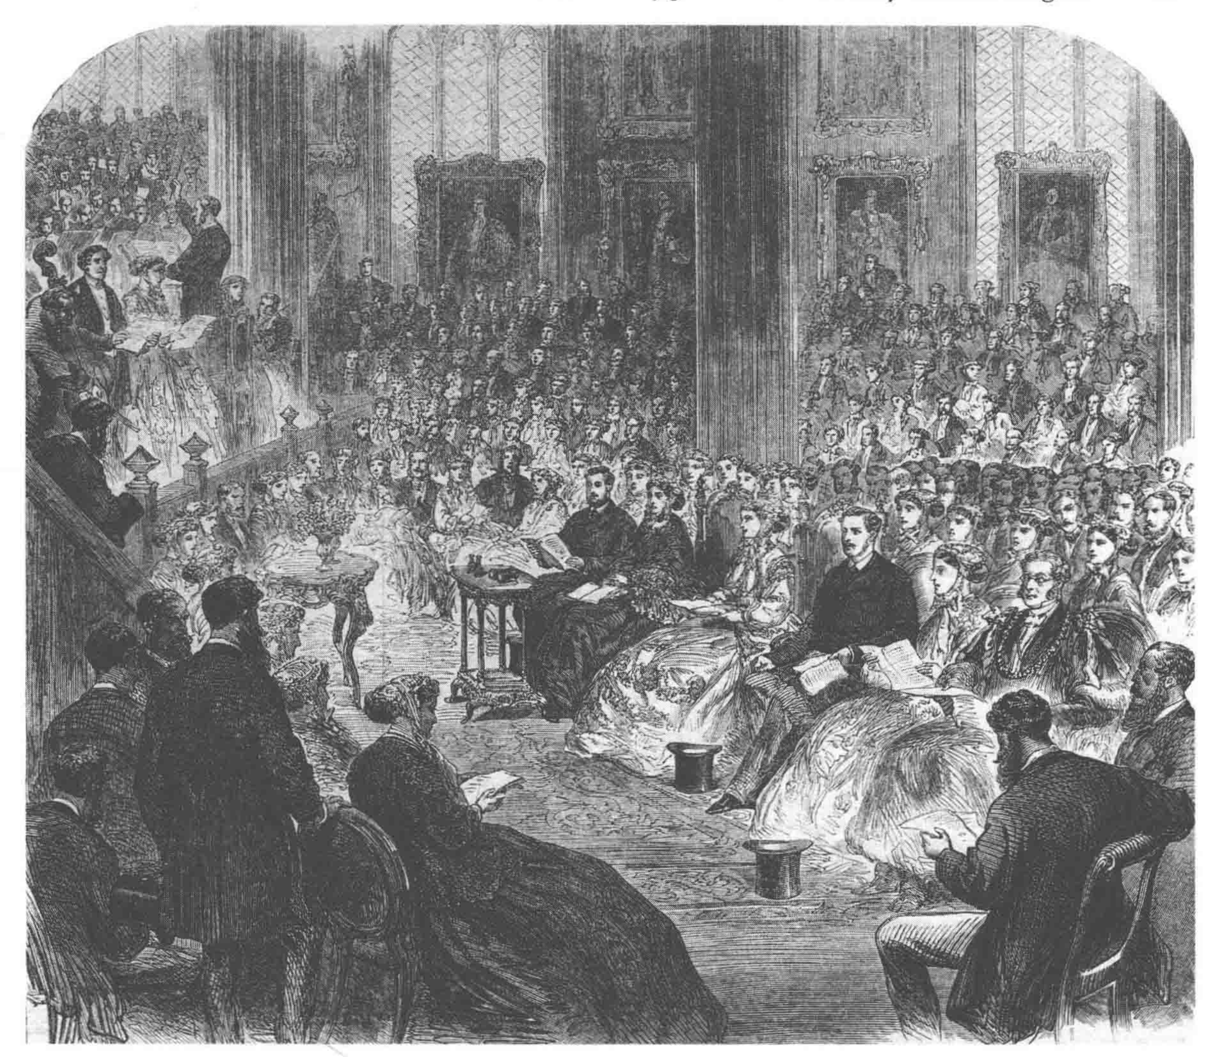
and 19th centuries. In 1776–7 James Bunn built a structure called the Pantheon (holding about 1000 people) in which concerts were held. In 1800, after Bunn's death, the Ranelagh gardens put up a building sometimes used for concerts which was also called the Pantheon and may have incorporated materials from Bunn's building. There were subscription concerts through much of this period, and they reached a zenith of activity around 1789.

Exactly how the precociously gifted William Crotch (1775–1847) was influenced by the musical life of Norwich during his early years remains unclear. His environment offered music for him to absorb, and Norwich was the scene of his childhood triumphs. His future lay, however, in Cambridge and London.

The Hall Concerts (*c*1789–1834) were an annual series of amateur music meetings probably held at first in St Andrew's Hall and later in a room above St Ethelbert's Gateway, hence the alternative name of Gateway or Gatehouse Concerts. In 1816 the Hall Concert organizers purchased and fitted up a music room in St Andrew's Bridge Street; Chambers (1829) said that there were about 40 performers, both amateur and professional. They were superseded by the Norwich Philharmonic Society, founded by Frank Noverre in 1839. The new society was partly professional. The first concert was given on 5 March 1841 in Noverre's rooms, with 15 strings, wind and piano. From 1901, when Princess Victoria became patroness, the concerts were given in St Andrew's Hall. In 1929 the Choral Society became part of the Philharmonic. At the beginning of World War II the chorus numbered 180, and the orchestra about 75, including 12 to 20 London professionals engaged for the concerts. Commissioned works included Moeran's *Nocturne* (1935) and Hadley's *La belle dame sans merci* (1936) and *Mariana* (1938). After the war concerts were resumed.

A small group of string players brought together by Cyril Pearce in 1925 grew into the Norwich Chamber Orchestra, so named in 1928; emphasis was on the works of Bach. Later organizations include the Norwich String Orchestra (which gave the first performance of Britten's *Simple Symphony*, under the composer, in 1934), the Norwich Mozart Orchestra (founded 1962) and the Academy of St Thomas (founded 1973).

The Norfolk and Norwich Music Club, founded in 1950, promotes chamber concerts. These are usually given in the Assembly House, which reopened as an arts centre in 1950 and was restored again after fire damage in 1995. The club has a tradition of commissioning new works. Since 1990 the King of Hearts, in a restored 16th-century merchant's house in Fye Bridge Street, has become a favourite venue for small-scale concerts, especially of early music.



5. Choral and operatic societies. Music on the water was a particular feature of 18th-century Norwich (see Chambers, 1829, pp.1273–4). From about 1795 an Anacreontic Society was active, performing glees, catches etc; this lasted into the 19th century. A choral society was founded in 1824, with Edward Taylor (son of John) as its first conductor, to form a local nucleus for the festival and also to give regular concerts. It was dissolved and re-formed in 1837 and again in 1844: the numbers had risen from 149 in 1824 to 256 in 1845. The concerts, however, became more and more unrewarding financially, and in 1875 the society was disbanded. A smaller group, the Gatehouse Choir, remained in existence as a descendant of the earlier Hall Concerts, and in 1902 this became the nucleus of a new Norwich Choral Society, founded by Frank Bates who was its conductor for 26 years. In 1929 it merged with the Norwich Philharmonic Society.

Other choral societies include the Norwich Madrigal Society (founded 1838, disbanded about 1860), the Glee and Catch Club (in existence in the mid-19th century), the Anglia Singers, the St Cecilia Society, the Norwich Singers, the Broadland Singers (founded in 1958) and the Keswick Hall Choir.

Earlier musical theatre performances in Norwich include what seems to have been the first provincial performance of Purcell's *Dioclesian* (January 1700) and the first ever performance in English of *Die Zauberflöte* (1829). An amateur operatic union gave concert performances of Italian operas in early Victorian times. The Norfolk and Norwich Amateur Operatic Society maintains a tradition of Gilbert and Sullivan performances; the Norfolk Opera Players (founded 1963) have a wider repertory, including operas by Nicolai, Offenbach and Martinů. The Theatre Royal, a 1935 replacement for the 1826 theatre on the site of Ivory's original playhouse, regularly hosts productions by Glyndebourne Touring Opera, the ENO and other companies. In 1997 Norske Opera's staging of Wagner's *Ring* was given in the theatre.

6. Festivals. Soon after the new Norfolk and Norwich hospital opened in 1772 an annual service and concert for its benefit were inaugurated at the cathedral; the music was usually by Handel. In 1788 and 1790 three-day music festivals were given with morning concerts in St Peter Mancroft and evening concerts in St Andrew's Hall; Gertrud Mara and Michael Kelly were among the singers (Kelly's *Memoirs* give the wrong date). At least six further festivals were held early in the 19th century. In 1824 the grander Norfolk and Norwich Triennial Musical Festival was founded, chiefly on the initiative of R.M. Bacon, music critic and the editor of the *Quarterly Musical Magazine and Review*, with assistance from Edward Taylor, originally a Norwich ironmonger who later pursued a successful career as a bass singer, teacher and music journalist in London and returned to Norwich for later festivals. In 1837 he became professor of music at Gresham College. Festivals were given (triennially except as stated) in 1824–48, 1852, 1854–1911, 1924–30, 1936, 1947 and 1958–76; the principal conductors were George Smart (1824–36), Julius Benedict (1845–78), Alberto Randegger (1881–1905) and Henry Wood (1908–30). The festival was almost invariably a financial success, but never more so than the first time (1824) when it produced a sum of £2411.

Almost from the start the Norwich Triennial Festival was notably progressive in its choice of works, and it was responsible for a whole series of premières and commissioned works, both British and foreign. Hummel's Mass in E♭ had its first English performance there in 1827, as did Spohr's *Last Judgment* in 1830 (one of several works translated and adapted to Protestant tastes by Taylor) and his *Calvary* in 1839. Feelings ran high at the 1852 festival, when two new English oratorios were heard: *Israel Restored* by William Bexfield, a local man and a pupil of Buck, and *Jerusalem*, a work in revolutionary style by Henry Hugo Pierson. Each work had its partisans, and the rivalry was intense. Another Pierson work, the unfinished oratorio *Hezekiah*, was performed in 1869.

Members of the royal family attending a concert in St Andrew's Hall during the Norwich Festival, 1866: engraving from the 'Illustrated London News' (November 1866)

The festival, which became annual in 1989 and now also promotes other concerts by visiting orchestras, has maintained a reputation for presenting new works. Among them have been Goring Thomas's *The Sun Worshippers* (1881), Parry's *L'allegro* (1890), Stanford's *Phaudrig Crohoore* (1896), Elgar's *Sea Pictures* (1899), Bridge's *Enter Spring* (1927), Bliss's *Morning Heroes* (1930), Vaughan Williams's *Job* (concert version, 1930) and *Five Tudor Portraits* (1936), Britten's *Our Hunting Fathers* (also 1936), Thea Musgrave's *The Five Ages of Man* (1964) and Tavener's *Let's begin again* (1995). In 1994 the first peformance was given of the Viola Concerto by Diana Burrell, one of the most significant composers to have emerged from Norwich.

7. The University of East Anglia. The university, which was founded in Norwich in 1964, has offered since 1965 a BA in music, the course including both practical and academic study. There is also a wide range of opportunities for postgraduate work in music and musicology. The Music Centre (opened in 1973) has a recording studio with synthesizers and computers for the composition and performance of electro-acoustic music. Britten acted as honorary musical adviser when the courses were originally devised. The first director of music, Philip Ledger, was succeeded in 1974 by Peter Aston, who was himself succeeded by David Chadd in 1998. There is a large University Choir and a University Orchestra; both regularly give concerts in the city, as well as an array of student choirs, groups and ensembles. A number of students sing as choral scholars at the cathedral, where an organ scholarship has also been created.

NICHOLAS TEMPERLEY (with DAVID CHARLTON and TREVOR FAWCETT)/CHRISTOPHER SMITH

Norwich sol-fa ladder. A chart showing the initials of the sol-fa syllables arranged vertically (see illustration). It was devised by Sarah Glover between 1812 and 1835 for teaching her 'Norwich sol-fa method'. It became the basis of John Curwen's 'modulator', from which it differs in that Glover placed the symbol for her tonic midway in the octave, which she regarded as two conjunct tetrachords: *S*, *L*, *T*, *D* and *D*, *R*, *M*, *F*. She also introduced the syllables *bah* and *ne* (shown as B and N on the ladder) to represent the 6th and 7th of the minor scale. The columns at the sides of the main column show the related keys of the subdominant and dominant respectively.

See also TONIC SOL-FA.

BERNARR RAINBOW

Nose flute. Any kind of flute, tubular or vessel, side- or end-blown, which is sounded by nasal breath. Such flutes have a very wide distribution, but are particularly common in the Pacific Islands and South-east Asia. Sachs suggested that the origin of nose flutes lies in the association of nasal breath with magic and religious rites. In Oceania the nose flute is pre-eminently an instrument of Polynesia and Micronesia. It is only rarely reported for mainland New Guinea but is present in the offshore D'Entrecasteaux group to the south-west and in the Bismarck Archipelago to the north-west. Southwards in Melanesia it is prominent only in areas adjacent to western Polynesia as in New Caledonia and the Loyalty Islands and in Fiji. In Micronesia it was formerly widespread in

Sarah Glover and her Norwich sol-fa ladder: engraving from 'The Teacher's Manual' by John Curwen (1875/R)

the Caroline Islands where it was present in Belau, Yap, Truk, Satowal, Nomoi, Pohnpei and Mokil. In Polynesia it was present almost everywhere except New Zealand.

For illustration *see* FLUTE, §I, fig.2*h*.

MERVYN MCLEAN

Noseman, Jacob. *See* NOZEMAN, JACOB.

Noske, Frits (Rudolf) (*b* The Hague, 13 Dec 1920; *d* Airolo, 15 Sept 1993). Dutch musicologist. Brother of the violinist Willem Hendrik Noske (1918–95). He studied the cello and theory at the Royal Conservatory at The Hague and the Amsterdam Conservatory (1939–45), as well as composition with Henk Badings and Hendrik Andriessen. He studied musicology at the University of Amsterdam with Bernet Kempers and Smits van Waesberghe (1945–9), followed by a year at the Sorbonne under Masson. He then taught history of music at the Conservatory of Amsterdam. In 1954 he took the doctorate at the University of Amsterdam with a dissertation on the French song from Berlioz to Duparc. He was librarian of the Music Library at Amsterdam (Public Library and Toonkunst-Bibliotheek) from 1951 until 1954, when he was appointed its director, a post he held until 1968. From 1965 to 1968 Noske was associate professor in musicology at the University of Leiden; in 1968 he succeeded Bernet Kempers as full professor at the University of Amsterdam until his retirement (1983). From 1965 he lectured widely as a guest professor at Berlin, Vienna, Warsaw, London, Parma and several American and Australian universities.

In his thesis Noske showed a wide-ranging knowledge, not only of the 19th-century French song, but also of French literature. He prepared editions of music of the early Dutch Baroque, on which he also wrote several

articles. Other areas of special interest to him were Mozart's Italian operas and Italian opera of the 19th century, musical drama, and the application of structuralism and semiotics to musical analysis. He was second secretary of the Koninklijke Nederlandse Toonkunstenaars Vereniging (1953–5) and general secretary (1955–9) and vice-president (1959–65) of the IAML.

ELLINOR BIJVOET/PAUL VAN REIJEN

Noskowski, Zygmunt (*b* Warsaw, 2 May 1846; *d* Warsaw, 23 July 1909). Polish composer, conductor and teacher. He studied at the Warsaw Music Institute (1864–7), where his teachers included Apolinary Kątski (violin) and Stanisław Moniuszko (harmony), and in Berlin (1872–5) with F. Kiel (composition) and R.F. Wuersta (orchestration). During the years in Berlin he composed songs, pieces for string quartet and the Symphony in A (1875). This symphony (his graduation piece) later gained first prize (with distinction) in the Carillon international competition for composers in Brussels (1893). From autumn 1875 until the end of 1880 he was based in Konstanz, where he was director of the Bodan singing society and music school. He returned to Warsaw in January 1881 and from that time contributed to the development of musical life in the city. He was director of the Warsaw Music Society (1881–1902), for which he was active as a teacher and organized concerts. He also attempted to organize a regular symphony orchestra, but its existence was disrupted by a constant lack of funds. In 1888 he became professor of composition at the Music Institute, in which capacity he taught a generation of Polish composers. From 1905 to 1908 he was director and conductor of the Warsaw PO, and from 1907 was also director of the opera. He occasionally directed choirs. Throughout his life he wrote music criticism for the daily press and for journals. In his concert reviews he also drew attention to more general musical problems.

Noskowski was one of the most important Polish composers of the second half of the 19th century. He composed all types of music, including popular works intended for a wide public and pieces for children. His large output was uneven in quality, and much of it is remembered only for its historical significance. The main characteristic of his style is an emphasis on contrapuntal techniques. This can be seen even in the opera *Livia Quintilla*, in which the dense polyphonic textures of the orchestra dominate the vocal parts. The most significant music is found in the orchestral and chamber works. Noskowski's musical language is conservative: his harmony goes little beyond that which is characteristic of the first half of the 19th century. His symphonic and chamber works are built on Classical cyclic forms, although the finale of the last symphony consists of five contrasting sections based on transformations of the same theme, thus showing some influence of the symphonic poems of Liszt. The resemblance is, however, rather superficial. Noskowski made extensive use of folk melodies, but these did not inspire him to undertake harmonic explorations. *Step* ('The Steppe') was the first symphonic poem in Polish music; it has colourful instrumentation and some illustrative elements.

WORKS

STAGE

Livia Quintilla (prol, 2, L. German, after S. Rzętkowski), Lemberg, Count Frederic Skarbek, 15 Feb 1898, vs *PL-Wtm*
Święto ognia, czyli noc świętojańska [The Rite of Fire, or St John's Night] (ballet, 3), Warsaw, 1902, frags. *Wtm*

Wyrok [The Judgment] (2, Noskowski, after A. Urbański: *Dramat jednej nocy*), Warsaw, Wielki, 15 Nov 1906, vs *Wtm*
Zemsta za mur graniczny [Revenge for the Boundary Wall] (4, Noskowski, after A. Fredro: *Zemsta*), 1908, Warsaw, Wielki, 10 April 1926, vs *Wtm*; orchd A. Gużewski, 1911
Several operettas, vaudevilles and 'folk pictures'

ZOFIA CHECHLIŃSKA

Nota. A term used by Johannes de Grocheio and in several French lais, apparently describing lai form. *See* LAI, §1(iii).

Nota cambiata [changing note] (It.: 'changed note'; Fr. *note de rechange*; Ger. *Wechselnote*). A type of NON-HARMONIC NOTE. The term was introduced by Angelo Berardi (*Miscellanea musicale*, 1689) for an accented passing note, but after the publication of Fux's *Gradus ad Parnassum* (1725) it came to mean an unaccented non-harmonic note quitted by leap of a 3rd downwards; when used on its own, the noun CAMBIATA has a different (though related) meaning.

Both the 'Berardian cambiata' and the 'Fuxian cambiata' are regular features of Palestrina's musical style, the latter offering the only examples in his music of dissonances resolved by leap (ex.1). More recently the term 'nota cambiata' has been extended to include similar configurations used in the 15th and 16th centuries, as in

Ex.1 Palestrina: *Adjuro vos, Liber IV Motettorum*

ex.2, and to other figures in which two notes following a dissonance have been interchanged ('note cambiate') so

Ex.2 Du Fay: *Missa Sancti Jacobi*, Kyrie

Ex.3

that the dissonance is likewise quitted by leap of a 3rd, as in ex.3.

WILLIAM DRABKIN

Nota procellaris (Lat.). A type of ornament, possibly vibrato. *See* ORNAMENTS, §1.

Notari, Angelo (*b* Padua, 14 Jan 1566; *d* London, Dec 1663). Italian composer. Although his horoscope (*GB-Lbl* Sloane 1707) gives 14 January 1566 as his date of birth, the engraved portrait on the frontispiece of his *Prime musiche nuove* (dedication signed 24 November 1613) gives 'Di Anni 40'. Presumably the engraving had been executed from a portrait painted some years before. Whether or not he was related to the madrigalist Giovanni Paolo Nodari (some of whose madrigals are in *GB-Lbl* Eg.3665), is not known. Before leaving Italy for England he was a member of the Venetian Accademia degli Sprovisti (with the nickname 'Il Negligente') and had contributed a piece to his fellow-Paduan Nicolò Legname's book of canzonets (1608).

Arriving in England, he entered the household of Prince Henry in 1610 or 1611; by 1618 he was in the service of Prince Charles. He seems to have acted as a spy for Gondomar, the Spanish ambassador, between 1621 and 1623, and on Christmas Day 1622 he sang at Mass in the ambassador's chapel. He continued to serve Prince Charles when he became king in 1625 and remained nominally one of the 'Lutes and Voices' of Charles II, in whose service he died. He may for a time about 1642 have belonged to the household of Lady (Mary) Herbert,

wife of Sir Richard Herbert, and may have travelled on the Continent during the Commonwealth.

His *Prime musiche nuove* was engraved by William Hole and published in London in 1613, or soon after. It contains settings of Italian poems in a variety of styles: monody (e.g. *Ahi, che s'acresce in me*), romanesca variations (*Piangono al pianger mio*), canzonetta (*Girate, occhi*), chamber duet (*Intenerite voi*), and divisions on Rore's madrigal *Ben qui si mostra*. A preface in English refers to the *trillo* – 'a kinde of sweetnes in your voice' – the symbol for which he gives as 'the letter "t" ether with one or two notes'. Undoubtedly this book was an important vehicle for the introduction of the more advanced Italian styles into England, even though the monodic pieces are on the whole less successful than the chamber duets and canzonettas. Notari also seems to have been the compiler of a manuscript of Italian monodies and other pieces (*Lbl* Add.31440), as well as parts of *Och* 878–80 (both dating from soon after 1643). These contain works by Monteverdi and various monodists, and possibly pieces by Notari himself. His portrait is reproduced in A.M. Hind: *Engraving in England in the Sixteenth and Seventeenth Centuries*, ii (Cambridge, 1964), pl.211.

Nota sensibile (It.). *See* LEADING NOTE.

Notation. A visual analogue of musical sound, either as a record of sound heard or imagined, or as a set of visual instructions for performers.

This article includes a discussion of notation in society (§II), subdivided into its primary types, which are considered with reference to various notational systems. Other specialized aspects of notation are considered in separate entries: BRAILLE NOTATION; CHEIRONOMY; EKPHONETIC NOTATION; PITCH NOMENCLATURE; SHAPE-NOTE HYMNODY; SOLMIZATION; TABLATURE; and TONIC SOL-FA. For non-Western notational systems *see*, in particular, CHINA, §§II, IV; INDONESIA; and JAPAN, §III. Other related entries on technical subjects include CONDUCTING; IMPROVISATION; MODE; PSYCHOLOGY OF MUSIC; SCALE; and TUNING.

Whereas Western notation is considered as such in §III, a discussion of musical documents as sources – their physical make-up and production, their format, the layout and presentation of the music, the ordering of their contents – will be found in SOURCES, MS; SOURCES OF INSTRUMENTAL ENSEMBLE MUSIC TO 1630; SOURCES OF KEYBOARD MUSIC TO 1660; and SOURCES OF LUTE MUSIC; in these entries reference is made to notations, and the descriptions of individual sources contain statements on notational types. *See also* ACCIDENTAL; CLEF; CONTINUO; NOTE VALUES; ORNAMENTS; PROPORTIONAL NOTATION; REST; SCORE; STAFF; and definitions of individual notational terms.

I. General. II. Notational systems. III. History of Western notation.

I. General

1. Introduction. 2. Chronology.

1. INTRODUCTION. The concept of notation may be regarded as including formalized systems of signalling between musicians, and systems of memorizing and teaching music with spoken syllables, words or phrases; the latter are sometimes called 'oral notations'. The origins of written notations can often be seen to lie in them; further, they are the natural musical communication systems of non-literate societies and non-literate classes of society. The continent of Africa south of the Sahara, for example, except for the white communities, uses no written notations, but many of its indigenous peoples communicate about music through speech in the form of syllables, word patterns, the numbers of xylophone keys, the names of strings and other technical vocabulary. Even in 11th-century Europe instrumentalists had no notation, and church musicians communicated mainly through syllables and hand signs rather than through the reading of a score in rehearsal or performance.

Written notation is a phenomenon of literate social classes. In all societies it has developed only after the formation of a script for language, and it has generally used elements of that script. Some cultures are particularly notation-prone in this sense: China, Korea, Japan and Europe have each accumulated a large number of notational systems to serve different purposes. Others, until the late 19th century, have developed very few, notably the countries of the Middle East (except Turkey), South and South-east Asia.

The use of notation and the form it takes are the result of the social and cultural context in which it has been developed. It is socially significant that, while in Western Europe it was vocal music that first acquired a written notation, in Greece, Mesopotamia and Pharaonic Egypt it seems to have been instrumental music. In the latter two cultures, and in later East Asian instrumental notations, the script of language was used as part of the notation; in the former, as in the chant notations of Byzantium and Eastern Europe, of Tibet, Mongolia and Japan, non-linguistic symbols were used and script was required only for sung texts. Furthermore some notations are designed to give all necessary information, others give only a small part of what would be needed by the non-adept. In the latter, the remaining information is withheld either because it is already learnt and therefore unnecessary, or because there is a desire to keep it secret.

Broadly speaking, there are two motivations behind the use of notation: the need for a memory aid and the need to communicate. As a memory aid, it enables the performer to encompass a far greater repertory than he or she could otherwise retain and realize. It may assist the performer's memory in music that is already basically known but not necessarily remembered perfectly; it may provide a framework for improvisation; or it may enable the reading of music at sight (this last concept is a predominantly Western one). A written notation provides the means to sketch and draft musical ideas during the composing process. As a means of communication, it preserves music over a long period; it facilitates performance by those not in contact with the composer; it equips

the conductor with a set of spatial symbols by which to obtain certain responses during performance; it presents music as a 'text' for study and analysis, and offers the student the means of bringing it to life in his or her mind when no performance is possible; and it serves the theorist as a medium by which to demonstrate musical or acoustical laws.

2. CHRONOLOGY. In trying to see all notations in a single chronological sweep it must be borne in mind that these developments can be seen only in their surviving remnants. A notation preserved as a musical source of a given date may be unrepresentative; a theoretical description of a notation may be ambiguous or inaccurate; a literary allusion to notational practice may take poetic licence or even be fictional. Interpretation of what survives is the first of the difficulties. Filling in the gaps between the survivals is the second, particularly when this involves not merely decades or centuries but millennia.

The earliest recognized form of writing by any civilization was the system used by the Mesopotamian civilizations of the Sumerians, Babylonians, Assyrians and others in the Middle East. Its pictographic origins date from at least the middle of the 4th millennium BCE and its developed syllabic-logographic cuneiform system survived into the Hellenistic period and down to the 1st century CE. The hieroglyphic writing of the ancient Egyptians, a mixture of ideographs (pictures representing not merely the objects depicted but also ideas associated with those objects) and phonetic symbols, survived to about 400 CE. It is in connection with these hieroglyphs, carved on the walls of temples and tombs, that the first visual representations of musical sounds may have survived (*see* CHEIRONOMY, §2 and illustrations): certain of the carvings from the Pharaonic period contain scenes of music-making that show what appears to be a system of arm, hand and finger signs by which instructors signalled details of melody and rhythm to performers (Hickmann, *RBM*, x, 1956, p.1 and *MGG1*). Moreover, some of the hieroglyphic signs themselves, from the Old Kingdom (*c*2686–2181 BCE) and New Kingdom (1567–1085 BCE), have been interpreted as specific written musical instructions. Cheironomy may also have existed among the Jews by the 2nd millennium BCE, and it is probable that some of the signs in the system of biblical accents developed by the Masoretic scholars of Tiberias during the 9th century CE and the early 10th were originally based on the cheironomic hand signs used to assist the singer in his chanting (see CHEIRONOMY, §4; EKPHONETIC NOTATION, §2; JEWISH MUSIC, §III, 2(ii)).

From ancient MESOPOTAMIA, there is clear evidence of a system of phonetic notation, that is, descriptive musical instructions that may be viewed as skeletal notations for string instruments. This system is preserved in about 80 Akkadian cuneiform tablets and fragments dating from between 1800 and 500 BCE, during which period the system was used consistently. This 'notation' is based on a technical Akkadian (and to a lesser extent Sumerian) music terminology that gives individual names to nine musical strings or 'notes' and to 14 basic terms describing intervals of the 4th and 5th that were used in tuning string instruments (according to seven heptatonic diatonic scales) and terms for 3rds and 6ths that appear to have been used to fine tune (or temper in some way) the seven notes generated for each scale. The combination of string names and interval terms is used to describe the tuning procedure and the generation of the seven scales, and forms a skeletal phonetic notation or a kind of phonetic instrumental tablature. This system was used in both northern and southern Mesopotamia and has also been found at the ancient site of Ugarit (Ras Shamra, Syria). Tablets from the latter site dating from about 1400 BCE include hymn texts written in the Hurrian language followed by the standard Akkadian musical instructions for intervals and scale. Unusually, these tablets have number signs after the interval names; this 'notational' system is open to various interpretations, but it seems likely to have been intended for the instrumentalist accompanying the singing.

The earliest known alphabetical system of notation (i.e. a system in which each sign represents a single sound, each sound being designated by one sign) is that of Ugarit, which is preserved on clay tablets using unique cuneiform signs to represent 30 letters; it appears to have evolved from cuneiform syllabaries of the mid-2nd millennium BCE in Syria-Palestine. The later North-Semitic alphabet of 22 letters, which developed towards the end of the 2nd millennium BCE, was the origin of, among others, the Hebrew and Greek alphabets, both of which emerged in the early centuries of the 1st millennium BCE. The first musical notation known to harness the alphabet, with its built-in ordering, to the representation of pitch was the older of the two Greek systems, the so-called 'instrumental' notation, which used a mixture of Greek letters and other symbols to represent a continuous diatonic series of notes over three octaves. Each letter or sign appears also rotated on to its side and also in mirror image to represent the diatonic note raised by a quarter-tone and semitone respectively. This notation must have come into existence some time before 500 BCE, whereas the 'vocal' notation, using the Ionic alphabet, cannot be much earlier than the 5th century BCE (*see* GREECE, §I, 7 and ALYPIUS).

An essentially ideographic system of writing existed in China probably by early in the 2nd millennium BCE, with each 'character' of the script representing a single monosyllabic word. The earliest reference to the use of monosyllables to represent musical pitches dates from the 4th century BCE; and the first detailed discussion, dating from the 2nd century BCE, shows the five monosyllables (and hence written characters) *gong*, *shang*, *jue*, *zhi* and *yu* denoting the notes of the Chinese pentatonic scale. These monosyllables are in effect solmization syllables in that they designate the five points on the pentatonic scale, movable to any fixed pitch. On the other hand, in the 3rd century BCE the earliest surviving account was given of the fixed-pitch system of the 12 *lü*, each pitch of which had its own name: the starting-pitch was called *huangzhong* ('yellow bell'), the 5th above it *linzhong* ('forest bell'), the 5th above that (i.e. the 2nd) *taicou* ('great frame') etc. Each pitch was thus represented in script by a pair of characters (*see* CHINA, §II).

Reference has already been made to the addition of accents to Hebrew biblical texts. The use of such accents for the cantillation of texts is called EKPHONETIC NOTATION. A developed system of nine accents, indicated by the placing and grouping of dots, existed for Hebrew texts in the 6th century CE. This system was developed to a high degree of sophistication in the ensuing centuries. Other traditions that use ekphonetic notations include the liturgical monophonic repertories of the Syrian, Armenian and Byzantine Churches.

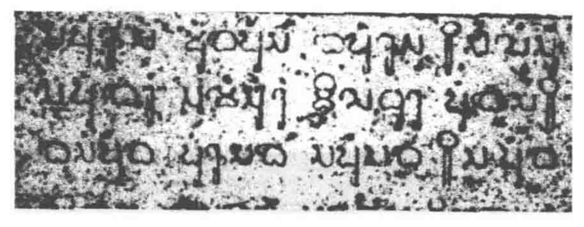
The earliest clear examples of instrumental tablature date from the 6th and 8th centuries CE. The first is an elaborate set of technical instructions for the Chinese zither, the *qin*, directing how to play the piece entitled *Youlan*. The system, known as *wenzi pu*, remained in existence until the 10th century. A tablature notation for the Japanese lute, the *biwa*, dates from 768 and derives from the Chinese court tradition.

The earliest surviving neumatic notations for Western plainchant date from the 9th century: notably the stroke (accent) neumes of St Gallen in Switzerland, in which finely drawn lines, curves and hooks represent the rise and fall of the melodic line graphically; and the point neumes of Palaeo-Frankish, Messine (or Lorraine) and Aquitanian sources. From this century also dates the earliest survival of Byzantine ekphonetic notation. It may have been not long after this that neumatic notation first came into use in Tibet for the singing of Buddhist chant, possibly by influence from the ekphonetic system of the Syrian Church transmitted by the Nestorians (*see* SYRIAN CHURCH MUSIC, §6; TIBETAN MUSIC, §II, 4; BUDDHIST MUSIC, §2).

In the 9th century dasian notation, which in its rotation of notational signs has a peculiar similarity to Greek 'instrumental' notation, was used to notate the earliest surviving Western polyphony: the so-called 'parallel' and 'free' organum of *Musica enchiriadis*. There were also the first traces of an alphabetical notation for Arabic theory – not used in musical practice – though its earliest survivals date only from the 13th century.

The Chinese *gongche* notation seems to have originated in the Central Asian kingdom of Kuqa before the 6th century CE, but only reappears in extant sources from the Song dynasty (960–1279). While at first it was, perhaps, a form of tablature for the double reed pipe *bili*, in later centuries it was used as a more general *solfeggio* type of notation for both vocal and instrumental music. The 10th century saw the change to the new *jianzipu* tablature for the Chinese *qin*: a highly compact notation in which information about right-hand plucking and left-hand positioning, duration and embellishment is packed into a single complex symbol (see §II, 6 and 8 below; *see also* CHINA, §IV, 4(ii)(a) and QIN, especially fig.2).

From the 10th century to the 12th survive the earliest partbooks for Japanese court wind and string instruments. These are primarily tablatures, but *koto* zither notation is also one of the earliest number notations (see below, §5; *see also* JAPAN, §III, 3).



The 11th century saw in western Europe the innovations associated with Guido of Arezzo: the staff, the Guidonian hand (a type of cheironomy) and solmization syllables; in eastern Europe the earliest neumes in Byzantine and Slavonic manuscripts; and in the Middle East the use of ekphonetic notations in Georgian and Armenian manuscripts. The 12th century saw the beginnings of *sumifu* neumatic notation in the Japanese secular epic, in which teardrop-shaped lines placed to the left of written text signify stereotyped melodic patterns; and the 13th century the beginning of *goin-hakase* for Buddhist chant, in which the angle at which a short line is placed indicates the pitch of the note to be sung, and *gomafu* notation (related to *sumifu*) for Japanese noh drama (see §II, 7 and fig.13 below; *see also* JAPAN, §III, 2).

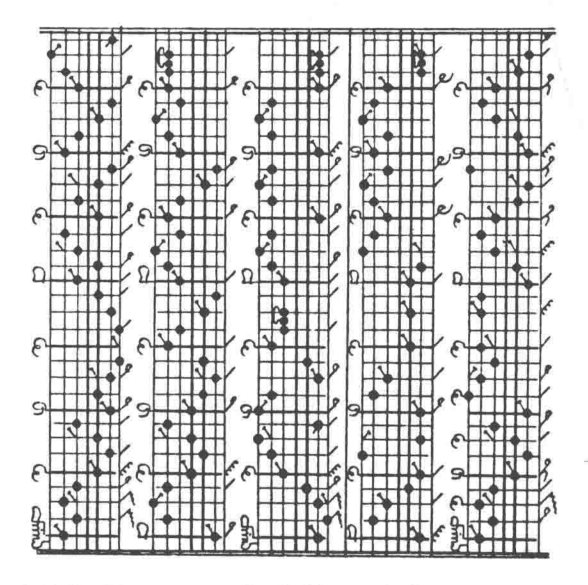
South Asian solmization syllables date back to at least the 4th and 5th centuries CE. In the *Nāṭyaśāstra* seven pitches are represented by the syllables *sa ri ga ma pa dha ni*, which are said to be shorthand for the Sanskrit *ṣaḍja ṛṣabha gāndhāra madhyama pañcama dhaivata* and *niṣāda*. Widdess (1996, p.393), however, asserts that the short forms are oral in origin and not abbreviations. Although these pitches are named in the *Nāṭyaśāstra* the earliest known South Asian notation dates from the 7th–8th century CE and is found on a rock inscription at Kudumiyamalai in Tamil Nadu (fig.1). Syllables used as mnemonics for drum-patterns are also described in the *Nāṭyaśāstra*, and particularly in the 13th-century *Saṅgīta-ratnākara*.

Meanwhile, Western notation was undergoing fundamental changes, with the formation of square notation in the 12th century, the development of the rhythmic modes and the evolution of the mensural system with its highly complex rhythmic possibilities. Contemporary with the peak of this development, in the mid-15th century, was the formation, in Korea, of the only alphabet among all the East Asian civilizations. Following soon on that was the importation and adaptation of Chinese notations for Korean use: the *yulchapo*, which took over the abbreviated names of the Chinese *lü* but pronounced them in Korean; the *kŏmun'go* tablature for the six-string zither, which adopted the compact Chinese *jianzipu* but incorporated Korean letters into it (see §II, 8 and fig.16 below); the *kongch'ŏk po*, which adapted the Chinese *gongche* notation for ritual melodies; and the 'five-note abbreviated notation' *oŭmyakpo* which corresponds to the ancient Chinese solmization system but uses a central degree of the scale *kung* (the lowest of the five Chinese degrees) and ranges outward from that using numbers and prefixes: *sangil* ('above one') for the note immediately above it, *hasam* ('below three') for the third note below it, and so on. With these went the invention of a Korean mensural notation, *chŏngganbo*: a grid system, in which each space corresponds to one time unit and into which a pitch symbol from one of the pitch notations could be placed as required (*see also* KOREA, §2).

During the 15th and 16th centuries the first Western instrumental tablatures developed (though they may possibly have begun in the 13th century), the earliest being for keyboard instruments and the lute family. The 16th century saw the gradual breakdown of the proportional mensural system of values into a fixed-value system in which each note value contained two of the next value down. At the same time, unmeasured square notation was still used for plainchant, and for monophonic secular music in Germany, as was neumatic notation – the 'Reformed' notation – in Byzantine and Russian sources.

It was probably in the 16th century (though possibly earlier) that Balinese solmization syllables for gamelan compositions in the *pelog* system came to be written down in Balinese script as a notation. Only at the end of

1. Small portion of the Kudumiyamalai inscription, Tamil Nadu, 7th–8th centuries CE



the 19th century did the *nut andha* ('ladder notation') of Central Java used in the Yogyakarta *kraton* manuscripts come into use: a grid system, with dots not unlike the Western staff (though vertical rather than horizontal; fig.2). Another system, *nut ranté* ('chain notation') using six horizontal lines, with dots above or below the lines representing pitches and connected with 'chains', came into use only a few years before that; at the same time a number notation for pitches, *nut angka*, also known as *kepatihan*, was introduced.

The 19th and 20th centuries saw in Western notation a formalization of the orchestral score, an increasing use of non-Italian verbal indications as auxiliary signs to staff notation, and a more detailed specification of all parameters of sound in an attempt to prescribe every detail of performance. This has brought with it proposals for the reform of notation, in particular two: Klavarskribo and Equitone. Compositional indeterminacy imposed new demands upon staff notation that at first were answered by 'space–time notation' and later by specially designed systems. Both representational and technical notations have also been devised for electronic music.

Many East Asian notations came under the influence of staff notation during the 19th century, and new ones arose using Arabic numbers (mostly based on the Galin-Paris-Chevé method see below, §II, 5) and recently developed solmization-syllable systems. Just as the writing of microtonal music by Western composers in the 20th century placed strain upon the rigid pitch representation of staff notation and caused the introduction of quarter-tone and sixth-tone accidentals and signs for microtonal inflection, so too the need to transcribe non-Western music has strained the capacity of staff notation. Two new methods have been developed: that of the MELOGRAPH, an invention by Charles Seeger that traces a pitch–time graph immediately above a volume–time graph; and a device by Karl Dahlback that produces two similar graphs by means of a cathode-ray tube.

Taking a historical perspective, between about 500 BCE and the 10th century CE most of the world's principal alphabetical and ideographic notations (many of the latter probably arising out of solmization-syllable systems) were established. Some of the ideographic notations were instrumental tablatures (see §II, 5 below), all of them from East Asia; Western tablatures developed later. Towards the end of this period was another in which accents were used as notational signs: this is concentrated particularly in the period from the 5th century to the 11th CE, although the origins of some systems may be earlier. Most of the world's neumatic systems seem to have developed in the surprisingly narrow period between the 9th century and the 12th: neumes in Western Europe, in Byzantium and Eastern Europe, in Japan and probably also in Tibet. Number notations are far later developments: apart from the use of numbers in Chinese *qin* tablature of the 10th century and Japanese *koto* tablature by the 12th, they arose in Korea in the 15th century, in Western tablatures in the 16th and thereafter with increasing popularity in the 19th and 20th centuries.

For general bibliography see end of §II.

II. Notational systems

1. Materials: general. 2. Letters of the alphabet. 3. Syllables. 4. Syllables and vowel acoustics. 5. Words. 6. Numbers. 7. Graphic signs. 8. Hybrid systems.

1. MATERIALS: GENERAL. A musical notation requires, in essence, two things: an assemblage of 'signs' and a convention as to how those signs relate to one another. A written musical notation requires further a spatial arrangement of the signs on the writing surface that makes a 'system' of the assemblage; it is this system that forms an analogue with the system of musical sound, thus enabling the signs to 'signify' individual elements of it.

Only rarely has music fashioned its own sign systems. It has generally been content to take over systems in use for other purposes (such as the representation of arithmetical values, of speech inflection or of the sounds of natural language). In so doing it has often discarded part of the system and modified the shapes of the signs to suit its purpose. Such signs, the 'materials' of notation, can be broadly classified into two categories: the phonic and the graphic. Phonic signs include letters, syllable-signs and word-signs (signs that convey both the meaning of the word and its sound in speech – known as 'logo-syllabic signs'). Certain systems of numerals also come into this category: systems that assign names to at least the lower range of numbers. Graphic signs include geometric shapes, lines, dots, curves, grids and the like.

Phonic signs are by their nature already representational of sounds outside music. They can be 'spoken' as well as written, which increases their communicative power. But they have an all-important additional quality: either they have meaning (like word signs and numbers) or they belong to some system of ordering (like letters and in some cases syllables). These are the properties that were implied above in speaking of the adoption for other purposes of systems already in use.

2. LETTERS OF THE ALPHABET. For the requirements of an alphabetical notation, it is not in fact the phonic – or perhaps 'phonemic', since each letter at least in principle signifies a single sound of language – quality of a letter that is important but rather its position within a conventional order: an alphabet. The ordering of letters in an alphabet offers a ready-made base for notation, as it can be directly related to the intrinsic acoustical order of musical sound. It thus becomes an analogue of musical

order: an item in the musical order is specified by reference to its place on the analogous system.

As stated above (§I, 2), the earliest-known alphabetic writing dates to the middle of the 2nd millennium BCE. The first known to have an established order of letters is the Hebrew alphabet, traceable back at least to the 6th century BCE. This order corresponds to the acrostics in the Bible (*Lamentations*, *Proverbs*, *Psalms*). Until the 17th century alphabetic writing existed in only a small area of the world: the Middle East, the Mediterranean countries, Eastern and Western Europe, South Asia and Korea. The earliest alphabets – Hebrew, Phoenician, Aramaic and North Semitic – all developed between 1000 and 500 BCE. From these developed the Greek, Latin, Cyrillic and early Indian alphabets. As to order of letters, the Greek alphabet is close to the Hebrew, the Latin close to the Greek.

One of the advantages of an alphabet for music notation is that it consists of single rather than compound signs – signs that are distinctive and at the same time compact. Another is that it contains a convenient number of signs (alphabets range from about 20 to 50 letters, most having between 20 and 30) to represent a chromatic double octave or a diatonic triple octave; fewer can be selected to represent a single octave in a repeating scheme or the frets on a stopped-string instrument. Moreover, the letters of alphabets are generally assigned names (the fourth letter of the Hebrew alphabet being called *daleth*, the Greek *delta*, the Latin and modern Western European *de* and so forth), so that the notation can be spoken as well as written.

The alphabet was used for pitch notation in ancient Greece, and then around the 10th century in western Europe before being formalized in shape and absorbed into staff notation as clefs (C, F, G) and accidentals ('b', 'h'). The alphabetic system is implicit still in staff notation, since in most European countries the placing of notes on the staff is translated into spoken letter-names (except in France, where they are translated into fixed solmization syllables; see PITCH NOMENCLATURE). The Western system is a repeating one, since the letters refer only to pitch classes, not to specific pitches; therefore the 19th-century German philosopher and scientist Hermann von Helmholtz developed a scheme of dashes to indicate pitch register (the dashes deriving from Greek notation but the letters coming from the Latin alphabet): *A*,,, *B*,,, *C*,–*B*,, *C*–*B*, *c*–*b*, *c*′ (middle C)–*b*′, *c*″–*b*″, *c*‴–*b*‴ etc. The alphabet has also been used to denote keys, finger positions or frets in many Western tablature systems.

There are many examples of verbal abbreviation in Western notations: the letter *p*, for example, is used as an instruction to play softly (*piano*) and, in a rather elaborate formalized fashion (as an alternative to 'Ped.'), below the staves, to indicate application of the sustaining pedal of the piano. 'Significative letters' were used in conjunction with some early Western neumatic notations to indicate duration (*c* to stand for *cito* or *celeriter*, 'quickly', i.e. 'short' value) and direction of movement (*l* to stand for *levare*, *s* for *sursum*, both meaning 'upward').

In all these non-alphabetic uses of letters, the notation can be described as 'secondary': that is, the letters signify words that in turn signify musical elements, rather than signifying musical elements directly. However, such is the force of tradition that formalized letters often cease to be recognizable: by this means a pedal mark has become a graphic sign that refers directly to the pianist's foot movement. The same is true even for alphabetic uses of letters: the treble and bass clefs are now scarcely recognizable as formalized letters 'G' and 'F', and have become instead graphic signs for the two fixed pitches *g*′ and *f* with a range of special technical connotations associated.

(a)	ding	dong	dèng	dung	dang
(b)	ulu	taling-tedung	taling	suku	bisah

3. Balinese slendro scale

3. SYLLABLES. As with letters, syllable notations fall into two categories: those that operate by reference to an established order of syllables, and thus relate directly to a musical order ('primary' notations), and those that use syllabic abbreviations of words, and operate by reference to meaning or name ('secondary' notations). Cutting across this categorization is the orthographic one: that some of these syllable systems are expressible as single symbols (ideograms or 'characters') while others have to be spelt out in letters.

A classic case of the first ('primary') category is the set of Japanese syllables *i*, *ro*, *ha*, *ni*, *ho*, *he*, *to*. These are the initial seven syllables of an established order of some 48 Japanese characters closely analogous to the order of an alphabet – that is, it is a conventional order rather than an intrinsic one. In Western music terminology in Japan, these first seven function exactly like the Western letters A, B, C, D, E, F, G, with repetition for each octave in the same way. Thus a C major scale is represented as *ha–ni–ho–he–to–i–ro–ha*, each having a single character to represent it in written form. (A more extensive set from this series was used in 17th-century *shamisen* tablature to represent successive finger positions from the open bass string to the highest position on the treble string.) A simpler example is the set of syllables for the Balinese five-note *slendro* scale, a set that rotates through five vowel sounds: *ding–dong–dèng–dung–dang*. It is almost an alphabetical system using only vowels, save for the fact that Balinese literary script uses characters rather than letters and therefore has no alphabet. The characters for these five notes are shown in fig.3 (*see also* INDONESIA, §II, 1(ii)(b), Table 1).

Similar to this is the set of Chinese syllables for the pentatonic scale: *gong–shang–jue–zhi–yu* (see fig.4*a*, with the parallel set of Korean syllables using the same Chinese characters, fig.4*b*).

(a)	kung	shang	chüeh	chih	yü
	宮	商	角	徵	羽
(b)	kung	sang	kak	chih	u

4. Chinese characters of the pentatonic scale with (a) Chinese and (b) Korean syllables

The Chinese *gongche* notation is a more complex system of the same type. It consists of ten characters, or ideograms, each representing a syllable that stands for a note on a largely diatonic scale extending over a 9th.

合	四	一	上	勾	尺	工	凡	六	五
he	si	yi	shang	gou	che	gong	fan	liu	wu
c	*d*	*e*	*f*	*f*♯	*g*	*a*	*b*	*c′*	*d′*

5. Chinese gongche notation

Fig.5 shows these syllables and their characters, with *he* arbitrarily set to the pitch *c*. Octave positions are sometimes shown by the addition of an affix or small mark. A chromatic scale could be produced from this by the use of the prefixes *gao-* ('high') to raise a note, or *xia-* ('low') to lower it, by a semitone; but after the 11th century *gao-* ceased to be used.

Korean musicians in the 15th century adopted the ten basic characters, applying their own pronunciation: *hap*, *sa*, *il*, *sang*, *ku*, *ch'ŏk*, *kong*, *pŏm*, *yuk* and *o*. The Korean notation is called *kongch'ŏkpo* and it does not use affixes or marks, allowing *sa* to denote *d* or *d*♭, and similarly with *il*, *kong* and *pŏm*. It is noteworthy that four of the characters in *gongche* notation are numerals (*si* is four, *yi* is one, *liu* is six and *wu* is five); thus the notation is partly numerical.

The South Asian system of syllabic solmization is usually written down in Devanagiri script in north India, or Tamil or Telugu script in the south (fig.6). Although notation is generally considered to be of little importance in what are predominantly oral traditions, it is widely used as an aid to memory or as a learning tool. This is particularly true of Karnatak music, which relies to a much greater extent on a body of compositions than does Hindustani music. The syllables themselves may describe the duration of a pitch through the use of a short or long vowel: usually a short vowel stands for a pitch of one *mātrā* ('beat') or less and a long vowel for two beats or more. Symbols modifying the pitches vary from system to system but common devices include a short vertical line above the syllable denoting a sharpened pitch, or a short horizontal line below the syllable showing a flattened pitch. The syllables are arranged on a framework which shows the rhythmic cycle (*tāla*), one line of notation being equal to one cycle of the *tāla* (fig.7).

(b)	ஸ	ரி	க	ம	ப	த	நி

6. South Asian syllabic solmization: (a) Devanagiri script; (b) Tamil (Telugu) script

Rather different, but not unlike the Indian solmization syllables, are the Western medieval *ut*, *re*, *mi*, *fa*, *sol*, *la*. They are indeed syllables in written form, being the initial syllables of the first six lines of a seven-line hymn to St John, the text of which is attested from about 800 and would have been well known in the 11th century when Guido of Arezzo created a solmization system from them. The syllables were by chance distinctive, and operated by reference to a textual order. But their referential character was much strengthened by the fact that the first six lines of the hymn's melody began successively on the degrees of the scale *c–a*, and they thus operated by reference also to an established external musical order – though whether the melody existed before the solmization system, or whether it was designed as a supporting aid, is not known.

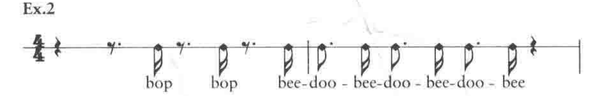
7. Page from a modern Indian collection of vocal compositions with notation (Ramanlal Mehta, 'Agra gharana')

The derivation is shown in ex.1. Out of this succession of notes was created the 'natural hexachord', which was flanked by a 'soft hexachord' of the same succession transposed a 5th lower and a 'hard hexachord' transposed a 5th higher, the three forming together the underlying musical system known as *musica recta*. This total system was transposable to other relative pitch levels, and isolated hexachords of 'alien' pitch levels could be introduced, each hexachord having the identical set of syllables (*see* SOLMIZATION, §I, 1; HEXACHORD; MUSICA FICTA; and GUIDO OF AREZZO).



Javanese *titilaras kepatihan* ('cipher notation') whose seven syllables, *ji*, *ro*, *lu*, *pat*, *ma*, *nem* and *pi*, are abbreviations for the numbers 1 to 7: *siji*, *loro*, *telu*, *papat*, *lima*, *nĕm* and *pitu*. In addition to their referential power and their capacity (as abbreviations) to refer to the meanings of words, syllables have a further quality: onomatopoeia. The degree of openness or closedness of the vowel sound, the presence or absence of initial and terminal consonants, and the character of any such consonants (dental, labial, nasal etc.) is frequently used to reflect tone-colour, attack or rhythmic value. A simple case is 'scat singing' in jazz, where *doo* is used for a stressed and sustained note, *bee* for a short unstressed note and *bop* for a staccato note, stressed but often off the beat. Thus the pattern *bop bop bee-doo-bee-doo-bee-doo-bee* can be sung to the rhythmic pattern shown in ex.2 by a scat singer almost as if it were a rhythmic

Ex.1

solmization; it can also be used as a verbal communication of the rhythmic pattern and is thus halfway to being a notation of a rudimentary and imprecise kind.

Ex.2

Onomatopoeic syllables are used by Ewe drummers in Ghana. Two strokes of the butts of the hands in succession at the centre of the drumhead are represented by the syllables *ga-da*, the softer sounds of the hands brushing across the centre of the drum by *ka-tsa*, and the use of splayed fingers to produce a combination of round drum tone and sharpness of attack by *ga-tsya*. But the relationship between drum sounds and syllables goes beyond representation: it is an identity – the drums are themselves thought of as producing the syllables, and when syllables are spoken to the drums they are spoken at the same pitches as the drums. Oral drum notations are widespread in South Asia and are described at length elsewhere in the dictionary (*see* INDIA, §III, 6(iii)(a)–(b); MRDANGAM, §1; and TABLA, §3).

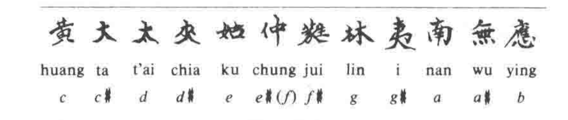
4. SYLLABLES AND VOWEL ACOUSTICS. Whereas the syllabic systems discussed above (§II, 3) represent specific pitch classes, scale degrees or performance techniques, other syllable systems, less formalized but highly regular, tend to use vowels and consonants in accordance with their acoustic phonetic features to reflect iconically relative pitch, duration, resonance, loudness and so on. The relations between such syllables and musical features are thus far from arbitrary.

Vowels, in particular, are often used in accordance with what phoneticians call their intrinsic pitch, intensity and duration (see Hughes, 1989). For example, the vowels *i*, *e*, *a*, *o*, *u* in their approximate Spanish or Japanese pronunciations are often perceived as constituting a descending pitch sequence (reflecting their 'second formant' pitches). Many cultures exploit this intrinsic pitch ordering of vowels in teaching instrumental music. Thus the fixed melodic repertory of the Japanese *nōkan* flute is taught by singing mnemonics such as *ohyarai houhouhi*, in which successive vowel pairs reveal melodic direction with over 90% accuracy: the sequences *ohya*, *rai*, *uho* and *uhi* all represent melodic ascents, with *uhi* signifying the largest leap because its two vowels are at opposite ends of the pitch spectrum; *iho* and *hou* represent melodic descents (*see* JAPAN, §III, 4). In several such systems in Japan (where scholars call them *shōga*) and Korea (*yukpo* or *kum*), exceptions to this relationship between vowels and melodic direction often result from the competing acoustics of intrinsic duration and intensity, whereby *a* is favoured for comparatively long, loud or metrically important notes, while *i* and *u* are used for weak or short notes, with *e* and *o* in between.

Consonants also play a role. In the sequence *teren* for Japanese *shamisen* lute, *t* indicates a normal, resonant down-pluck; *r* signifies a gentler sound (never the initial note of a phrase), either an up-pluck or a left-hand pizzicato; and *n* shows that the second sound is longer than the first. In many drum mnemonics throughout the world, a final *k* – a stopped sound – represents a damped stroke, while a final nasal or vowel shows that the sound is left to resonate and decay naturally.

Such systems could be called 'acoustic-iconic systems'. Their oral origins are reflected in the lack of any indigenous explanations for their patterning; their iconic symbolic power (teachers emphasize their importance) lies precisely in their acoustic naturalness. Today, however, such systems are often written down. In many Japanese and Korean written notation systems (which tend to be different for each instrument), each line of tablature or pitch notation is accompanied by a line of acoustic-iconic syllables (see below, fig.16*b*). The fact that this may happen even when this line adds no information to the tablature, as in *shamisen bunka-fu* notation, confirms the traditional importance of such syllables in transmission.

5. WORDS. Words have assumed a place in Western staff notation only during the last 350 years or so. They have done so with the rise of the score and of the desire of composers to specify the instrumental forces for their music; and this has happened simultaneously with the desire also to specify tempo, mood, character and detailed matters of tone production and attack (*see* TEMPO AND EXPRESSION MARKS). Thus, for tempo, words such as *largo* and *allegro* were introduced, and a set of modifiers was applied to them to express shades of meaning: *molto*, *assai*, *non troppo*, *-etto* and so on. Such words, together with others expressing mood and character – such as *andante*, *scherzo* and *scherzando*, *dolente* – generally appear at the beginnings of sections or whole movements (even serving as titles). It is no coincidence that their introduction occurred in that part of the Baroque period during which the doctrine of the Affections (*Affektenlehre*) was the predominant aesthetic, and that a great expansion of the range of terms, and of the languages from which they were drawn, took place during the Romantic era. Other words, such as *rallentando*, *ritenuto* and *stringendo* for tempo, and *pizzicato*, *leggiero* and *flautando* for attack and tone production, control temporary changes and localized features, and thus appear in the course of the musical notation.



The most striking aspect of the Western use of words is its consistently auxiliary nature. Words are almost never

on the staff, but above or below it, or in the margin. They were not integral to the system when Western staff notation was being formulated during the late Middle Ages, when even the part-names tenor and contratenor were not always supplied and when a name was almost never given to the top voice. They have since become indispensable to staff notation, but have retained their auxiliary position, so that a music copyist will enter the note symbols representing pitch and rhythm before finding the most convenient places to add the verbal elements of the notation so that they can easily be read. This situation is not merely the result of historical circumstance. There is the more pragmatic ground that Western words are written alphabetically and thus have two disadvantages for notational use: they occupy a lot of space, and (more important) they take time to read and understand.

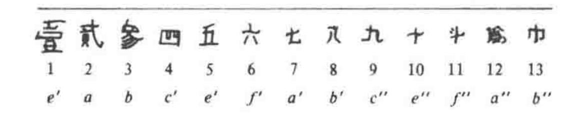
These disadvantages are not present in most East Asian writing systems, where characters represent syllables or words. The classical Chinese language is in essence made up of monosyllabic words that do not change or acquire prefixes or suffixes under different grammatical conditions as they do in most Western languages; the most that they do is become incorporated into compounds of monosyllables (e.g. *nü-ren* means 'female' + 'person', thus 'woman'). So when, in the Chinese fixed-pitch system of the 12 *lü*, the names of individual pitches are written down, each pitch is represented by a pair of ideograms. Moreover, when the note names *huangzhong* ('yellow bell', pitch *c*), *linzhong* ('forest bell', *g*), *yingzhong* ('answering bell', *b*) and *jiazhong* ('pressed bell', *d*♯) are written down, the second ideogram is always the same. In fact, when the names of all the chromatic pitches are written down their first ideograms are distinctive (i.e. they do not require the second ideogram to distinguish them from others): '*yellow* bell' (*c*), '*greatest* tube' (*c*♯), '*great* frame' (*d*), '*pressed* bell' (*d*♯), '*old* purified' (*e*), '*mean* tube' (*e*♯ or *f*), '*luxuriant* vegetation' (*f*♯), '*forest* bell' (*g*), '*equalizing* rule' (*g*♯), '*southern* tube' (*a*), '*not* determined' (*a*♯) and '*answering* bell' (*b*). Thus in notation the names are abbreviated to their first words, as shown in fig.8; *see also* CHINA, §II, 4, Table 2.

Words are often used as 'labels' or memory aids for standard melodic formulae. The so-called neumatic notation of Japanese *karifu* relies on words beneath the graphic symbols to indicate a large amount of the melodic inflection. The same is true of Tibetan Buddhist notation, whose neumes have written above them verbal instructions as to vocal production, directional movement and ornamentation. In oral traditions, groups of words and whole phrases are used as mnemonics for standard patterns. Ex.3 shows an African instance: the sentence 'b'o tan ma tun ro'ko Baba ma j'iyan tan' ('else I must go back for more, Father, don't finish the yam') is broken up into syllables in the piece of music for a pair of hourglass drums and a small kettledrum, from the Yoruba in Nigeria.

6. NUMBERS. Numbers would seem to be the most readily adaptable of all materials for notational purposes. They provide a reference system that can control any or all parameters of musical sound, as the pioneers of integral serialism demonstrated. In particular, pitch can be controlled by assigning numbers to the notes of a scale, to the keys of a keyboard, to the finger positions or frets of a string instrument, or to the holes or valves of a wind instrument (or

8. Chinese fixed-pitch system of the 12 lü

the fingers of its players), and pitches can be represented in this way individually or relative to each other by the measurement of interval in a melody or chord. Duration lends itself most naturally to numerical representation because the hierarchy of beats in musical metre involves subdivision of a large time unit or multiplication and addition of small units and is thus intrinsically arithmetical. Any other parameter, such as loudness, attack or tone-colour, can in theory be measured as a scale of values and then be represented by those values as numbers (e.g. 1 for extremely soft, 5 for moderate and 10 for extremely loud, with the intervening numbers for gradations between these), but such systems have tended to be restricted to the coding of music for computers.



In practice, the measurement of pitch by numbers (other than for scientific purposes) has been very rare, and is a predominantly modern phenomenon. Perhaps the most important was the GALIN-PARIS-CHEVÉ METHOD from the mid-19th century. The numbers 1–7 represented pitches, with a dot below for lower octave and above for upper. The numbers were purely visual: they were spoken as *ut*, *re* and so on. This system was adopted in modified form in China, Japan and other countries. The abbreviated number system of the Javanese *kepatihan* notation has already been discussed as a syllabic notation (§3 above). Notational systems for the Japanese *koto* use the numbers 1–13 in Japanese characters (though the characters for 11–13 are not true numbers). But these are secondary systems in the sense that the numbers refer to the 13 strings on the instrument rather than directly to the pitches that they produce: the pitches will depend upon the scale to which the instrument has been tuned. Fig.9 shows the 13 characters and their Arabic numeral equivalents, together with the notes that they represent in the most common tuning (*hirajōshi*); because of the pentatonic scale in use the number of any note is five away from that of its octave. A similar system exists for the 25-string Chinese *se*, using the Chinese numbers 1–25. An even more extended number notation for pitch (not fixed-pitch) is the pitch representation of the Ford-Columbia computer input language for music. There, the numbers 1–49 designate leger lines and staff lines and their intervening spaces: thus 1 is the tenth leger line below the staff, 2 the space above that, and so on. The entire set of numbers is dependent on the clef governing the staff. One type of modern Japanese *shamisen* notation

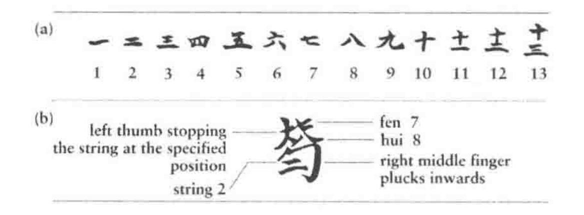
3: b'o tan ma tun ro 'ko Ba - ba ma j'i-yan tan
else I must go back for more, Father, don't finish the yam



9. Numeric notation for the Japanese koto in hirajōshi tuning

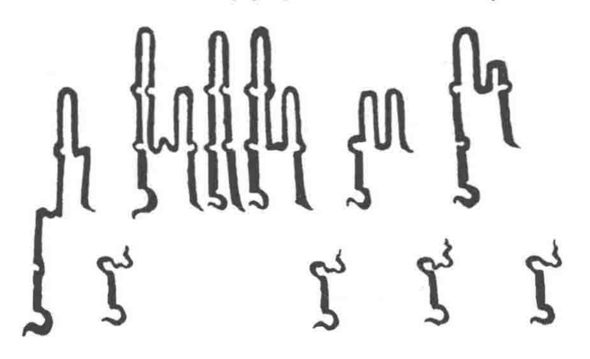
uses three kinds of numeral: Arabic numerals form a direct pitch notation using 1–7 for an ascending scale in the central octave and the same numbers with a dot to the left and the right respectively to represent the notes of the lower and higher octaves: Roman numerals I–III to the right of these numbers show the three strings of the instrument; and Japanese characters for the numbers 1–3 indicate which finger is to be used.

Probably the earliest, and at the same time the most complex, number notation is the *jianzi pu* for the Chinese QIN. Like the notation for the Japanese KOTO, its numbers refer directly to the means of production and only indirectly to the sound produced. The strings of the *qin* can be stopped at studs which serve as frets, or at points between them. Numbers are used to indicate all three of these: 1–7 for strings, 1–13 for the studs (*hui*, in ascending order), and 1–10 as a guide to the distance between two studs (*fen*). The three (often only two, because there is not always a *fen* number) are gathered together into a complex note symbol, with the string number in the lower half and the other two in the upper half, together with other symbols to indicate the stopping finger, the plucking finger and certain technical details. Fig.10*a* shows the Chinese numerals, and Fig.10*b* shows a single note symbol made up of five elements, of which three are numbers and the remaining two special symbols.

Western notations use Arabic numerals in keyboard tablatures and Italian lute tablature of the Renaissance. They are also used in staff notation to indicate metre and to show unusual rhythmic groupings. Thus time signatures have a denominator that represents a level of note value (on a scale from semibreve = 1 to minim = 2, crotchet = 4, quaver = 8, semiquaver = 16 etc.: these numbers are used in American and German parlance to describe the levels of value, with semiquaver being '16th-note' and 'Sechzehntel') and a numerator that indicates the number of units of that level in a bar. A triplet in a duple metrical context is indicated by a number 3 within a slur mark, and in Chopin's music, for example, this is extended to groupings of 11, 21 and so on.

7. GRAPHIC SIGNS. The act of writing a succession of notational syllables is graphic because it traces a path across the writing surface. That path is the analogue of the passage of music through time. The direction of the path tends to follow the prevailing direction of writing for the language of the country concerned. The Chinese,

10. Jianzi pu number notation for the Chinese qin



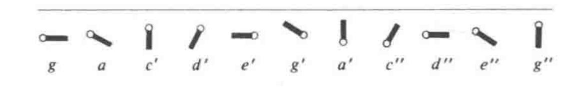
Korean and (to some extent) Japanese languages have been written from top to bottom, in columns beginning at the right-hand side of the page: consequently most Chinese and Korean notations have been written in columns in the same way, and so have Japanese instrumental notations. On the other hand, Japanese neumes (*karifu*, *meyasu*) are written horizontally from right to left. Tibetan, Javanese, Balinese, Greek and Latin are all written horizontally from left to right. Consequently Tibetan neumes and Javanese and Balinese ideographic notations all read in that direction, as do Western neumes, alphabetical and staff notations, and tablatures.

This path across the writing surface may be more precisely defined by the spacing out of notational symbols so that each space represents a beat of the prevailing metre. Thus in Chinese *gongche* notation the ideograms representing pitches are equidistant down their columns; and when there is a gap in the column of ideograms the previous pitch is assumed to continue to sound for a second beat. Alternatively, beats may be marked by a graphic symbol. One such is a dot – as in Japanese *gagaku* notation, which uses small dots for the basic beat and large dots for every fourth or eighth beat – defining two levels of metre (such dots often indicate the sound of percussion). Another such symbol is a line drawn at right angles to the path – as in Korean 'mensural' *chŏnggan* notation (which encloses its symbols in a grid with thin and thick horizontal lines to show their places within two levels of metre), in modern Japanese Ikuta-school *koto* notation (which uses short and long horizontal lines to show the same), or in the bar-lines of Western staff notation. Such graphic marks have the economic advantage that the spaces allocated for beats need not be equal in size: metrical units containing several symbols can be given more space than units with few or none.

So far, the path discussed has been one-dimensional. But it is also possible to define a broad path across the writing surface and to treat the width of the path as a second dimension. This dimension can be made the analogue of some other parameter of music: in particular, of a technical aspect of an instrument – the string or course of a zither or lute, for example, or the keys of a metallophone – or of pitch (as in diastematic neumatic notations) or volume (as in some electronic scores).

A system of notation recently discovered in Mongolia and used in Nomun Khan monasteries in the 18th and 19th centuries is thought to describe melodic pitches arranged according to the tuning of the half-tube zither (*yatga*). This notation takes the form of lines tracing the broad tonal contours of the melody rather than a series of discrete notes and should probably be regarded as signifying the ten strings of the *yatga* running horizontally across the surface of the page (fig.11). Much more research is needed into this system, however, before definite conclusions can be drawn about what precisely it represents. A simple way of using the second dimension for pitch in vocal music without need for new signs is to 'height' the syllables of text themselves, as in dasian notation; however, this does not work for music with any degree of melisma.

Western staff notation is another form of the same procedure. The dots, however, are made void or full and supplied with stems and flags or beams to represent grouped durations in such a way that the horizontal dimension between two bar-lines can be treated flexibly. In other words, the exact proportional use of space to



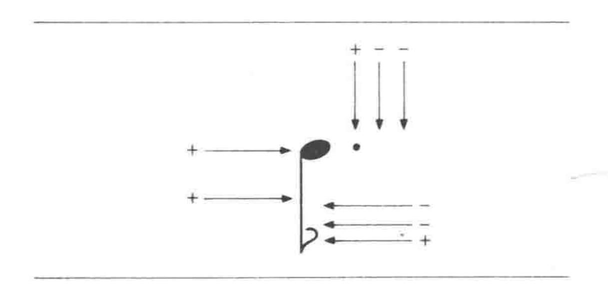
11. Notation for the yatga, used in Mongolian Nomun Khan monasteries

time is obviated by the application of duration symbols to the dots. Such duration symbols are themselves graphic signs; moreover, their beaming into groups conveys other information such as accentuation, phrasing, differences of dynamic level and the application of syllables.

Such graphic signs as these last belong to a reference system – in this case a system representing duration and comprising only five elements: a stem, a flag, a dot and two kinds of note head; if the void head can be regarded as an 'absent' head then they constitute four signs, each of which operates in a binary way (fig.12) as present (+) or absent (–) in appropriate positions. Similar graphic reference systems are the signs of Japanese *goin-hakase* notation and its later modifications, *karifu* and *meyasu*, and also the 'teardrop' notation, *gomafu*, and its later development *bokufu*. In the first three, a notched-stick shape is rotated through eight positions corresponding to eight pitches of a pentatonic scale, thus spanning a 10th (fig.13). They are linked to form a graphic trace extending leftwards from the text syllable. The trace is not, however, an exact representation of pitch since the notation relies on the names of standard melodic formulae written beneath. In *gomafu* and *bokufu* marks are put to the left or right of syllables to indicate such standard formulae.

A comparable system is that of so-called dasian notation from the 9th century. The materials for this constitute a spatial matrix with pitch as the vertical axis and time as the horizontal, and the Greek *prosōdia daseia* in two transformations: first modified into four distinct forms to designate the four pitches of the tetrachord; and then with each form reversed, inverted, and reversed and inverted to represent the higher pair of tetrachords, with the first two also shown facing downwards giving 18 signs in all (fig.14; *see also* ORGANUM, §2).

A rather special case of a notation that is graphic and operates on binary principles is BRAILLE NOTATION for



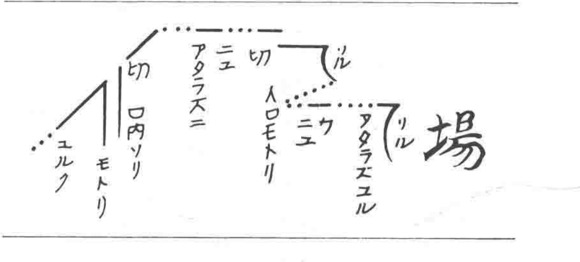
13. Graphic reference system of the Japanese goin-hakase, karifu and meyasu notations

the blind. The basic material is a display of six dots arranged in a matrix two (across) by three (down). These dots are raised from the surface of the paper by embossing, so that they can be felt. Each dot is either present (embossed) or absent. The pattern of the upper four dots designates pitch and the pattern of the lowest two designates duration. There are special patterns for octave register, accidentals and other notational devices.

Other graphic signs do not belong to such a system. They represent movement and shape in music, and thus display elements in relation to each other. They cannot specify individual musical elements, as can referential notations. Notations that rely on graphic relationship have only relative pitch significance, even when they have taken over an existing sign system, such as the accentual signs of the 5th-century Syriac writers (nine principal signs denoting main and subsidiary pauses, interrogative accents and so on, and made up of dots in different placings and groupings), or those of the 9th-century Tibetan scribes, or the classical Greek prosodic accent signs from which Byzantine EKPHONETIC NOTATION evolved, or the signs of the Roman grammarians from which Western neumes are sometimes alleged to have developed. That is because, without the imposition of a grid system, distance is difficult for the eye to judge, for both reader and writer. The line of text to which a melody was to be sung could be used as a pitch demarcation, with dots above and beneath syllables signifying higher and lower pitches, as in some Vedic chant books.

Neumes are stylized contour shapes. Their rises and falls and level lines represent rises and falls and level passages in a melodic line. Neumes thus differ from ekphonetic notations (though the dividing-line is sometimes difficult to draw) in that they are not concerned with inflection of voice between high, medium and low, but with groups of sung pitches rising and falling over a quite narrow range: a neume may represent a pattern of intervals whether it lies high or low in the voice's compass. Each neume is thus self-contained; the pitch relationships between a neume and its neighbours are not necessarily graphically shown, though in the 'heighted' neumes that appear in Western European sources from about the 10th century some attempt is made to show this.

The neumes of Tibetan Buddhist notation are made up of curves and undulations of varying amplitudes that

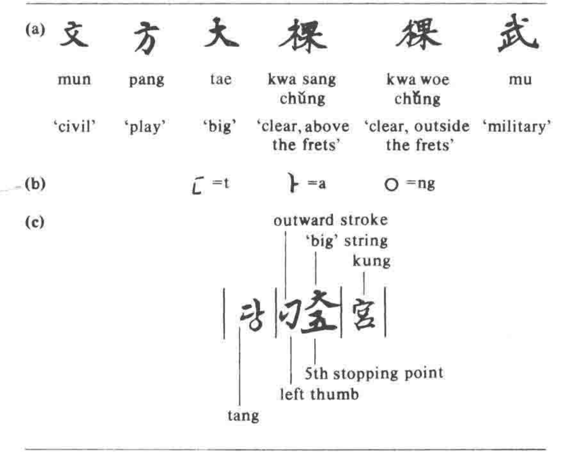


12. Binary variation in Western staff notation

graves (left-facing) finales (right-facing) superiores (inverted left-facing)

excellentes (inverted right-facing) residui (reclining, down-facing)

14. Dasian notation

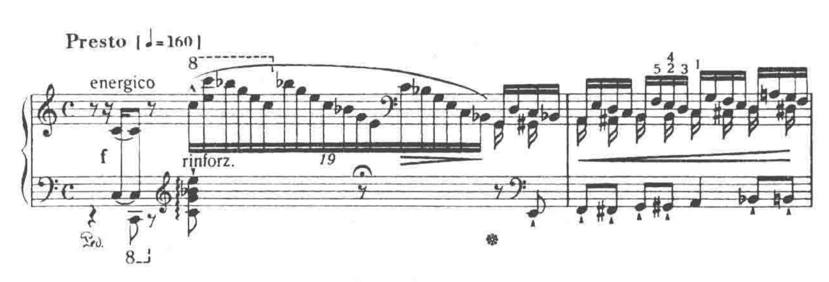


15. *Japanese karifu notation*

represent directional movement of the voice, together with crosses or circles representing the sound of drums or cymbals (*see* TIBETAN MUSIC, §II, 4).

8. HYBRID SYSTEMS. Many notations are hybrid in that they use more than one type of material. Japanese *karifu*, for example, has already been discussed above (§§5 and 7): the notation is generally called 'neumatic', but is equally a verbal notation in that Japanese characters under the graphic neume shapes give essential information about melodic turns of phrase (fig.15). Tibetan Buddhist chant notation has also been discussed in these two contexts, since verbal instructions as to vocal production and other aspects of performance appear above the line of neumes. The *jianzipu* notation for the Chinese *qin* has also been shown to contain special symbols as well as numbers. In the following discussion, three notations will serve to illustrate the interaction of materials.

Occasionally two materials interact in a tautologous way – that is, they call for the same musical result but by different visual means. But most interactions are in some way complementary.



A notation that combines tautologous and complementary uses of different materials is the notation for the *kŏmun'go* or Korean zither. The notation is known as *hapchabo* and dates from the 15th century. It is an adaptation of Chinese *jianzipu*, but whereas the Chinese notation uses numbers for the designation of both string and stopping-point, the Korean notation assigns names to its six strings (see fig.16*a*) and uses the string name in conjunction with a number for the stopping-point. Added to the left of this name and number is a graphic symbol indicating the left-hand stopping finger, and where necessary symbols for direction of stroke, ornaments and so on. The central part of the notation is thus a complementary hybrid of word, number and graphic signs. This compound symbol is placed in the middle of three columns. In the right-hand column appears the central scale degree *kung* from the Korean *oŭmyakpo* 'five-note abbreviated notation', and in the left-hand column appear a group of Korean letters that signify one of the Korean solmization syllables from series such as

16. *Hapchabo notation for the Korean kŏmun'go (zither)*

tŏng, *tung*, *tang*, *tong* and *ting*, or *rŏ*, *ru*, *ra*, *ro* and *ri* (see fig.16*b*). All these notational elements, with double tautology as to pitch, point to B♭ stopped with the left thumb and plucked with an outward stroke (fig.16*c*).

The most fully hybrid of all notations is the staff notation of the West. It uses all the types of material discussed above. Fig.17, the beginning of the Prelude from Liszt's first book of *Etudes d'exécution transcendante*, contains examples of letter notation in (1) the clefs, which are formalized letters G and F; (2) the accidentals, which are formalizations of 'b' (♭) and 'h' (♯, ♮); and (3) the dynamic marking *f*, which is an abbreviated verbal notation. It also contains syllabic notations, both of them abbreviations for words: (1) the pedal application *Ped.*, so formalized as almost to be a pure graphic symbol; and (2) the technical instruction *rinforz.*, for *rinforzando*. It also contains two examples of full verbal notation: (1) the general designation 'Presto' for the tempo and character of the Prelude as a whole; and (2) the localized technical instruction *energico*. It has several examples of numerical notation: (1) the tempo specification, which supplements the tempo aspect of the verbal instruction 'Presto'; (2) the indication of octave transposition; (3) the fingering in bar 2, which is a technical notation; and (4) the indication '19' for rhythmic grouping. But its main constituents are graphic notations: (1) the staves, bar-lines and brace; (2) the note symbols and rests; (3) the time signature '**C**', which derives from the medieval half-circle designating duple division of breve and semibreve (and thus is not in origin a verbal abbreviation of 'common time', though it has acquired this status in more recent times); (4) the phrase mark, which is partly a graphic duplication of

17. *Western staff notation (Liszt, Prelude from 'Etudes d'exécution transcendante', i; Budapest: Editio Musica, Kassel: Bärenreiter, 1970)*

pitch and partly an indication of phrase articulation that duplicates the beaming of note symbols; (5) the pause sign; (6) the pedal release sign; (7) the *staccatissimo* signs; and finally two suggestively graphic signs, (8) the spread-chord indication in bar 1, and (9) the decrescendo and crescendo signs.

From this it can be seen that staff notation is a complex multiple hybrid system with very low redundancy, partly technical and tablature-like, partly representational.

III. History of Western notation

1. Plainchant.

(i) Introduction. The earliest forms of plainchant notation, probably dating from the 9th century onwards, relied on signs generally known as 'neumes'. Such neumatic notation is clearly of great historical importance, for it stands at the beginning of the development that led to the notational forms in use today. Yet the time, place and circumstances in which neumes were first used are all disputed. Ever since medieval plainchant was revived in the 19th century the rhythmic interpretation of the melodies has been controversial, and the debate continues still. To a lesser extent the precise significance of certain signs (e.g. the *oriscus*, *quilisma* and liquescent neumes) and the possible use of chromatic notes in a basically diatonic system are also the subject of argument. All these areas of uncertainty stem from the fact that the notation represents only a few aspects of what was sung. So not only must modern scholars and performers interpret the signs committed to parchment by medieval scribes, they also have to elucidate the conditions that determined what should be represented in musical notation (and also what need not be notated).

The foundations for the systematic investigation of chant notations were laid principally by the monks of Solesmes, as part of the restoration of medieval chant for modern liturgical use. The facsimiles published in the Solesmes series Paléographie musicale (particularly 1st ser., ii–iii, 1891–2) and in Bannister's *Monumenti vaticani* (1913/*R*) are still of immense value. The volumes of Paléographie musicale are usually accompanied by notational studies, beside which the works of Wagner (1905, 2/1912) and Suñol (1925) are the most comprehensive. Subsequent detailed studies of many regional types of chant notation are cited below. Stäblein (1975) and Corbin (1977) are modern surveys of the whole area, and Hourlier (1960) is a useful set of facsimiles with commentary.

Although the different styles of chant notation show agreement on the basic principles, they vary considerably from area to area and period to period; this variety reflects the circumstances (ecclesiastical-political, geographical, liturgical, educational) in which notation was used, and can, therefore, illuminate the history of ecclesiastical music in striking ways.

The following survey describes the principal characteristics of neumatic notation, before addressing the problem of its origins. The main regional styles of neumes are distinguished, in four historical phases: the period before the introduction of the staff; the staff notations of the 11th and 12th centuries; the less numerous forms of the 13th century onwards; and the notation of printed chant books. For each of the first three epochs a separate table of neume signs has been constructed (Tables 1, 2 and 3).

(ii) Principal characteristics. In general Latin usage the word *neuma* meant 'gesture, sign, movement of the hand'; in a musical sense it denoted a melodic element, often an untexted melisma. From the end of the 10th century,

however, the term was also used for the graphic signs used to represent melodies, typically designating a sign or group of signs attached to one particular syllable of text (see Atkinson, 1995; see also Wagner, 1905, 2/1912, p.15).

From this period onwards also survive tables that name the signs ('nomina notarum' or 'nomina neumarum'), with some variance of nomenclature depending on local traditions (see Huglo, 1954; Bautier-Regnier, 1964; Odenkirchen, 1993; Bernhard, 1997). Modern usage generally follows the practice of the *tabula brevis* found in a number of German sources. Several of the names appear to be of Greek origin or at least to affect a Greek derivation. The most common are as follows (see Tables 1, 2, and 3 for their melodic significance: step upwards, downwards etc.): *virga* (Lat.: 'rod', 'staff'); *punctum* (Lat.: 'point', 'dot'); *tractulus* (from Lat. *trahere*: 'to draw out'); *pes* (Lat.: 'foot') – also known as *podatus* (probably pseudo-Gk.); *clivis* (from Gk. *klinō*: 'I bend', via Lat. *clivus*: 'slope') – also known as the *flexa* (Lat.: 'curve'); *torculus* (Lat.: 'screw of a wine-press'); *porrectus* (Lat.: 'stretched out'); *scandicus* (from Lat. *scandere*: 'to ascend'); *climacus* (from Gk. *klimax*: 'ladder'); *trigon* (from Gk. *trigōnos*, Lat. *trigonus*: 'triangular'); *oriscus* (possibly from Gk. *horos*: 'limit', or *ōriskos*: 'little hill'); *salicus* (from Lat. *salire*: 'to leap'); *quilisma* (from Gk. *kyliō*: 'I roll', *kylisma*: 'a rolling').

The signs are usually classified as simple, compound, special (sometimes called 'ornamental') and liquescent. The simple neumes (most of those in Tables 1–3) consist of up to three notes and can be extended or combined to make compound neumes of four to six or even more notes. Some signs, which may be modified forms of the conventional neumes or additional letters, appear to indicate special features of performing practice (articulation, ornaments, agogic nuances etc.), but the manner of their performance is often unclear today.

A further distinction touches upon the different styles of writing neumes. In some areas signs representing two or more notes in a single stroke were preferred, while in others discrete dots or short strokes for each separate note were favoured. An example of (predominantly) stroke notation is early German notation, especially the sophisticated version practised at St Gallen. (Because of

the hypothesis that sees the origin of stroke neumes in the accents of classical prosody, German and French notations and all types more or less closely related to them are often referred to as 'accent neumes'; this term will be avoided here.) Aquitaine is the best example of an area where a notation consisting primarily of points was used. Most areas, however, mixed extended strokes and dots, and the distinction has often been over-emphasized to buttress arguments concerning the origins of neumes (see below, §1(iii)).

The *virga* and *punctum* each represent a single note. In stroke notations the *virga* was used for notes of relatively higher pitch, the *punctum* for relatively lower ones. Many other notational styles make only restricted use of the *virga*. Sometimes the *punctum* was drawn in elongated form, called the 'punctum planum' in older literature and the 'tractulus' in recent writings. Some manuscripts use both *punctum* and *tractulus* and appear to distinguish rhythmically between the two, the former being shorter, the latter longer. In the important early manuscripts from the Laon/Reims area (containing Messine neumes) the *punctum* takes the form of a small hook or barb, called the 'uncinus' in recent writings. In representing passages of simple recitation on a single note some sources prefer the *virga*, others the *punctum*.

The significance of most of the simple and compound neumes is more or less clear, but many of the special neumes are difficult to interpret; manuscripts vary to the extent in which they use these signs. The *oriscus* seldom appears alone over a syllable, but rather as part of a group of signs, or combined in special signs: *virga strata* (*virga+oriscus*; also known as *gutturalis* or *franculus*); *pes stratus* (*pes+oriscus*), *pes quassus* (*oriscus+virga*), *salicus* (*punctum+oriscus+virga*), *pressus maior* and *minor* (*virga+oriscus+punctum* and *oriscus+punctum* respectively, the final *punctum* being a lower note). Although in many contexts the *oriscus* seems to signify the repetition of the previous note, it has also been suggested that the neume may represent a non-diatonic note, or some agogic or articulatory peculiarity. The *quilisma* sign usually appears between two notes a major or minor 3rd apart, but it has also been interpreted as indicating a peculiarity of delivery, for example, a chromatic glissando, a turn or a rhythmic nuance. While the last note of the *trigon* is relatively lower, the relationship of the first two is unclear; they may represent

the same pitch, a semitone ascent or a non-diatonic interval. Some sources use *strophici*, which may signify a special type of articulation.

The signs known as 'liquescent' neumes are linked to liquid and sonant consonants and diphthongs in the text at a syllable change; they appear to involve a form of half vocalization of the note in question, passing from one syllable to the next. Two notes in ascending order, where the second is liquescent, are indicated by the *epiphonus*, and two notes in descending order with liquescence by the *cephalicus*.

Although many chant notations are recognizable at a glance, at least in a general way, their systematic investigation depends on the isolation of each sign in a particular notation and of all constituent elements within every neume, and the painstaking comparison of one source with another in the way these elements are used. Basic structural features include the direction of the script (*axis*) in ascending and descending strokes or groups of notes (diagonal, vertical etc.; see Tables 1, 2 and 3), and the way in which individual notes are combined in strokes or groups of signs. These are to be distinguished from calligraphic features such as the manner in which curved strokes or note-heads are drawn, or the degree of thickness of elements within a sign. The structural and the calligraphic features of a script vary according to time and place independently of each other.

Corbin (1977) introduced the concept of 'contact neumes', meaning a neume foreign to the area and predominant type of notation of a particular source: the neume may have been adopted by the notator of a manuscript as a result of contact with the foreign type. Corbin also used the term for a notation whose signs were derived from two or more earlier types; such a notation is here called 'mixed' or 'hybrid'.

(iii) Origins and earliest examples. Precisely when and where neumes were first used in the medieval West is not known. Isidore of Seville, writing in the middle of the 7th century, stated in his *Etymologiae* that melodies could not be written down (*GerbertS*, i, 20), and no concrete evidence exists from anywhere in the West for the use of notation before the Carolingian era. Necessity being the mother of invention, the reigns of the Frankish kings Pippin the Short (751–68) and Charlemagne (768–814) are thought to be the most likely period when a pressing need for plainchant notation could first have arisen. At this time the Franks made strenuous efforts to remodel their liturgical practices along Roman lines and, during the reign of Charlemagne, initiated a wide-ranging programme of educational reform, which might have included music writing. A positive view in this regard is taken, for example, by Levy (1987 etc.) who interprets passages in several 8th-century documents as referring to notation. For example, the decrees of the Council of Clovesho in England (747) refer to '[cantilenae] iuxta exemplar quod videlicet scriptum de Romana habemus ecclesia' ('[chants] according to the written exemplar, that which we have from the Roman Church'; A.W. Haddan and W. Stubbs: *Councils and Ecclesiastical Documents Relating to Great Britain and Ireland*, Oxford, 1869–71, iii, 137); however it is not clear whether the written exemplar contained only chant texts or notation for them as well (see Hiley, 1993, p.297 for a negative view). Furthermore, Charlemagne's *Admonitio generalis* (789) decrees 'Et ut scolae legentium puerorum fiant psalmos notas cantus compotum grammaticum per singula monasteria vel episcopia et libros catholicos bene emendate' ('. . . that schools cultivate reading by the boys: psalms, notes [*notas*], chant [*cantus*], the computus, grammar, in each monastery or bishop's school, and accurate versions of catholic books . . .'; MGH, *Capitularia regum francorum*, i, 1881, p.60); although the two words 'notas cantus' might be taken together to mean '[notational] signs of the chants', they more probably refer to two quite separate activities: 'writing, singing' (see Haas, 1996, p.152). None of the extant writings of the various scholars and advisors associated with Charlemagne's court mentions music notation and the earliest definite references to neumes are by Aurelian of Réôme (*c*850; CSM, xxi, 1975, chap.19). By the end of the 9th century Hucbald already knew of several different styles of notation (*GerbertS*, i, 117); his statement is confirmed by surviving examples.

The dating of the earliest examples is fraught with uncertainty and relies in large measure on palaeographical estimates of the date when the accompanying literary text was written. Three dozen or more specimens from the 9th century have been proposed; Table 4 is a list of many of them, a few of which are no doubt dated optimistically early. Most examples are single items in books that were never intended to contain more: several are notations of the *Exultet* chant in a sacramentary, or of the Genealogy of Matthew or Luke in an evangeliary. Often it is difficult in such cases to decide whether the neumes were added at a later date.

The earliest surviving complete chant books with notation – the graduals *F-CHRm* 47, *LA* 239 and *CH-SGs* 359 – date from the end of the 9th century or the beginning of the 10th; *F-LA* 266 is a fragment of a cantatorium slightly older than *LA* 239. *VAL* 407 may have been copied at the same scriptorium as the gradual *CHRm* 47. (The sacramentary-gradual *AN* 91, possibly from Angers and notated with Breton neumes – see PalMus, 1st ser., i, 1889, pl.XXII and p.148 – has also occasionally been dated to the 9th century, but is more probably of the 10th.) Ten palimpsest leaves of what appears to have been a notated 9th-century gradual survive in *D-Mbs* Clm 14735. The existence of several 9th-century books containing the texts of Mass chants – unnotated graduals in other words – from important centres such as Corbie, Nivelles and Senlis (ed. R.-J. Hesbert: *Antiphonale missarum sextuplex*, Brussels, 1935) suggests that before the late 9th century such books were not normally provided with notation. On the other hand, two notated fragments dating from the late 9th century have survived from what appear to have been Office antiphoners, one with Breton neumes and one with German. These predate the earliest surviving complete notated antiphoners by a century. The possibility that Charlemagne promoted a notated archetype of the chant repertory, as argued by Levy, thus seems somewhat unlikely on chronological grounds. Although several centres were clearly versed in the practice of music notation well before the end of the 9th century (e.g. Regensburg in the first half of the century, Laon in the second, and St Amand), there is little sign of a concerted effort to establish complete notated repertories for Mass or Office during the 'first Carolingian renaissance'.

While Palaeo-Frankish, French and German, Breton, Laon and Spanish neumes are represented on Table 4,

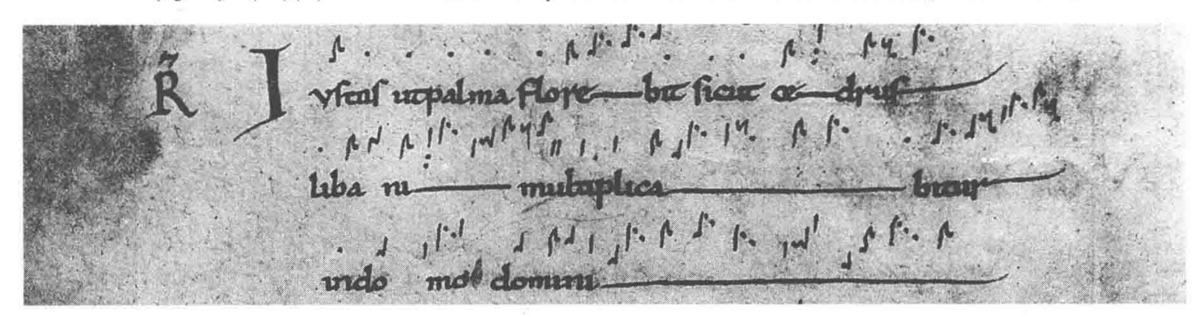
there are no surviving examples of 9th-century notation from Aquitaine, Italy or England.

No single explanation of the origins of neumatic notation has gained wholehearted acceptance. The prosodic accents of Alexandrine grammarians (see Laum, 1920 and 1928) have frequently been cited as the 'ancestors' of the neumes (Coussemaker, 1852; Pothier, 1880; Mocquereau in PalMus, 1st ser., i, 1889; Suñol, 1925; Cardine, 1968). According to this theory the acute accent gave rise to the *virga*, the grave accent to the *punctum* and the circumflex to the *clivis* or *flexa*. Yet, with the exception of Palaeo-Frankish neumes, the grave accent is hardly recognizable in most notations. Only one medieval treatise explains neumes in terms of accents, the anonymous *Quid est cantus?* (?11th century; *I-Rvat* Pal.lat.235; see Wagner, 1905, 2/1912, p.355), which contains such phrases as 'De accentibus toni oritur nota quae dicitur neuma . . . Ex accentibus vero toni demonstratur in acuto et gravi et circumflexo'. Atkinson (1995) has convincingly argued that the author of the treatise had Palaeo-Frankish notation in mind. Nevertheless, while the prosodic accents were certainly known in Carolingian times, they can have suggested hardly more than some rudimentary elements of a system for music notation.

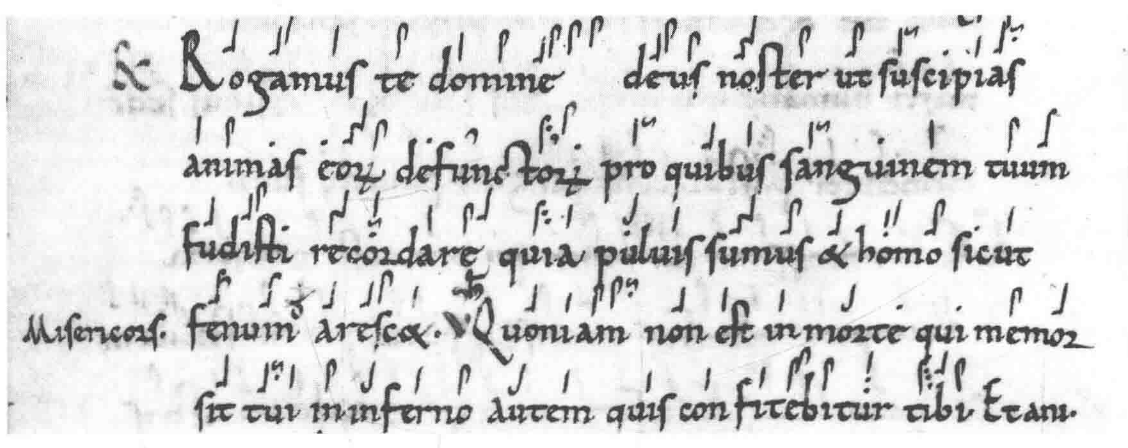
The notation of the earliest graduals mentioned above, from Brittany, Laon and St Gallen, is far from rudimentary; indeed, it is of a sophistication and complexity matched by few later chant books. According to one theory these complex signs are a representation of the gestures (Gk. *neuma*: 'gesture') made by the cantor while directing a performance, in other words, they derive from the practice of CHEIRONOMY (Huglo, *RdM*, 1963). The difficulties of this theory have been exposed by Hucke (1979). Cheironomy as practised in other (mostly non-Western) music cultures involves hand signs that denote exact pitches, something plainchant neumes manifestly have no intention of doing. To reconstruct a lost cheironomic practice from surviving notational signs and then to hypothesize that the signs derive from the cheironomy is inherently unsatisfactory, though the possibility should not be dismissed out of hand.

Floros (1970) proposed a wholesale adoption of Byzantine notational practice by Rome in the second half of the 7th century, claiming far-reaching correspondences between Palaeo-Byzantine notation of the Chartres type and Latin neumatic notation, including liquescent and special neumes and significative letters. But Floros's reconstruction of the early stages of Byzantine notation has been challenged (Haas, 1975), and the theory seems implausible on chronological grounds. Not until the 11th century was it customary to notate every syllable of Byzantine melodies; from the 9th century to the 11th notation was used only for particular points in the melody. And the Byzantine system developed in a quite different direction, as an interval notation, specifying intervals by signs as in a code, not representing them spatially on the page. (For further discussion of Byzantine notation *see* BYZANTINE CHANT, §3; on the development of the connection between vertical space on the page and a sense of higher and lower pitch in music see Duchez, 1979, and Sullivan, 1994.) However, the possibility that the concept of chant notation and some of its basic elements had a place in the interchanges between Carolingian and Byzantine church musicians of the late 8th century and the early 9th should not be dismissed completely. (The system of eight modes is ascribable to these contacts.) The names of some neumes – of which, however, no records exist before the 12th century – appear to be Greek or pseudo-Greek.



As Treitler (1982, 1984, 1992) has repeatedly stressed, neumes must not be viewed as imperfect forerunners of staff notation. Had it been desired to represent exact pitches, the means to do so would have been found. (Exactly this was indeed accomplished by Hucbald, with a letter notation adapted from Boethius, and the authors of the *Enchiriadis* group of treatises, with dasian signs.) Neumes remind their reader of the essential features of a melody that has already been learnt. The singer retains in his or her memory the store of typical melodic gestures implied by the genre and mode of the piece. The neumes guide the adaptation of those turns of phrase to the liturgical text in question. (See Hucke, 1988, and, for rare evidence of the system 'under construction', Rankin, 1984.)

The point at which this written reinforcement of the singer's memory became necessary, and where the first steps were taken in the development of notation is uncertain. Levy (1987) has favoured a relatively early date and has argued for two distinct stages in the creation of a written 'Carolingian archetype', two archetypes in fact. A first attempt would have been made in Palaeo-Frankish neumes, a system that appears to have achieved only modest dissemination; the second would have been made with French-German notation.



Others have argued for a later date, at least for the notation of whole chant books (van der Werf, 1983; Hiley, 1993, p.371). The wide variety of notational styles and the small but persistent differences between versions of melodies in different areas suggest the independent writing down of the repertory from memory at different times and places, after the various notational styles were already established. The fact that the whole process had to be repeated after the introduction of staff notation, again with different results in different areas, also suggests that the dissemination of an archetype was neither expected nor practicable.

Several scholars, including Stäblein (1975, diagram on p.27), have hypothesized genealogical relationships among the different neume families. The more ancient neumatic notation is believed to be, the greater the room for speculation about the organic development of the different styles. Jammers, for example, associated the point notation of Aquitanian sources with Gallican chant, and regarded stroke neumes as typically Roman. Handschin (1950, pp.81ff) distinguished between pre-Carolingian practice and a '"gregorianische" Neumensippe'. The sources known at present do not, however, seem to offer conclusive evidence to support such hypotheses.

Many questions, therefore, remain concerning the origins and early development of the neumatic notations. Under what circumstances could several different but equally mature types have developed by the end of the 9th century and yet more by the 11th? Is what they have in common the result of development from a common ancestor or did they evolve independently from a rather informally transmitted 'idea' of a written *aide-mémoire* for the singing-master? Is the appearance of fully notated graduals (with Mass chants) no sooner than the end of the 9th century deceptive (are earlier ones lost?), and why

18. French neumes: gradual, early 11th century, from St Denis (F-Pm 384, f.10r)

19. English neumes: Office of the Dead, early 11th century, from St Augustine's Abbey, Canterbury (GB-Ob Bodley 572, f.27v)

are the earliest fully notated antiphoners (with Office chants) no older than the end of the 10th century?

(iv) Early notations, 9th–11th centuries.

(a) French and German notation, including St Gallen and England. Despite differences in the direction of the script (from vertical in France and England to strongly inclined in south Germany) many basic similarities link the stroke notations used throughout France north of the Loire (except for Brittany and the archdiocese of Reims) and Germany.

French neumes (fig.18) were used within the area contained roughly by the four provinces of Lyons: the archbishoprics of Lyons, Rouen, Tours and Sens (Corbin, 1957). Numerous important manuscripts from such centres as St Denis, St Vaast, Dijon, Nevers, Cluny and Lyons use this notation. In the late 11th century the notation was also taken to south Italy and Sicily in the wake of the Norman conquest of those regions. The neumes typically ascend vertically and descend diagonally (the angle varies from place to place). However, this vertical direction is by no means a hard-and-fast rule in French notation, and in some sources (e.g. *F-SOM* 252 from St Omer: facs. in PalMus, 1st ser., iii, 1892, pl.184; and *Pa* 1169 from Autun: facs. in ibid., pl.183) the difference from German practice seems very slight. Other general differences from German practice are the angled form of both *pes* and *clivis*, and, from the 11th century, a tendency to add a hook or head to the upper left of the *virga* and *pes* and a foot to end of the *clivis*; occasional exceptions to these basic characteristics may, however, be found. The *quilisma* usually has three hooks; a few manuscripts, notably *F-MOf* H.159 from Dijon (on this source, see also §1(iv)(a)), use a descending *quilisma* as well. The *trigon* is rarely encountered. (For facs. see PalMus, 1st ser., iii, 1892, pls.181–93; Bannister, 1913, pls.10–20, 39–40, 43–9; Suñol, 1925, Fr. trans., 2/1935, pp.230–44; Jammers, *Tafeln*, 1965, pls.23–6, 28; Stäblein, 1975, pls.3–5; Corbin, 1977, pls.1–5, 21–6, 28–9, 40–41.)

The same general type was used in England (fig.19; see Rankin, 1987), especially in Winchester, and was imported thence to Scandinavia. The direction of the English neumes is even more markedly vertical than most French sources, for example, in the *climacus* where the initial *virga* is slightly rounded at the top and the succeeding *puncta* descend vertically. The rounded *clivis* is also more characteristic of English than French sources. (For facs. see PalMus, 1st ser., iii, 1892, pls.178–80; Bannister, 1913, pls.41*b*–42; Suñol, 1925, Fr. trans., 2/1935, pp.283–97; Stäblein, 1975, pls.6–9; Corbin, 1977, pls.30–31.)

A small number of 11th-century manuscripts, mostly from Normandy, use a special form of *punctum* like a small hook (it resembles the *uncinus* of Messine notation, though it is not related to the latter) for the lower note of the semitone steps (B, E and the A below B♭). An equivalent form is sometimes found in Aquitanian neumes (where it is usually regarded as a type of *virga*). After the adoption of staff notation the sign still persisted, although strictly speaking superfluous, and was used even into the 13th century. Examples of it are found in England as well as Normandy (see Corbin, 1977, pl.22; Hiley, 1993, p.424). The Aquitanian form spread as far as Portugal (Corbin, 1952).

German neumatic notations have often been referred to en bloc as 'St Gallen' neumes (since the time when St

Gallen was believed to have received its chant directly from Rome: by implication its notation was also considered to stand at the root of the German tradition). But St Gallen is only one eminent member within a more or less clearly differentiated group. The territory of German neumatic notation includes the whole German-speaking area, and, from the 11th century onwards, some parts of north Italy (Bobbio, Moggio, the Aosta valley, Aquileia), Besançon and Remiremont, Bohemia, Hungary, Poland and parts of Scandinavia. The direction of this notation is diagonal both ascending and descending; the style of script is flexible, perfected down to the tiniest details. Both *punctum* and *virga* are used for syllabic notes and the normal form of the *pes* is rounded. The notation is rich in special neumes. (For facs. see PalMus, 1st ser., iii, 1892, pls.110–12, 114, 116–17; Bannister, 1913, pls.2–9; Suñol, 1925, Fr. trans., 2/1935, pp.298–304; Jammers, *Tafeln*, 1965, pls.6, 9–12; Stäblein, 1975, pl.58; Corbin, 1977, pls.8–9, 11–12; Möller, 1990.)

The best-documented form of this script is the notation of St Gallen itself (fig.20). A number of sources have been published in facsimile and subjected to intensive study (*CH-SGs* 339, 359, 390–91, *E* 121 and *D-BAs* 6). The extraordinarily rich repertory of signs includes modified forms of the basic neumes together with additional *episemata* and significative letters to represent agogic nuances and other features. (For facs. see PalMus, 1st ser., iii, 1892, pls.108, 113, 115; Suñol, 1925, Fr. trans., 2/1935, pp.298–304; Jammers, *Tafeln*, 1965, pls.7–8; PalMus, 2nd ser., i, 2/1970; Stäblein, 1975, pls.59–60; Corbin, 1977, pls.6–7.)

Numerous similar notations can be found in sources dating from the 11th century in adjacent areas as well. Rarely, however, was more than a part of the full arsenal of signs employed, and the meaning of a few signs sometimes appears to have been modified (Engels, 1994).

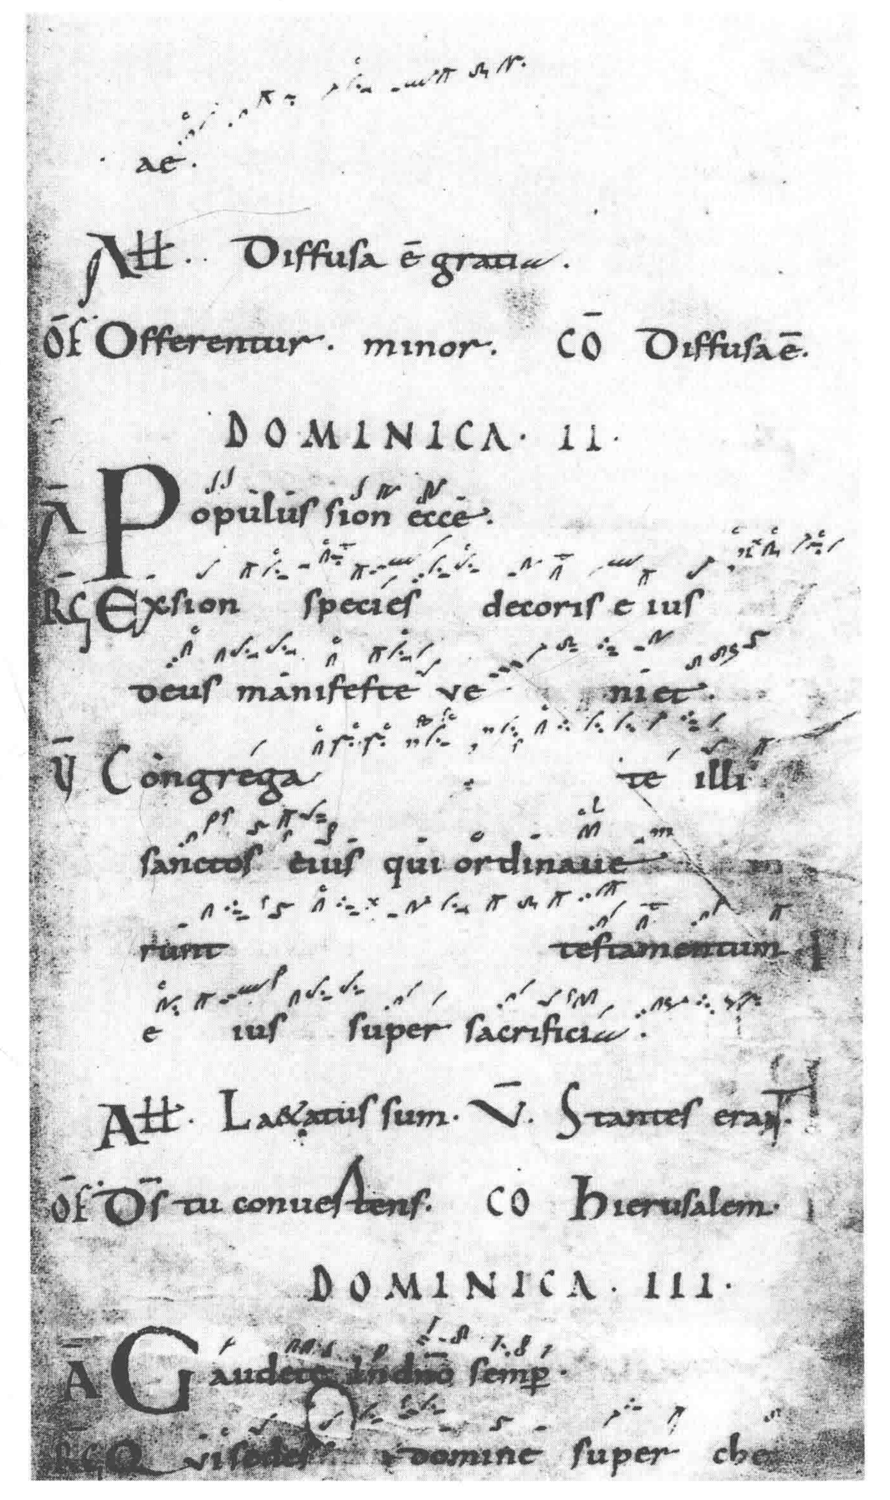
Many regional types within the German group have not been analysed in the same depth as St Gallen notation. One of the most important is the Echternach type, documented from the 10th century onwards (facs. of *D-DS* 1946; ed. Staub and others, 1982; Möller, 1988); its characteristic feature is the *pressus minor* resembling a question mark.

(b) The Spanish peninsula. Neumes that in many ways are similar to the main French-German type were used in Spain before the Christian reconquest. There are, however, a number of distinctive signs: the *scandicus* proceeds upwards as a single line with loops; the *pes*, instead of making a simple angle, may swing upwards with a loop; and the *torculus* and *porrectus* also contain loops. This basic Spanish type was divided between two geographical areas. In northern Spain a roughly upright orientation (like that of French notation) prevailed, whereas the neumes in sources from Toledo (fig.21) are inclined drastically to the right, as it were impelling the line of music forwards. Since practically all the melodies for which these notations were chiefly used, those of the Mozarabic rite, have not survived in diastematic notation, some details of Spanish notation are not fully understood. Its age is also to some extent disputed, the possibility having been raised that it may antedate the 9th-century Frankish examples (Huglo, 1985). Thus estimates of the date of the León antiphoner (facs. in *Antifonario visigótico*, ed. L. Brou and J. Vives, 1953–9) vary from the 9th century to the 11th (see Mundó, 1965).

Spanish neumes were also used for some 'Gregorian' chant manuscripts, written after the Roman rite was brought into Spain in the 11th century (e.g. *Antiphonale silense*, ed. I. Fernández de la Cuesta, 1985). But the chief vehicle for the import of 'Gregorian' chant was Aquitanian notation.

In north-east Spain, in the area roughly corresponding to modern Catalonia, another type of notation similar to French became established, usually known as 'Catalan' notation.

(For discussion see esp. Suñol, 1925, Fr. trans., 2/1935, pp.311–82; also Bannister, 1913, pls.25–6; Jammers, *Tafeln*, 1965, pls.42–3; Stäblein, 1975, pls.86–8; Corbin, 1977, pls.37–9.)

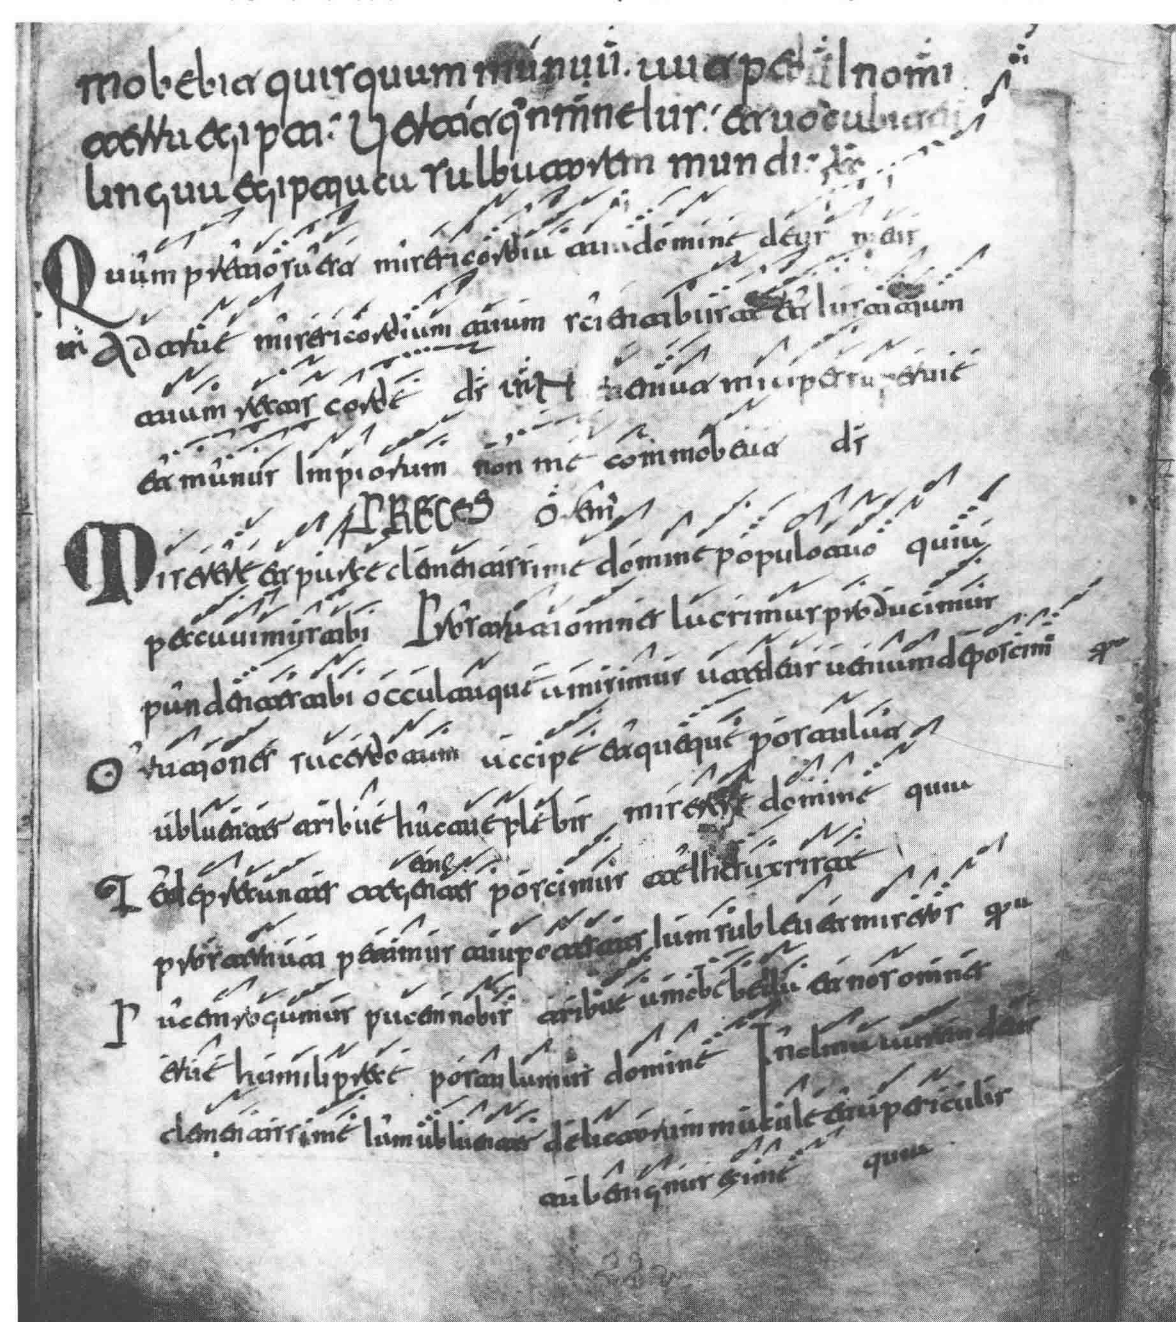


(c) Italian notations. Many different stroke notations were used in north Italy (e.g. those of Asti, Vercelli, Novara, Civate, Mantua, Reggio d'Emilia and Verona), most of which await detailed investigation (on that of Brescia see Barezzani, 1981). They have in common the use of long chain-neumes and vigorous pen strokes. Some scripts have signs also found in a few French sources (angled *pes*, conjunct *climacus*), and the direction of the script also occasionally resembles French practice.

Special subtypes include the notation of Novalesa (fig.22). Its neumes include auxiliary forms with loops and rings, and a broad curve for the *clivis*; the script ascends vertically (see Suñol, 1925, Fr. trans., 2/1935, pp.186–97; Corbin, 1977, pp.165–71 and pl.36).

Bologna notation (fig.23; see also PalMus, 1st ser., xviii, 1969; Kurris, 1971) probably represents the oldest north Italian notation (Hourlier, 1960, pl.30; Corbin, 1977, p.155). It is marked by vigorous diagonal upstrokes, particularly for *resupini*; the script ascends diagonally, descending nearly vertically. Its repertory of signs is large, with numerous variant forms reflecting agogic or melodic features. The presence of both *punctum* and two forms of *tractulus*, horizontal and slanting (*planus/gravis*) for single lower notes, signs with rings, and a peculiar form of *quilisma* are notable.

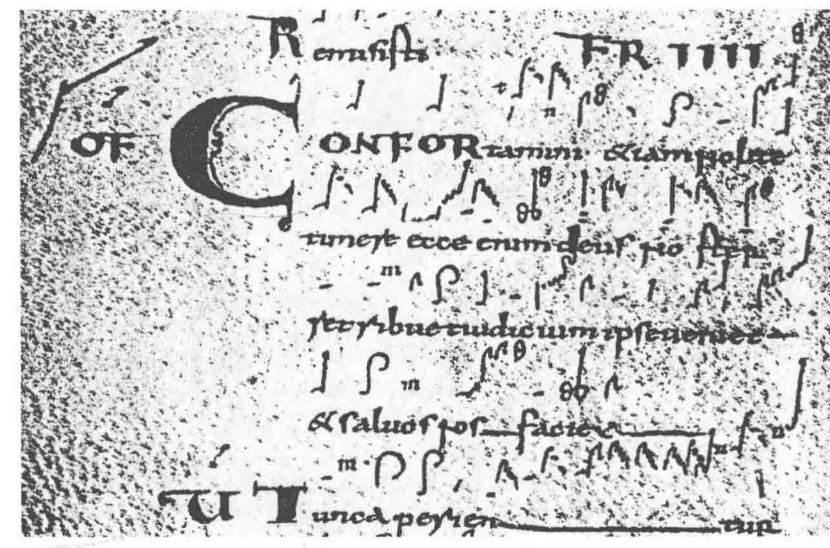
The most independent type of north Italian notation was that used in the Benedictine abbey of Nonantola near Bologna; there are also sources from Torcello (fig.24) and Verona. A peculiarity of this notation is the way in which the first note of a group or melisma is connected graphically to the corresponding vowel of the text. Notes are represented mostly by individual *virgae* or *puncta* deployed diastematically. In both *climacus* and *scandicus* the *puncta* are arranged vertically, but the curved *virga* at the start of the *climacus* (and related neumes) makes the direction clear. The *quilisma*-note is represented by two dots. The script ascends diagonally and descends vertically (almost going backwards). (For facs. see PalMus, 1st ser., ii, 1891, pls.11–14; Suñol, 1925, Fr. trans., 2/1935, pp.197–9; Jammers, *Tafeln*, 1965, pl.32; Stäblein, 1975, pl.15.)



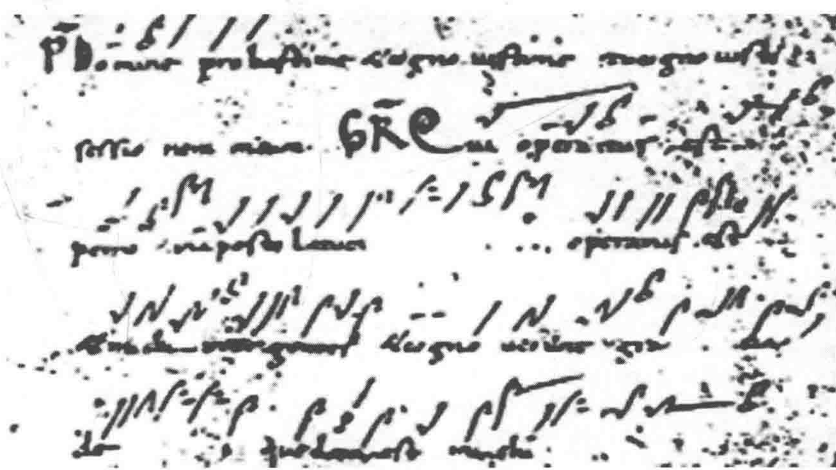
The adiastematic notations used in central Italy have hardly been studied at all (see Baroffio, 1990, note 30). They are not uniform; some are akin to north Italian stroke notations (e.g. *I-Rvat* lat.4770; *CHTd* N.2: facs. in PalMus, 1st ser., xiv, 1931, pls.44–5, see also p.251; *Rc* 1907: facs. in PalMus, 1st ser., ii, 1891, pl.7; *Lc* 606: facs. in PalMus, 1st ser., xiii, 1925/*R*, p.94, fig.10), others already show characteristics of 12th-century staff notations (right-angled *pes*, prolongation of horizontal elements). Beneventan features also appear in some scripts,

20. German neumes: cantatorium, c900, from St Gallen (CH-SGs 359, f.27r)

for example, the right-angled *clivis* and conjunct *scandicus*; their meaning, however, is not yet defined (e.g. *Rvat* lat.10646: facs. in Suñol, 1925, Fr. trans., 2/1935, p.209). Boe (1999) has discovered examples of adiastematic notation from Rome datable as early as around 1000, and also shown that French neumes as used at Bijon were used at the imperial abbey of Farfa in the mid-11th century.



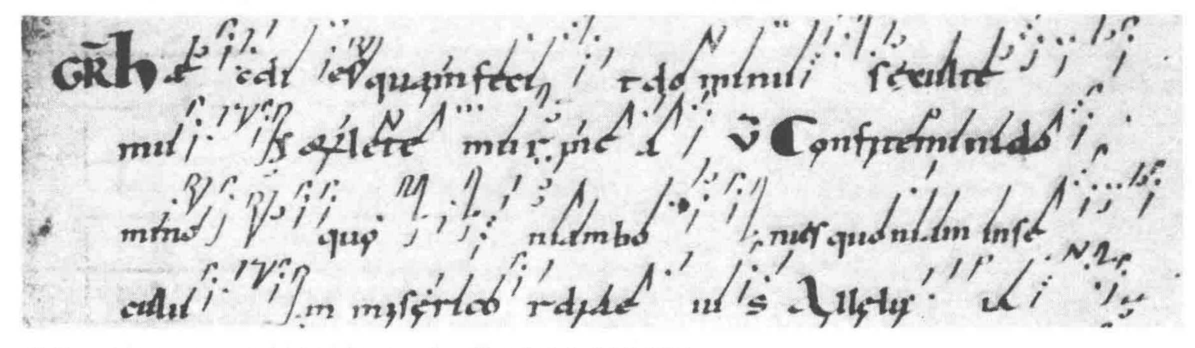
Beneventan notation (fig.25) was used in the area corresponding roughly to the duchy of Benevento and its area of influence (including Benevento, Monte Cassino, Bari and the Dalmatian coast); it thus covered much the same territory as Beneventan literary script. (10th-century sources are listed in Corbin, 1977, p.143.) The repertory of signs is extremely rich (in PalMus, 1st ser., xv, 1937/*R*, Huglo listed 353 different neume forms, among them



21. Toledan neumes: missal, 10th century, from Toledo (E-Tc 35.5, f.12v)

many varieties of liquescent signs). The *virga* has a graphic stress on the left. There are two types of *punctum*, one horizontal, the other slanting (*planum/grave*). The *clivis* also has two forms, one pointed (when approached from a lower note), the other right-angled (approached from the unison or a higher note). The *scandicus* is conjunct. The meaning of *tractuli* joined by a thin diagonal stroke is unclear ('inflatilia' with two notes, 'gradata' with three). Compound neumes, where long chains of notes are formed without lifting the pen from the parchment, are also prominent. The relative diastematy of this notation later developed towards an increasingly exact pitch-notation (the *custos* was used even before the introduction of the staff). (For facs. see PalMus, 1st ser., xiv, 1931, xv, 1937/*R*, xx, 1983, and xxi, 1992, which are devoted to Beneventan sources.)

(d) Palaeo-Frankish notation. Palaeo-Frankish neumes (fig.26) were first discussed by Handschin (1950) and Jammers (1952; see also, *Tafeln*, 1965, pls.34–6); sources are surveyed by Hourlier and Huglo (1957). Their name is due to Handschin, who regarded them as the forerunner of accent neumes. The connotations of the

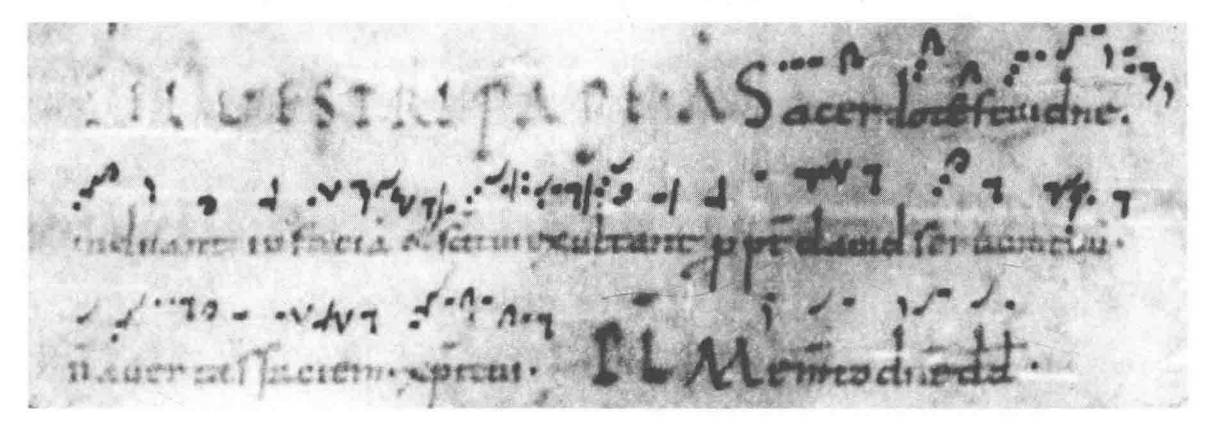


22. *Novalesa neumes: troper, late 11th century, from Novalesa (GB-Ob Douce 222, f.103v)*

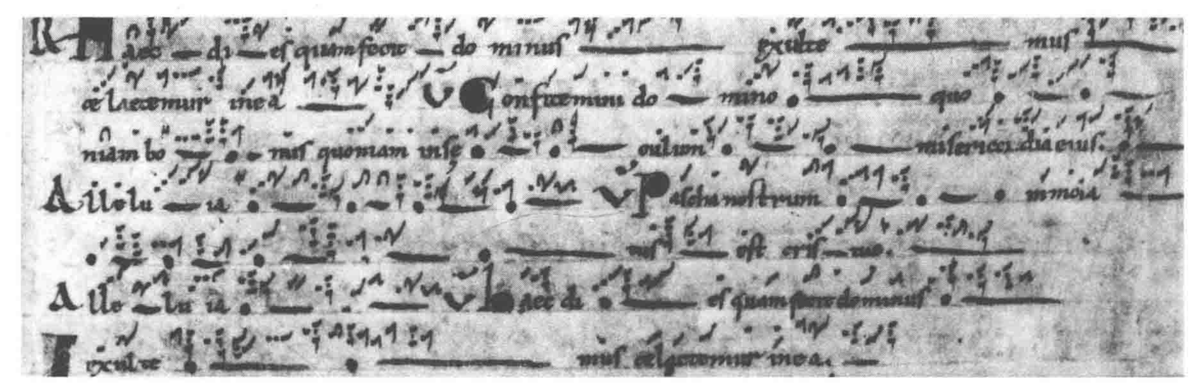
23. *Bologna neumes: flyleaf of gradual, late 10th century, from ?Bologna (I-MOd O.I.13, f.B)*

term are, however, problematic, and with hindsight the alternative designation 'St Amand notation' might be more appropriate (see Huglo, 1990, p.239). The notation appears to have been used in a restricted area including several important monasteries of Picardy and Hainault – Corbie, St Bertin, Anchin, Marchiennes – with the abbey of St Amand as its possible centre and an important outpost at Corvey on the Weser. They are last found at St Amand in the 12th century. The chief distinguishing feature of the notation is that the *pes* and *clivis* are represented by a single straight or slightly curved stroke; there is thus no *virga*. The *torculus* tends to be a simple semicircle. There is no distinction between *oriscus* and *quilisma*. In this notation, if anywhere, a strong connection seems to exist to the oratorical accents of the grammarians (Atkinson, 1995). Few sources are available in facsimile, so the degree of variance in neume forms and resemblances to other types of neumes cannot yet be assessed accurately. Since the two- and three-note neumes are sometimes 'split' into *puncta*, this notation has been reckoned among the 'rhythmic' types, perhaps the earliest such, implying that the distinction between slower and

24. *Nonantolan neumes: missal, late 11th century, from Torcello (I-Bu 2679, f.12r)*



25. Beneventan neumes: missal, 10th–11th century, from Benevento (I-BV 33, f.22v)



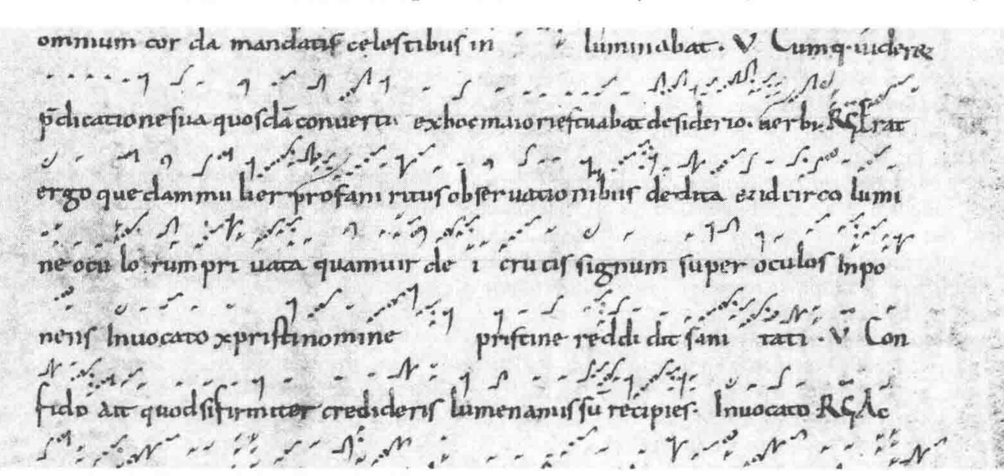
faster delivery was present in the minds of chant scribes from the very beginning. (For a hypothetical line of development, tracing a link between Palaeo-Frankish neumes and the notations of Brittany, Aquitaine and Laon, see Hourlier and Huglo, 1957, p.218.)

(e) Breton notation. Breton notation (fig.27) is found chiefly in north-west France, but also in 10th- and 11th-century sources from Pavia. Huglo's survey (*AcM*, 1963) shows a progressive retreat from the south-west (some features appear in early manuscripts from St Martial at Limoges), the Loire valley, Chartres, Maine, and Normandy south of the Seine. It was superseded by French notation in Angers by the turn of the millennium, but survived in the backwater of Brittany until the mid-12th century. Some 10th-century sources from southern England also use Breton notation (Rankin, 1984). With its obvious antiquity and simplicity, Huglo (op. cit., 82) and Stäblein (1975, p.30) thought it might once have been propagated widely throughout the Carolingian empire. As in Palaeo-Frankish notation (from which it may derive), the same sign is used where in other notations either an *oriscus* or a *quilisma* would be employed. Since the two- and three-note neumes are sometimes 'split' into *puncta*, this notation has been reckoned among the 'rhythmic' types (see Ménager, 1912). One of the principal sources, *F-CHRm* 47 (facs. in PalMus, 1st ser., ix, 1906), may be dated as early as the late 9th century and probably comes from Rennes. (For facs. see Bannister, 1913, pls.60–62; Suñol, 1925, Fr. trans., 2/1935, pp.256–9; Jammers, *Tafeln*, 1965, pls.40–41).

(f) Messine (Lorraine, Laon) notation. Messine notation (fig.28) was used in north-east France, in an area

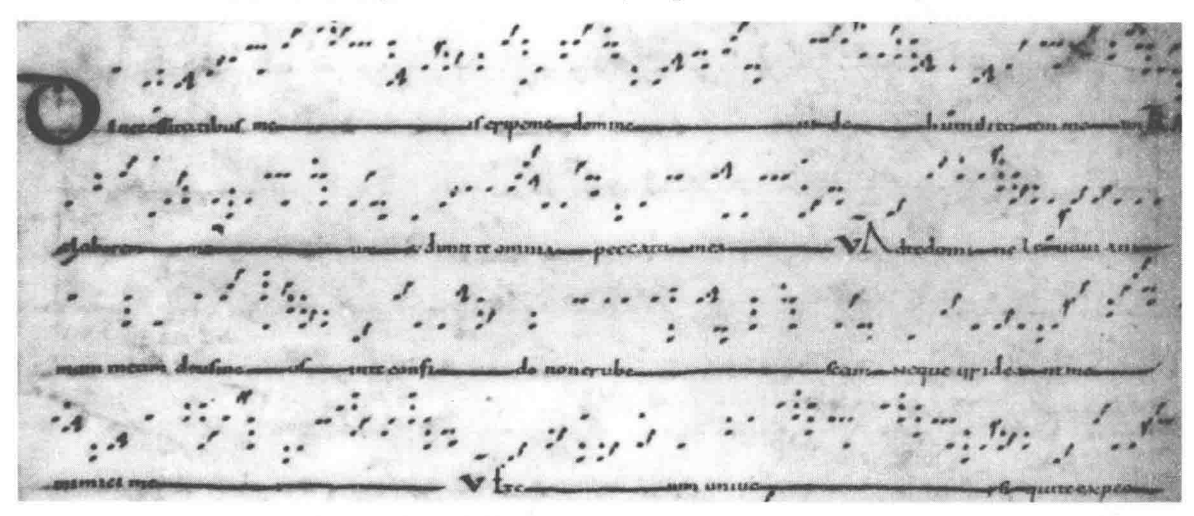
26. Palaeo-Frankish neumes: missal, 9th century, from north-east France (F-Pn lat.17305, f.15v)

27. Breton neumes: gradual, early 12th century, from Rennes (F-Pn lat.9439, f.107r)



including most of the archbishopric of Reims, bounded in the east by the Vosges, Eifel and Hunsrück. Towards the south and west it was not sharply detached from the area of French neumes. A special variant appeared as early as the 10th century near Lake Como (Sesini, 1932).

The earliest complete source to survive is *F-LA* 239 (facs. in PalMus, 1st ser., x, 1909), written in or near Laon about 930. Its repertory of signs is remarkably rich; each basic sign has variant forms (graphical variants, variants in the inner articulation of the sign, also significative letters). The basic sign for single notes is a small hook (*uncinus*). Characteristic signs include the *clivis* in the form of an Arabic '7' and the *cephalicus* in the form of an Arabic '9'. The direction of the script is diagonal ascending, vertical descending.



Similarly detailed studies of other manuscripts with Messine notation are not yet available. (Jeffery, 1982, and Hourlier, 1988, both discuss other very early examples; the main survey of sources is Hourlier, 1951. See also Lipphardt, 1955 and 1957; Arbogast, 1959; Cardine, 1968, Eng. trans., 1982; Corbin, 1977, pp.87–94. For facs. see PalMus 1st ser., iii, 1892, pls.154–65; Bannister, 1913, pls.55*b*–59*b*; Suñol, 1925, Fr. trans., 2/1935, p.248–55; Stäblein, 1975, pls.63–4.)

(g) Aquitanian notation. This notation (fig.29) was used over a wide area of south-west France, roughly corresponding to the Frankish province of Aquitania, and consists predominantly of discrete points. A *virga*, in the form of a point with a tail attached, is not found standing alone but as the final note of the *pes* or *scandicus*. The *torculus* is almost the only conjunct neume, formed of *punctum* plus *virga* joined to the final *punctum*. The *quilisma* is distinctive: after the initial *punctum* an almost vertical slash with initial hook is joined to the tail of the final *virga*. The earliest substantial source is the 10th-century miscellany from Limoges *F-Pn* lat.1240, whose principal scribes used Aquitanian notation, although some Breton and northern French neumes are also present.

Even before the end of the millennium scribes would use a dry-point line as a vertical orientation for music notation (the usual lines drawn for entering text would therefore be used alternately for text and music), usually for the 3rd above the final in authentic modes and the final in plagal modes (but F rather than E for mode 4). In some manuscripts a deliberate distinction seems to be made between dot and dash, possibly meaning shorter and longer notes respectively. In other sources the scribe seems simply to alternate the two, especially in descending *climacus* figures. In some sources, particularly *F-Pn* lat.903 (from St Yrieix; partial facs. in PalMus, 1st ser., xiii, 1925/*R*), alternative forms of the *virga* are used. A semicircular *virga* appears for the note on the lower step of a semitone (E, B etc.), a further type, the so-called *virga cornu* ('horned' *virga*), signifies the upper step of the semitone. Not dissimilar in shape to the latter is the *virga strata* (*virga+oriscus*). Even though the vertical placement of the notes is particularly exact in most sources from the mid-11th century onwards, clefs were not used, and

28. Messine neumes: Office of St Amand, 10th–11th century, from Reims (I-Rvat Reg.466, f.102v)

29. Aquitanian neumes: gradual, 11th century, from St Michel-de-Gaillac (F-Pn lat.776, f.37r)

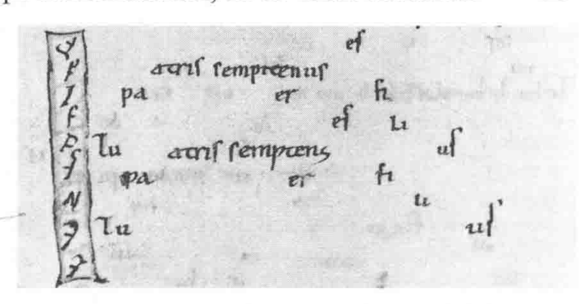
custodes but rarely, so that in the case of non-standard pieces the aid of the *virga* at the semitone is often useful for determining pitch. (The principal analysis of the notation is that of Ferretti in PalMus, xiii, 1925. For facs. see PalMus, 1st ser., ii, 1891, pls.83–103; Bannister, 1913, pls.63–4; Suñol, 1925, Fr. trans., 2/1935, pp.260–82; Jammers, *Tafeln*, 1965, pls.29–30; Stäblein, 1975, pls.31–5; Corbin, 1977, pls.19–20.)

(h) Significative letters. In some early sources letters are placed adjacent to the neumes, intended to clarify their interpretation with regard to pitch, rhythm, agogic nuance or dynamic (see Table 5). They are particularly common in a small group of 10th-century sources from St Gallen, Einsiedeln and Regensburg, and are also found in manuscripts from Laon and Chartres. Smits van Waesberghe (1938–42) counted 4156 letters in *CH-SGs* 359, 12,987 in *SGs* 390–91 (the Hartker Antiphoner) and 32,378 in *E* 121.

The use of significative letters diminished in the 11th century. Significative letters are described by Notker of St Gallen (*d* 912; ed. Froger, 1962; see also MGH, *Scriptores*, ii, 1829, p.103), who attributed their invention to one 'Romanus' (a choice of name no doubt intended to heighten their authority). According to Ekkehard IV of St Gallen (*d* 1036) the 'litterae alphabeti significativae' were added by Romanus to an authentic antiphoner of St Gregory, brought to the abbey from Pope Hadrian I. Consequently they are sometimes known as 'Romanian' or 'Romanus letters'. Some of the letters on Notker's list are commonly used but others are rare in chant sources. Notker's explanations (often rather fanciful) are usually devised as a mnemonic, where the significant letter is emphasized in the actual choice of words in the explanation; thus 'g' indicates 'ut in gutture gradatim garruletur genuine gratulatur'. Notker's explanations are summarized in Table 5, col.2. No corresponding explanation survives for the letters used in *F-LA* 239, but they were elucidated in PalMus, 1st ser., x (1909; see also Billecocq, 1978; and for sources from Chartres, see PalMus, 1st ser., xi, 1912). Some of the more common meanings are explained in Table 5, col.3. The two traditions differ as to the meaning of 'a' and 'f'.

(v) Pitch-specific notations, 11th–12th centuries

(a) Alphabetic notations and dasia signs. The need for pitch-specific signs was greater in theoretical texts, many of which contained music examples, than in the liturgical chant books. Treatises that dispense with music notation, such as *Prologus in tonarium* by Berno of Reichenau (*d* 1008; *GerbertS*, ii, 62–91), cite pitches by means of the note names of classical Greek theory (*proslambanomenos*, *hypatē hypatōn* etc.). Other treatises, however, employ simpler systems based on sets of symbols or letters of the alphabet. The series of signs known as 'dasia' (or 'daseia': see Phillips, 1984, and Hebborn, 1995) was used in the important *Enchiriadis* group of treatises in the 9th century. Hermannus Contractus promoted another set of letters that specified the interval between one note and the next. Of all these, only alphabetic letters seem to have been used to notate whole chant books.



The alphabetization of the individual notes of the scale was thus at first a purely theoretical procedure and was intimately connected with the use of the monochord as a teaching instrument. Boethius (*d c*524), the principal conduit for classical Greek music theory to the Middle Ages, demonstrated several features of the Greek *systēma teleion* (Greater Perfect System) by means of pitches produced on the monochord, and in one instance the notes of the diatonic scale through two octaves are marked off with the letters 'a' to 'p' (*De institutione musica*, iv.17).

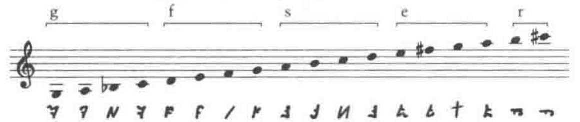
Hucbald of St Amand, writing at the end of the 9th century, had already referred to the desirability of combining neumes with pitch-letters (*GerbertS*, i, 117–18; Babb, 1978, p.37; Traub, 1989, pp.62–5), although the actual pitch-letters he chose were not the a–p series but a selection from the 'Alypian' series transmitted by Boethius (*De institutione musica*, iv.3–4; see Babb, 1978, p.9). Hucbald's suggestion was not, however, taken up in this form in practical sources, although those with dual notation, such as the 'tonary' *F-MOf* H.159 (first half of the 11th century, from St Bénigne, Dijon), which also contains French neumes, do put his idea into practice. It is not clear whether the probable *spiritus movens* behind the copying of this manuscript, Guillaume de Dijon, knew

Hucbald's work, or whether he was influenced by the late 10th-century treatise *Dialogus de musica* (see below).

Another series a–p, but this time representing modern *c–c″*, is also reported by Hucbald, and is known from several texts on the construction of organs and bells. The only known practical source utilizing this series is the Winchester manuscript with *voces organales GB-Ccc* 473 (late 10th- to mid-11th centuries), which attaches letters to the neumes of many sequences, making them among the earliest of all directly transcribable pieces (Holschneider, 1968 and 1978).

The dasia signs (fig.30) are known from three important texts of the 9th century and the early 10th, *Musica enchiriadis*, *Scolica enchiriadis* and *Commemoratio brevis de tonis et psalmis modulandis*, together with a number of others (ed. Schmid, 1981). The dasian series starts from a nucleus of four signs, representing the pitches of the four finals of Gregorian chant (D, E, F and G), which are then reversed and inverted to make further sets of four.

30. Dasia signs: 'Musica enchiriadis' (F-Pn lat.7211, f.10v)



Their intervallic disposition is so explained that the scale in ex.4 results (assigning the nucleus to modern *d–g*).

The practical significance of this scale is unclear (see Phillips, 1984), since repetition at the octave is not consistently possible. (For examples of polyphony with a total range of more than an octave, the full series of dasia signs is abandoned.) Possibly we are meant to understand

TABLE 5: Significative letters

Letter	*St Gallen*	*Laon*	*Chartres*
a	[the chant] rises higher (*altius*) in pitch	increase (in length or emphasis) (*augete*)	—
b	used in conjunction with another letter to mean 'very' (*bene*), i.e. that [the chant] rises or falls 'by a large interval', or that [a note] is to be held 'for a long time'	—	—
c	to be performed rapidly (*cito*) or quickly (*celeriter*)	quickly (*celeriter*)	quickly (*celeriter*)
d	[the chant] sinks lower (*deprimatur*)	—	lower (*deprimatur*)
e or *eq*	[the note] sounds at the same pitch (*equaliter*)	same pitch (*equaliter*)	—
f	to be performed with harsh or percussive attack (*cum fragore seu frendore feriatur*)	highest point of the phrase (*fastigium*)	*fragose*? (see PalMus, 1st ser., xi)
g	to be uttered by degrees in the throat (*in gutture gradatim*)	—	—
h	—	low (*humiliter*)	low (*humiliter*)
i	[the chant] moves downwards (*iusum*) or lower (*inferius*)	—	—
k	signifies nothing to the Latin peoples, but for us Germans (*alemannos*) it stands in place of the Greek '*x*', short for *klenche*, meaning with a ringing tone	—	—
l	rise [in pitch] (*levare*)	rise (*levare*)	rise (*levare*)
m	sing the melody moderately with restraint (*mediocriter*)	moderately (*mediocriter*) (appears to refer to either rhythm or interval)	—
n, *nt*	—	join together (*nectere*)	join together (*nectere*)
nl	—	—	do not ascend (*non leves*)
o	the shape of the letter itself should be in the mouth (*ore*) of the singer	—	—
p	driving forward (*pressionem*), with urgency (*prensionem*)	—	—
q	—	—	*q* as in *equaliter*: same pitch
r	with straight or forthright vibrato-less [tone] (*rectitudinem vel rasuram ... crispationis*)	—	—
s	ascend (*susum vel sursum scandere*)	ascend (*sursum*)	—
t	drag out (*trahere*), or hold (*tenete*)	hold (*tenete*)	hold (*tenete*)
x	wait (*expectare*); there is no Latin word beginning with this letter	—	—

Ex.4 Dasia signs in the 'Enchiriadis' group of treatises (D. Hiley: *Western Plainchant: a Handbook*, 1993, p.393)

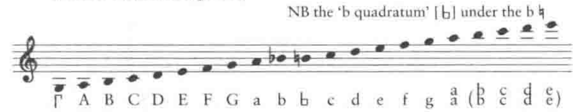
tetrachords:
g graves
f finales
s superiores
e excellentes
r residui

that b♭, f♯ and c♯ are available in all octaves, which would support the suggestion that some chants (principally offertories) 'modulate'.

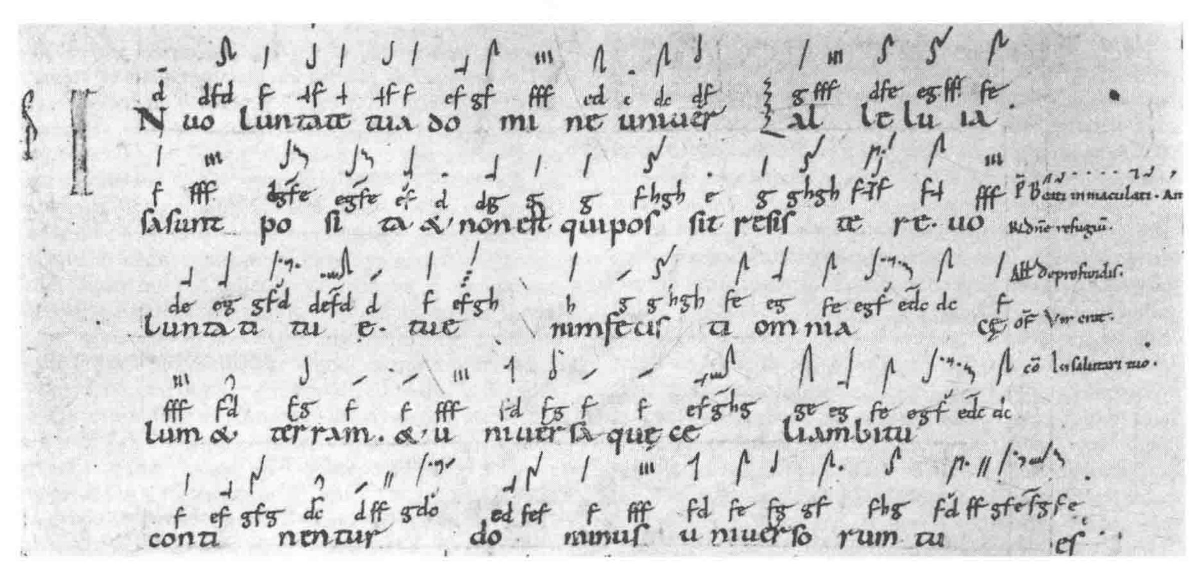
In contrast to early Western notation, the system developed to notate Byzantine chant specified intervals between notes (*see* BYZANTINE CHANT, §3). The same principle was adopted by Hermannus Contractus (*d* 1054), using the following letters: 's' (semitonus) for the semitone; 't' (tonus) for the tone; 'ts' for the minor 3rd; 'tt' for the major 3rd; 'd' (diatessaron) for the perfect 4th; 'D' (diapente) for the perfect 5th; 'Ds' for the minor 6th; 'Dt' for the major 6th; and 'e' (equaliter) for the unison. A dot under the letter indicated descending motion.

The a–p series was adopted for use in *F-MOf* H.159 (fig.31) and a small group of manuscripts from Normandy and Norman England (Corbin, 1954; Santasuosso, 1989). All these sources are associated with GUILLAUME DE DIJON (William of Volpiano), the Italian abbot of St Bénigne, Dijon, who reformed most of the leading monasteries of Normandy in the early 11th century. *MOf* H.159 contains the complete corpus of Mass Proper chants in musical (not liturgical) order notated with both neumes and alphabetic letters in the series a–p (Guidonian A = a, Guidonian a = h, Guidonian aa = p; I = b♮, *i* = b♭; for the Guidonian scale, see below, ex.6). The scribes of this manuscript (see Hansen, 1974) attached special signs for liquescence, *oriscus* and *quilisma* to the letters.

A group of five special signs in *F-MOf* H.159 have occasioned much speculation (ex.5). They occur among the letters where a semitone step in the scale would normally be expected. According to one theory (see Gmelch, 1911) the signs represent quarter-tones or some

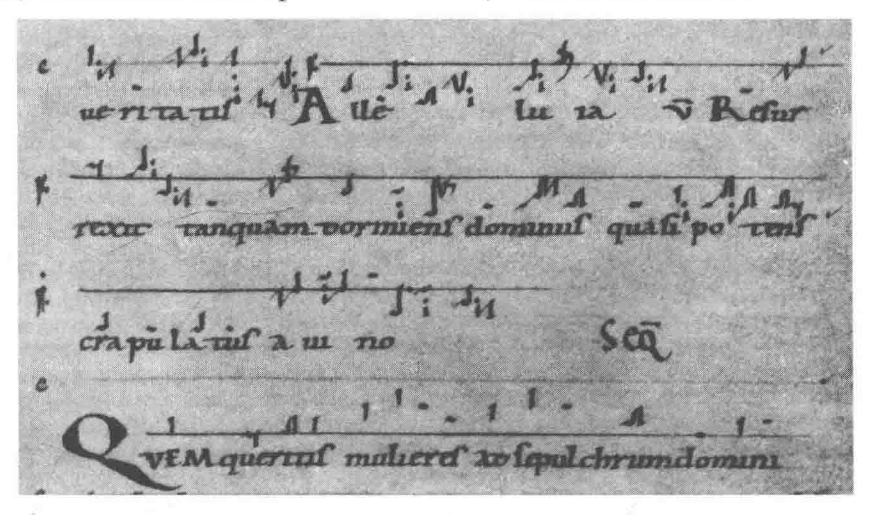


Ex.5 Special signs in *F-MOf* H.159



other non-diatonic tones. Froger (1978) argued that the context does not necessitate the use of intervals smaller than a semitone, and there is no evidence from contemporary writings that such intervals were ever envisaged. The signs themselves seem not unlike the dasia. No fully convincing explanation for their use has yet been found.

The anonymous *Dialogus de musica*, written at the end of the 10th century in north Italy (*see* ODO, §3), proposes an alphabetic series not merely for pedagogical purposes but also as a way to notate a complete antiphoner: Γ indicates the lowest note, followed by the letters A–G then a–g for successive octaves, with 'aa' signifying the highest pitch. Only one fragment of such an antiphoner, however, has survived; the flyleaves of the Hereford noted breviary (*GB-H* P.9.vii) are from an older antiphoner with alphabetic, not neumatic notation (facs. in W.H. Frere, *Bibliotheca musico-liturgica*, i, London, 1901 [dated 1894]/*R*, pl.2). On these leaves, longer note groups in melismas are separated by dots. Guido of Arezzo also adopted this alphabetic system, extending the series to 'ee' (ex.6). (Santasuosso, 1989, is a study of alphabetic notation. For further facs. see Wagner, 1905, 2/1912, pp.222–9, 251–7; Bannister, 1913, pls.27–32; Suñol, 1925, Fr. trans., 2/1935, pp.392–404; Stäblein, 1975, pls.89–94.)



Ex.6 Pitch-letters in the *Dialogus de musica* and Guido of Arezzo (D. Hiley: *Western Plainchant*, p.395)

(b) The introduction of the staff. As early as the first period of medieval music notation, theoretical and pedagogical writings often specified the exact intervallic structure of music examples they cite. For this purpose, horizontal lines (varying in number) and/or letters and

31. French neumes and alphabetic signs: gradual in tonal order, 11th century, from St Bénigne, Dijon (F-MOf H.159, f.30r)

32. Roman staff notation: gradual, 1071, from S Cecilia in Trastevere (CH-CObodmer 74, f.80v)

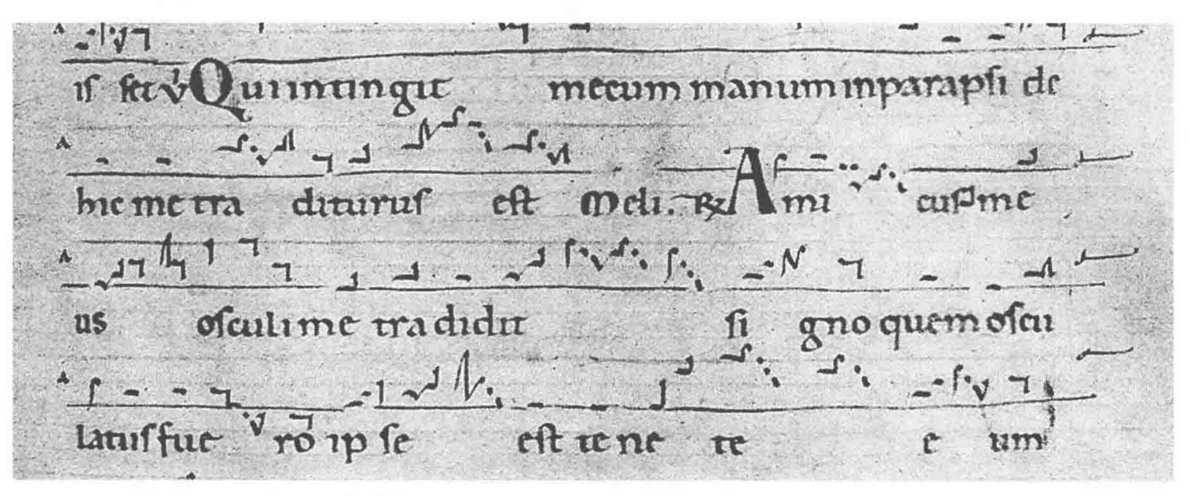
symbols (e.g. dasia signs) were employed. These methods remained confined to theoretical texts, being too complicated for the notation of the entire contents of liturgical books. A historical turning-point was Guido of Arezzo's reform of musical notation (proposed in *Aliae regulae* [*Prologus in antiphonarium*], *c*1030; see Smits van Waesberghe, 1951). Based on the use of a staff, his system changed the whole relationship between writing and music in the greater part of Europe in a remarkably short space of time, and created the preconditions for developments of the greatest importance in Western music.

The rapid success of the reform may be attributed, on one level, to the simplicity and practicality of the system and to its incorporation of elements from previous systems of notation. The staff lines represent notes a 3rd apart, the intermediate notes being placed in the space between. The pitch of the lines is indicated by letter-clefs, letters of the traditional alphabet being set at the start of the respective line. In the 11th and 12th centuries the lines were normally scored into the parchment (dry-point lines), but those representing the upper note of a semitone step could be distinguished by coloured ink: red for the F-line, yellow for the c-line. Another of Guido's recommendations was the *custos* at the end of a staff, facilitating the progression to the next by indicating its first note. The notes themselves took the form of traditional neume shapes. Although the 'full' Guidonian system employed clefs, coloured lines and the *custos* together, in some cases not all these elements were adopted.

But it was not only the intrinsic merits of the reform that lay behind its Europe-wide success; the ecclesiastical-historical context was also favourable. When Guido explained his new ideas to Pope John XIX (1024–32), showing him how a previously unknown melody could be learnt from notation alone, Guido was commissioned to notate Roman liturgical books in staff notation – an obvious sign of papal approbation. The new 'Guidonian' system, therefore, also became 'Roman' notation, just at the beginning of an epoch when the role of the papacy and the relationship between Rome and the local Churches was changing. The dissemination of staff notation took place in the era of the crusades and the investiture struggle. Guidonian notation belonged to the arsenal of the reforms of Pope Gregory VII (1073–85); it could facilitate liturgical reform and preserve the unity of centralized uses.

Many scriptoria that adopted staff notation set their own traditional adiastematic neume shapes on the lines, which is probably what Guido himself had done. At the same time some of the previous allegiances (determined by geography or institutional connections) in respect of notational practice were relaxed or replaced. The scriptoria had three alternatives: to put their traditional neumes onto the staff; to import shapes from elsewhere along with the staff; or to create a new set of signs commensurate with the new system (naturally drawing upon previous experience).

The dissemination of staff notation across Europe did not proceed at a uniform rate. Examples in theoretical writings show that knowledge of the new notational ideal spread rapidly. But this does not necessarily mean that the transition was effected at the same time in notated liturgical books or the teaching of chant. Staff notation was introduced relatively early in central and northern Italy, including Rome: the gradual of S Cecilia in Trastevere of 1071 (*CH-CObodmer* 74: facs. in Lütolf, 1987; fig.32) is the oldest surviving complete codex with Guidonian notation. The transition also began in central France in the 11th century, soon followed by the Low Countries (St Trond) and Lorraine. During the 12th century, liturgical books in England, Sicily and Scandinavia (all of which were under Norman influence) were supplied with staff notation. In the areas of Aquitanian and Beneventan notation, which had already displayed diastematic characteristics in the previous notational epoch, the system was taken up either rather late (south Italy) or in strongly modified form (south France). Such features of 'classical' Guidonian notation as clefs and coloured lines were not regarded as essential. Some conservative Beneventan scriptoria retained their own diastematic but non-Guidonian notation as late as the 13th century (e.g. *I-BV* 21: facs. in Kelly, 1989, pl.12; the use of the *custos* is characteristic). Traditional Aquitanian notation had achieved full diastematy by the end of the 11th century, without recourse to the Guidonian system (see *F-Pn* lat.903: facs. in PalMus, 1st ser., xiii, 1925/*R*). In the area of German neumes staff notation was ignored for a long time; for example, in the scriptoria of the network of churches following the secular liturgical cursus (including most of the Augustinian canons) staff notation was adopted only towards the end of the 13th century. Many conservative centres continued to use adiastematic



neumes even beyond the 13th century. In Hungary Guidonian notation gained general acceptance in the last third of the 12th century, and in Bohemia and Poland during the 13th century.

The new Gregorian monastic orders also played their part in the process of assimilation of the reformed notation. The Camaldolese, Carthusians, Cistercians and Premonstratensians all chose to adopt the Guidonian system, which then spread throughout the monastic networks (in variant forms peculiar to the respective orders) across the whole of Europe. The more centralized the order, however, the less influence individual houses seem to have exerted on the scribal culture of their wider environment. In Germany, for example, the splendid Guidonian notation of the Cistercian books remained confined to the order itself. The Italian Camaldolese, on the other hand, supplied codices with staff notation to other churches.

(c) Central and southern Italy, including Rome and Benevento. Among the earliest centres to adopt the Guidonian reform were those of central Italy (from Perugia to the Lombard plain, Tuscany, Umbria, the Papal States, the secular churches, Camaldolese, Vallombrosians – the actual area requires more exact definition). Sources from this area usually adopt the full Guidonian system of coloured lines, clefs and *custodes* (Smits van Waesberghe, 1953, pp.53–6), with local variation in neume shapes. Although a systematic survey of all the material is still lacking, a number of sub-types in this notational area may be distinguished. Classic examples are those of the Camaldolese manuscripts in Lucca (see fig.33 from *I-Lc* 601; see also *Lc* 603, and 609 from S Maria di Pontetto: facs. in PalMus, 1st ser., ii, 1891, pls.34–5, and PalMus, 1st ser., ix, 1906; see also *E-Tc* 48.14: facs. in Smits van Waesberghe, 1953, tab.3; and *I-Fl* 247 and 158 – Camaldolese antiphoners of the 11th–12th centuries from Vallombrosa and Struma respectively) and those of Pistoia (*I-PSc* 119 and 121: facs. in Stäblein, 1975, pls.24–5). A feature of these scripts is the elongation of horizontal strokes; the liquescent *virga* resembles the Beneventan form. Closely related to these notations is that in the Arezzo orationale (*I-ARc*: facs. in PalMus, 1st ser., ii, 1891, pl.26), and, among others, a Benedictine gradual (*I-Sc* F.VI.15: facs. in Stäblein, 1975, pl.27). Compared with these, the finely differentiated notation of Ravenna is recognisably independent in style (*I-Pc* 47 and *MOd* O.I.7: facs. in PalMus, 1st ser., ii, 1891, pl.37; Hourlier, 1960, pl.35; see also Baroffio, 1990). The small square note-heads (*virga*, *punctum*, *pes*) are reminiscent of north Italian point notations. The strong right tilt of the *virga* in the *climacus* and of the initial ascending element in the pointed *clivis* and *porrectus* are also characteristic. The half-cursive notation of the Benedictine gradual from Norcia, *I-Rv* C.52 (facs. in PalMus, 1st ser., ii, 1891, pl.33) represents another variant of central Italian notation; Beneventan influence is apparent in some neumes (e.g. the different elements in the *climacus*), as indeed it seems to be for the whole group of central Italian staff notations.

Beneventan and central Italian notations seem to be most clearly differentiated from each other in the form of the *scandicus*. In Beneventan and in reformed Guidonian 'Italo-Beneventan' staff notations from central Italy all three elements are conjunct, ending in a vertical *virga*. Central Italian notations also use the disjunct form (inherited from adiastematic Italian systems) for the *scandicus*: two *puncta* and a *virga*. But the conjunct *scandicus* is also present in these sources and further research is needed to establish whether this is the result of Beneventan influence or whether the quilismatic *scandicus* is intended. Central Italian notation is further characterized by the two forms of the *clivis* (pointed and right-angled), the tendency to build long chains of notes, the right-inclined *virga* at the start of the *climacus* and moderation in the use of special neumes. The direction of the script is diagonal both ascending and descending, but the angle differs within the area.

The Roman basilicas, perhaps as a result of Guido's audience with John XIX, adopted the staff system (red F- and yellow c-line, letter-clefs and *custos*) and combined it with neumes perhaps best described as simplified Beneventan (for the literary text, however, Caroline not Beneventan script was employed). Compared to the classical forms of Beneventan notation, most of the special neumes and the variant forms of the basic signs are absent. This is the notation used to record the Old Roman chant repertory (fig.32 from *CH-CObodmer* 74: facs. in Lütolf, 1987; see also *I-Rvat* lat.5319: facs. in MMMA, ii, frontispiece; *Rvat* S Pietro B.79: facs. in Baroffio and Kim, 1995). It was not, however, restricted to Rome but also

33. Tuscan staff notation: antiphoner, early 12th century, from S Pietro, Puteoli (I-Lc 601, f.191r)

used in many churches in Lazio and Umbria (e.g. *I-CT* 12: facs. in PalMus, 1st ser., ii, 1891, pl.33; *MGG1*, iv, Tafel 34, pp.835–6) and was subsequently adopted for the earliest Franciscan chant books.

South Italian scriptoria in the area of Beneventan notation (Benevento, Monte Cassino, Bari; some of their manuscripts are sources of Old Beneventan chant) displayed no great enthusiasm for the Guidonian reform. Beneventan notation apparently developed towards perfect diastematy without any outside influence. At Monte Cassino this process accelerated under Abbot Desiderius in the second half of the 11th century (with the use of a staff without clefs or coloured lines but with *custos*), while coloured lines appeared in the 12th century (fig.34). Benevento itself was more conservative. At the end of the 12th century codices were still written without clefs, but with clear diastematy. (For facs. see Wagner, 1905, 2/1912, p.267; Kelly, 1989; PalMus, 1st ser., xv, 1937/*R*, and xxi, 1992; Cavallo and others, 1994.)

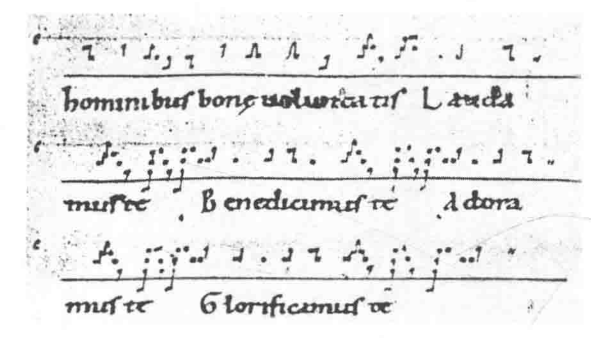
(d) North Italy, including Milan. The scriptoria of north Italy including the plain of Lombardy, with few exceptions, had adopted the Guidonian system by the beginning of the 12th century (fig.35). In some cases neumes of the previous local type were set on the staff without much alteration (e.g. at Nonantola and in the Como area where Messine-type neumes were used), but in most cases there was a modification under central Italian influence. The notation called Milanese exists only on staves; it seems to have been newly created at the time when the staff was introduced, drawing on elements of both Italian and Messine systems. In this period there was a general tendency in north Italian notations towards the use of discrete *puncta*, joined with fine lines.

Nonantolan neumes were combined with the full Guidonian system (Smits van Waesberghe, 1953, p.57), adopting a vertical ascending direction in the process (for facs. see Stäblein, 1975, pl.16; PalMus, 1st ser., ii, 1891, pls.15–18; G. Iversen, ed.: *Corpus troporum*, iv: *Tropes de l'Agnus Dei*, Stockholm, 1980, pls.XXX–XXXI). In Vercelli, by contrast, the notation had become diastematic by the 12th century, but can hardly be described as Guidonian, using only a *custos* (for facs. see Stäblein, 1975, pl.20; Iversen, op. cit., pls.XXVII–XXVIII; see also *I-VCd* 70 and 161). Characteristic of a large number of sources whose notation is generally closer to central Italian practice are: two types of *clivis*, pointed and right-angled; both disjunct and conjunct *scandicus*; right-facing *virga* at the start of the *climacus*. (For facs. see G. Iversen, ed.: *Corpus troporum*, vii: *Tropes du Sanctus*, Stockholm, 1990, pls.XXV–XXVI; *MGG1*, viii, Tafel 48 after p.1026; Stäblein, 1956, pl.7; PalMus, 1st ser., ii, 1891, pls.36, 37B.)

Milanese staff notation (fig.36) employed Guidonian coloured lines. Its characteristics include: conjunct *scandicus*, right-angled *clivis*, *pes* pointing right, no independent *virga*, *tractuli* for all single notes, *climacus* appearing as a *clivis* combined with a *punctum*, a tendency to construct long chains of notes, and an individual shape for *torculus* and *porrectus*. Like other notations of the region, neumes tended to be constructed out of points joined with thin lines. (Examples include *GB-Lbl* 34209: facs. in PalMus, 1st ser., v, 1896; and *I-MZ* c.14/77: facs. in PalMus, 1st ser., ii, 1891, pl.40; see also Stäblein, 1975, pl.21; Huglo and others, 1956, Tav.VII.)

(e) Normandy, Paris and other French centres, England and Sicily. The beautiful chant manuscripts with square notation produced in Paris workshops in the 13th century (and taken as models by the designers of the type for the Solesmes-Vatican books at the end of the 19th century and the beginning of the 20th) are often regarded as the outcome of a development initiated in Paris itself. But this is not the case. During the 12th century many centres in northern France, especially Normandy, and England began to make the *punctum* like a small square and used a small square head or foot on the *virga*, *clivis* and so on. They also adopted the Guidonian staff. Hesbert (1954) has traced this development within the manuscripts from the Norman abbey of Jumièges, and the same could be done for other centres. There are naturally some small differences between scriptoria: in Paris, for example, manuscripts from the late 12th century with staff notation have a *pes subbipunctus* with head turned right, instead of left as in 'classical' square notation of the 13th century (e.g. *F-Psg* 93, *R* 249 from St Victor, also *Pn* lat.17328 from St Corneille at Compiègne).

As already remarked, several 12th-century Norman and English manuscripts (e.g. *F-Pn* lat.10508 from St Evroult) use the special *punctum* at the semitone step. In Norman Sicily it seems that when the generation of scribes using neumatic notation had passed away, a form of proto-quadratic staff notation with mostly French but also one or two Italian elements (such as an Italian *pes*) was introduced. (See Suñol, 1925, Fr. trans., 2/1935, pp.145–7.)



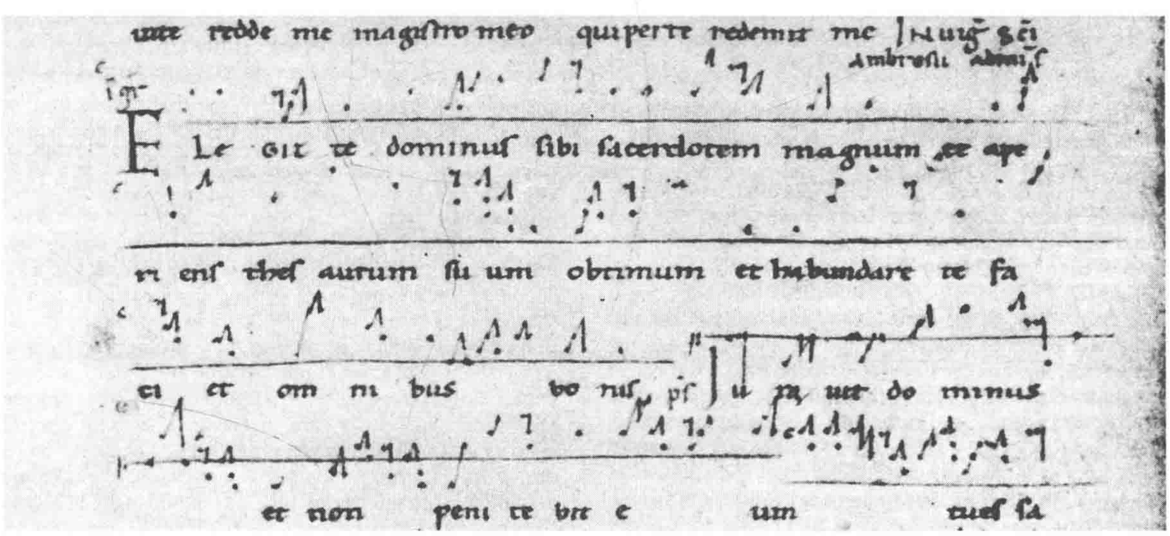
No sources from these areas with staff notation are known to date from the 11th century, and many centres continued to use adiastematic neumes well into the 12th century. 12th-century manuscripts with staff notation survive from Angers and Fleury; Chelles, Paris, St Denis and St Maur-des-Fossés; the Norman monasteries of Fécamp, Jumièges and St Evroult; St Albans, Worcester and Downpatrick; Palermo and Catania; and Jerusalem. (For facs. see PalMus, 1st ser., ii, 1891, pls.43, 194; Bannister, 1913, pls.94, 96; Stäblein, 1975, pls.41, 65; Bernard, 1965, pls.xvii-xxvi; Bernard, 1974, pls.ix–x, xxxvii–xlv.)

(f) Messine (Metz, Lorraine, Laon) notation. The Guidonian staff spread to the area of Messine notation during the 12th century, co-existing briefly with notation *in campo aperto*. Even before the introduction of the staff, attempts at a more precise diastematy are visible. Scriptoria in this area, principally those in monastic centres, adapted the Guidonian system along their own lines, and little homogeneity can be observed. As in other parts of France, no need to apply all aspects of the system was felt, resulting in much variety in respect of coloured lines, *custodes* and letter-clefs. From the 13th century, however, Lorraine neumes regularly appear on staves of four red or black lines; some of the earliest preserved examples are those from the seat of the archbishopric in that area, Reims (see fig.37 from *F-RSc* 221; see also *RSc* 261: facs. in PalMus, 1st ser., iii, 1892, pl.167; and *F-Pn* lat.833 and 18008, both from the end of the 12th century).

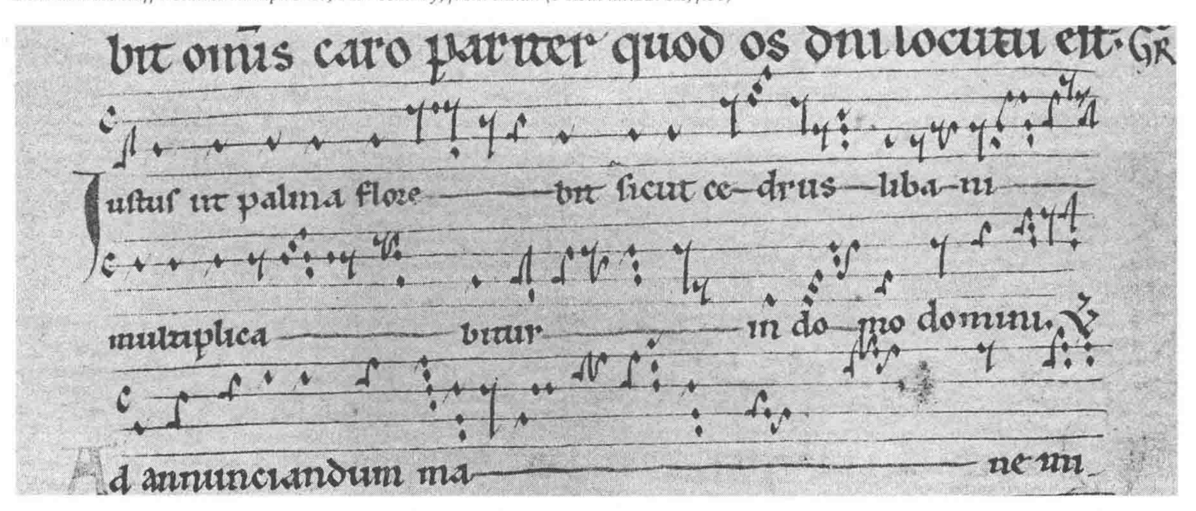
The vocabulary of Messine neumes was somewhat simplified for the staff. The disjunct neume forms (used to signify agogic prolongation) receded, similarly the *virga* and most of the special neumes: the *quilisma* was replaced by a *scandicus*, the *oriscus* became a normal note or was simply omitted. Some scriptoria continued to use

34. Beneventan staff notation: gradual, 12th century, from Monte Cassino (I-MC 546, f.49r)

strophici, and of the liquescent neumes only the *cephalicus* and *epiphonus*. The basic single note remained the hook-shaped *punctum* (*uncinus*), whose form varied from place to place. The representation of the *scandicus* and *climacus* continued to be variable. From the 12th century onwards the *climacus* tended to descend not vertically but diagonally to the right, perhaps under French or German influence. During this century the area of Messine notation gradually narrowed under French influence – *F-CA* 193 (olim 188) f.151*r*, from Cambrai (facs. in PalMus, 1st ser., iii, 1892, pl.168B), for example, includes a French *pes* among Messine neumes). However, the Messine system exercised considerable influence on almost all notations in the German area that adopted staff notation. (*I-VEcap* CLXX, a noted breviary from Namur, early 13th century, is a classic example of Messine notation; for facs. see also Suñol, 1925, Fr. trans., 2/1935, p.254–5; Bannister, 1913, pls.55*b*–59*b*; PalMus, 1st ser., iii, 1892, pls.166–73; Hourlier, 1960, pl.19; Wagner, 1905, 2/1912, p.322). A complete codex with Messine staff notation

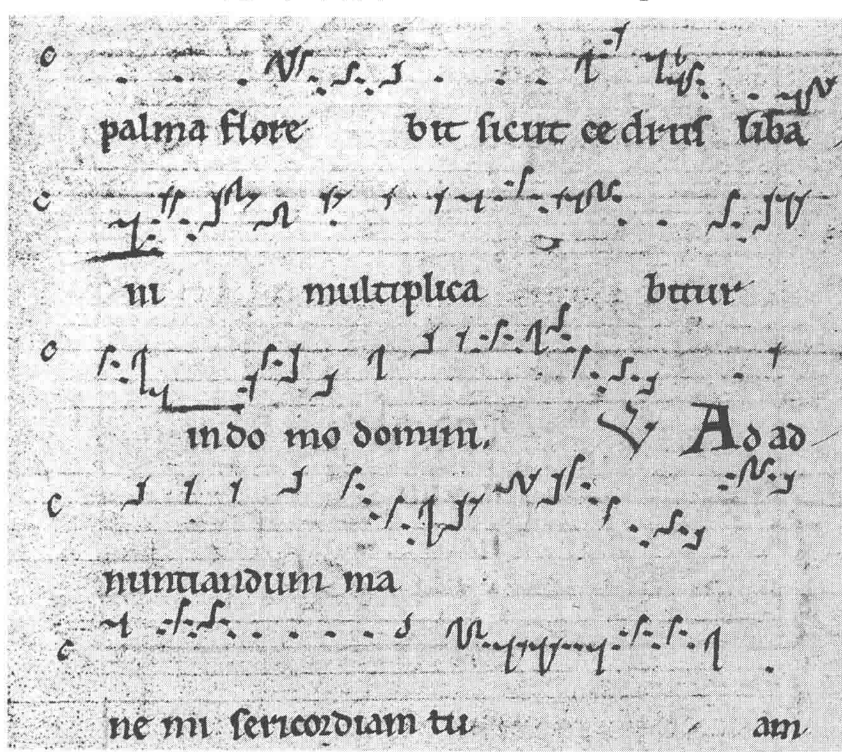


35. North Italian staff notation: troper, 12th century, from Brescia (I-Bu 2748, p.88)



(with some German features), the noted missal *F-VN* 759 of the 13th century, has appeared in facsimile (ed. Saulnier, 1995).

(g) French-Messine mixed notation. With the introduction of staff notation, scriptoria in central France developed their own variety of the system (in respect of coloured lines, clef letters and *custodes*; fig.38); among manuscripts following Guidonian practice strictly are those of Nevers (e.g. *F-Pn* n.a.lat.1235–6; for facs. see PalMus, 1st ser., iii, 1892, pl.195B; Stäblein, 1956, pl.3; M. Huglo: 'Un nouveau prosaire nivernais (Paris, B.N. nouv.acq.lat.3126)', *Ephemerides liturgicae*, lxxi, 1957, pp.3–30; G. Iversen, ed.: *Corpus troporum*, iv: *Tropes de l'Agnus Dei*, Stockholm, 1980, pls.X–XI). The French-Messine system is an example of a 'hybrid' notation (Corbin, 1977, p.127). Most neumes are French, but beside the French *clivis* there is a right-angled *clivis*, which Corbin thought had been borrowed from Messine notation (although Italian influence, or perhaps even a music-theoretical source, cannot be ruled out entirely), and which is used where the first note of the *clivis* is at the same pitch as, or lower than, the preceding note. From the area east of Sens many such examples of French-Messine mixed notations may be found in this period (Corbin, 1977, map 2; manuscripts from Troyes, St Florentin, Auxerre, Vézelay, Dijon, Langres; for facs. see PalMus, 1st ser., iii, 1892, pl.198A; Bernard, 1965, pl.VI).



(h) Cistercian notation. The first great houses of the Cistercians (Clairvaux, Morimond and Pontigny) were

36. Milanese staff notation: antiphoner, 12th century, from Milan (I-Rvat lat.12932, f.5v)

37. Messine staff notation: missal, 12th century, from Reims (F-RSc 221, f.74v)

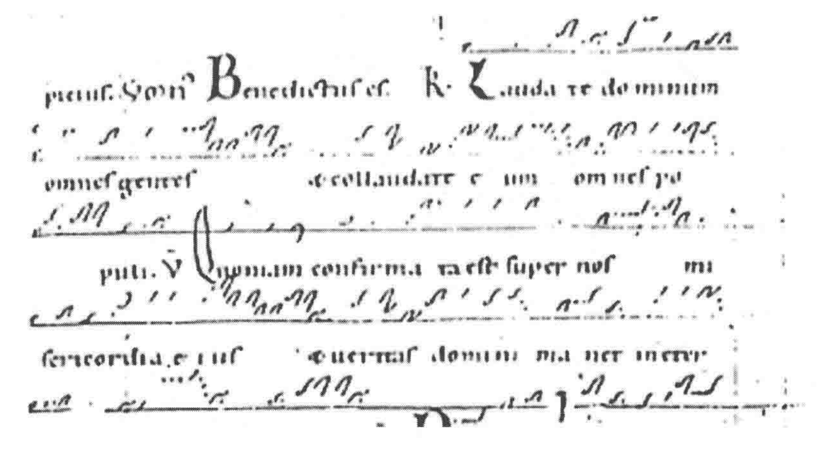
38. Mixed French-Messine staff notation: gradual, 12th century, from Auxerre area (F-Pn lat.10511, f.185v)

founded in the area in which the French-Messine hybrid notations were used. Cistercian notation used the staff from the very beginning (Marosszéki, 1952, p.31) and employed a mixture of French and Messine neumes. Beside the French *virga*, *pes*, *scandicus*, *climacus*, *clivis* and *cephalicus*, occur the Messine *clivis* and *porrectus*. No special neumes are used. While there is some regional variety among French Cistercian scriptoria in respect of the appearance of the staff, those in Italy, Germany and central Europe followed rather strict Guidonian practice. (For facs. of *F-Dm* 114, the 12th-century standard Cistercian compendium see *MGG1*, xiv, Tafel 73 after col.1344.)

(i) The Rhineland, Liège and the Low Countries. The Rhineland down to the Low Countries was one of the first areas to use staff notation, which was employed from the late 11th century onwards (staff notation was known in St Trond in 1099; see Smits van Waesberghe, 1969, p.27). Aachen (see fig.39 from *D-AAm* 13), Liège and Cologne seem to be among the earliest centres that adopted the system, with Utrecht, the Münster area, Mainz and even further south along the Rhine within the area of influence. Later, staff notation spread north-east, following, for example, the path of the Teutonic Knights. Many neume shapes were derived from earlier German forms, but the *virga* was provided with a small diamond-shaped head (later to grow into the 'Hufnagel'). The first element of the *pes* sometimes became an upward-arching semicircle (*pes à ergot*), a form found in French or Messine scripts but previously rare in German sources. Special neumes and liquescents were also used. The direction of the script no longer slanted as much as it had done previously, but the script retained much of its rounded contours. Red and yellow lines for F and c respectively are common, the F-clef is often a simple point and the *custos* is absent from early manuscripts. Some sources appear to have borrowed signs from French or Messine notation, for example, the right-angled *clivis* or the *epiphonus* with a closed ring. Typical examples available in facsimile are from Ratingen or Gaesdonck (*D-Mbs*

39. Rhenish staff notation: gradual, 13th century, from Aachen (D-AAm 13, f.120v)

Clm 10075; facs. in Hourlier, 1960, pl.5), the abbey of St Jacques, Liège (*F-Pe* B-A: facs. in Bernard, 1974, pl.XVII), Maastricht (*NL-DHk* 76.F.3: facs. in *MGG1*, viii, Tafel 72 after col.1410), Stavelot (*GB-Lbl* 18031–2: facs. in PalMus, 1st ser., iii, 1892, pl.131), Trier (*D-Ds* 664: facs. in PalMus, 1st ser., iii, 1892, pl.132; *D-TRs* 2254: facs. in ibid., pl.133), Aachen (*D-AAm* 13: facs. in *MGG1*, v, Tafel 14 before col.321 and Haug, 1995, pl.93–9) and Utrecht (*NL-Uu* 417: facs. in Haug, 1995, pp.131–3; *Uu* 406: facs. in Loos, Downey and Steiner, 1997). Variant forms in the Mainz area use a vertical *virga* and a *pes* with a left-facing head. Such forms are also to be found in the Hildegard-Codex (Dendermonde, Benedictine Abbey, MS 9: facs. van Poucke, 1991) and a Koblenz missal (Wirzenborn [nr Montabaur], f.260*r* *Kirchenarchiv*: facs. in PalMus, 1st ser., iii, 1892, pl.137). Its influence may have reached further south, being felt in such books as the Zwiefalten antiphoner (*D-KA* 60, second scribe, f.260r), the gradual *D-Au* Öttingen-Wallersteinische Bibliothek, Maihingen I.2.4°.13, and an antiphoner fragment *A-Ws* C 1.



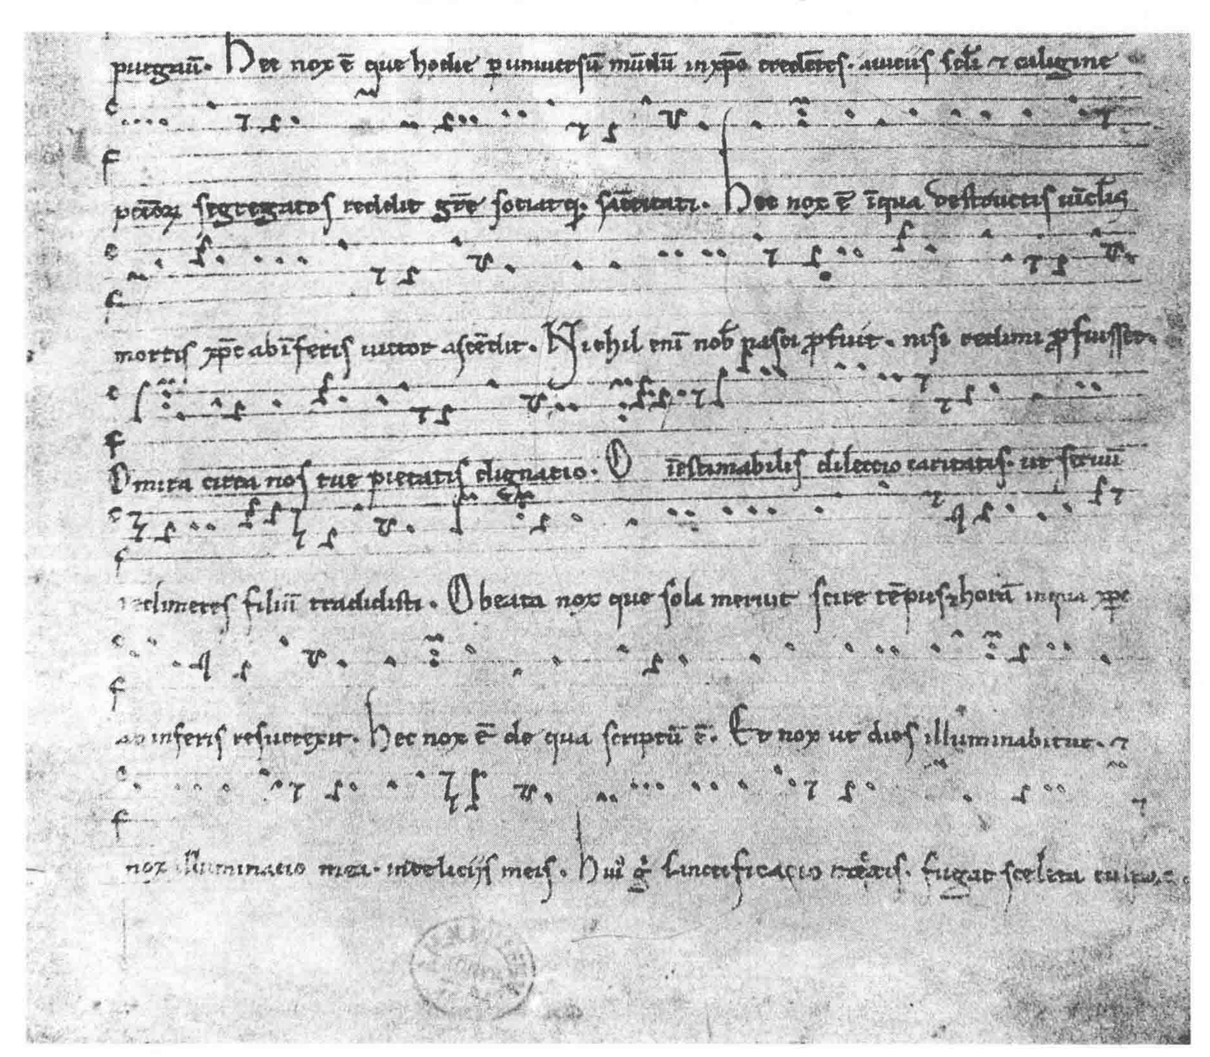
(j) South Germany, Klosterneuburg, Bamberg. Adiastematic notation was still dominant in south Germany during the 12th century. However, two types of staff notation developed under special circumstances, employed in comparatively few books. These types are referred to as 'south German' staff notation and 'Klosterneuburg' notation, respectively.

In a number of Benedictine scriptoria traditional south German neumes were placed on the staff, with differences in the use of clefs and coloured lines. Perhaps the oldest preserved source is the fragment of a monastic antiphoner from the end of the 11th century, *A-LIs* 623, with coloured lines and clef-pairs D-a, F-c or a-e. Important 12th-century sources include the Einsiedeln hymnal (*CH-E* 366 with red F-line, clef-pair F-c: facs. in Stäblein, 1975, pl.62), fragments from Hirsau (e.g. *D-Sl* Cod.fragm.53 with coloured lines, clefs on all lines, *pes* like an Arabic '3') and from Prüfening near Regensburg, affiliated to Hirsau, including the most extensive fragment, *Mbs* lat.10086 (fig.40) with red F- and green c-line, clefs a 5th apart (also from Prüfening come *D-Mbs* lat.23037, f.240 with clefs on all lines and a *pes* sometimes like an Arabic '3'; and *Mbs* Clm 13021 and 12027). Some sources with mostly south German neumes and script-direction appear to borrow from Messine practice *cephalicus* like an Arabic '9', right-pointing *virga*), for example, *D-Mbs* lat.9921 (f.40*v*, from Ottobeuren) and *D-KA* 60 (f.267*r*, from Zwiefalten).

Closely related to these is the distinctive notation in 12th-century Bamberg sources. Its typical features are a right-leaning *virga* like an Arabic '1', an elongated *tractulus* (*punctum planum*), both pointed and right-angled *clivis* forms, the latter with a long first element. (This type of *clivis* can already be seen in the late adiastematic notation of Bamberg sources, e.g. *D-BAs* 24 and 26, both of the 13th century.) Early examples include the 12th-century music theory manuscript *D-Mbs* Clm 14965b (f.30*r*; see Smits van Waesberghe, 1969, p.97) and two fragments of monastic antiphoners from the turn of the 12th century (*A-KN* F8 and F19). This script evolved further in 13th-century sources such as *D-BAs* 25 (an antiphoner, first notation, f.2*r*) and 12 (gradual frag., f.8*r*).

Messine (Lorraine) features are predominant in Klosterneuburg notation, which also seems to be of south German Benedictine origin. Only the *clivis* and the special neumes (*strophici*, *oriscus*, *virga strata*, liquescents) are German. The direction of the script (ascending diagonally, descending vertically) is also Messine. The old, wavy *quilisma* is replaced by a form similar to the conjunct *scandicus*, while the normal form of the *scandicus* contains three Messine *tractuli* (*uncini*). Red F- and yellow c-lines are used consistently, all lines have clefs, but the *custos* is avoided. Sources include *D-Mbs* lat.9921 (ff.1, 54–7; see Smits van Waesberghe, 1969, p.111), from Ottobeuren, and three from Augsburg: *A-Wn* 573 (ff.19–25; see Berschin, 1975); *D-Mbs* lat.22025 (flyleaf); and *D-W* Gud.lat.334 (olim 4641). The most important group of completely preserved codices are those from the house of Augustinian canons at Klosterneuburg, including a gradual from the first third of the 12th century, *A-Gu* 807 (facs. in PalMus, 1st ser., xix, 1974) and the antiphoners from later in the century, for example, *A-KN* 1010, 1012 and 1013.

(k) Hungary. In the 12th century, when the Guidonian reform was carried out, Hungary was politically and ecclesiastically an independent kingdom. The notational reform may have been part of more general changes to the liturgy. Older Hungarian codices used south German neumes. At this time a deliberate campaign seems to have been carried out to create a new, reformed notation. Neumes of Messine and Italian origin were combined in a unique synthesis and set on the staff to create an independent notational type, known as 'Esztergom' or



40. South German staff notation: gradual, 12th–13th century, from Prüfening (D-Mbs lat.10086, f.29)

'Graner' notation (see fig.41 from *H-Bn* MNy 1, 13th-century additions; see also Szendrei, 1988). Some remnants of the German neumes found in 12th-century sources gradually disappeared: only the supple appearance and careful calligraphy are reminiscent of the superseded German models. The characteristic features of the Esztergom notation are: *tractulus* rather than *punctum*; right-facing *pes*; right-angled *clivis*; vertically descending *climacus* – often starting with a stereotyped wave like a double-note; and a conjunct *scandicus* (the last two after Italian models). Liquescent and other special signs are rare. 12th-century sources include *H-Bn* MNy 1 (first notation), *HR-ŠIBf* 10 (binding) and *H-Bu* U.Fr.1.m.214; from the 13th century date *A-GÜ* 1/43 and *CZ-Ps* DE.I.7; and *SK-BRm* EC Lad.3 and EL18 were copied in the early 14th century. *TR-Itks* 42 dates from around 1360 (facs., Szendrei, 1999).

(l) German-Messine mixed notations in Germany and central Europe. The change to staff notation was somewhat delayed in non-monastic scriptoria using German neumes. Only after the mid-13th century did sources with staff notation appear regularly east of Mainz or in the south German dioceses. Palaeographically these notations belong together, for they are all characterized by a fusion of German and Messine forms (in differing combinations, some an equal mix, others predominantly one or the other). The direction of the script is German (ascending and descending diagonally). The rhomboid single note typical of the whole region is a stylized evolution of the Messine *punctum* (*uncinus*). Since these developments were relatively late, the appearance of the notations was influenced by gothic scribal characteristics. Until the sources have been more comprehensively investigated it is not possible to say if these notations were disseminated initially from one centre or represent simultaneous and independent developments.

The earliest among the preserved sources is the Quedlinburg gradual *D-Bsb* 40078 (fig.42), from the start of the 13th century (sometimes dated to the end of the 12th; facs. in Haug, 1995, pp.109–12). The usual form for a single note is a *virga* with short stem and left-facing head (showing Messine influence on German form). The other neumes are of German or Messine type. There are coloured lines, but clefs are found only in the middle of lines for a change of register, not at the beginning. 13th-century manuscripts where there is also a balance between

41. Esztergom staff notation: 13th-century additions (H-Bn MNy 1, f.1r)

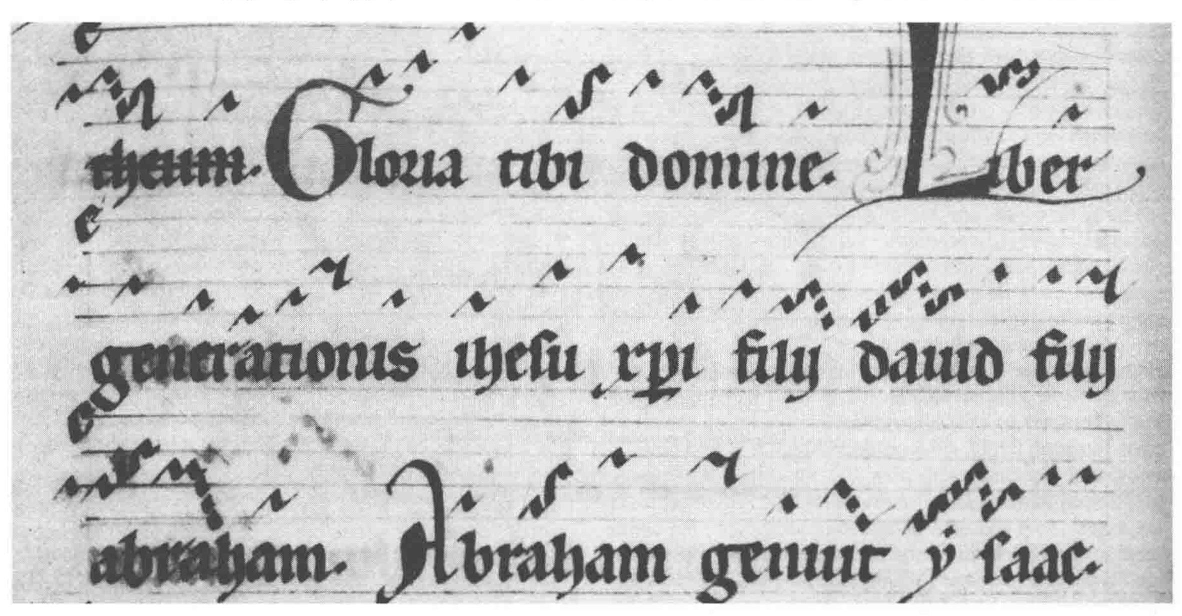
42. Mixed German-Messine staff notation: gradual, 12th–13th century, from Quedlinburg (D-Bsb 40078, f.245v)

German and Messine forms include those of Brunswick (see Härting, 1963) and Leipzig (e.g. *D-LEu* 391: facs. in Wagner, 1930; see also the 13th-century gradual *CZ-Ps* DF.I.8).

A number of notations more decidedly Messine in character are found from the mid-13th century onwards. The shape of the neumes is always articulated, consisting of rhomb for the noteheads connected by thick Gothic strokes. Examples are common in Austrian and Moravian sources (*A-Wn* 1925; Olomouc, Kapitulni Knihovna CO 3; *CZ-Bam* 6/11 and 19/27). Staff notation is known to have been introduced in the Moravian diocese (suffragan of Mainz until 1344) by Baldwin, Dean of Olomouc (*d* 1203; see Pokorný, 1980, p.42).

A mixed Messine-German staff notation was adopted in the south Polish diocese of Kraków, with sources dating as early as the 13th century (additions in *PL-Kk* 51), although the first complete sources are later. Messine elements predominate in a gradual of about 1300 from Wislica in the Kraków diocese (Kielce, Biblioteka Seminarium Duchownego RL 1), rather as in Moravian and Austrian sources just mentioned.

Besides the forms incorporating the stylized Messine rhomb, square note-heads were also used in some scriptoria of the region (see *A-KN* 629 and 1021, Olomouc, Kapitulni Knihovna CO 7). For example, the Benedictine scriptorium of Tyniec in southern Poland developed an individual notation combining square and rhomboid forms (e.g. *PL-Wn* Akc.10810; see Szendrei, 'Notacja liniowa', 1999).



Silesian notation, one of the most individual as well as best-documented notations of this area, is also dominated by Messine forms. The earliest sources already rely on the Messine *punctum* (*uncinus*) for the single note, and for the *pes* and *scandicus* when the interval of only a 2nd is involved (larger intervals end with a *virga*). There are no special neumes. This notation developed independently until the 16th century. Sources include the missal *CZ-Pnm* XIII.B.17 from the end of the 13th century (facs. in Hutter, 1926, Abb.VI-VII) and the following 14th-century manuscripts: *PL-WRu* Br.Mus.K.21; Ms.Muz.51322 (olim K.24); I.F.386; and R 503.

(m) The Messine notation of Prague. Apart from some monastic houses with affiliations outside Bohemia, scriptoria of the Prague diocese used German neumes until staff notation was introduced by Vitus (*d* 1271), dean of Prague Cathedral. (German adiastematic neumes are still found in some Prague cathedral manuscripts as late as the early 14th century.) The manuscripts commissioned by Vitus, dating from between 1235 and 1253, use classical Messine forms, though the direction of the script is diagonal descending as well as ascending; the *custos* is absent (see fig.43 from *CZ-Pak* A 26-2, dated 1253; facs. in Spunar, 1957, pl.14c). The Premonstratensians probably played a part in this importation of Messine notation into Bohemia.

Codices written under Bishop Tobias (1279–96) witness its further assimilation. The following examples may be cited: *CZ-Pak* Cim.4 (dated 1235, ninth gathering: facs. in Spunar, 1957, pl.14*b*); *Pak* LXI.2 (Evangeliary of Bishop Tobias, dated 1293); *Pak* P.3 (Agenda of Bishop Tobias, 1294: facs. in Hutter, 1926, pls.IV–V); and *Pu* XIV.A.19. Both staffless German neumes and Messine staff notation are found in *Pu* IV.D.9 (*Liber ordinarius S Viti*, 13th–14th century).

(n) Cistercian and Premonstratensian notations in central Europe. Cistercian monasteries in central Europe used staff notation much earlier than other churches of the region, in fact from the time of their foundation in the 12th century. They used the French-Messine mixed notation as it had been developed in the Burgundian homeland of the order. This Cistercian system was more or less isolated from the traditions of its new environment, but gradually assimilated a few gothic features.

Premonstratensian notation in this area was less autonomous. The early houses of the order used Messine neumes, and the Premonstratensians were probably influential in introducing Messine staff notation to central Europe. Later sources with staff notation tended to assume characteristics of the local region. The first two notational layers of the troper *CZ-Pak* Cim.4 are probably Premonstratensian (see Vlhova, 1993). (See also the Polish Premonstratensian antiphoner of *c*1200, MS Arch.Norbertanek 1 in the convent library of Klasztor Norbertanek, Imbramowice, Poland: facs. in Miazga, 1984, p.235; and the German gradual from Arnstein, Trier diocese, *D-DS* 868, dated 1208–15: facs. in Miazga, 1979, p.120, facs.19).

43. Prague Messine staff notation: 'plenarium', dated 1253, from Prague (CZ-Pak A 26-2, f.73v)

(vi) Pitch-specific notations, 13th–16th centuries.

(a) Square notation. The development of square notation may have resulted from changes in the conception and the function of chant notation. The resolution of stroke notation into a series of discrete squares linked by thin lines suggests that chant was thought of more in terms of individual pitches than of lines and phrases, perhaps because of its role as static tenor beneath more mobile upper parts in polyphony. Because of the easier visibility of individual notes, it facilitated singing from a codex by a group of singers (the increasing size of manuscripts also reflects the trend towards singing from a book instead of from memory, at least in some centres). To notate in this way, with thick horizontal and hair-thin vertical strokes, required a different pen-hold from that used for writing texts. These new requirements and techniques led to the separation of cursive notation (for private musical jottings) from formal book notation (for official use).

The 'classical' square notation best known from Parisian books of the mid-13th century onwards was a development of the French notations used in northern France (especially the Ile de France) in the 12th century. Thus the *virga*, *pes* and *porrectus* have a left-facing head and the *clivis* has a thin initial upstroke; the direction of the script is vertical ascending and diagonal descending. The *scandicus* consists of a *punctum* combined with a *pes*, or a *pes* with a *virga*; and the two *puncta* of the *climacus* take the form of small rhombs. A four-line staff (sometimes red) is normal; the *custos* is usually absent, as it had been in the Paris area in the 12th century. (For facs. see PalMus, 1st ser., iii, 1892, pl.204A)

Square notation was adopted with greater or lesser promptness in wide areas of western and southern Europe, Britain and Scandinavia in the 13th century, occasionally (though not always) replacing a different notational type (e.g. in some centres where Messine notation had been used). Sometimes Parisian books were imitated fairly exactly, no doubt as a result of the general political, intellectual and cultural importance of Paris in the 13th century. But many regional centres assimilated square forms into their traditional notation (e.g. retaining the original direction of their script) without adopting all features of Parisian practice. Many of these local varieties await thorough investigation. Aquitanian scriptoria furnished many examples of this (Stäblein, 1975, p.161, pls.43*a–c*), so also the Carthusians (PalMus, 1st ser., ii, 1891, pl.105; iii, 1892, pl.206A) or northern French centres such as Beauvais (Bernard, 1965, pl.xix–xx; Stäblein, 1975, p.159, pls.41*a–b*). Thus old notational boundaries retained some of their effectiveness even in the 13th century. Milanese notation, presumably because of the different chant repertory it represented, remained individual throughout the Middle Ages.

Homogenizing and standardizing forces were nevertheless at work. Chant books could be commissioned from professional scriptoria and executed by scribes unfamiliar with local (provincial) idiosyncrasies. The new religious orders of the Franciscans, Dominicans and Augustinian hermits made square notation obligatory for their chant books (see Huglo, 1967; Van Dijk, 1963, ii, p.359); the correctoria of the Dominicans were written in Paris in the mid-13th century (PalMus, 1st ser., iii, 1892, pls.200A–B). When the Franciscan Pope Nicholas III (1277–80) ordered the destruction of older chant books in Rome and their replacement with new ones after the Franciscan model, square notation acquired the semi-official status of a 'Roman' notation. Thereafter it made rapid headway, especially in Italy, where Beneventan notation, for example, was shortly superseded. It also penetrated Germany and central Europe, mainly as the preserve of the religious orders.

(b) 'Gothic' notations. Gothic notations were not a new notational type but a change to the surface appearance of traditional neume shapes. Something similar had happened with the establishment of square notation, but whereas there the pen was held parallel to the line, in gothic style it remained diagonal. The horizontal and in particular the vertical down-strokes are strongly marked, the diagonal up-strokes fine. Whereas elegant, curved shapes were still common in the 13th century, by the 15th

44. West German Gothic notation: gradual, 15th century, from the collegiate chapter of St Martin, Bonn (H-Bn Clmae 259, f.1v)

century thick, often uninterrupted chains of geometrically regular strokes were used. The basic shapes, however, are those of the German and central European notations already established in the 12th and 13th centuries, with the variety already described above, at least at first. The number of types diminished with time. Cistercian notation and that of Bamberg (except for its distinctive *clivis*) were eventually assimilated into the regional types with which they coexisted. Klosterneuburg notation disappeared after the 14th century. But the Esztergom notation in Hungary, and the notations of Prague and Silesia retained their independence. The rest of Germany and central Europe used either the (west) German or the mixed Messine-(east) German type. The former predominated as before in the area from the Rhineland up to the Low Countries, the latter in eastern and southern Germany, Austria, Switzerland and Poland (the geographical boundaries have not been precisely determined).

The chief difference between the (west) German and the Messine lies their preference as regards in the sign for single notes. In the former both the *punctum* (as always, for lower notes) and the *virga* (for higher notes and recitation) are used. Here the head of the *virga* is shaped like a horseshoe nail (Ger. 'Hufnagel', hence the common designation of this notation as *Hufnagelschrift*; fig.44). On the other hand, the mixed Messine-German notation preferred the rhomb (lozenge, diamond, derived from the *uncinus*; fig.45) for single notes. In German notation the

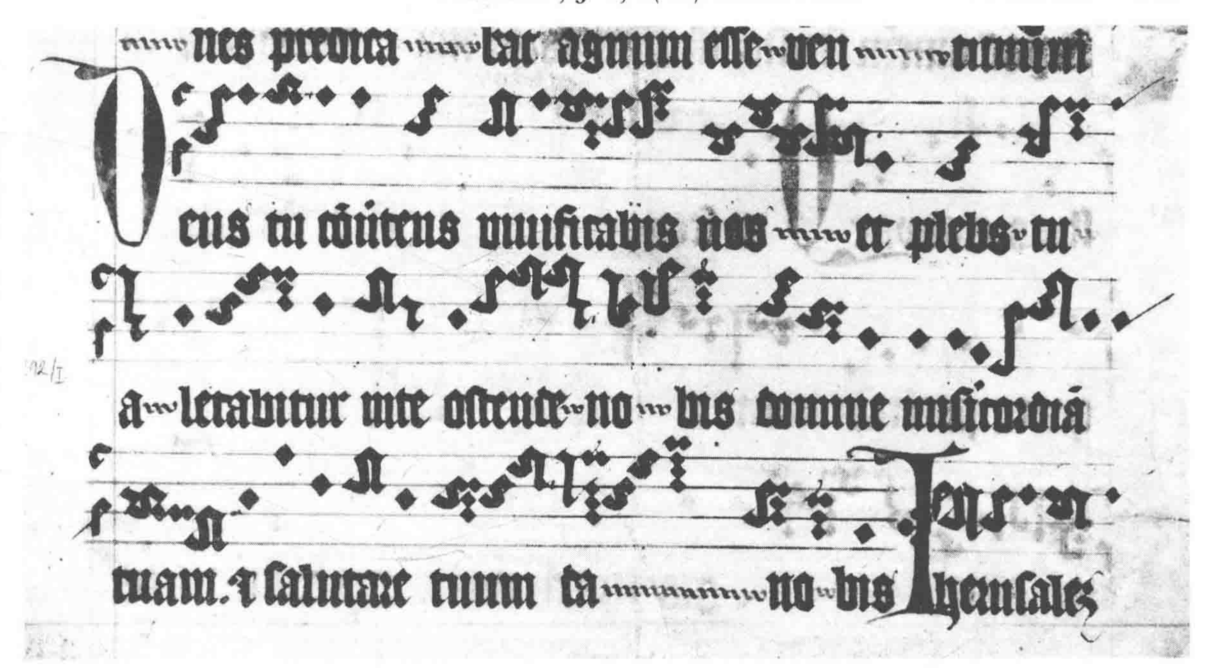
45. Messine-German Gothic notation: gradual, dated 1360, from Moosburg (D-Mu 2° 156, f.114r)

rounded *clivis* with initial vertical shaft was preferred, in Messine-German the right-angled *clivis*. The westerly scriptoria cultivated more rounded shapes and placed less emphasis on the individual note-head, and liquescents – the *strophici*, even the *quilisma* – are still to be found. (PalMus, 1st ser., iii, 1892, pl.141; Hourlier, 1960, pl.7.) Messine-German notation appears to place more emphasis on the individual note. Liquescents remained but other special neumes disappeared.

In neither family is uniformity to be expected; for example, *D-W* 528, from Minden, is basically Messine-German but has a *virga* with its head on the right-hand side – a kind of compromise between *Hufnagel* and Messine rhomb (Haug, 1995, pp.156–60). Some Messine-German sources occasionally (but inconsistently) use a *virga* for a single higher note (e.g. San Cándido Stiftsbibliothek, VII a 7: facs. in Haug, 1995, pp.129–30; *D-Mu* 2° 156: facs. in Hiley, 1996).

Within the general areas of dissemination of the types mentioned above, notational 'islands' are discernible, where a tradition other than the prevailing regional system was employed. The Benedictines of the Abbey of St George in Prague, no doubt because of their connection with Hirsau in the Black Forest, used German staff notation in the very heartland of Prague-Messine notation. The Order of Teutonic Knights brought (west) German notation (together with the Dominican liturgy) into the north-eastern areas of Europe they colonized (e.g. the 14th-century antiphoner *PL-PE* L 19; see also Szendrei, 1994, and 'Notacja liniowa', 1999).

Professional workshops producing manuscripts to order were responsible for a gradual simplification and standardization of the notational picture, although some local scriptoria continued to produce codices of more individual appearance. In the late Middle Ages the number of sources made for private purposes (as informal music notebooks and school music books) increased. The appearance of the cursive notations in this class of music manuscripts naturally differs radically from the highly artistic books for official use.



(c) Esztergom (Gran), Prague and Wrocław (Breslau). Three larger enclaves of independent notations persisted to the end of the Middle Ages in Hungary, Bohemia and Silesia, respectively.

Esztergom notation was uniquely long lived. Although losing ground fractionally to Messine-German notation, it retained all its essential characteristics, its arsenal of signs and typical direction, even beyond the Middle Ages (fig.46; survey with facs. in Szendrei, 1988). In surface appearance it acquired some gothic features. In a few scriptoria a new mixed notation incorporating some Messine-German elements was practised for luxury manuscripts (for facs. see Szendrei, 1990–93).

Prague notation continued to develop during the 14th and 15th centuries. After Prague became canonically independent of Mainz in 1344, its status as seat of the archbishopric, the imperial power and the university demanded the production of numerous splendid presentation codices; in such books the way in which every note is represented by a rhomb, joined by hair-thin lines (in traditional Messine combinations) is particularly noticeable (fig.47). When Olomouc became suffragan of Prague the local notation disappeared in favour of the latter's notation, which also spread beyond the borders of Bohemia and Moravia, influencing practice in Kraków in the 14th century and other areas in the 15th, during the time of the Hussite ascendency. (For facs. see Hutter, 1930, and Plocek, 1973.)

In Silesia the notation of Wrocław (Breslau) attained its fullest individuality in the second half of the 15th century (fig.48). Here, too, rhombs were used for *pes* and *scandicus* with intervals of a 2nd, and they predominate as component elements in other neumes as well, joined by lines of varying slenderness. (For facs. see Miazga, 1984, pls.71, 81, 91; *Musica Medii Aevi*, iv, 1973, pls.16–17; ibid., viii, 1991, pls.11–12.)

(vii) Printed notations. Early printed chant sources have been surveyed by Riemann (1896) and Molitor (1904). They precede the earliest printed polyphonic music by over two decades. Some 270 books with printed music were published by 1500 (King, 1964, p.8), almost all liturgical. Some of the earliest examples are in missals where only some of the priest's chants are provided with music. The first known book of this kind is the missal printed in Rome in 1476 by Ulrich Han from Ingolstadt. The earliest choirbook is even older, a gradual probably printed in Konstanz in 1473. The gradual uses 'gothic' notation with a pleasing repertory of shapes, even including the *distropha* and *custos*. The Roman print uses square notation. Printers displayed considerable ingenuity in devising appropriate note-forms, with German printers generally approaching the flexibility of handwritten neumes more successfully than their Latin counterparts,

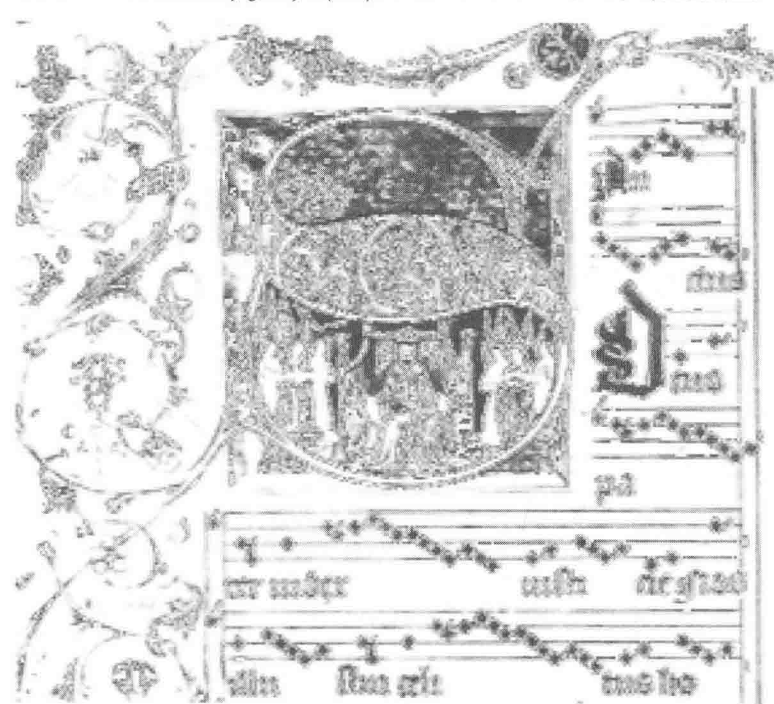
46. Later Esztergom notation: gradual fragment, 15th century, of the Paulite Order (H-Ba K 484, f.1r)

who often relied on the square and lozenge, or even the square alone.

Even before the advent of music printing, plainchant notations occasionally adopted features of mensural notation. Manuscripts with signs such as the *semibrevis* and *minima* are not uncommon in the 16th century in the south of the German-speaking regions. These were not used for traditional melodies but for new compositions, particularly melodies for the Mass Ordinary (e.g. the pieces in *CH-SGs* 546: ed. Marxer, 1908; also Sigl, 1911). Mensural notational signs were then taken up in some printed chant books; for example, books printed in Venice by Francis de Bruges regularly include the mensural Credo known as the 'Credo cardinale' (Tack, 1960, p.50).

Mensural signs were also adopted in Giovanni Guidetti's influential *Directorium chori* (1582), which includes the simple tones of the Mass and Office. There is a fourfold distinction between lozenge (*semibrevis*, short), square (*brevis*), square surmounted by an arc, and square with *fermata* (longest value), in the ratio 1:2:3:4 (see ex.7). A 'dotted rhythm' is always indicated by using 3

Ex.7 Note shapes in Guidetti (D. Hiley: *Western Plainchant*, 616)



with 1. Such shapes were then widely adopted in later books, particularly for the notation of the new chants produced in profusion in France as part of the 'neo-Gallican' ecclesiastical movement.

See PLAINCHANT, §9(i); PLAIN-CHANT MUSICAL; and NEO-GALLICAN CHANT.

In printed chant books of the 19th century various styles were used, which were derived and developed from earlier printing practice, often incorporating mensural features. The melodies thus notated, when not actually new compositions, were the result of much revision and recasting, whose principal monument was the gradual in the 'Medicean edition' (1614–15) composed by Felice Anerio and Francesco Soriano. When the Benedictines of Solesmes made new editions of the chant melodies in their medieval form they decided to develop a new font incorporating as many features as possible of the 'classical' quadratic notation of the 13th century, but also including a sign for the *quilisma*, which by the 13th century was no longer in use. In the Solesmes *Antiphonale monasticum* (Tournai, 1935) a sign for the *oriscus* was introduced. More recent books (*Liber hymnarius cum invitatoriis & aliquibus responsoriis*, Solesmes, 1983) have developed further signs to represent other features of the early chant manuscripts (a greater variety of liquescent signs, *apostropha*, *pes* with light first note etc.: see *Liber hymnarius*, p.xii).

Research at Solesmes had made it clear that the notation of early St Gallen and Laon manuscripts was particularly rich in rhythmic detail. The question as to whether such indications should be represented in the Vatican editions caused a rift in the commission appointed to prepare the new books. Pothier, the chairman of the commission, saw them as a local and temporary phenomenon that need not become part of an official edition with claims to universal validity (see Pothier, 1880; David, 1927; Bescond, 1972). Eventually two parallel editions appeared, that of the Vatican was 'plain', that of Solesmes contained supplementary horizontal bars (known as 'episemata') over certain notes and dots after others, to indicate lengthening. The Solesmes version became particularly well known after the publication of the compendium *Liber usualis* (Solesmes, 1921), and was propagated in numerous explanations of the 'Solesmes method' (Suñol, 1905 etc.; Gajard, 1951) as well as in Mocquereau's weighty treatise, *Le nombre musical* (1908–27).

An interesting development has been the re-publication by the Benedictines of Solesmes of older chant editions with the addition of hand-drawn reproductions of the neumes of *F-LA* 239, *CH-SGs* 359, *E* 121 and so on in the *Graduale triplex* and *Offertoriale triplex*. The purpose

47. Later Prague notation: gradual, c1470, from Hradec Králové (CZ-HK 40 (II A 2), f.8v)

48. Later Wrocław notation: gradual, dated 1429, from St Mary Magdalene, Wrocław (PL-WRu 1194, f.105r)

of such editions is to enable performers to take the notation of the early sources into account. Starting with the writings of Cardine (esp. 1968), a large body of literature has been created to support theories of chant performance based on details of these neumatic notations (*see* PERFORMING PRACTICE, §II, 2(i)).

2. Polyphony and secular monophony to *c*1260.
This section is devoted almost exclusively to the notation of rhythm, an emphasis borne out by the theoretical sources from later in this period. Apart from the Aquitanian manuscripts mentioned below, which display the neume dialect particular to this region, the music is notated in the square notation of plainchant (see above, §III, 1(vi)), which originally had no rhythmic significance, but acquired durational values for use in polyphony. Detailed descriptions of the sources of early polyphony discussed below may be found in Sources, ms, §IV; manuscripts containing secular monophony are treated in Sources, ms, §III.

(i) Neume patterns in Aquitanian polyphony, c1100–c1200. Several conspicuous features emerge in the notation of Aquitanian polyphony, including the Codex Calixtinus (*E-SC*, copied in central France *c*1150–80; see Huglo, 1995). One is a predilection for stronger consonance at the ends of neume-against-neume or note-against-neume units; another is the use of patterned melismas (e.g. strings of two- or three-note neumes). Stäblein (1963) and Karp (1992) proposed that rhythmic configurations akin to those of the later modal system may be present. Ex.8 is an example of Aquitanian/Compostelan polyphony with a hypothetical rhythmic transcription.

The preference for consonance at the ends of neumes is particularly striking in texted sections of conductus, *versus* and *Benedicamus* settings, where it belies the

Ex.8 Neume patterns in Aquitanian/Compostelan polyphony (after Stäblein, 1963; Karp, 1992)
(a) *Ad superni regis* (contrafactum of *Noster cetus*) *E-SC* Codex Calixtinus, f.214*v*

supposed pitch alignment and syllable placement implied by the sources; regular neumatic patternings are prominent in final melismas (or caudas), and also appear in organal voices of chant settings. A connection with Parisian polyphony is possible, although no theoretical witness supports such an association. One of the pieces in the Codex Calixtinus is attributed to Magister ALBERTUS PARISIENSIS (*d* 1177), who has been identified with a cantor of Notre Dame; this ascription, however, is not certain.

(ii) Pre-modal rhythm. As with interpretations of the Aquitanian repertory, the first manifestations of rhythmic indications in the Parisian corpus are difficult to construe (for a recent attempt, see Roesner, 1990). The period proposed for the musical activity is between about 1160 and 1250, while the surviving manuscript sources and theoretical testimony date from between about 1230 and 1300; this disjunction has meant that the historical picture is largely speculative and in dispute. It is evident, however, that at some point during the composition of the Notre Dame repertory certain portions of organa and conductus (discant passages, copulas, caudas and clausulas) were subject to rhythmic realization and recorded in a notation that conveyed the essence of this practice. Temporal durations were indicated by grouping the notes together as ligatures, rather than by discrete shapes.

The earliest evidence of this practice occurs in the opening portion of the anonymous treatise *Discantus positio vulgaris* (*c*1225–40), which advises that two-note ligatures represent a short–long (i.e. breve–long, or B–L) gesture, three-note groups signify long–breve–long (L–B–L) and those with four notes are all short; when more than four notes are found in a ligature they are executed at the discretion of the performer and not according to any specific criteria. The ratio of the long value to the short is 2:1, with greater or lesser durations described as 'beyond measure' (*ultra mensuram*). Although such lengths are strictly inexpressible as 'long' or 'short', they were not alien to the rhythmic practice. For example, single notes, such as those employed for a chant tenor in a discant passage or as a solitary figure within a ligatured portion, are described as having the duration of a long and a breve combined, that is, a ternary (later 'perfect') long value. In addition, the treatise implies that durations in ligatures are flexible; they may communicate different values depending on their position in a melodic phrase (e.g. a three-note ligature may have a value of B–B–L when preceded by a long). Such basic rules of thumb as given in the *Discantus* form the starting point for interpreting the rhythmic properties of Parisian polyphony. However, they neither suggest a fully developed system nor invoke the terminology of the rhythmic modes that was to be a staple of later theoretical works.

(iii) The system of modal rhythm. At some point between the composition of the early part of the *Discantus positio vulgaris* and the treatise ascribed to JOHANNES DE GARLANDIA (*c*1240–60) the diverse rhythms of Parisian polyphony were abstracted into a series of repetitive patterns, analogous perhaps to the modern function of a time signature. These underlying patterns, which are termed 'modes' (Lat. *modi*, sing. *modus*; Garlandia: *manieres*), formed the principal means of signifying ligature rhythms until the advent of mensural clarifications to their shapes (*see* RHYTHMIC MODES). The following list names authors whose works include discussions of modal rhythm. However, it is important to realize that mensural doctrines appear in treatises as early even as Garlandia's text. Furthermore, occasional inconsistency exists in these theoretical works as to the number of the modes, their ordering and the depiction of particular ligature shapes.

Anonymous: *Discantus positio vulgaris* (*c*1230–40: survives only in a partly revised form; see Reckow, *AcM*, 1976, p.137, n.81); ed. Cserba, 1935, pp.189–94

Johannes de Garlandia: *De mensurabili musica* (*c*1240–60: portions may stem from an anonymous earlier treatise; the final chapter of the work as it survives in *F-Pn* lat.16663, ed. in *CoussemakerS*, i, postdates Franco); ed. Reimer, 1972

Franco of Cologne: *Ars cantus mensurabilis* (*c*1280: see Frobenius, 1970); CSM, xviii

Walter Odington: *Summa de speculatione musicae* (before 1300); CSM, xiv

Table 6 shows the six commonest rhythmic modes in their most conventional numerical ordering together with their associated ligature patterns (indicated by brackets over the notes). Each has a fundamental recurrent pulse equivalent to the *ultra mensuram* long (= dotted crotchet), and each pulse divides into three smaller time units (*tempora*/breves = quaver). Several important distinctions among the patterns are defined by whether the main pulse falls on the last note of the ligature (i.e. 1, 3*a*–*b*, 6*a*–*b*) or on the first (2, 4, 6*c*), whether the pulse is divided L–B (1*a*–*b*, 3*b*, 6*b*) or B–L (2, 3*a*, 4, 6*c*) and whether a ternary ligature extends over one, two or three pulses. (The value of the three-note ligature is the most equivocal and in the 5th mode is restricted largely to the tenor part in discant passages; the 4th mode, curiously, appears to be a theoretical construction not encountered in practice.) In all these important distinctions, the note shapes as they appear in the manuscript sources remain ambiguous; harmonic consonance, the succession of ligatures and the proportions between parts all contribute to define (or confound) the intended rhythm. This ambiguity appears to have prompted the writing of many of the treatises listed above, as their authors tried to clarify the intended durations by modifications to the standard, chant-based notational figures.

(iv) Coniuncturae, plicae and strokes. One of the most ambiguous of all modal figures was the *climacus*, which was drawn with lozenges in square notation. These were called *currentes* (Lat.: 'running') by Anonymus 4, probably as an extended use of a term that originally referred to the descending scales found in Aquitanian as well as Parisian polyphony. Johannes de Garlandia did not mention them at all, possibly because they could be confused with the rhomboid semibreve. Franco of Cologne called the figure the *coniunctura* (Lat.: 'joined [note]'), and even in his most rational system it eluded rhythmic codification. Liquescent forms of neumes also appeared

6*c*: 2nd mode with *notae plicatae* (BBBBBB...BB)			

in melismatic polyphony in modal rhythm. Usually they indicated an added breve on a weak beat (see modes 6*b*–*c*), although other values were possible according to the prevailing rhythmic framework and the length of the host note. Because a single liquescent note was usually written like a 'U' or an inverted 'U', it was termed PLICA (Lat.: 'fold'). A vertical stroke added to the end of ligatures made them 'plicata'. The liquescent neume, however, did not abandon its original function in such texted music as conductus, secular monophony and in chant settings if the cantus firmus demanded it.

Vertical strokes were used for two different purposes: as indications of changes of syllable and to signify rests. For the first purpose 12th-century scribes drew a roughly vertical line through both staves, although in Parisian sources this shrank to a small stroke through one or two lines only. Where a rest was intended its duration was not specified, although it frequently corresponded to the penultimate value of the modal pattern.

Whereas former repertories tended to preserve the ligatures of cantus firmi, undifferentiated single notes were typical for tenors in the early Parisian corpus, whether the tenor held long notes in ORGANUM or moved with the pulse in discant (*see* DISCANT, §I). Only in the later layers of discant did tenors include ligatures with breves. Although a stroke generally appears after each note of the tenor in organum, the pitch seems to have been sustained beneath the continuing organal voices. Anonymus 4 called this a *burdo* (Lat.: 'support', 'drone').

(v) Modal rhythm in practice. The system of modal rhythm outlined by the theorists is an intellectual abstraction from flexible practice. The rudimentary patterns of the modes they cited are of course frequently encountered in the late 12th- and early 13th-century repertory, and are particularly clear in tenors of late clausulas and motets. But in practice they are often so extensively intermingled, not merely vertically in different voices but successively in single parts, that they are only of limited descriptive use if treated strictly. Modal integrity can be compromised not only by the insertion of unligated long notes within a phrase, but also by the practice of *fractio modi* (Lat.: 'breaking of the mode') – the introduction of shorter note values than normal. Such deviations alter the expected sequence of ligatures in a particular pattern. *Fractio modi* may have prompted an early formation of the 6th mode (6*a*) from the 1st, as the typical series of two-note ligatures succeeding an initial ternary figure in mode 1 is, in mode 6, replaced by three-note figures following an initial four-note gesture. In such cases the final note of the ligature tends to retain its normal value within the prevailing mode as far as is feasible, with the added notes splitting the other elements of the pattern. Even with this provision, however, the profusion of 'non-modal' ligatures in an ornate passage of *fractio modi* can seriously obscure a clear reading of the rhythm. Fig.49 gives some of the patterns described by Anonymus 4.

Ambiguities within the modal system may be demonstrated by two examples. Ex.9 gives the opening of the

etc.

etc.

etc.

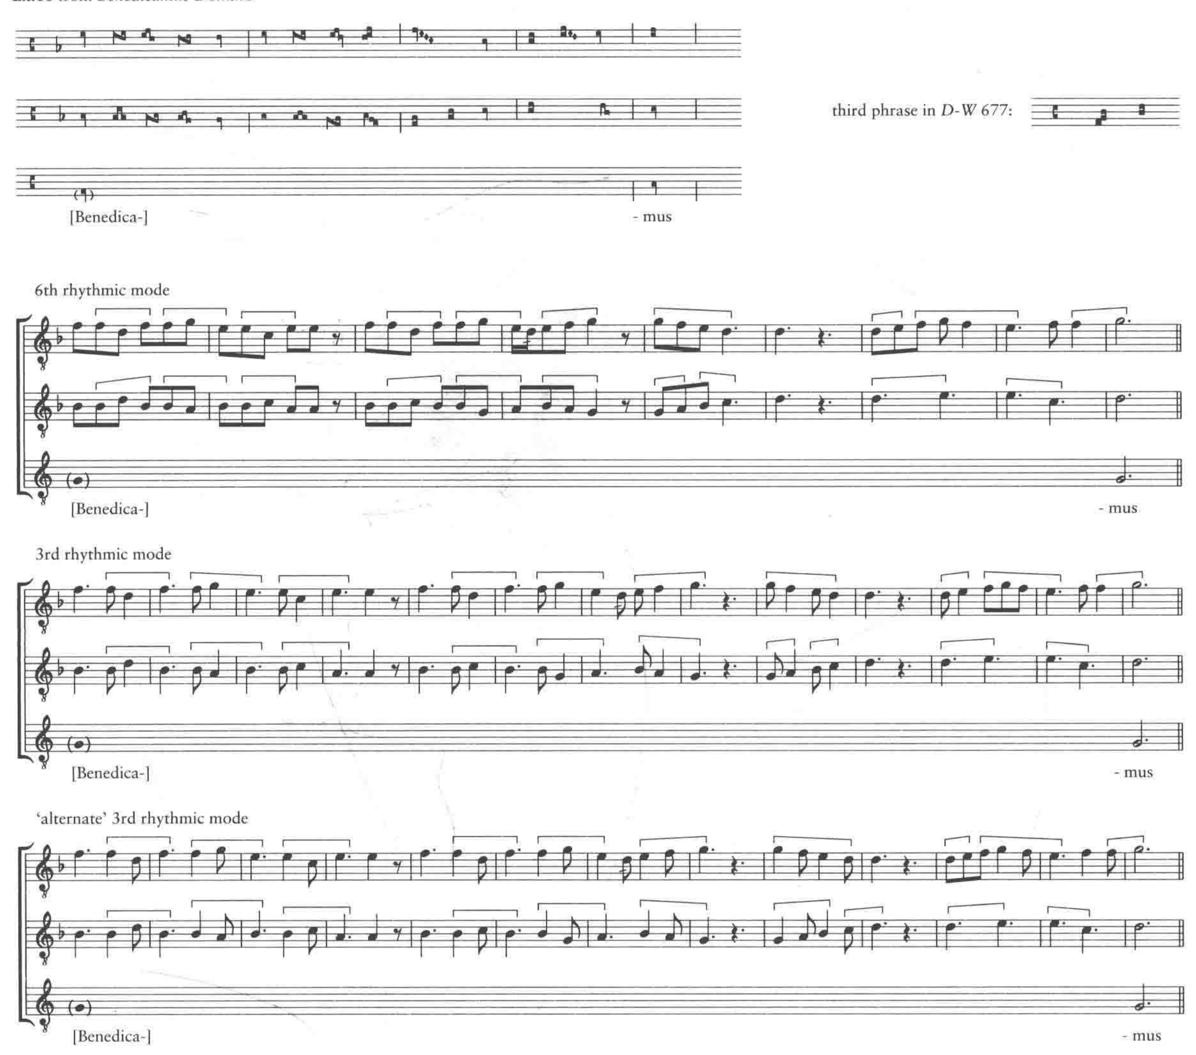
49. Patterns of fractio modi after Anonymus 4 (ed. Reckow, i, pp.38–9)

verse section of Perotinus's *Alleluia, Posui adiutorium* (*I-Fl* Plut.29.1, f.36*v*). Judging from the ligature patterns, both upper parts appear closest in form to the 2nd mode; yet the duplum lacks a final three-note ligature to match the triplum (which, contrary to the rules, ends with a two-note ligature followed by a single note). In this case, the penultimate note may reasonably be interpreted as a long. Consonances between the second note of each ligature, however, are greater in number than between the first – a transcription in the 1st mode thus seems more appropriate, so that each pulse is coincident with a consonance.

Ex.10 is from a *Benedicamus Domino* (*I-Fl* Plut.29.1, f.41*r*). Because of the prevalence of repeated notes, which defy ligation, the passage may be transcribed in the 6th mode (as in Husmann, 1940) as easily as in the 3rd. But most of the rest of the piece is in the 1st mode, so that a reading in the 'alternative' 3rd mode (3*b*) probably causes the least disruption. The consideration of variants in the concordant sources also influences interpretation, as, for example, in the third phrase where *I-Fl* Plut.29.1 notates the duplum in a 2nd-mode pattern, whereas *D-W* Guelf.628 (677) uses the 1st mode. Furthemore, cadences such as that in ex.10 frequently present problems of interpretation; the transcriptions given here are only a few out of many justifiable readings.

(vi) Organum purum, modus non-rectus and irregular modes. Particular segments of sustained-tone *organum duplum* (termed *organum purum* by Anonymus 4, and *organum in speciali* or *organum per se* by Garlandia) present serious problems regarding the extent and type of rhythmic interpretation and have caused much disagreement among scholars. Unlike discant or copula passages, whose unfolding often suggests a 'straightforward' (*rectus*) rhythmic mode, the ligature formations of *organum purum* defy such easy categorization. Garlandia's representative discussion of the rhythmic component, with its emphasis on oppositional construction, demonstrates vividly how the subsequent imposition of the modal system failed to reflect accurately the capricious style of *organum purum*:

> *Organum purum* is said to be that performed according to a certain mode that is not *rectus* but *non rectus*. A *rectus* mode is used here to mean that by which discant is performed. ... But in *non rectus* [measure] the long and breve are taken not in the first way, but according to the context (*ex contingenti*).



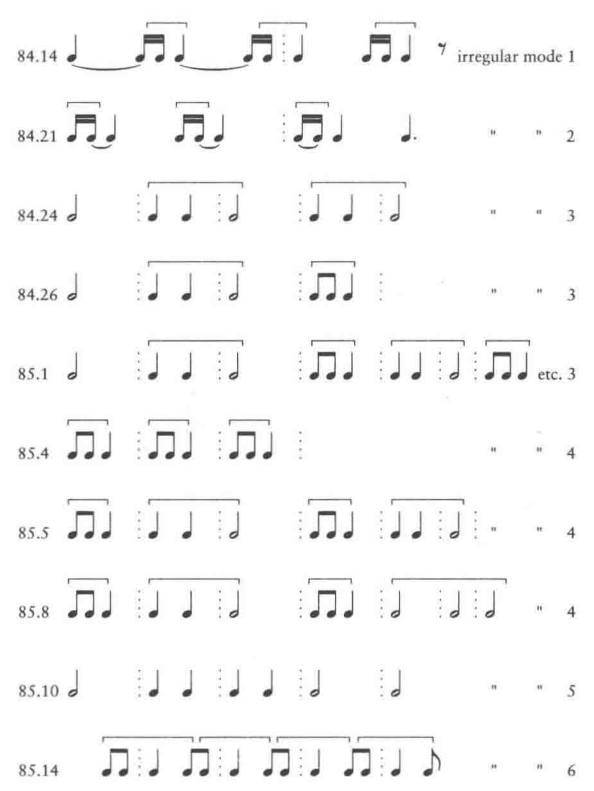
Just what contexts might affect the performance appear in a later paragraph:

> Longs and breves in organum are recognized in this way, that is to say through [concord], through notation, through the penultimate. Whence the rule: each thing [?duplum note] that falls upon something [?tenor pitch] in compliance with the strength of the [consonances] is said to be long. Another rule: whatever is notated long according to the organa before a rest or in [?the] place [of a concord] is said to be long. Another rule: whatever is accepted before a long rest or before a perfect concord is said to be long.

Perhaps because of the vagueness of such passages, no agreement on the rhythmic realization of *organum purum* has yet been reached. Does the first rule imply that every harmonic interval between duplum and tenor owes its length to consonance, or only the contact points between the two parts at the start and close of major sections? Does the last rule apply to all perfect concords, or only particular ones? And what is the role of the notational component? What purpose do the duplum ligatures serve and how are they to be coordinated with the other strictures mentioned by Garlandia? Finally, and perhaps most importantly, there is the question of whether the theoretical information and manuscript sources reflect or recast a performing tradition that began at least a half-century earlier. Faced with such dilemmas it is easy to understand why editors of this repertory often choose a

Ex.9 Perotinus: *Alleluia, Posui adiutorium*

non-committal approach to *organum purum* by using stemless note heads, although several transcriptions with specified durations are also available (e.g. Waite, 1954; Tischler, 1988; Payne, 1996).



Another perplexing phenomenon are the 'modi irregulares' mentioned by Anonymus 4 (fig.50). While the first two appear to be rhythmically sharper versions of the normal 1st and 2nd modes, interpretations of the others ranges from binary mensuration of the long to mere nuances of tempo.

(vii) English practice. Sanders (1962) has convincingly demonstrated that pairs or longer chains of lozenges ('English breves') used in English manuscripts dating up to about 1300 signify 1st-mode rhythms (L–B, L–B etc.). Such breves appear in *D-W* Guelf.628 (677) (even in the non-English works: for facs. of Perotinus's *Sederunt see* SOURCES, MS, §IV, fig.30), *GB-Lbl* Harl.978 (in which some pieces have been 'reformed' by adding tails to alternate lozenges to make them longs) and the Worcester Fragments (earlier layers). Johannes de Garlandia and Anonymus 4 both reported that the English interpreted ternary ligatures in what has become known as 'alternative 3rd mode' (3*b* in Table 6. Similarly, Wibberly (EECM, xxvi) argued that certain nuances in the slanting of ligatured notes by English scribes may reflect an attempt to distinguish between complementary insular and continental rhythmic practices.

(viii) Mensural notation before Franco. Clarification of ambiguities in modal notation already appears in the earliest Parisian sources, though inconsistently, and in the theory of Johannes de Garlandia. Such specifications affected the appearance of discrete note shapes, ligatures and to a lesser extent rests.

The pressure towards the codification of note forms seems indebted to the motet (*see* MOTET, §I). Many early 13th-century motets were clausulas with text added to their upper voice or voices; because the text usually set a separate syllable to every pitch, the ligatures of clausulas were thus split into single notes. Hence in older sources the music of motets was often available in melismatic notations as clausulas, but in texted form with undifferentiated note heads.

All the chief sources of Parisian polyphony up to about 1260 may distinguish between a single long and a single breve in instances involving repeated notes (the long with a downward stem attached to its right-hand side, the

50. Anonymus 4, chap.vii: 'De modis irregularibus' (references are to page and line numbers in Reckow's edn)

breve without). The opening of the *organum quadruplum Sederunt* has already been cited; another example is the clausula *Mulierum* (Apel, 1942, facs.52*a*). Double longs are also frequently distinguished by horizontal elongation (see ex.9 above).

In mensural sources certain conventions regarding the value of the discrete notes were observed. A long contained three *tempora* if followed by another long (as in mode 5), and two *tempora* if succeeded (mode 1) or preceded (mode 2) by a breve; pairs of breves (mode 3) were interpreted in the order *brevis recta* (one *tempus*) – *brevis altera* (two *tempora*), except by the English, who preferred the opposite interpretation (see above, §2(vii)).

The semibreve (single lozenge) attained its shape at about the time of *De mensurabili musica* (*c*1240–60); but it is rare in sources from this period. (Both Garlandia and Anonymus 4, however, used the term *semibrevis* to refer to half a *brevis altera*; see Sanders, 1962, p.267.) The earliest surviving manuscripts clearly and consistently making the distinction are rather later: *F-Pn* n.a.fr.13521 ('La Clayette MS') and *GB-Lbl* 30091, from the end of the 13th century. Other important steps concerned the clarification of ligatures. Theorists conferred qualities of 'propriety' (*proprietas*) and 'perfection' (*perfectio*) on the traditional chant-based shapes of modal rhythm. The former term referred to the first note of the ligature – whether it was drawn 'properly' (*cum proprietate*) or not (*sine proprietate*) – the latter originally specified whether the note shape concluded in a regular manner (*cum perfectione*) or denoted a 'broken' or 'unfinished' figure (hence 'imperfect', *sine perfectione*). Fig.51 gives the basic shapes and their alterations. The meaning of the modifications (as well as the default forms) depended on the individual theorist. Garlandia, for example, held that lack of propriety reversed the default values of an entire two- or three-note ligature (a proper, perfect B–L thus became L–B, and L–B–L inverted to B–L–B), whereas imperfect ligatures needed to be reconstituted to perfect forms according to the context of the phrase. Franco's innovation was to specify undeviating values for ligatures of all types and to equate propriety and perfection respectively with the durations of only the first and last notes of a figure. (For a comparative table drawn from several theorists, see Reimer, 1972, i, 56.)

The ligature that became known as 'having opposite propriety' (*cum opposita proprietate*), written with an ascending stroke to the left, is first seen in *D-W* 1099. Garlandia was the earliest theorist to describe such a ligature, but whereas he interpreted it in a manner akin to *fractio modi* (with the last note as a long and all others equal to a breve), later practice was to read the first two notes as semibreves and the remainder according to the rules of perfection (see below, §III, 3). An alternative form of the descending ligature *cum opposita proprietate* had three lozenges with a tail descending obliquely from the left of the first, and is found in some French and many English manuscripts.

Johannes de Garlandia used a stroke through one space of the staff for a breve rest and a stroke through two or more for a long (number of *tempora* undifferentiated). Magister Lambertus used a stroke through one space for the semibreve rest, through two for the *brevis recta*, three for the *brevis altera* and *longa imperfecta*, and four for the *longa perfecta* (a practice found in *D-BAs* lit.115). Franco used strokes through the lower portion of a space for semibreve rests, and one complete space for each *tempus*. The duration of the two-tailed *plica* might also be differentiated. The plicated breve had either a very short tail to the right or a single tail to the left, the plicated long a long tail to the right and a shorter one to the left. English scribes used a lozenge with a tail descending obliquely to the left for a semibreve.

(ix) The rhythmic interpretation of polyphonic and monophonic conductus. The caudas of the more complex Parisian conductus were usually written in the ligature notation associated with modal rhythm. Realization of the syllabic sections, however, is far less certain. As with the texted versions of early motets, the note values set to conductus verses are ambiguous in the major sources; but in contrast to the motet the routine absence of melismatically or mensurally notated forms of the music compounds the problems of interpretation. Often it is presumed that the texts themselves provide clues for performance in a rhythmic mode. However, there are several methodological problems with such a premise. Firstly, datable examples of Parisian conductus indicate that the genre was cultivated from about 1160 to about

	cum perfectione	*sine perfectione*
cum proprietate		
sine proprietate		

51. Note shape alteration according to proprietatas and perfectio

1240, well before the codification of the modal system and only briefly coincident with the imposition of its strictures; it is therefore questionable whether modal interpretations of conductus poetry should apply to the entire repertory, if at all. Secondly, the modal system originated as a means of interpreting ligatures; it cannot be assumed that its successive long and breve durations apply equally to syllabic passages before the advent of the motet. Lastly, although the poetry of conductus is 'rhythmic' in the specific sense that it relies on lines with set numbers of syllables, the accentual configurations within each line do not approach the regularity of poetic metre and can frustrate a performance that adheres too strictly to a modal pattern.

The series of transcriptions of the opening of *Hac in anni ianua* (ex.11) reflects the diversity of possible solutions (see also Apel, 1942, p.258). Exx.11*a–d* treat each syllable as occupying the same length of time. 11*a* interprets the ligatures in binary rhythm (perhaps the least justifiable) and 11*b* in ternary, both within the 1st mode; 11*c* gives a strict reading in mode 1, as if there were no text (compare the treatment of Aquitanian *versus* in ex.8), and 11*d* is a strict reading in mode 2. Exx.11*e–f* abandon the principle of giving equal time to each syllable: 11*e* interprets the text as in the 1st mode; 11*f* as in the 2nd. On the other hand, ex.11g gives the closing cauda of the piece; its ligatures suggest the 3rd mode (although the alternative mode 3 could serve equally well), which could influence the choice of rhythm for the rest of the work. Page (1997) has suggested rendering the syllabic portions of all conductus with unmeasured values.

Given the difficulties of transcribing polyphonic conductus, where the rhythm might be expected to be evident from the relationship between the parts, it is not surprising that monophonic conductus presents even greater problems. In several of the more elaborate works, interpretations with equal syllables are often complicated by the presence of compound neumes of six or more notes (these are occasionally present in polyphonic conductus also). As an illustration, ex.12 gives a rhythmic rendition of the opening of one of the most ornate works in the Parisian corpus, *Turmas arment christicolas*, on the murder of Adalbert of Leuven, Bishop of Liège, by German knights in 1192. The principle of equal syllables has been applied wherever a syllable carries one, two or three notes; where it has four or more its value has been extended to two or more dotted crotchets. If such an interpretation was originally intended, it displays nothing of the regular ligature patterns characteristic of the *organa tripla* and *quadrupla* of this period, and the stress of the text is not complemented. Interestingly, the ligatures and melodic content of monophonic conductus often suggest the *modus non rectus* of *organum purum* rather than the clearer forms of the rhythmic modes. As a result, transcription in unmeasured values for this repertory, as well as for other types of monophony from the period, has become standard practice.

(x) The rhythmic interpretation of secular monophony. The same cautions exercised in the treatment of conductus rhythm apply to the secular monophonic repertory, but with even more circumspection. The application of modal rhythms before the codification of the system and outside the Parisian orbit is highly questionable (this includes the majority of troubadour and trouvère songs), the texts are non-metrical and therefore not conducive to patterned rhythms, and, except for a handful of songs in *F-Pn* fr.846 and a few in other manuscripts, mensural notation is not used, even though the bulk of the sources of secular monophony dates from after *c*1250. In retrospect, the suggestion that troubadour and trouvère melodies might be transcribed in rhythmic patterns resembling those of the rhythmic modes (see Sanders, 1985) seems to have been adopted with excessive zeal, although it still has its adherents.

Yet even with a preference for unmeasured transcriptions, opinions are divided on the fundamental procedures for interpreting the songs. Among recent treatments, van der Werf (1972 etc.) suggested an essential rhythmic equality for each pitch that could be adapted to accommodate rhetorical features of the poem. Stevens (1986) proposed a single elastic rhythmic unit for each syllable, and along with Page (1987) recommended the recognition of various registers (high/courtly versus low/popular styles) among songs – distinctions that could affect the imposition of rhythm as well as the use of instruments in performance. Aubrey's approach (1996) is the most flexible and inclusive, eschewing single, systematic procedures and suggesting that the different contexts in which songs were performed might have significantly altered the presentation of even the same piece by the same executor. This method favours the investigation of each piece on its own terms to uncover patterns of musical structure and emphasis that can inform the rhythmic treatment.

3. Polyphonic mensural notation, *c*1260–1500.

(i) General. Well before this period the notation of pitch had lost all ambiguity apart from occasional uses of the Plica and the operation of the rules of *musica recta* and Musica ficta. The four-line staff used for plainchant was still sometimes retained in polyphony, especially for a voice presenting plainchant, but the five-line staff had come to be used for polyphonic voices. A six-line staff became normal for the 14th-century Italian repertory, and was occasionally used outside it. Additional staff-lines were provided throughout the period wherever the range of a voice demanded, though the leger line itself was rare. The most commonly used clef was the C (on any line), as in plainchant, and its position was readily movable from line to line when range or a copying error made this expedient. Of the other two clefs used in plainchant the F came increasingly into use with the gradual extension of the lower pitch register, but the B♭ – that is, the ♭ sign used on its own as a clef – was rare in polyphony, probably because of the growing use of the same symbol to supply what would later be called a key signature. The treble G clef appeared in the 14th century; it came increasingly into use, especially in England, again in connection with extension of range; bass G and D clefs are rare. (*See* Staff and Clef.) Score notation had disappeared by about 1260, except for late copies of the organum and conductus repertory, and certain categories of composition in England, for which it was retained late into the 15th century (including carols, homophonic sequences and cantilenas, and English discant). Notation in separate voices reflected their new rhythmic independence.

(a) # ♮ ※ (b) ♭ (c) ♮

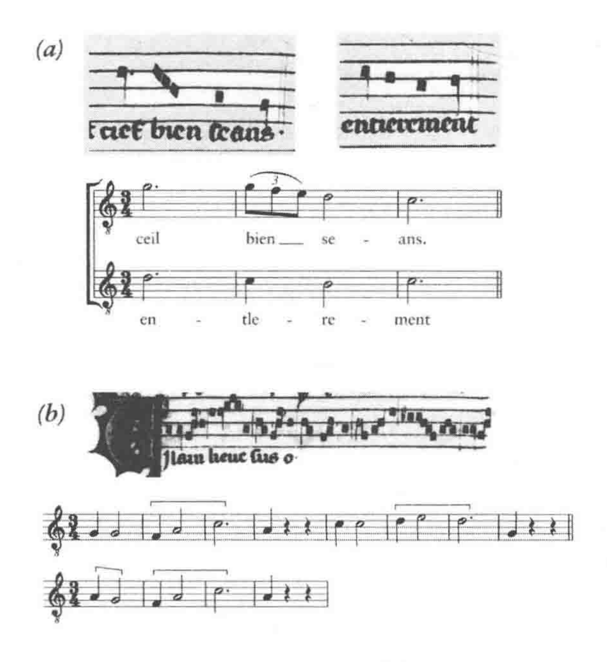
52. 'Accidents' of the solmization system

Throughout the period there were three principal signs for what are now called accidentals. They did not function as modern accidentals do, in that they did not signify the automatic raising or lowering of an otherwise 'natural' note by a semitone. They were adjuncts of the solmization system: the signs in fig.52*a* (alternative forms adopted by different scribes) designated the note following it to be sung to the syllable *mi*, and fig.52*b* designated it to be sung to the syllable *fa*. Fig.52*c* was often used simply as an alternative to fig.52*b*, though it seems to have been used by some scribes to refer to notes in the upper octave of a given voice range. In consequence, the note F, for example, would be rendered not flat but F♮ by the placing of the 'flat' sign (fig.52*b*) before it; a 'sharp' or hard b (♮) sign before the note E would render it E♮. Ambiguity could arise with A and D as to whether a flat sign meant natural or flat, and with G and D as to whether a sharp sign meant natural or sharp; but this ambiguity could usually be resolved by consideration of context. Significantly, the three clef signs discussed above were all indications of *fa* in the three basic hexachords (based on G, C and F respectively).

(ii) Franconian notation. The development of notation from *c*1260 to 1500 was almost exclusively in the realm of rhythm, and specifically concerned with achieving precise notation for note values shorter than the long and breve. The 13th century saw the gradual adoption of graphic distinctions between the long and the breve, both as isolated note shapes (*simplices*) and as they appear within ligatures. The forms of square note with and without stem had been used arbitrarily in the Florence manuscript (*I-Fl* Plut.29.1), but were used throughout the next generation of sources, including the Montpellier manuscript (*F-MOf* H196), to indicate long and breve respectively (*see* Sources, ms, §V for these manuscripts). Ligatures began to have fixed evaluations regardless of their modal context, even though they still often adhered to modal patterns and though the values assigned to them derived from their modal interpretations. These and other fundamental changes can be traced in the musical sources, and are mentioned in the theoretical writings (*c*1240) ascribed to Johannes de Garlandia, Magister Lambertus (before 1279) and the St Emmeram Anonymus [Sowa anon. 1930] (1279), all of which are now dated earlier than the main formulation of these changes by Franco of Cologne (?*c*1280) on whose rules the following summary is based. The Franconian system required that note symbols should be capable of indicating the rhythmic

modes rather than being determined by them. Under this system, each of the three principal note values had two states. The long was either 'perfect' or 'imperfect', there was also a duplex long, worth two longs, which Franco explained as a means of avoiding repeated notes. The breve was either *recta* or *altera* ('other' – Robert de Handlo in 1326 proposed that the breve be thought of as *alterata*, 'altered', *CoussemakerS*, i, 385). The semibreve could be either 'major' or 'minor'.

The perfect long was worth three breves. The imperfect long was worth two breves, as had been the earlier long, and was used in combination with a preceding or following breve; it could not stand on its own (i.e. only triple time was allowed on the level of the long), and hence could not be called *longa recta* (but see Johannes de Garlandia, ed. Reimer, i, 37). When a long preceded a second long the first must always be perfect (thus, in terms of breves, 3–3 or 3–2).



The *brevis altera* was worth two *recta* breves. It arose as the second breve in the context breve–breve–long (1–2–3 breve units respectively): see fig.53*a* (in the upper voice the first breve is subdivided into semibreves). Although identical in duration with the imperfect long it could not be written thus because of the preceding rule. Where a long followed by a breve would normally be imperfect, it could be rendered perfect by the placing immediately after it of a dot or stroke, variously called *tractulus, signum perfectionis* or *divisio modi*, as in fig.53*b*. A long followed by two breves was perfect unless preceded by a single breve. The following set of patterns illustrates the operation of the system (numerals represent multiples of breve-values; primes represent signs of perfection):

LBLB	= 2–1–2–1
L′BLB	= 3–1–2–1
LBBL	= 3–1–2–3
BLBBL	= 1–2–1–2–3
LB′BL	= 2–1–1–2
LBBBL	= 3–1–1–1–3
LB′BBL	= 2–1–1–2–3
LBBBBL	= 2–1–1–1–1–3
L′BBBBL	= 3–1–1–1–1–2

The *brevis recta* might contain no more than three semibreves and no fewer than two. If three, they would be equal and all minor; if two, they would be minor–major (1–2). Franco made no provision for two equal semibreves, though some earlier theorists did not specify the value of a pair of semibreves when it constituted a breve nor did they recognize a group of three (Johannes de Garlandia, ed. Reimer, i, 50; Dietricus, ed. Müller, 5; Amerus, p.II). (The semibreve pairs in *F-MOf* H196 and *D-BAs* ED.N.6, and possibly other sources, mostly lend themselves much more comfortably to equal performance, and it is not always certain that Franco's rules apply.)

There is no provision as yet for the breve to be imperfected by the semibreve, or for the semibreve to stand alone: the breve-semibreve relationship was not at that stage analogous to that of the long-breve. This meant also that the principle of 'alteration' did not apply. A breve preceding a second breve is not said to be perfect, because there is no question of its being imperfected. Similarly, the second of a pair of semibreves is not said to be 'altered' before a breve, because a pair of semibreves is rendered iambically, regardless of what follows. Hence the following patterns (numerals represent multiples of semibreve-values):

BSSSS	= 3–1–2–1–2
SSS′SS	= 1–1–1–1–2

53. *Details from F-MOf H196: (a) f.365v; (b) f.361v*

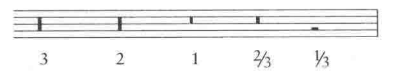
Several of Franco's contemporaries (e.g. St Emmeram anonymus, 1279) added to the semibreve-pair rule 'and vice versa', implying the reverse interpretation (2–1); and one later writer, the author of the *Quatuor principalia* (*CoussemakerS*, iv; *see also* JOHN OF TEWKESBURY), even attributed this interpretation directly to Franco.

Franco defined ascending and descending *plicae* for the long and breve. *Plicae* continued in use in the 14th century, but their pitch and rhythmic evaluation are sometimes open to question (see Handlo's evaluations, *CoussemakerS*, i, 383ff; also ed. in Lefferts). They were obsolete before 1400, by which time any surviving *plica* shapes no longer have the former significance of a *plica*.

Franco took over the existing ligature shapes with their connotations of propriety and perfection depending on the presence or absence of stems (*see* §III, 2). He provided evaluations that were mostly consistent with the earlier system but which could stand independent of their modal meanings. The first note of a ligature 'with propriety' was a breve, the last note of a ligature 'with perfection' was a long. He opened the door to many hitherto unused ligature shapes and provided a means of evaluating them, simple for anyone familiar with the existing shapes. A ligature with a stem ascending from the first note was described as having 'opposite propriety': it signified two semibreves. All notes other than the first and last were breves. In practice, downward stems were occasionally used to create a long in the middle of a ligature; the upward stem could occur elsewhere than at the beginning to create two semibreves; and the long body of the duplex long or *maxima* could be used to create this value anywhere in the ligature. These are later modifications to Franco's system. Notes in ligature were subject to the same rules for imperfection and alteration as single notes, but in practice grouping in ligatures tended to favour certain groupings as strongly as did a *divisio modi*.

Franco advocated the use of ligatures where possible; if possibility here implies absence of constraints from word underlay, he did not say so. However, it remains generally

54. *Principal ligature shapes of the Franconian system*



true (with a few exceptions) that two syllables do not have to be fitted to one ligature. On the other hand, Franco disallowed the pre-Franconian practice of notating 5th-mode tenors in motets as three-note ligatures and insisted on a succession of separate longs. Fig.54 shows the principal ligature shapes of the Franconian system. (An oblique shape involves only two pitches: the first and last covered by the ligature.) In evaluating ligatures of more than two notes, the first and last were treated as though each formed a two-note ligature with its neighbour. Middle notes were breves unless modified by stems making them longs or semibreves, or by extension of the note body to make a duplex long or *maxima* (fig.55).

Fig.56 shows the rests given by Franco, together with their values in terms of *recta* breves. They are respectively the perfect long, the imperfect long and *brevis altera*, the *brevis recta*, the major semibreve, the minor semibreve and the *finis punctorum*, which marked the end of a section or piece and was immeasurable. All these rests were fixed in value, not subject to imperfection or alteration. Franco made no provision for a binary division of the long, though it is generally agreed that some pre-Franconian compositions require this. Such a division became common in the following generation (see Sanders, 1962). After Franco the breve was further subdivided, being replaceable by more than three semibreves. The evaluation of these smaller semibreves differed, both in theory and in practice, in the separate 14th-century traditions of France, Italy and England, and the resulting rhythmic differences contributed largely to the musical distinctness of the three styles. Franco was the starting-point for all three. In none of them was a primary division of the breve into more than three semibreves called for: smaller note values were achieved by further subdivision of the primary divisions – subdivisions that were still regarded as types of semibreve, and were written without differentiation as semibreves. In addition, French and Italian theorists introduced imperfect time, with two equal semibreves constituting one breve, on an equal footing with perfect time.

Jacobus of Liège alleged that Petrus de Cruce had used up to seven semibreves in the space of a breve. He said that 'another' had used up to nine semibreves, and Robert de Handlo and John Hanboys said the same of a 'Johannes de Garlandia' (*CoussemakerS*, i, 389; see also edn by Lefferts); both cite pre-Ars Nova motets (*F-MOf* H196) in support. They do not specify the semibreves' values. But Petrus seems to have earned Jacobus's approval for staying within the Franconian tradition and distinguishing

55. *Extension of the note body in the Franconian system*

56. *Fixed-value rests as given by Franco of Cologne*

the semibreves adequately from each other without recourse to stems; and Robert de Handlo attributed to him the orthodox Franconian division of the breve into two unequal or three equal semibreves. In view of these two facts, there is no compelling reason to assume that his shorter notes were anything other than forerunners of one of the 14th-century systems, all of which arranged the shorter notes, according to rules prescribed in increasing detail as the century progressed, within the primary perfect or imperfect division. (Apel's claim (1942, 5/1961, p.319) that Petrus introduced a system without precedent or progeny using five or seven equal semibreves is based on a misreading of Jacobus, who would surely have condemned such temerity.) There is no mention of Petrus in the early French or Italian treatises.

(iii) French 14th-century notation. The first theoretical formulations of French 14th-century notation were those of Philippe de Vitry and Johannes de Muris dating from the early 1320s. Their starting-point was explicitly the teaching of Franco. In addition to the triple division of the breve permitted by the latter, they reintroduced duple division and further subdivided these semibreves into shorter notes, which were regarded as different orders of semibreves, and were at first not differentiated graphically except for the occasional lengthening downstem. The first surviving musical instances of this practice are some of the motets interpolated between about 1317 and 1319 into one copy of the ROMAN DE FAUVEL (*F-Pn* fr.146). Some are cited in *Ars nova*, and Vitry may well have been the composer of them, for composer and theorist alike were concerned mainly with a metrical scheme in which the breve was divided into two equal semibreves each of which was in turn subdivided into three smaller values. Fig.57 shows the interpretation of the contents of the breve when subdivided by two, three, four and five semibreves respectively. Other musical sources of these motets corroborate these interpretations by distinguishing the shorter order of semibreve with an upward stem, thereby converting them into a new level of note value known as the *minima*. Italian theorists of the time (see §(iv) below) also gave these interpretations.

Vitry's *Ars nova* established the following hierarchy of five possible subdivisions of the breve: 'minimum perfect time' (i.e. Franconian, although he stated that interpretation of semibreve pairs as 2–1 had been superseded by that of 1–2, and thus departed from Franconian practice in his only statement about perfect time), three semibreves; 'minimum imperfect time', two semibreves each comprising two minims; 'medium perfect time', three semibreves each comprising two minims; 'major perfect time', three semibreves each comprising three minims; 'major imperfect time', two semibreves each comprising three minims (Roesner, Avril and Regalado, 30–38).

Taken together with later treatises embodying the theory of the Ars Nova as it developed (including Johannes de Muris's later treatise, *Libellus cantus mensurabilis*,

57. *Subdivision of the breve*

*c*1340, and Anonymus 5 of *CoussemakerS*, iii), the French system can be summarized as follows. There was a graphic distinction of the minim by an upward stem from approximately the time of Vitry's treatise. The four principal levels of note value, the long, breve, semibreve and minim, were thus visually distinct. The relationships between these four levels of note value were given names: *modus* ('mode' or 'mood') for the long-breve relationship, *tempus* ('time') for breve-semibreve, *prolatio* ('prolation') for semibreve-minim. Each of these relationships might be binary or ternary. The various relationships of mode, time and prolation came to be termed 'mensurations'. The four combinations of *tempus* and *prolatio* were attributed to Vitry as the 'quatre prolacions'. Various special signs were proposed for the available mensurations, but none was much used during the 14th century. Their appearance in the later part of the century reflected the existence in composition of a wider range of possibilities and therefore the need to specify which combination of relationships was in force. Yet they were in practice confined, with few exceptions, to the circle for perfect *tempus* and the half-circle for imperfect *tempus*, with a dot in the centre to designate major *prolatio* (its absence designated minor).

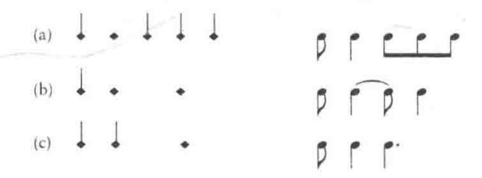
The existing range of symbols for rests was extended. The semibreve rest became a short vertical bar suspended from a staff-line, and the minim a similar bar placed upon a staff-line. These rests, like Franco's, were fixed in value. Within a given mensuration, which established the value of each rest as perfect or imperfect, no rest was imperfectible or alterable – a situation that did not apply in either Italy or England.

Dots were used to mark off groups of notes according to *tempus*, that is according to breves'-worth, by extension of Franco's principle, and also to indicate perfection. This led in later treatises towards the idea of a 'dot of addition' which added half again to the value of an imperfect note. At first this concept was expressed in terms of showing the perfection of an imperfect note. Muris stated that an imperfect note might be made perfect by the addition of half its value (*Libellus*; no dot is mentioned, but one source of the treatise has a musical example with a dotted breve in imperfect time). Anonymus 5 stated that 'a dot, when it perfects, always adds to the note after which it is placed the neighbouring part' (i.e. the next note value down).

Vitry prescribed red notes for various purposes. Where black notes were perfect, red indicated imperfect mode or imperfect mode and time. The roles of black and red could also be reversed. Red could be used to prevent individual notes from being perfect or altered (i.e. to fix their value regardless of context). Red could effect octave transposition (though no surviving examples are known) or pick out a plainchant voice.

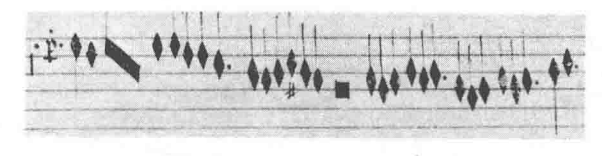
Franco's rules for imperfection of the long were now also applied to the breve and semibreve, and his rules for alteration of the breve to the semibreve and minim. The precise evaluation of any note depended on the governing mensuration and on the context.

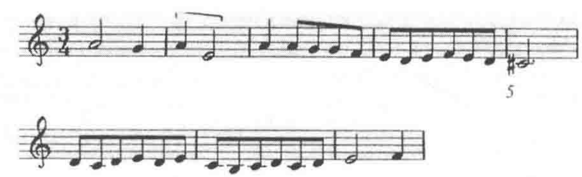
Not only could the long be imperfected by the breve, the breve by the semibreve and the semibreve by the minim, but imperfection by non-adjacent values was permitted – for example the long by the semibreve and the breve by the minim. A note could be imperfected to a varying extent: a breve might be imperfected by one minim or two. Vitry specified four types of semibreve: the *major* (i.e. *altera*), equal to six minims, the 'semimajor' or imperfect equal to four or five, the *recta* or *vera* equal to three, and the *minor* equal to two. The minim was often described as a *semibrevis minima*, the lowest value that a semibreve could have.



Franco's rule that a long preceding a long was always perfect came to be strictly applied to breves and semibreves, and was later formulated as the rule *similis ante similem perfecta* ('like before like is perfect'). Particular contexts yielded fixed values for certain notes by requiring them to be perfect: for example, the semibreve shown in fig.58*a* could be imperfect, yet the first semibreve in fig.58*b* had to be perfect, so that only by means of the *minima altera* could the rhythm given in fig.58*c* be shown. Such alteration of the minim became possible only when the minim was graphically distinct: a pair of unstemmed semibreves, according to Vitry, was trochaic. The full application of these relationships on all levels was not yet in operation at the time of Vitry's treatise.

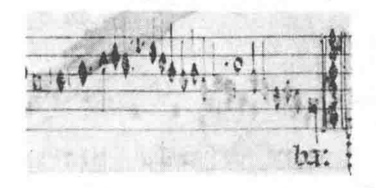
Syncopation was discussed by theorists, and was allowed by Johannes de Muris in perfect or imperfect mood, time and prolation. Although it was not discussed systematically, it seems clear from the musical sources that the means of syncopation were notes or rests of fixed value (e.g. any rest, or a note imperfected by coloration or perfected by a dot). Dots of syncopation are in effect dots of division unusually positioned to show displacement. A note set off by two dots, as found in later 14th-century sources, is thus isolated as the agent of displacement or prevented from alteration.





See also Ars nova; Fauvel, roman de; Isorhythm; and Sources, ms, §VII.

(iv) Italian 14th-century notation. The early development of Italian Trecento notational theory has been clarified by reference to treatises which apparently antedate Marchetto da Padova, who had long been regarded as its first exponent (Gallo, *La teoria della notazione*, 1966). Amerus, in 1271, recognized exclusively binary division of the long with each of the two breves further subdivided into two semibreves. Guido frater (?1326–30) showed the systematic fusion of this binary tradition with Franconian teaching, dealing with perfect and imperfect time, and agreed in most essential points with Marchetto's *Pomerium*.



In perfect time the breve was divided into three 'major' semibreves (the use of the term is different from Vitry's). Each of these might be divided into two 'minor' semibreves (as in fig.59*a*), and each of those into two 'minimum' semibreves, totalling 12 minimum semibreves or minims (Guido: *semibreves minime*; Marchetto: *minime*). Alternatively, each major semibreve might be divided into three, making nine in all; Guido, unlike Marchetto, spoke of this as a French practice. (Guido called the resulting nine notes minimum semibreves, whereas Marchetto called them minor semibreves.) In imperfect time the breve was divided into two equal major semibreves and was defined as two-thirds the value of the breve of perfect

59. Excerpts and transcriptions from the Squarcialupi Codex (I-Fl Med.Pal. 87)

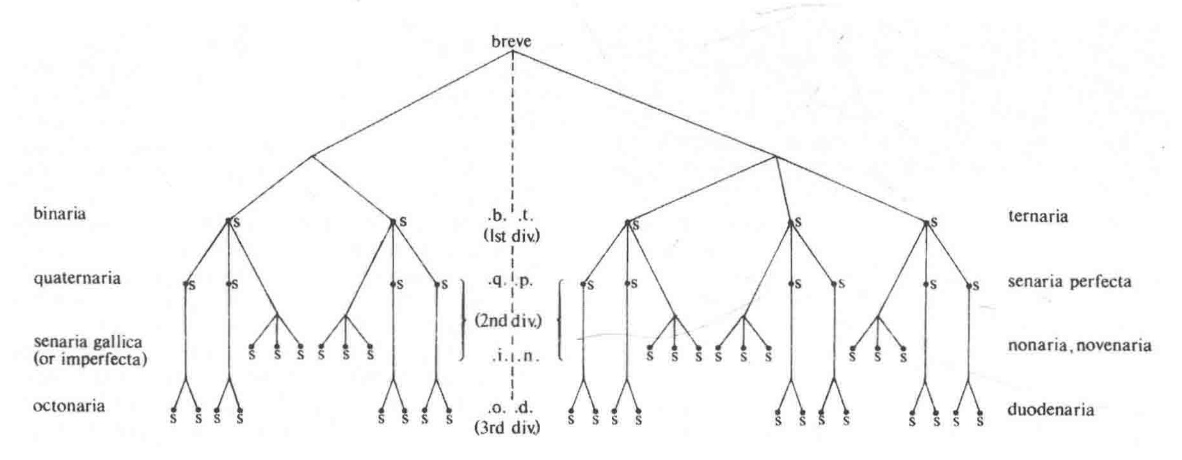
time. Each of these two major semibreves might be divided into two minor semibreves, and each of those into two minims, making eight minims in all (Guido: *semibreves minime*; Marchetto: *minime in secundo gradu*, bars 1–3, 6–8). Guido and Marchetto both called this manner of division the 'Italian way'. Alternatively, each of the two major semibreves might be divided into three minims (Marchetto: *minime in primo gradu*), making six minims in all; this Guido and Marchetto call the 'French way' (their evaluations are shown in fig.60). Marchetto admitted, but did not enlarge upon, the further division of the six minims of imperfect time into two to make 12, and into three to make 18.

Unstemmed semibreves (*naturales*) were evaluated according to certain prescriptions which could be overruled artificially (*via artis*) by means of stems. Downward stems indicated longer notes whose precise value depended on context as well as on the 'division' (approximately equivalent to the French 'mensuration') that was in operation. Upward stems indicated the minim, whose value was fixed within any division that contained that level of note. The use of these stems was not necessary, even that of stems for minims, if what was required was the normal arrangement of a certain number of notes within a certain division. It became necessary only with abnormal arrangements of notes.

The primary division of perfect time placed the longer of two notes at the end of the *tempus* unless a downward stem was attached to the first note (as in fig.59*a*, bars 1, 8). This is not the same as alteration in French notation, since here a semibreve in such a position need not precede a breve; the procedure is Franconian. Whenever unequal division of notes within an 'Italian' division was called for, the longer note (or notes) was again placed at the end (as in fig.59*a*, bars 2–3) unless modified by stems. But the 'French' divisions, whose evaluations as given in the right-hand column of fig.60 are taken from Guido, normally placed the shorter notes after the longer. Though not entirely consistent, and thus in defiance of Marchetto's attempt to impute superior logic to the French system, they are the rhythms most commonly encountered in contemporary French music.

Unless bounded by a breve or ligature, each *tempus* group of semibreves was marked off by a dot. Any ligature comprising two semibreves occupied a full *tempus*. Although Guido provided two forms of semibreve rest (both standing on the staff-line), one occupying a quarter, the other a third of the space between two staff-lines (ed. Gallo, 27), he did not equate these with the three levels of semibreve. In practice, rests were inconsistently indicated and were as much subject to variation in value as the notes to which they corresponded; this was diametrically opposed to the French use of rests, to which however Italian notation moved closer as the century progressed.

The breve could not be imperfected: the rhythm that French notation rendered as an imperfect breve followed by a semibreve (2–1) was represented in Italian notation by a semibreve with a downward stem followed by a plain semibreve: that is, a semibreve prolonged by *via artis* to two-thirds of a *tempus* followed by a major semibreve. Hence, since a semibreve could not occupy a *tempus* alone, no semibreve could be used alone. That also derives from Franco.



Marchetto proposed that the initial letters of certain *modi* and divisions be used to identify them. This was the counterpart to the French mensuration signs (see (iii) above), which found no place in the Italian tradition until it merged with the French later in the century. Marchetto advocated '.i.' and '.p.' for 'imperfect' and 'perfect' *modus*

Divisiones in Italian notation

Perfect time	*Imperfect time*
1st division	ITALIAN — *1st division* — FRENCH
2nd division	(q) — *2nd division*
3rd division	(o) — *3rd division* — (naturales) — (per artem)

60. *Systems of subdivision (after Guido frater)*

(see *a*), not for the divisions of *senaria imperfecta* and *perfecta* (fig.61) which had not yet acquired these names. The letters '.b.' and '.t.' were to indicate the binary and ternary divisions of the breve (CSM, vi, 164). The letters 'Y' and 'G' were to indicate the Italian and French (literally 'Gallic') manners in imperfect time. In addition, the letters 'S.G.' were used presumably for *secundum gallicos* or *senaria gallica* in *I-Rvat* Rossi 215. The later uses of letters, derived from musical sources and subsequent theoretical writings, in particular from Prosdocimus de Beldemandis, are shown in fig.61. There seems to be no theoretical or practical justification for the widespread modern teaching that undesignated semibreves in *senaria imperfecta* are to be read with the longest note last (in the

61. *Indication of subdivision by initial letters*

(a) (b)

62. (a) Dragma; (b) extension of a note value by half

bar or in each half of it); if anything other than the French way was wanted, it was specified by stems.

Minims were present only in the French divisions and in the third division or beyond of the Italian manner. They did not technically halve the value of a semibreve, although two minims were equal to one minor semibreve, because they were themselves a kind of semibreve. Semiminims, on the other hand, which were mentioned in *Ars nova* but not by the Italian theorists, came into use in later musical sources to divide the minim in half. They had a loop to the right or left of the minim stem. Triplets – three minims in the time of two – were shown by a loop in whichever was the opposite direction.

Other innovations of the later sources included the dragma – a semibreve with upward and downward stem (fig.62*a*) – with a fixed value of two minims. This was often used to represent three minor semibreves in the time of two major semibreves. The same effect could also be achieved by void coloration, which could give three notes in the time of two or four in the time of three. A note augmented by half was represented as shown in fig.62*b*. A dot could not be used because of its function as marking the division.

See also SOURCES, MS, §VIII.

(v) Late 14th-century notation. Towards the end of the century, in the music of Landini's generation, many French features had entered Italian notation. The Italian division signs, although Prosdocimus's formulation of them was even later, were increasingly superseded by actual or implicit French mensuration signs. Dots of division, downward stems and variable rests gradually disappeared. Breves were imperfected, and dots of addition replaced the other special signs. The notational unrest of this stage was reflected in many pieces combining French and Italian characteristics, and in the existence of more than one notated version of some pieces, an otherwise rare phenomenon (Fischer, 1959). The eventual absorption of Italian notation by French was the result of a final exploitation of the inherent possibilities of both systems. Extreme rhythmic complexities were indulged in by composers of both nationalities, largely in the orbit of the schismatic papal court at Avignon and of Gaston Fébus, Count of Foix.

The principal technique used was syncopation. The existing means of fixing the values of notes that were to act as syncopating agents were greatly expanded by the use of a variety of stems, hooks, dashes and loops whose precise meaning varied from piece to piece and sometimes within a single piece, as well as by the use of displaced dots of division. Specialized colorations were also used. These sometimes fixed note values and were thus additional means of achieving syncopation, and sometimes they expressed a proportional relationship of one passage to another (see §(vii) below). The main manuscripts containing this sophisticated and short-lived repertory are *I-MOe* α.5.24, *F-Pn* it.568 and *CH* 564 (for further discussion see Stone, 1994).

See also ARS SUBTILIOR and SOURCES, MS, §VIII.

(vi) English 14th-century notation. Robert de Handlo, in 1326, gave clear indications that the English continued to pursue the notational individuality they had shown in their pre-Franconian notation (*see* §III, 2 above) into the 14th century, and musical sources confirm this. Handlo's treatise is an expanded and glossed version of Franco; his other chief authorities were Petrus de Cruce and a certain 'Johannes de Garlandia' (for discussion of the identity of the theorist see JOHANNES DE GARLANDIA). Here if anywhere there is justification for crediting Petrus de Cruce with an important stage in notational development; however, Handlo's account does not permit the ascription to him of any advance on Franco that was not more exhaustively dealt with by Johannes de Garlandia. All three follow Franco in accepting only a ternary division of the breve. (Other than an apparent reference to duple time in the problematic dicta of Petrus le Viser (*CoussemakerS*, i, 388; see also edn of Robert de Handlo by Lefferts), there is no theoretical support for duple time in England until the late 14th-century treatise of Hanboys, though a few compositions at an earlier date require duple interpretation.)

The basic ternary division of the breve was into three 'minor' semibreves. If two semibreves took the place of a breve, one of them became major and was distinguished by a downward stem. Some evidence, more musical than theoretical, points to pairs of semibreves without stems and separated by dots often being performed trochaically (see §(ii) above). Evidence for trochaic performance of undesignated pairs of breves in 13th-century English music is strong (Sanders, 1962): this may support the 14th-century case, but the grounds are musical rather than notational, because Franco's long-breve relationship was not applied at the level of the semibreve (i.e. like Italy, unlike France).

Each of the three minor semibreves was subject to a further subdivision into three. Each minor semibreve's-worth might be marked off by a small circle, or *signum rotundum*, which was quite distinct from the dot of division used to mark off *tempus*. If only two semibreves fell within one such division they were to be read unequally as 1–2 (*minima–minorata*) unless the reverse was indicated by a downward stem on the first of the pair. As in Italy, the French concepts of imperfection and alteration were entirely absent and cannot thus be used to justify iambic interpretation of strings of semibreve pairs. The system of circles reflected an English reluctance to use stems where a note could be evaluated by convention, although not many occur in surviving musical sources. If four was considered the basic Italian division of the breve and six the French, the English was nine, which necessitated some additional clarification by stems or circles.

Later in the century, after the period of French influence discussed below, Hanboys (?*c*1370) distinguished within imperfect time between *curta* and *longa mensura*, the former having four minims to the breve, the latter eight (as in *GB-Lbl* Sloane 1210 and *DRc* 11).

Rests were inconsistently notated early in the century; by the latter half, despite the allegation by several English theorists, including Hanboys, that rests could be altered or imperfected, the forms of rests followed French practice: semibreve hanging from a staff-line, minim placed on a line. There is one important exception: a rest intersecting a line, in effect a semibreve plus a minim rest, was often used for the perfect semibreve. Even in a major-prolation piece an imperfect semibreve rest was often shown by the normal semibreve rest, whereas in French notation it would be shown by two minim rests (as it sometimes was in England, too).

(a) (b) (c)

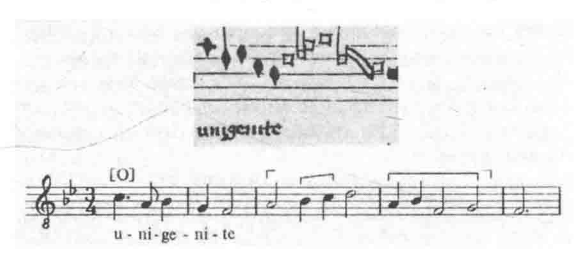
63. Unusual features of English notation

Other English peculiarities, mostly with theoretical and musical documentation, included the *brevis erecta* (fig.63*a*) to indicate chromatic alteration, the swallow-tailed note (fig.63*b*) to indicate rhythmic alteration (also serving to elongate the first of a pair of semibreves – it appears to be a successor to the downward-stemmed semibreve), and the use of the stepwise descending form of the semibreve–semibreve ligature (fig.63*c*) to indicate rhythmic alteration of the second note.

It is clear from the variety of notational practice in musical sources, as well as from the treatise of Hanboys, that at this period there was no single English notation but, rather, that there were diverse English notations. Hanboys cited some individual notational practices of which he disapproved. One of these accords with a surviving musical composition which is adjacent in its source to an example of approved practice.

French influence was not felt until some time after the middle of the century. It is clearly present in the pro-Vitrian treatise *Quatuor principalia* (completed in 1351), as well as in some imported French motets, all of which are in imperfect time and major prolation. The dot of addition makes no appearance in England (nor is there any substitute for it, as in Italy) until the very end of the century when the French influence was most fully assimilated, just before the Old Hall manuscript (*GB-Lbl* Add.57950) was compiled. *Quatuor principalia* condemned some uses of the more notably eccentric auxiliary signs in England, but at the same time achieved some startling fusions of English and French practice. Imperfect breves started to appear in English sources around that time, often in trochaic alternation with semibreves. *Quatuor principalia* declared the major semibreve (presumably of the English tradition) to have the same value as an imperfect breve and to be written like it. Thus it is not known whether these English breves were thought of as imperfected breves or major semibreves (evidence of parallel passages favours semibreves). Minims, with upward stems, began to appear around that time, occasionally in combination with unstemmed minims and in conjunction with *signa rotunda* which are in fact made redundant by the stems and did not long survive them.

See also SOURCES, MS, §VI; OLD HALL MANUSCRIPT; WORCESTER POLYPHONY.



(vii) 15th-century notation. In England about 1400 there existed notational practices as complex as those in southern France; these can be seen in the Old Hall repertory. There are canonic and isorhythmic pieces that involve advanced notational features, and virtuoso essays in syncopation and complex proportional usage. The full resources of continental coloration were available: that is, in addition to normal black-full notes there were black-void, red-full and red-void; and two pieces in the Old Hall repertory use blue-full notes. The normal coding of colour for proportions in English pieces was black-void 2:1, red-full 3:2, red-void 3:1. These colorations could be further modified by the use of numerals and signatures. They made it possible to conceive of rhythmic patterns that could otherwise have been notated in only the most clumsy or inadequate way. It was this, rather than innate conservatism, that led the English to retain some use of black-full notation, alongside black-void, after most continental scribes had abandoned black-full about 1430.

Coloration was used also to express imperfection: to prevent alteration and perfection in notes that might otherwise be subject to them, rather than to bring about a reduction in all note values. When the notation was principally black-full, the coloration was red or black-void; when black-void, the coloration was normally black-full. The indication of imperfection remained the most common function of coloration throughout the 15th century and into the 16th. Fig.64 shows black-void coloration being used to bring about imperfection and to prevent alteration (see also Woodley, 1993).

The earliest examples of black-void notation date from about 1400 and are mostly English. The reason for the change is obscure but may perhaps best be accounted for by the change in writing habits associated with the general move from parchment to paper as the main writing surface. It is also true that the greater simplicity of style that dawned with the 15th century did not, except in the continuing English tradition, require the availability of so many colorations for proportions. For the change was much more than a simple reversal of black-full and black-void notation: as black-void superseded black-full, so the latter came largely to replace red-full and thus red notation came to be abandoned (as in fig.65 – see bars 8–9). Continental compositions using proportions (e.g. those in *GB-Ob* Can.misc.213, from the late 1430s) inclined much more to the use of numerical proportion signs and mensuration signs with graphic or numerical modifications.

The reason for proportional notation lay in what may be called minim equivalence: that is, in French notation, where a change of mensuration occurred, the relationship between the two mensurations was that of minim = minim (this is clearly established at this time by pieces in which mensuration changes in the different parts occur at different points in the composition – it applies in fig.65 between bar 16 and bar 17). Proportional notation was simply a way of overriding that equivalence, and thus of extending the possibilities of the mensural system. It did so for shorter or longer passages by expressing a different note relationship to a preceding passage or to other voices in the composition.

If the relationship was expressed numerically, the number of new units would be placed above the equivalent number of old units in the form of a fraction. The unit referred to in such a fraction was normally the minim, though it could be the semibreve of the same kind. Thus the '3' in fig.65, which implies 3 over 2, indicates the occurrence of three minims in the time of the previous two. The half-circle with vertical bar (often called 'cut C' by modern writers: fig.66*a*) indicated what was known as 'diminution': that is, the performance of a passage faster

64. Part of the tenor of a Gloria by Dunstaple (I-Bu 2216, p.24), with transcription

65. Part of top voice of a Gloria by Binchois (I-TRmp 87, ff.26v–27r), with transcription of all four voices

than normal, by a specified ratio. Sometimes diminution occurred in the exact ratio of 2:1, in which case it was called *dimidietas*. In other cases it did not or could not; a slight acceleration may be denoted by Tinctoris's *acceleratio mensurae*. Anonymus 12 (*CoussemakerS*, iii, 484) reported that with the circle with vertical bar ('cut O': fig.66*b*) one third of all values was taken away. Later in the century these 'cut' mensuration signs were sometimes used as a conventional signal for imprecise diminution which enabled longer note values to be written, and sometimes they were used with no apparent mensural significance or as general-purpose signs (Wegman, 1992; Bent, 1996). This was a way of avoiding an otherwise inevitable flood of short note values, with their less easily legible stems. The reversed half-circle (fig.66*c*) sometimes carried the function of duple diminution when placed after a passage governed by the half-circle. However, when it occurred after a passage with a triple dimension

(a) ¢ (b) Φ (c) Ɔ

66. Mensuration signs: (a) 'cut C'; (b) 'cut O'; (c) reversed half-circle

to its mensuration (circle or half-circle with dot) it indicated a proportion of 4 : 3 (see Hamm, 1964; *see also* Proportional notations). The principle of equating notes of different denominations by means of a stated ratio became a well-established practice in the music of Ockeghem's generation, when numerically modified mensuration signs could shift the basic set of relationships in the way shown in fig.67.

	C	O	⊙	⊙	C2	O2	⊙3	⊙3
					2	3	2	3
	2	3	2	3	2	2	3	3
	2	2	3	3				

67. Numerically modified mensuration signs

But apart from the cultivation of proportions in a few works by a small number of composers, the trend of the late 15th century was towards notational simplification. It is significant that, at just the same time, the late 15th century and the early 16th, cases arose of a simplified notation using only one note shape and repeating it at the same pitch to make up any note of greater value, or using only a short vertical stroke in the same way. Such a notation was presumably designed for singers who could not cope with the complexities of the mensural system, especially with imperfection and alteration. It was in the early 16th century that note values in mensural notation came to be precisely determined by their appearance regardless of context, rather than by their denomination as long, breve, semibreve or minim in a given context (the step that Franco had achieved) – at least, that became true of the essential working of notation, for imprecision and considerations of context in practice continue to feature in notation right up to the present day. However, in about 1500 musicians increasingly often placed a dot after a note that was to be perfect, even where earlier practice would not have required one. The practice of alteration gradually decayed. An intermediate stage before notators felt free to place an imperfect breve before a perfect one was the use of the coloured (black-full) breve where previously an altered semibreve would have been used.

4. Mensural notation from 1500.

(i) General. The simplified void notation of the late 15th century and the 16th, used throughout Europe for the international polyphonic repertory, was, like the medieval systems from which it developed, a singer's notation. It was not well suited to notating more than a single melodic line, especially when associated with printing by movable type. In succeeding centuries, however, especially after the rise of the thoroughbass, theory and teaching were increasingly controlled by instrumentalists such as keyboard players, and the staff notation used for the bulk of the repertory was influenced by instrumental requirements, adopting many features that permitted it to express increasingly complex information. Conversely, keyboard tablature began to decline. The instrumental features adopted included, in the 16th and 17th centuries, the barline, beam and slur, permitting the clear grouping of notes for rhythmic and other purposes; the standardization of clefs, facilitating the sight-reading of even fairly complex textures; and the reintroduction of the score, which had been dropped in French notation in the 13th century. In the 16th, 17th and 18th centuries, the demisemiquaver and the hemidemisemiquaver were added to the range of note values; keyboard notation adopted, when necessary for the sake of clarity, a score layout with more than two staves to the system, not previously used except in the partitura. In the 19th century, the vocabulary of signs for dynamics, accents and articulation was greatly extended; some novel features, which became basic to 20th-century practice, were introduced by Beethoven, Schumann and Liszt.

Thus notation continued to develop after the 16th century. Yet a rift gradually developed between notational theory and practice; professional musicians often came to treat theory as elementary and in consequence to expound it merely within the sphere of musical rudiments or incidentally in treatises on performance. This situation began to change only in the second half of the 19th century. Meanwhile, however, proposals for reform had been made, from the 17th century onwards, by those seeking a universal musical notation. Even though most proposed reforms were impracticable and were adopted by no-one but their inventors, as a whole they strikingly illustrate the desire of Western notators for a notation independent of any single musical style. Even a system as economical and adequate as Tonic Sol-fa was not adopted for the bulk of diatonic music: its limitation in practice to a single style was felt as a fatal flaw, as similar limitations had never been present in medieval notational systems. That did not prevent its use for the benefit of the musically uneducated: and Tonic Sol-fa merely exemplifies the numerous novel notational systems for vocal music devised from the 16th century onwards for this purpose. These systems are often unconcerned with theoretical abstractions, and thus resemble instrumental tablatures. Most of them were based on popular solmization practice, and many provide the same information in more than one way.

A turning-point in notational practice seems to have occurred in the second half of the 19th century in consequence of the harmonic and rhythmic theory of the period (Moritz Hauptmann, Hugo Riemann and Mathis Lussy). The notational principles outlined, to some extent *en passant*, by these theorists were popularized in Germany, France and Britain and may have laid the foundations for a number of details of modern notational theory and practice. In particular, the rules for orthography in accidentals and in rhythmic notation (with slurs and beams) came under close scrutiny, with attempts to abolish the less theoretically justifiable aspects of notation in the 18th century and the early 19th. The heavily edited versions of Classical works produced by Riemann and others may well represent attempts at transcription into a new notational language, rather than arbitrary suppression of the composer's wishes in favour of the editor's; perhaps for that reason, some scholars opposed the concept of the *Urtext* edition, holding that the careless adoption of obsolete and hence misleading notational conventions was indefensible.

The notation evolved by Riemann and Lussy, precise as it is in rhythmic detail, well deserves the title of 'orthochronic' notation (an equivalent term was coined by Chailley, 1950): note shapes uniquely fix durational relationships between notes, and there are no subdivisions of notes other than duple unless specially indicated. However, the extension of this term to all notation since the 16th century seems arbitrary, since no account is then taken of the numerous conventions whereby rhythms intended in performance were not explicitly indicated in the score. These conventions, including the occasional anomalous triple subdivision of note values, were widespread until the last third of the 19th century, and may be found in much music (though not the bulk of the repertory) even later than that. The term 'orthochronic' is, accordingly, avoided here in favour of the more comprehensive term 'mensural', which may legitimately be used wherever note shapes are directly related – even if only vaguely or notionally – to the durations of notes in performance; in other words, to almost all notation in the mainstream

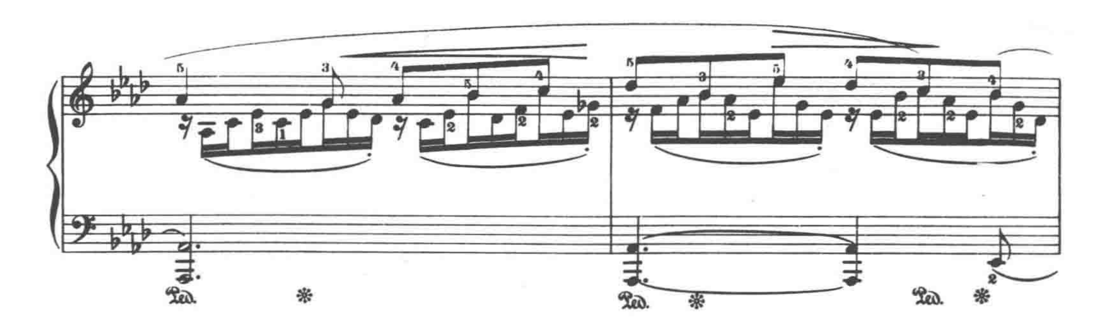
repertory, classical or popular, except tablature, from Franco of Cologne to the present.

In the 20th century proposals for notational reform by professional notators and experiments in notation by composers greatly increased. Where these are not simply arbitrary, they represent to some extent further developments of the notation of the late 19th century, with further extensions of the capacity of mensural notation to carry large quantities of information; they may be seen as new departures reflecting the new ideas underlying the music. With the rise of historical musicology and ethnomusicology, notation has been faced with new problems in the attempt to use it to represent material originally designed for another, or no, notational system. In ethnomusicology, notation has become for almost the first time on any large scale descriptive rather than prescriptive. Since most musical works notated in the 20th century were tonal and traditional in style, whether editions of old music or new compositions, only certain universally useful devices, such as the representation of durations proportionally by the spacing and alignment of notes, gained universal currency.

The fullest discussion of the history of Western notation, copiously illustrated, is to be found in the two volumes of Wolf's *Handbuch der Notationskunde* (1913–19/*R*), to which the reader is referred for more detailed information; a shorter survey is Rastall's *The Notation of Western Music* (1983, rev. 2/1998). Apel's *Notation of Polyphonic Music, 900–1600* (1942, rev. 5/1961) is also valuable for medieval and Renaissance notations. For information on recent notational usage the volumes by Read (1964 and 1978), Karkoschka (*Schriftbild*, 1966) and Risatti (1975) may be found helpful.

(ii) Notes: shapes, colours, abbreviations. Void ('white') notation (see §3(vii) above), with duple relationships for the most part between note values, and dots (when used for rhythmic purposes) only as dots of addition, was generally (though not universally) adopted by the early 16th century in both vocal and instrumental music, tablatures apart. It was generally adopted by printers from Petrucci onwards, since it was readily adaptable to printing from movable type; in some music, such as popular metrical psalters, this notation survived virtually unchanged for centuries (as in fig.68, a 19th-century metrical psalter). Even when the appearance of the notation changed, the representation of primary (uninflected) pitches by their position on the staff, in the manner established in the Middle Ages, remained unchanged in succeeding centuries except in occasional instances where staff notation was treated as a tablature. The latter may be seen in the modern notation of harmonics on string instruments by finger position rather than by sound, and more strikingly still from the 17th century in SCORDATURA notation, where the written notes or chords represent finger positions and, since the instrument is abnormally tuned, do not correspond with the sounds. For the notation of accidentals, see §(vi) below.

After 1600 black-full notation (i.e. where the note heads of minims and higher values are black) was never again of great importance, despite the advocacy of such a notation by Lacassagne (1766). It was used for symbolic reasons in some works of the 15th, 16th and 17th centuries, such as Ockeghem's *Missa 'mi-mi'*, with black-full notes at the word 'mortuorum', and J.C. Kerll's *Missa nigra* (*see* EYE MUSIC). The opposition of void and full notes was used also in various 20th-century reform proposals, for distinguishing pitches rather than durations (e.g. in Equitone, where full notes are a semitone higher than the equivalent void notes, and in KLAVARSKRIBO, where void and full notes correspond with white and black notes on the modern keyboard – see fig.79 below).



Red notes were still in occasional use at the beginning of the 16th century for distinguishing rhythmic proportions (as in *GB-Llp* 1, probably dating from the reign of Henry VIII), but dropped out of general use as rhythmic style became simpler; their use would, moreover, have entailed unnecessary expense in music printing. They continued, however, to be described by theorists such as Morley (*A Plaine and Easie Introduction*, 1597; ed. Harman, pp.114ff), and red and other colours have remained in occasional use to the present day in one of their oldest and simplest uses: to distinguish individual strands of the notation from one another. Red, green and black notes are used for this purpose in the 16th-century manuscript *D-Bsb* Mus.ms.theor.57, and red and black notes on a single staff in the 18th-century manuscript *Bsb* Mus.ms.40296. Red is used to distinguish the main melody in 16th-century Spanish lute tablatures (here with red numerals rather than red notes); and the same principle appears in a few late 19th-century editions (fig.69). Dallapiccola used square red notes for a canon whose resolution is printed in normal notation, in the 'Andantino amoroso e contrapunctus tertius' from the *Quaderno musicale di Annalibera* (1952). Other uses of colour include yellow or red for notes subject to chromatic alteration (G.M. Trabaci).

Coloration in a more general sense – full notes used in opposition to void notes for rhythmic purposes – survived in the 16th and 17th centuries especially for expressing hemiola rhythms in 3/2 time, three full semibreves or equivalent replacing two normal void dotted semibreves.

68. *Notation for the Geneva melodies in a Malay metrical psalter, including traditional clefs, time signatures, lozenge-shaped notes and the custos at line ends ('Sûrat Segala Mazmûr'; Haarlem: Enschedé, 1822) [tops of two columns]*

69. Red notes in the original (notes with upward stems) distinguish the main melody in otherwise conventional late 19th-century notation with systematic phrasing, dynamics and pedalling indications (Mendelssohn, 'Song without Words' op.38 no.6, in 'Pianoforte Pieces with the Melody Notes Printed in Red', ed. S. Hawley, i; London: Lengnick, 1899)

The derivation of these full semibreves from 14th- and 15th-century imperfect semibreves is clear, even though redundant dots had been placed after perfect semibreves generally from about 1500; the continuing influence of 15th-century principles may be seen in the omission of dots after 'perfect' void semibreves in even so late a source as Caccini's *Euridice* of 1600 (fig.70).

Soon after 1600, coloration was used for entire movements in mensural notation, such as courantes, whether or not hemiola rhythms were intended (fig.71*a*, from Frescobaldi, 1626, where the rests show that the 'crotchets' are coloured minims). This practice, which was derived from tablature notation, may have contributed to the increasing use of the crotchet as the beat; in G.B. Fontana's practice (1641, fig.71*b*) crotchet rests are used to correspond to coloured minims, and the semibreve rest is used for a bar's rest (Riemann, 1910, pp.140ff).

Smaller note values (*fusa* and *semifusa*) were increasingly used in the 16th century, owing to, or resulting in, the slowing down of note values in general (see §(iii) below). In the late Middle Ages, a semiminim could be written as a coloured note (red in black notation, black in void notation) with a stem but without a flag, or as a non-coloured note with both stem and flag; this generated a series of smaller note values with alternative forms, the non-coloured forms bearing one more flag than the coloured. These alternative forms remained theoretically available, although the coloured forms (as in modern practice, where a crotchet is the coloured form of the minim) have been generally preferred. This meant,

Coro Primo à v. e ſi replica al fine d'ogni ſtanza. Al canto al ballo.

Al cãto al bal lo all'om bre al prat'adorno Alle bell'ond'e liete

Al canto al bal lo all'om bre al.prat'adorno Alle bell'ond'e liete

al prato adorno Alle bel.'ond'e liete

al prato adorno Alle bell'ond'e liete

al prato adorno Alle bell'ond'e liete

70. Score notation: the first five notes in the bass are 'perfect' semibreves each equal to three minims, unlike the sixth which is imperfected by a minim; all voices employ coloration in the fourth bar to ensure that the semibreves are imperfect (Caccini, 'Euridice'; Florence: Marescotti, 1600)

71. *(a) Coloration used throughout a section in triple time, the notes with stems ('crotchets') being equivalent in value to minim rests (see line 2, bar 3) (Frescobaldi, 'Il primo libro di capricci'; Venice: Alessandro Vincenti, 1626) (b) Coloration used throughout a section in triple time, the notes with stems ('crotchets') being equivalent in value to semiminim rests (see system 2, bar 1) (G.B. Fontana, 'Sonate a 1.2.3.'; Venice: Bartolomeo Magni, 1641)*

paradoxically, that as small note values were increasingly used, and especially as the semiminim came to represent the beat at the end of the 16th century, 'void' notation (i.e. notation in which the minim and larger values were written with white note heads) consisted more and more of black notes.

The non-coloured forms of the semiminim and below, which in the 16th century often occur in sections in fast triple time where the time unit was the semibreve rather than the minim, survived until the 18th century (fig.72, from Couperin). By the time of Couperin almost all the shorter note values used today may be found, mostly in written-out ornamentation; both small and large note values, with corresponding exceptional time signatures, occur for symbolic reasons in Telemann's *Getreuer Music-Meister* of 1728 (*see* EYE MUSIC, fig.1). Beethoven used small note values and rests particularly lavishly (fig.73, from the Fantasia op.77). For the grouping of smaller note values by means of beams, and for the continuing use of ligatures, see §(iv) below.

Standard small melodic formulae, mostly of short notes (ornaments), had been abbreviated with special signs in keyboard tablatures from the late Middle Ages onwards, and in medieval vocal music some abbreviations are also found to indicate repeated material (for an example *see* ISORHYTHM). The double bar with two (or four) dots to

Les Disloqués

Les Boiteux.

Reprise.

72. *Void notation for a triple-time section in an 18th-century work (F. Couperin, 'Second livre de pieces de clavecin'; Paris, 1745)*

indicate repetition is already found in essence in 15th-century polyphony. A large vocabulary of signs indicating abbreviations of ornaments, not generally precise before the 17th century, was developed in the 18th century, especially in French keyboard and lute music (*see* ORNAMENTS, §7). Some notators, such as Bach, often preferred to write ornaments out in full, a tendency increasingly evident in the 19th century as improvised ornamentation declined (*see* IMPROVISATION, §II, 3(iv)). A parallel phenomenon was the increasing reluctance of notators during the 19th century to abbreviate at the repetitions of short phrases, for example in Alberti basses. (For details of special notations for abbreviating repeated notes and figures *see* ABBREVIATIONS.)

The lozenge-shaped notes of many 15th-century sources continued to be used in much printing from movable type (see fig.68 above) and in carefully written manuscripts throughout the 16th century. Rounded note shapes came increasingly to replace them from as early as the 15th century (fig.74, with pear-shaped notes, from *I-PEc* G.20); no adequate reason seems yet to have been given for this change. Etienne Briard jettisoned the lozenge-shaped notes in favour of oval ones in French printing as early as about 1530, but in England the change did not occur in printing until Carr's *Vinculum societatis* (1687; fig.75).

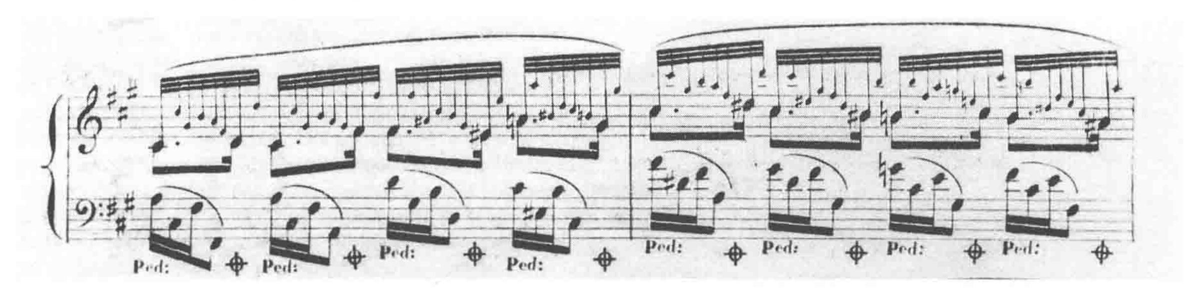
Notes of a smaller than normal size occur in early 19th-century English songs, printed as keyboard music (i.e. with the vocal part and accompaniment notated on two

73. *Small note values in a slow tempo with quaver beats, including in the penultimate bar semihemidemisemiquavers and a semihemidemisemiquaver rest (Beethoven, Fantasia op.77; Vienna: Artaria, c1810)*

74. *15th-century void notation with pear-shaped notes but still without downward minim stems (I-PEc G.20, f.42v)*

75. *Modern oval notes, with modern bar-lines, beams and slurs (J. Carr, 'Vinculum societatis'; London, 1687)*

staves rather than three: see §(v) below). The main melody is notated normally, whereas the accompaniment on the upper staff is distinguished by small notes (fig.76). The use of small notes to distinguish ornamentation, alternative versions of passages or other subsidiary material became normal in 19th-century piano music (fig.77, from Chopin's Prelude op.28 no.8, published in 1839; the proportion of small notes to large is particularly high). The small notes often did not count towards the value of the full bar; sometimes they refer to notes intended to be played very rapidly. (For the use of small notes to represent music without a regular pattern of beats, see §(iii) below.)



Unconventional note shapes, like some coloured notes, have occasionally been used within the normal mensural system for special purposes (see fig.78, with reversed note shapes representing one strand of a complex texture). The problem of differentiating such strands was solved by Schoenberg, on the other hand, by the use of squared slurs joined to the capital letters *H* (*Hauptstimme*, principal voice) or *N* (*Nebenstimme*, subordinate voice).

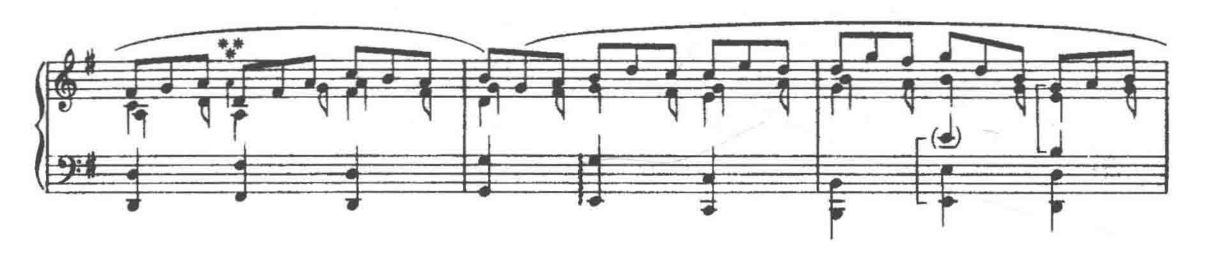
Since the reintroduction of the score, and particularly in the 20th century, duration has frequently been related to the horizontal distance between notes, though aesthetic considerations have often led notators to place notes symmetrically between bar-lines, so that arguments about simultaneity cannot usually be settled conclusively by considering alignment. Thus the staff has been treated as the axis of a graph; and, as far as this is true, the indication of duration by note shapes is redundant. Reformers have sometimes attempted to eliminate the redundancy: Hans Wagner (*Vereinfachte Notenschrift*, 1888) proposed the abolition of all note shapes but the semibreve. The Equitone and Klavarskribo systems have attempted the same: duration is related to the distance between notes, and note shapes are used to represent pitch (fig.79).

Other proposals for changing or abolishing the mensural note shapes, up to the late 19th century, have generally been of little practical significance. Examples are the 15th-century proposals of Giorgio Anselmi to distinguish durations by ascending and descending stems variously applied to a void breve shape (Gaffurius, *Practica musice*, 1496, ii, chap.4) and, as one of the first efforts to devise a thoroughly reformed notation, J. van der Elst's series of somewhat complex note shapes (fig.80, from *Notae Augustinianae*, 1657; see also his *Den ouden ende nieuwen grondt van de musijcke*, 1662) for both vocal and instrumental notation. Another unsuccessful reform, that of Sauveur (*Système général des intervalles des sons*, 1701), attempted to give each pitch a distinctive

76. *Small notes distinguishing subsidiary material from a song melody (R.A. Smith, 'The Scottish Minstrel', i; Edinburgh: Purdie, 1821)*

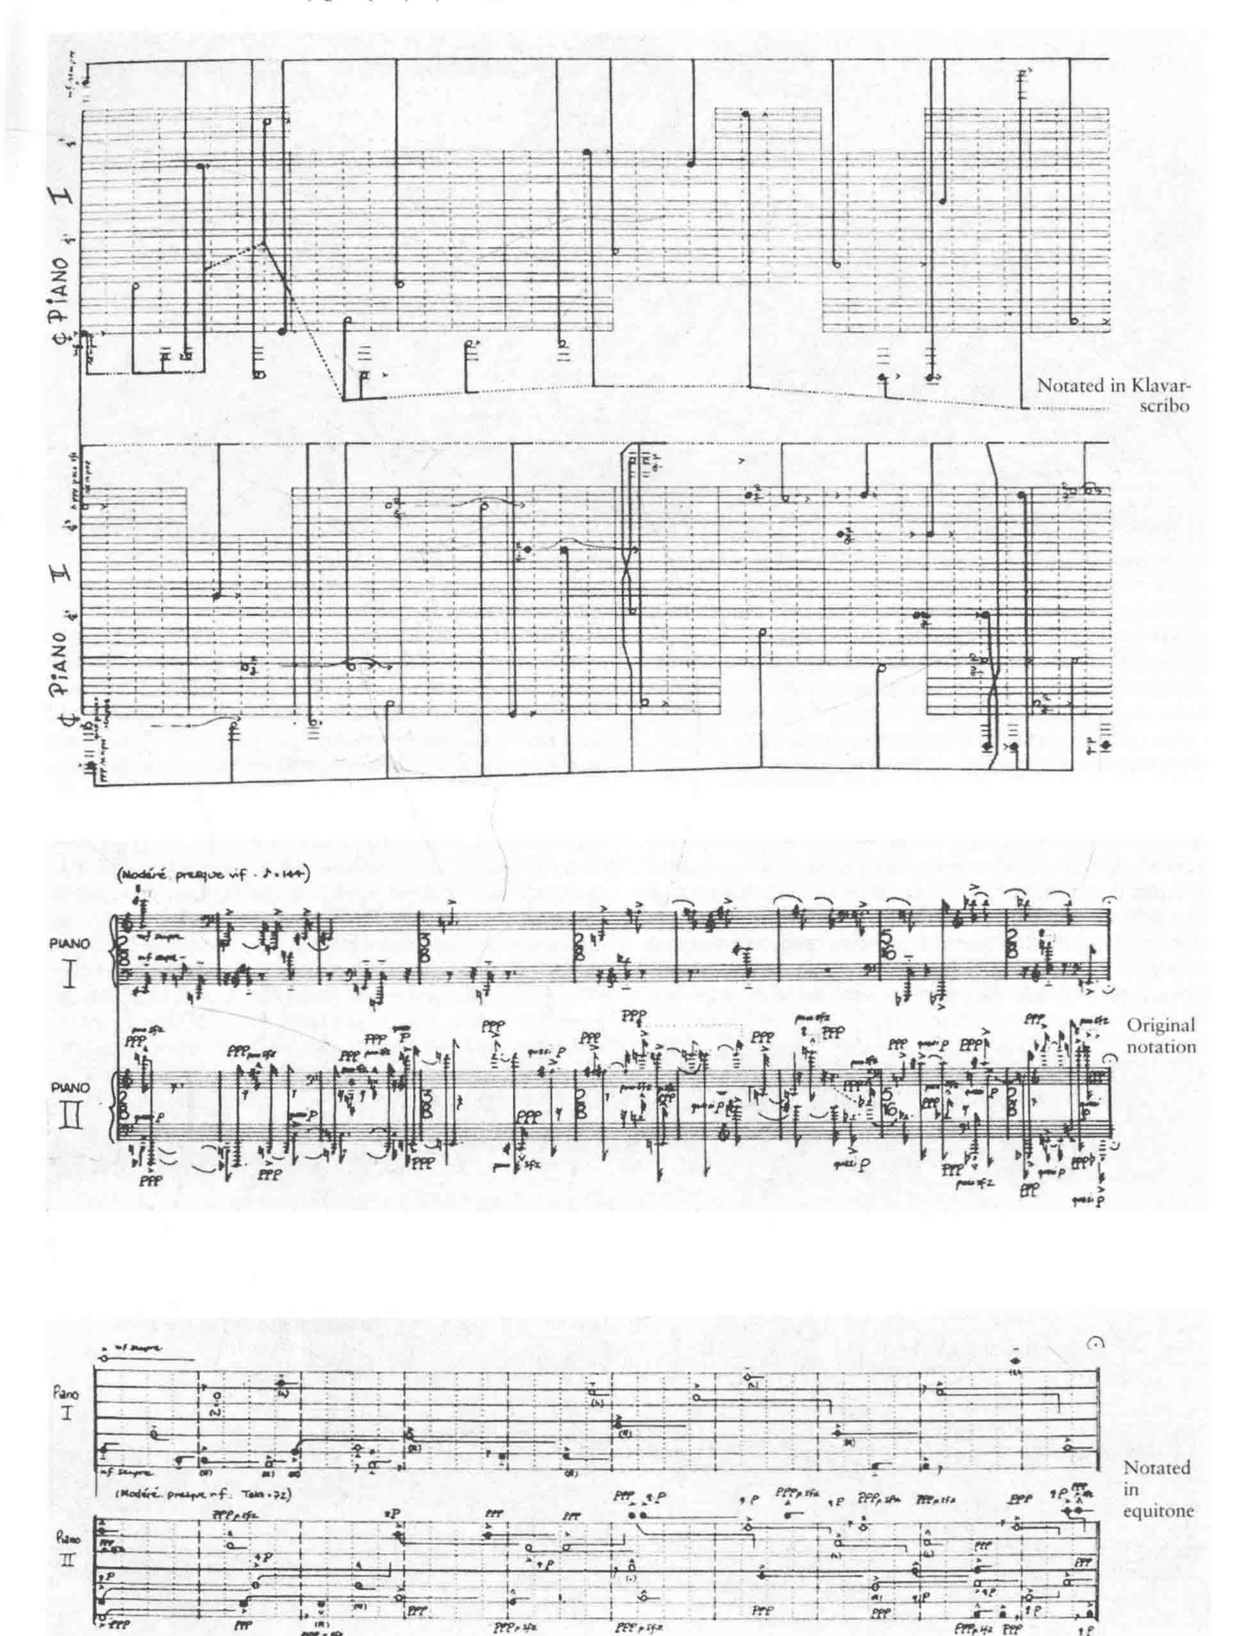
77. Small notes, to be played in measured time, distinguishing ornamental figuration (Chopin, Prelude op.28 no.8; Paris: Catelin, 1839)

note shape, and may thus be seen as a forerunner of the 19th-century shape-note system (see §5(iv) below; the shape-notes were taken up and used in a different sense by Cowell: see §(iii) below). (For details of other reforms, see Wolf, 1919, 335ff; for novel note shapes representing various durations, see Risatti, 1975, pp.1ff.)



For chords including several adjacent semitones, notated on a single staff, traditional mensural notation is inadequate, allowing as it does only for two vertical groups of notes a 3rd apart, either side of the stem. From the early 20th century such chords were notated with supplementary diagonal stems branching from the common stem, by means of which the chords could include three vertical groups of notes. The extension of such chords into clusters suggested the adoption of abbreviated signs, notably those of Henry Cowell (fig.81), which have been adapted also to represent sustained clusters (see fig.82 and Risatti, 1975, pp.26–7, 36).

(iii) The division of time. Vestiges of the system of proportional mensuration signs persisted to the 18th century in some places. After 1500 the more complex proportions are found only in theoretical works, and in a few 16th-century polyphonic works to illustrate the text (e.g. the pieces by Renaldi and Striggio quoted by Morley, 1597). Nevertheless proportional signatures, in the form of fractions like those of the 15th century and, as then, cancelled by the reciprocals of the fractions, were used in the 17th and the early 18th centuries in Italy and Germany for pieces with short sections in different metres (e.g. 12/8 is cancelled by 8/12, 6/4 by 4/6). Apel's suggestion (*Notation of Polyphonic Music*, 5/1961, pp.163, 442) that these mensuration changes might have carried connotations of tempo change seems only speculative. Examples of this notation occur in Frescobaldi (fig.83), Corelli's op.5, Georg Muffat (*Apparatus musico-organisticus*, 1690), F.X. Murschhauser (*Prototypon longobreve organicum*, 1707) and the manuscript *CZ-KRa* II/133. On the more complicated question of C and ₵ as proportional signatures, see below.

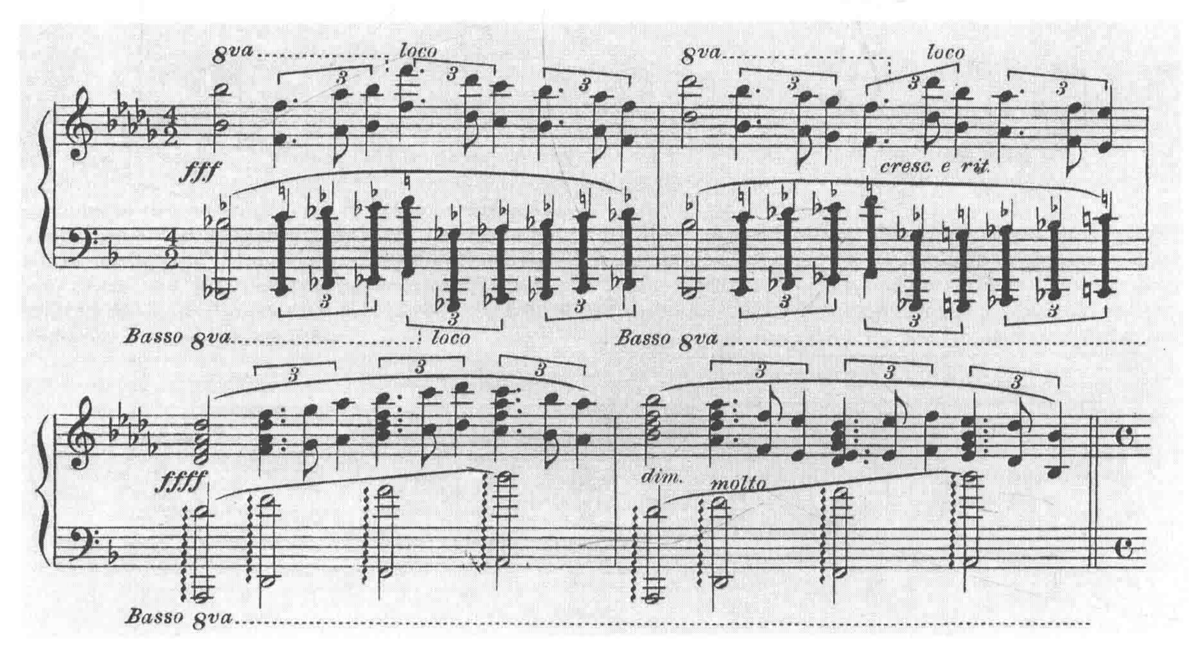


A fundamental change in *tactus* notation occurred, however, from the 17th century; it eroded the significance of proportional signatures for tempo, and makes unambiguous determination of tempo very difficult in a good deal of later music. In medieval notation there was a progressive slowing down of note values (see §3 above), and this continued during the 16th century, partly no doubt owing to the proliferation of short note values. By the second half of the century the minim had become the normal beat in polyphony. But this slowing down did not continue uniformly throughout the polyphonic repertory: even though the crotchet became the main time unit for much music in the 17th century, the minim continued to be the normal beat in much music produced for popular consumption, such as the metrical psalters and hymnals, and in church music in the *stile antico*. Indeed it still survives as the normal beat in hymn tunes and Anglican chants; the crotchet has only recently taken its place in some hymn tunes, and then usually only when settings are complex or connotations of a modern style are sought.

The change, then, lies largely in the increasing readiness of notators arbitrarily to adopt different note lengths as the main beat in different contexts (for an example of this *see* MADRIGAL, fig.2). This variety in *tactus* notation presumably had its roots in the 15th-century notation of augmentation and diminution, which continued to be expounded as the basis for theoretical distinctions such as those between C and ₵. By the time of Beethoven any note value between the semiquaver and the dotted minim was capable of functioning as the main beat (compare parts of the Arietta of the Sonata op.111, fig.89 below, with his scherzos: that of the Ninth Symphony includes specific recognition of the dotted minim as the beat – 'ritmo di tre battute', etc.).

With this increasing variety of augmentation and diminution, especially from the 18th century, any note value could theoretically function as the beat, independent of considerations of tempo, through a novel explanation of fractional time signature (found at least as early as

78. Reversed notes distinguishing a subsidiary strand of the texture (J.S. Bach, arr. M. Hess, 'Jesu, Joy of Man's Desiring'; London: Oxford University Press, 1926); the small note in bar 1 also has this meaning, and the note in parentheses may be omitted

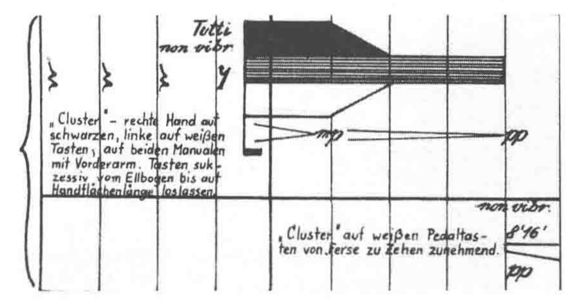


79. *Comparison of conventional 20th-century staff notation, Klavarskribo and Equitone, using a passage from Boulez's 'Structures' (E. Karkoschka, 'Das Schriftbild der neuen Musik'; Eng. trans., 1972)*

80. Proposed novel note shapes (right) compared with the established shapes (left) (J. van der Elst, 'Notae Augustinianae', Ghent, 1657)

G.M. Bononcini's *Musico prattico*, 1673). Here, as in modern theory, the denominator of the fraction representing the time signature indicates the note value on which the metre is based (usually the beat, with the figure 1 for the semibreve, 2 for the minim, 4 for the crotchet etc.), and the numerator indicates the number of such note values to the bar.

Parallel with the partial emancipation of the time signature from tempo, there were two developments tending to make the determination of tempo and time easier: the increased use of bar-lines and of verbal specifications of tempo. Vertical lines had been used through staves in medieval score notation, not in their modern sense as bar-lines but to divide sections from one another; but some 15th- and 16th-century keyboard and lute sources include the visual separation of units of one or more bars, either by a space left between them or by a bar-line. Such bar-lines are used with varying degrees of consistency and frequency (for bar-lines marking off single beats, see Apel, 1942, p.67). The bar-line was used in vocal music also (mainly in scores) from the late 16th century, but was not adopted generally in mensural notation until the 18th century. Even later than that some notation lacked it, as do some 19th- and 20th-century editions of old music. In 20th-century music dotted bar-lines were used to clarify the subdivisions of larger bars, as in Debussy's *Les sons et les parfums tournent dans l'air du soir* (from *Préludes*, i, 1910). (For the use of conflicting bar-lines, see below.) The increasing unreliability of time signatures as indicators of tempo is also reflected in the adoption of Italian (and later German, English and other) terms for this purpose. These tempo indications (in



81. Cluster notation (H. Cowell, 'The Tides of Manaunaun'; New York: Breitkopf & Härtel, 1922); the distinction between white and black clusters is purely durational

Donington's terminology, 'time-words': see *Interpretation of Early Music*, 3/1974, pp.386ff), like bar-lines, seem to have appeared first in polyphonic music for soloists, perhaps because of the complexity of this music from the individual performer's point of view when compared with vocal music. Tempo indications occur in Luys Milán's *El maestro* (1536) but were not generally adopted before the 17th century: the terms *adagio*, *allegro*, *grave*, *largo*, *lento* and *presto* are attested between 1596 and 1619, with others during the 17th century. These tempo indications have not always carried their present connotations, nor has their significance always been precise. From the early 19th century (Beethoven) they were supplemented still further by metronome indications, and in the 20th century (Bartók) by precise indications of the duration of a piece in minutes and seconds (*see* TEMPO AND EXPRESSION MARKS and METRONOME (i)).

Despite these developments, time signatures never completely lost their associations with tempo, although the associations of numerical (fractional) time signatures, taken in isolation, are seldom unambiguous. No consistency exists in the music of the last three centuries even in the relationship between the note values chosen to function as beats and tempo.

With O and C, the circular and semicircular signatures inherited from the Middle Ages, practice was even more confused. Theorists continued to expound the significance of vertical bars in time signatures (as in ₵), and of the reversal of symbols (e.g. in Ɔ) as signifying diminution; but even when distinctions can be drawn between C meaning 4/4 and Φ ('alla breve') meaning 2/2 or 4/2 (the latter, for example, in the Credo of Bach's B minor Mass), it is by no means clear that the tempos of the beats were intended to be equivalent. In the 16th century the sign C became uncommon, the basic duple metre of most polyphony being signified by ₵; precisely the reverse convention became common at the beginning of the 17th century, and the reason for the change is obscure, for no change in meaning seems necessarily to have been intended. This change occurred in English music printing quite suddenly about 1594 in madrigal partbooks and about 1621 in psalm books (fig.84). These signs may enclose a dot without changing in meaning. Similarly, Φ is sometimes used as a synonym for O, C 3, C 3/2, Ͼ 3/2, ₵ 3/2, 3, 3/1 and so on, for quick triple time; from the 17th century O and Φ seem to have been dropped until Φ was later revived with a new meaning (see below). These time signatures were used without total consistency well

82. *Cluster notation for organ: the black symbol represents a cluster on the black keys, the 'void' symbol a cluster on the white keys or equivalent pedals (Z. Vostřak, 'The Pendulum of Time'; Vienna: Universal, 1968); these are supplemented by verbal instructions on the gradual release of the keys*

83. *Keyboard notation with a 12/8 time signature (bar 4, bass line) cancelled in the next line by an 8/12 signature (Frescobaldi, 'Toccate d'intavolatura'; Rome: Borboni, 1637)*

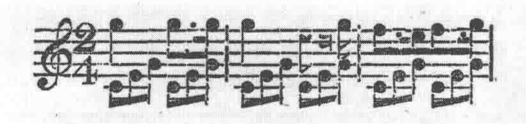
into the 19th century at least; Schubert often used ₵ *adagio* movements in 4/4 and C for fast movements, whereas Bruckner used ₵ for fast 4/4 movements and C for slow movements. (In the first movement of Bruckner's Seventh Symphony, moreover, it is hard to see a real tempo difference being intended between the *allegro moderato* ₵ of the opening and the *ruhig* C at bar 51.) Even books of rudiments may imply that C and ₵ are synonyms (Dibdin, *Music Epitomized*, 1808 edn., p.37).

The most that can be said is that vertical bars in time signatures, and reversed ('retorted') signs, indicate relatively fast tempos, but not always reliably; this is particularly likely when ₵ is used for music in the *stile antico*, or when the time signature changes during the course of a piece. (For relevant passages from a wide variety of theorists, see Donington, *Interpretation of Early Music*, 3/1974, pp.405ff.) There has been no thorough investigation of time signatures used since the 16th century; the degree of ambiguity at different times and places can scarcely be assessed, and the reasons for it are unknown.

Signs sometimes used in the 18th and 19th centuries as equivalents of 4/2 ('great alla breve') rather than ₵ (2/2

84. *English psalm book with a C time signature with an imperfectly deleted bar (Sternhold and Hopkins, 'The Whole Booke of Psalmes'; London: Stationers' Company, 1626)*

85. Three different but perhaps synonymous rhythmic conventions in a single piece in 6/8 time: crotchet-quaver alone (bar 8), crotchet-quaver with a figure 3 signifying a triplet (penultimate bar), and dotted quaver-semiquaver (system 2, bar 1) (T.A. Arne, 'VIII Sonatas or Lessons'; London: Walsh, 1756)



or 4/4) include 2/1, Φ, revived in a new sense (e.g. Bach, Gigue from Partita no.6, BWV830), CC (Rossini), C C and ¢ ¢ (Schubert, *Impromptu* D899 no.3, altered to ¢ by Schubert's publisher). Φ was sometimes written as C Ɔ (i.e. with its elements spaced out).

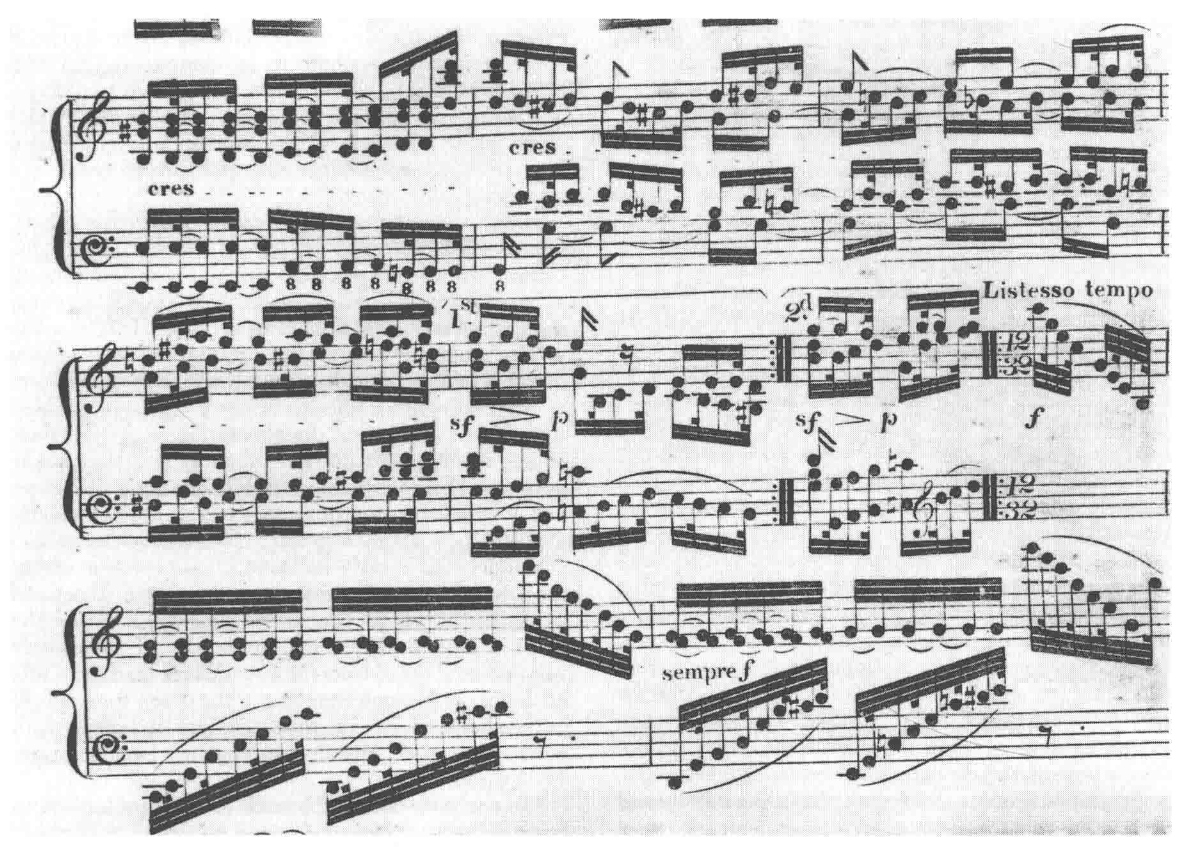
Even when the tempo implied by a time signature is clear, divisions of the time within individual bars are not always literally those written, even apart from considerations of agogics, in terms of which most notators intended the written note values to be interpreted with some degree of rhythmic freedom. Unwritten rhythmic conventions cannot generally be guessed in European music before the 16th century. At that period Tomás de Santa María wrote of pairs of notes written equal but intended to be played unequally (*Arte de tañer fantasia*, 1565); this may have been widespread, and a similar practice is well attested in 17th- and 18th-century France (*see* NOTES INÉGALES). In some cases of unequal performance of note pairs, the first note of each pair was to be lengthened; in others it was the second note, though this was generally indicated in some other way. Even written-out ornaments must have been subject to some rhythmic alteration in practice: some trills written as successions of even rapid notes were intended to begin slowly and then speed up. Such practice was in certain contexts so much a matter of course that notational devices were used to indicate the absence of inequality: either a verbal direction (e.g. 'notes égales') or dots written over individual notes (Marin Marais). A comparable unwritten rhythmic convention, attested in some 19th-century keyboard music, is the introduction of unwritten rhetorical pauses (see Franklin Taylor's preface to his Clementi edition, concerning the *Didone abbandonata* Sonata), though Lussy (1874) sought to restrict this practice to salon pieces (Eng. trans., pp.207–8).

Discrepancies between written and intended rhythms are particularly likely when different strands of the texture are notated in different time signatures; these multiple time signatures (in Read's terminology, 'polymeters') occur fairly frequently in the 18th century (as in Bach and Mozart). In such cases it is usually at least possible that

86. Dotted quaver and semiquaver to be accommodated to a sextuplet rhythm, as shown by the occurrence in bar 4 of a semiquaver in two polyphonic parts at once (Mendelssohn, 'Song without Words' op.85 no.1; London: Ewer, 1850)

87. Notation of a melody in 2/4 and its accompaniment in 6/8, cited by Callcott as being doubtful of interpretation ('A Musical Grammar'; London, 1806)

the conflicting rhythms which result are to be accommodated to one another (for exceptions, see below). Dotted-note figures with duple subdivisions against triplets are cases in point: particularly in late Baroque music it often seems likely that dotted rhythms are to be relaxed into triplet rhythms: the use of a crotchet and quaver under the numeral *3* (and often slurred), for the more accurate notation of triplet rhythms in cases such as these, is attested in the mid-18th century (Arne, 1756; see fig.85, where it is immediately adjacent to the older convention) but not generally used before the 19th. In some 19th-century notation, for example chorus parts in Verdi operas, the accommodation of dotted rhythms to triplets also seems highly probable. There is even some evidence in the 19th century of duplets in a melody and triplets in an accompaniment being accommodated to each other (Bochsa, *New and Improved Method of Instruction for the Harp*, *c*1818–19, p.60); although theorists explain triplets as three notes in the time of two, they do not always state that all the notes involved are equal in length. Some piano notation, with polyphonic figuration and notes occurring in more than one polyphonic voice (fig.86), absolutely requires accommodation of the rhythms, though its evidence ought not, perhaps, to be pressed into proving rhythmic accommodation elsewhere. The correct practice in Schubert's music, where dotted and triplet rhythms often appear simultaneously, is particularly difficult to establish (see *MT*, civ (1963), 626, 713, 797, 873).



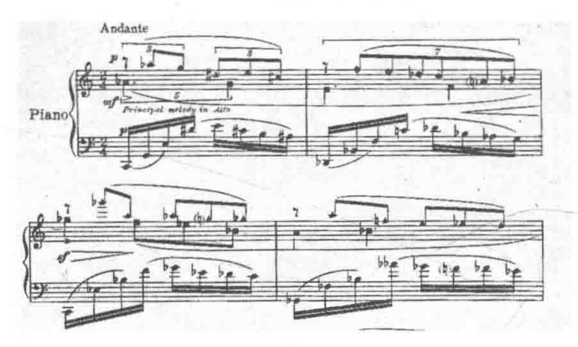
On the other hand, even an apparently straightforward case of dotted notes against triplets in Paisiello was cited as early as 1806 by Callcott (fig.87, from *A Musical Grammar*, p.236, repeated in many subsequent editions) as an ambiguous case: 'There is some doubt whether this Melody should be played as written, or as if it were compound; that is, one dotted Crotchet, one Crotchet, and one Quaver, in the first Measure'. The possibility of maintaining conflicting rhythms in certain contexts had been raised by some in the second half of the 18th century (Quantz, Eng. trans., 1966, p.82; Türk, 1789). A general tendency in cases of conflict to accommodate all rhythms to the most relaxed within a texture ultimately lacks logic, and a cautious approach combined with aesthetic judgment seems advisable in the present lack of detailed studies based on a large cross-section of notational evidence.

A distinction between intended and written rhythms, literally interpreted, is likely, on the grounds of the category to which a piece belongs, until the 19th century at least and even later in popular music. Double-dotting, though attested in Marais as early as 1701, is, like the precise notation of triplets, uncommon in mensural notation before the 19th century; yet the French overture is a well-known example of a category with a well-defined tradition of tempo and double-dotting in performance, which was required but not normally spelt out in the notation. There were conventions concerning the tempo and rhythmic features of various categories, particularly dances, such as the minuet, gavotte, chaconne and pastorale; these conventions varied to some extent according to period and country, and were sometimes ambiguous even to contemporaries. Nevertheless the notation used for them might for the sake of convenience vary in literal detail from the intended effect, if there was no danger of misunderstanding at the time – for example in the choice of C as the time signature of a gigue, with quick triple time intended throughout (see Ferguson, 1975, pp.92–3).

The tradition-bound approach to notation implicit in practice such as this led some to retain traditional 'category' notation even when the notation was no longer suitable to the category. Chopin, for example, retained the 3/4 time signature of the scherzo (descended from the 18th-century minuet) even though the tempo had so greatly increased by his time that the bar contains only one beat, and single phrases frequently contain notes tied over three or four bars, as well as rests of two bars or more (fig.88). According to later 19th-century rhythmic theory, this traditional notation seemed inadequate (for criticisms of category notation based ultimately on this theory, see S. Macpherson, 1908, rev. 1915, pp.39ff, and 1911, rev. 1932, p.17). Nevertheless, category (or rather style) notation remained alive in 20th-century popular music notation: notated almost universally in C, it very often requires to be interpreted on grounds of style as if notated with unequal pairs of notes closer to 12/8; moreover, certain other rhythmic characteristics (such as

88. Notation of a fast scherzo in the traditional 3/4, although this tends to obscure the rhythmic structure (Chopin, Scherzo op.54, 1842; autograph, PL-Kj)

89. Mixture of triple and duple subdivisions of semiquavers and, in the 12/32 section, demisemiquavers (Beethoven, Piano Sonata op.111; London: Clementi, 1823); in the second 12/32 bar, for example, demisemiquavers equal three hemidemisemiquavers except when followed and 'imperfected' by a single hemidemisemiquaver



syncopation) are frequently required by the style though not spelt out in the notation.

In addition to these complexities, there are many contexts in 18th-century music where triple subdivisions of notes are extensively tolerated. The lack of theoretical provision for such practice at times renders passages difficult to read: a notable example is the Arietta of Beethoven's sonata op.111 (fig.89) where the demisemiquavers are to be taken as 'perfect' in the medieval sense unless followed by a hemidemisemiquaver and thus rendered 'imperfect' (this detail of Beethoven's notation survives in modern editions of the sonatas).

The confusion in the use of time signatures and subdivision of beats, especially in relation to tempo, was recognized by Riemann (*Musikalische Dynamik und Agogik*, 1884). He recognized that the choice of note length for the beat was often arbitrary, particularly since 6/8, for example, could represent either two or six beats to the bar. Accordingly, and to facilitate the representation of beats with triple subdivisions, he proposed a system of time signatures based on the beat, ignoring differences that had long been artificial, such as that between 2/4 and 2/8. In his reformed system, time signatures were to comprise simple integers (e.g. 2, for two beats to the bar, whatever their nominal value), integers separated by dots (e.g. 2.3, meaning six beats in two groups of three each) or fractions (e.g. 2/3, meaning two beats with triple subdivisions, or 3.2/3 meaning six beats with triple subdivisions in three groups of two). However soundly based and economical, this ingenious system did not win general acceptance, though the use of the simple integer (found with a more restricted meaning earlier in the French Baroque), omitting the denominator of the conventional fractional time signature, is fairly widespread in 20th-century mensural notation.

Another abortive attempt to increase the variety of the subdivisions of the beat, in this case well beyond the capacity even of 14th-century Ars Subtilior notation though not matching the theoretical potential of 15th-century proportional notation, was the system proposed by Henry Cowell. He sought to supplement the traditional vocabulary of note lengths with 'two-third notes', 'four-fifth notes', 'four-seventh notes' (i.e. as fractions of a semibreve) and further submultiples of the semibreve, which were to be represented with void notes of various shapes without stems (triangles, squares, lozenges etc.). Some of these shapes were borrowed from traditional American shape-note notation (see §5(iv) below). These notes would then generate others by the addition of stems and flags, in the same way as the semibreve: with a stem, for example, 'third-notes', 'two-fifth notes', 'two-seventh notes' and so forth. The system is exemplified in Cowell's *Fabric* of 1917, published in 1922 (fig.90: see also Read, 1964, 2/1969, pp.76–7; Stone, 1963, p.19). A further system of durational proportions, based on ratios and not requiring novel note shapes – and thus more flexible than Cowell's system – has been adopted by Stockhausen (*Klavierstück I*).

Multiple time signatures occasionally occur from the 18th century in pieces where there is clearly no question

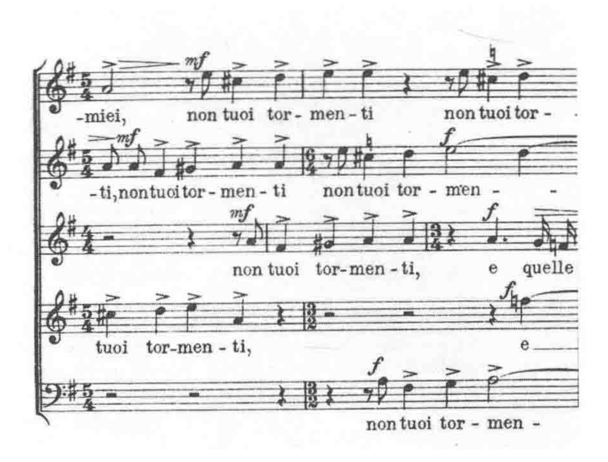
90. *The use of novel note shapes for uneven divisions of the beat, but retaining (redundant) traditional numerals and square brackets with the same sense (H. Cowell, 'Fabric': New York: Breitkopf & Härtel, 1922)*

of accommodating the rhythms in one part to those in another: Fux's *Concentus musico-instrumentalis* (DTÖ, xlvii, Jg.xxiii/2) has a movement with a simultaneous 'Aria italiana' in 6/8 and an 'Aire française' in ₵; and the 'Fanfare' from *La triomphante* in Couperin's tenth *ordre* (fig.91) has conflicting signatures, with the explanatory note 'Quoy que les valeurs du dessus ne semblent pas se raporter avec celles de la basse; il est d'usage de le marquer ainsi'. In some 20th-century music and editions of older music, both conflicting signatures and conflicting bar-lines may be found (figs.92 and 93: examples from Bartók, String Quartet no.3, 1929, and an edition of Monteverdi madrigals by Leichtentritt).

Time signatures representing additive metres (those in which the beats within a bar cannot be subdivided into groups of equal size) are found in the 18th century: Handel included a few orchestral bars in 5/8 in *Orlando* (1733) to represent madness; Burney (*History*) termed this 'a division of time which can only be borne in such a situation'. (The principle of additive rhythm occurs much earlier than this in *vers mesurés à l'antique*.) Additive time signatures were used by Reicha ('3/8 et 2/8'), Chopin, Tchaikovsky, Bartók (3 + 3 + 2 over 8) and others, but Moritz Hauptmann's rhythmic theory regarded them as 'inorganic' and thus to be condemned (1853, Eng. trans., 1888, pp.196ff). A list of 20th-century works with additive and other unusual signatures may be found in Read, 1964, 2/1969, pp.159ff; some are based (not necessarily consistently) on small rapid note values, rather than beats, as the unit for the numerator of the fraction. A variant of this occurs in Stockhausen's *Klavierstück I*, with the smallest note value, not necessarily directly represented in the changing time signatures, regarded as the basic time division. As changes of time signature within a piece became increasingly common in the 20th century, various notational details were simplified: the double bar previously usual before a change was often reduced to an ordinary single bar-line, time signatures were enlarged and written between the staves, or above the staff (Debussy).

For music partly or entirely outside a system of regular beats, notational practice has varied. The oldest sign representing an indefinite prolonging of a note's duration is the pause sign or fermata (a semicircle over a dot), inherited from the Middle Ages and still universally used in Western notation (in the 20th century it was sometimes modified to provide various degrees of extra length, or inverted to signify shortening rather than lengthening). Relatively lengthy passages of music without a regular metric beat occur from the 17th century onwards in recitative; Italian recitative was normally divided arbitrarily into bars of four beats, with C as a time signature, whereas French recitative was notated with frequent changes of time signature more closely reflecting the declamation of the text. (The arbitrary use of a time signature in Italian recitative is paralleled by the occasional 16th- and 17th-century practice of notating pieces in duple metre even though their musical sense is triple: see Apel, *Notation*, pp.66–7.) An experimental notation is found in some French harpsichord pieces of the last quarter of the 17th century and the early 18th century, where conventional time divisions are quite abandoned and the music notated either entirely in 'semibreves' grouped with slurs, or in a mixture of 'semibreves' joined with slurs and 'short note values' joined with beams (fig.94; for details of this notation and its interpretation *see* PRÉLUDE NON MESURÉ, and Moroney, 1976).

Various methods were used from the 18th century to notate irregular expressive melodies in free rhythm in instrumental music, as for example in written-out cadenzas or in keyboard fantasias (Mozart, Beethoven). They may be notated, like Italian recitative, by using a regular time signature and bar-lines and by dividing the passage arbitrarily into beats, as in the case of Beethoven's Ninth Symphony (fourth movement) or in his Piano Sonata op.31 no.2 (first movement). This notation has been maintained by later composers, including Wagner, for the shepherd's piping in Act 3 scene i of *Tristan und Isolde*. Alternatively the passages may be written without a time signature, either in notes of conventional size, or in small notes, or a mixture of the two, grouped with beams as required to clarify the accentuation, and with any bar-lines irregularly placed as an auxiliary means of grouping: this method was used by Mozart and many later composers (fig.95).



In notation of this sort the note values carry only imprecise connotations of duration. A more systematic use of imprecise durations was required in a number of some 20th-century works: notes of indeterminate length were notated in various novel ways, sometimes with

91. *Notation with conflicting time signatures, 9/8 against 3/4 (F. Couperin, 'La triomphante', from 'Second livre de pieces de clavecin'; Paris, 1733)*

92. *Score notation with conflicting bar-lines (Bartók, String Quartet no.3; Vienna: Universal, 1929)*

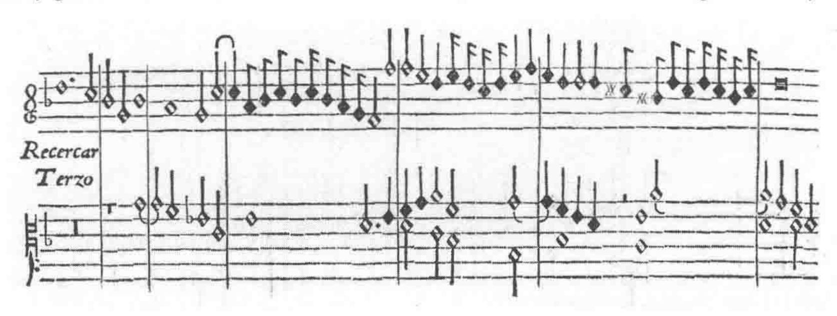
93. *Score notation of early music with conflicting bar-lines (Monteverdi, ed. H. Leichtentritt, '12 fünfstimmige Madrigale'; Leipzig: Peters, 1909)*

imprecise distinctions between longer and shorter notes (see Risatti, 1975, pp.1ff). In some 20th-century music, great rhythmic variety within the texture had to be represented without the aid of regular beats in any strand, and increased precision was sought in the notation of accelerandos and decelerandos, previously indicated only with verbal directions in the score. This was sometimes achieved through the modification of aspects of notation not formerly used to represent the division of time: converging and diverging multiple beams used for groups of short note values notated in an otherwise traditional fashion may denote increasing and decreasing tempos; or staves may be slanted upwards from the horizontal to denote an increase in tempo and downwards to denote a decrease in tempo (Bussotti). Other devices include the multiplication of metronome indications at short intervals, the use of '+' and '–' signs for (imprecise) tempo changes and so on (see Risatti, 1975, pp.21ff). Rhythmic proportions more complex than those available with the traditional numerals (*3* = three in the time of two, *5* = five in the time of four, etc.) have been represented by a precise spacing of notes to a specific scale (e.g. one second to 2·5 cm of score); this notation may be supplemented with auxiliary signs specifying the duration of individual 'bars' (short subdivisions) within the music, resembling the specifications of precise lengths in an architectural scale-drawing. In 20th-century music generally, whatever the style, vertical alignment of different parts of the texture became a generally reliable indication of the order in which notes are to be sounded, and whether or not notes are simultaneous; and spacing of notes tends generally to be proportional to their durations.

(iv) The joining and separation of notes. 15th-century ligature theory was fully expounded by Morley (1597), and still appears in 17th-century didactic material; but it was not always thoroughly understood, even by theorists, and the only ligature to remain in fairly common use was that 'with opposite propriety' signifying two semibreves.

94. *Unmeasured harpsichord prelude notation, without bar-lines and using only semibreves and slurs (J.-H. D'Anglebert, Prelude; F-Pn Rés.89ter, f.52v)*

95. *Unbarred notation of conventional size at the close of a 'cadenza in tempo' (Mozart, Piano Sonata K333/315c, 1783–4; D-Bsb); a written-out retard leading up to the final fermatas is created by the use of increasingly longer note values*



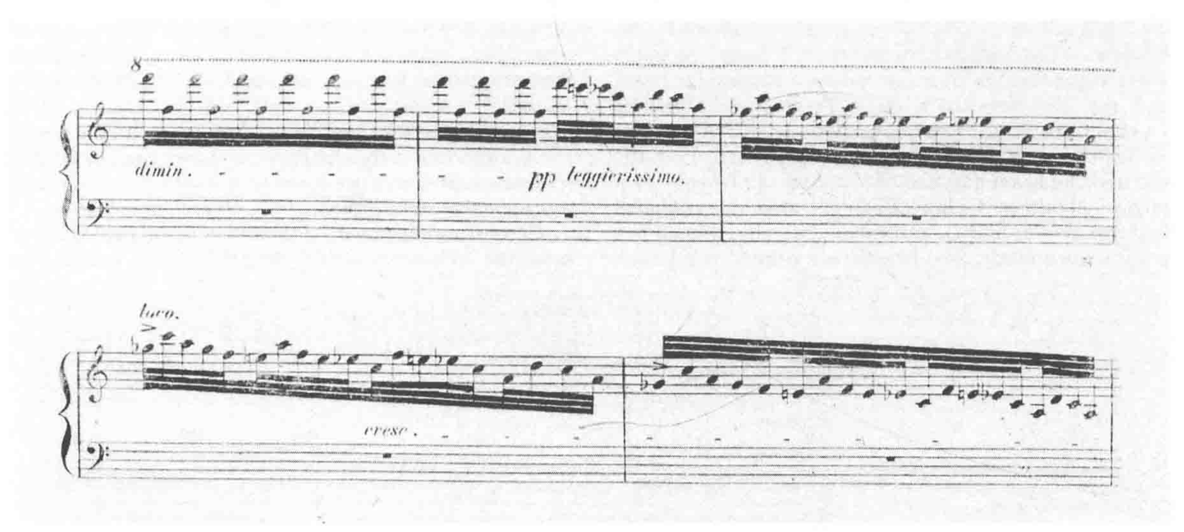
Even this ligature was confined mostly to music in the *stile antico*. The ligature system was unsuited to printing by movable type, and since it applied only to long note values it was relatively useless after the minim had become the basic beat in polyphony. The two-semibreve ligature survived in Austria as late as the first half of the 18th century (Fux).

Ligatures had always been relatively uncommon in keyboard and other instrumental notation, but a comparable device had been the beam, found in some but not all early keyboard sources to join together groups of small note values (e.g. in the Buxheimer Orgelbuch, *D-Mbs* Cim.352b; see fig.130 below) and in some sources to join groups of rhythm signs together in a characteristic grid pattern. In these sources the primary sense of the beam is rhythmic, since the first of any group of notes joined together is stressed; this continued to be the meaning of the beam in instrumental music even after it had been transferred to vocal music. Another device comparable to the ligature was the slur or tie; the latter occurs in 16th-century keyboard sources such as Cavazzoni's *Recerchari, motetti, canzoni* (1523) and Buus's *Intabolatura d'organo* (1549; fig.96). Both the beam and the slur came to be used in vocal music for a purpose originally served by the ligature: to join together the notes to be sung to a single syllable, the slur for long note values, and both the beam and the slur for short ones. Praetorius (*Syntagma musicum*, iii, 2/1619) recommended the slur in place of all ligatures save that 'with opposite propriety'; both the slur and the beam are used to join notes to be sung to a single syllable in Gabriel Bataille's *Airs de différents autheurs* (1608; fig.97), and occur generally, though not always consistently, in 17th-century printed collections and manuscripts of vocal music from Italy and southern Germany. They occur for a similar purpose in English printed music first in the *Vinculum societatis* of J. Carr (1687; see fig.75 above); it is not clear which (perhaps both) of these notational innovations is intended by the 'vinculum' of the title.

This 17th-century convention still survives in most vocal music, though some notators have begun to adopt a notation more closely resembling instrumental notation, since syllabic vocal music is often difficult to read if small note values are at all numerous. 20th-century additions to it in scholarly editions of old music included square slurs to represent notes originally grouped as ligatures, and dotted, hairline or slashed slurs to differentiate editorial from original ones. Even Lussy in the 19th century, despite his concern to use the beam in the service of rhythmic theory, made a specific exception in favour of traditional vocal notation (Eng. trans., p.29).

In instrumental music the beam continued to be used for joining together small notes, in groups generally corresponding to a single beat or to simple multiples and submultiples of beats. An extension of its use occurred in the breaking of secondary beams (generally all but the first beam) within a group to clarify the subdivisions of the group, a practice not apparently found in Beethoven but attested at least as early as Liszt (fig.98, from his *Fantaisie romantique sur deux mélodies suisses*, 1837 edn) and adopted by many later notators, including Reger. This notation was recommended by Lussy since it clarified accentuation within groups, and is now part of standard notational practice (Read, 1964, 2/1969, pp.83–4).

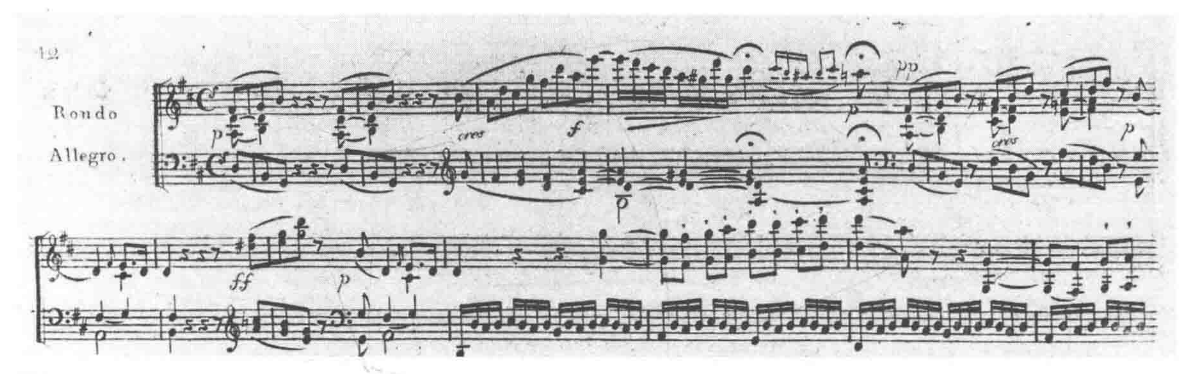
Certain simple standard formulae involving syncopation had been notated since the Middle Ages contrary to



96. *16th-century Italian keyboard notation, including ties across barlines with the beginnings and ends of ties separated where necessary (J. Buus, 'Intabolatura d'organo'; Venice: Antonio Gardane, 1549)*

97. Staff notation for the vocal line (using bars and slurs) with tablature for the lute (G. Bataille, 'Airs de différents autheurs'; Paris: Pierre Ballard, 1608)

the principle that a note or rest symbol should always occur on each beat, the note being tied to the last note of the previous beat if necessary. The chief examples of these exceptions were patterns involving a note value between two of the next shorter note value (e.g. quaver-crotchet-quaver) and dotted notes; and until the 18th century at least, it was possible to write a void note with a bar-line passing through it, or a note in one bar and its dot in the next (the latter device occurs occasionally even in Brahms's practice). Other unorthodox groupings of notes, uncommon up to the 18th century, were used more frequently from the early 19th; they were condemned in terms of later 19th-century rhythmic theory.



Some 19th-century unorthodox rhythmic groupings of notes were undertaken purely for considerations of simplicity, for example Clementi's use in *Gradus ad Parnassum* of a minim (meaning a dotted crotchet tied to a quaver) in 9/8 time (fig.99). Some, however, represent the first examples of beaming across beats and across bar-lines in order to clarify cross-rhythms. This latter practice, whose introduction is often erroneously attributed to early 20th-century composers, is found occasionally in Beethoven's notation, notably in the Rondo of his Piano Sonata op.10 no.3, 1793 (fig.100), though it is exceptional as early as this. It occurs in Schumann's notation of his characteristic staggered rhythmic groups as early as his 'Abegg' Variations op.1 (1830) and more extensively in later works such as *Carnaval* (1834–5: fig.101). The practice is important in the notation of 20th-century composers such as Stravinsky, Bartók and Prokofiev.

98. Notation of demisemiquaver groups with the third beam broken between each group of four or five (Liszt, 'Fantaisie romantique sur deux mélodies suisses'; Leipzig: Hofmeister, 1837)

99. Unorthodox rhythmic notation for the sake of convenience: a minim used for a dotted crotchet tied to a quaver (Clementi, 'Gradus ad Parnassum'; Leipzig: Breitkopf & Härtel, 1817–26)

100. Beaming across bar-lines (Beethoven, Piano Sonata op.10 no.3; Vienna: Eder, 1798)

Some 19th-century notators, including Brahms, sometimes used slurs across bar-lines to achieve the same effect. The use of beams over rests, again in the interest of clarifying rhythm, is also attested in the first half of the 19th century though it is often attributed to 20th-century notators.

Further 20th-century developments involving beams included beams broken by notes or rests but visually continuing through them (Debussy, as in fig.102, from *Danseuses de Delphes*, from *Préludes*, i, 1910, and later composers), rests connected to beams with stems (Stockhausen, as in fig.103, from *Klavierstück IV*; any distinctions intended by the various ways of connecting the rests and beams seem obscure), and notes written as single notes (with flags) but joined together with beams (Boulez, *Le marteau sans maître*, 1953–5 (fig.104) and others; this symbol has been used in conflicting senses). (For the use of beams to group together relatively fast notes of imprecise value, and to indicate duration in other ways, see Risatti, 1975, pp.7ff.)

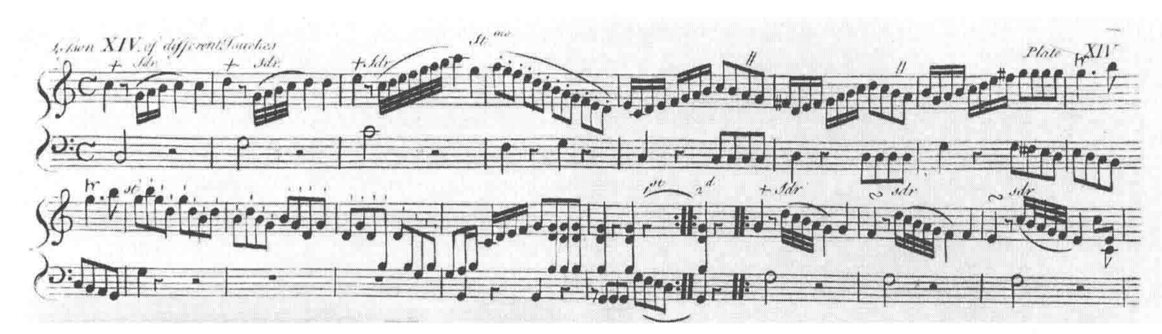
Since the 16th century, slurs have come to be used for various other purposes; all of these uses imply joining together two or more notes. For example, slurs in instrumental music might by the 17th century refer to bowing, breathing or tonguing units (fig.105) and hence, sometimes, phrasing (see Donington, *Interpretation*,

101. Beaming across bar-lines throughout to show cross-rhythms (Schumann, 'Paganini', from 'Carnaval' op.9; Leipzig: Breitkopf & Härtel, 1837)

102. Beams broken by intervening notes (see bars after the double bar-line) (Debussy, 'Danseuses de Delphes', from 'Préludes', i; Paris: Durand, 1910)

3/1974, pp.473–4), sometimes denoting that the first note under the slur was to be accented, or, with quavers slurred in pairs in the French Baroque style, that a rhythmic inequality was intended (*see* NOTES INÉGALES). (For further details on early conventions for notating bowing, see Wolf, 1919, 240–41; for further on phrasing slurs, see below.) In keyboard music, from the 18th century at the latest, rapid slurred white-note scales implied a glissando, single or double, as in Bach's Concerto in C for two harpsichords BWV1061, and Beethoven's Piano Sonata in

103. Notation of rests with lengthened stems connected to beams (Stockhausen, 'Klavierstück IV'; Vienna: Universal, 1954)

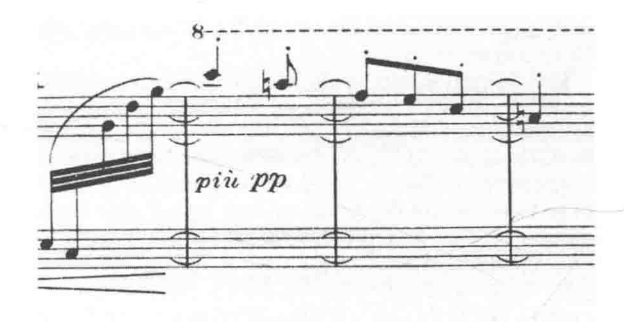


104. Notes written with conventional beaming (see drum part, bar 1) or as single notes with flags joined by a beam (Boulez, 'Le marteau sans maître'; Vienna: Universal, 1957)

C op.53, last movement; the glissando (here termed 'sdrucciolato') and other special effects are illustrated in a didactic 'Lesson ... of Different Touches' in Pasquali's *Art of Fingering* (?1760; fig.106). Vertical slurs beside chords in 18th- and 19th-century keyboard music indicated, like the short angled line through the chord, and wavy lines (at first an alternative form) that have now superseded both, that the chords were to be broken or 'sprinkled'.

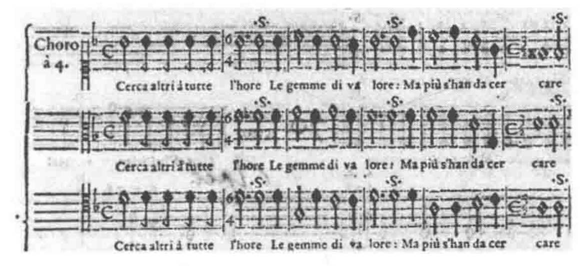
Despite the early use of the slur for phrasing, consistency in the use of the legato slur was apparently not generally achieved until the middle of the 19th century. Slurs imply in a general way that the music is to be performed legato, and the notes at the beginnings and ends of the slurs are usually not intended to be given any special treatment (for Berlioz's practice, which may not have been peculiar to him, see Temperley, 'Berlioz and the Slur', *ML*, 1, 1969, p.388–92). The desire of notators to represent phrasing more precisely seems likely to have developed from the rhythmic theory of the second half of the 19th century. Lussy deplored the lax practice of earlier notators (Eng. trans., p.44) and proposed that in keyboard notation the slur should represent phrasing by being equated with physical action: 'All the notes ... covered by a slur ... should be played ... with a single movement of the wrist for the first note, and the other notes must be articulated by the fingers alone, the hand merely gliding to right or left without any further movement of the wrist'. (The practice of placing a dot under the last note of a slurred group at this period, presumably indicating staccato detachment of that note, was deplored by Lussy on the grounds that it misled performers into accenting these notes.) Later writers who distinguished between traditional notation and accurate phrasing notation include Tobias Matthay (*The Slur or Couplet of Notes*, London, 1928) and Stewart Macpherson, who devoted considerable space to an attack on traditional notation and an exposition of the 'correct uses of notational signs' (*Studies in Phrasing and Form*, rev. 1932, pt.i), requiring editors

105. 17th-century English viol tablature, with slurs indicating that notes are to be bowed together and with other special signs to indicate various graces (GB-Mp 832 Vu51, Manchester Lyra Viol MS, p.127)



106. Special notation for various degrees of articulation: 'sdr' and slurs for sdrucciolato or glissando, 'st' and dashes for staccato, 'st.mo' and slurs over dotted notes for staccatissimo (a series of markedly detached notes all to be played with the same finger) (N. Pasquali, 'The Art of Fingering the Harpsichord'; Edinburgh: Bremner, ?1760) [bars 1–6, 8–14]

to adopt consistent phrasing notation rather than reproduce the original 'with an almost touching fidelity'. Riemann (*Musik-Lexikon*, 1882) sought still further precision, because of the ambiguity of the slur: he proposed the use of squared slurs or commas in order to avoid confusion with the legato slur, but from 1900 used both squared and conventional slurs for phrasing. For an example of the complexity of Riemann's phrasing notation as evolved for his special 'phrasing editions' of various classical works, see fig.107. The comma was frequently used in 20th-century notation, as in Riemann's, in order to notate articulation in a melody (*see also* RHYTHM).



Debussy seems to have broken new ground with ties and slurs, particularly in indicating their beginnings and endings separately (*La fille aux cheveux de lin*), and, later, in notating chords sustained over two or more bars by a series of small ties across the bar-line, without repetition of the chords themselves. He also used ties to indicate, without theoretical accuracy, that notes within a broken chord were to be sustained until, and beyond, the end of a bar (fig.108, from *Les fées sont d'exquises danseuses*, from *Préludes*, ii, 1913).

Signs indicating the separation of notes, motifs and phrases rather than their conjunction are found in the early 17th century: Cavalieri used a *signum* at the ends of lines of text in vocal parts, perhaps, as Schering suggested, indicating breathing marks (fig.109, from *Rappresentatione di Anima, et di Corpo*, 1600: GMB, p.183; *see* SIGNUM CONCORDANTIAE and FERMATA). This usage may be seen in chorales of Bach's time and Bach himself used a fermata on the last note of the phrase of a cantus firmus

107. Phrasing notation designed by Riemann as systematic musical punctuation: slurs and small vertical dashes mark off the rhythmic units of his theory; bracketed numerals indicate the incidence, or distortion, of 8-bar phrases (W.F. Bach, Suite, g, ed. H. Riemann; Leipzig: Steingräber, 1893)

108. Ties across bar-lines indicating indefinite prolongation of notes (Debussy, 'Les fées sont d'exquises danseuses', from 'Préludes', ii; Paris: Durand, 1913)

109. Signa at ends of lines of text, perhaps indicating breathing (Cavalieri, 'Rappresentatione di Anima, et di Corpo'; Rome: Mutii, 1600)

in chorale preludes, even though the accompanying figuration allows no pause. Staccato signs (dots or vertical dashes) are found in the Baroque period; for the sake of illustration Pasquali (1758; fig.106) distinguished several different degrees of articulation, but distinctions between dots, dashes and other symbols became generally consistent only in the 19th century. Some of these symbols, including dots, seem also to have meant accents; it is not always clear in Chopin's music, for example, whether bass notes with dots over or under them are to be detached or accented. In the late 19th and the 20th centuries, notably in the music of Reger, Debussy and Schoenberg, an elaborate hierarchy of some dozen different combinations of signs has sometimes been used to cover the range from strong accents to lightly detached notes, and numerals have sometimes been substituted for these (e.g. Read, 1964, chap.15). Many new symbols were introduced in the 20th century to denote related matters such as attack and playing technique on specific instruments.

(v) Clefs, staves, leger lines. The F and C clefs, positioned so as to avoid leger lines, were supplemented from the 14th century with the G clef and a bass G or *gamma* clef (fixing bass G), in order to allow further exploration of the treble and bass registers without the necessity for leger lines. From the 15th century standard combinations of clefs became increasingly common in vocal music: three-part songs were often notated with a C clef on the first line for the upper voice and C clefs on the fourth line for tenor and contratenor. Later, standard combinations of three different clefs came to be used in four-part songs. In 16th-century polyphony, after Petrucci's publications, combinations of four different clefs became more common and the combination of soprano, alto, tenor and bass clefs – that is, C clefs on the first, third and fourth lines and an F clef on the fourth line – first became standard, together with the combinations of transposed clefs, used to avoid leger lines (and obsolete by the 17th century), known as CHIAVETTE.

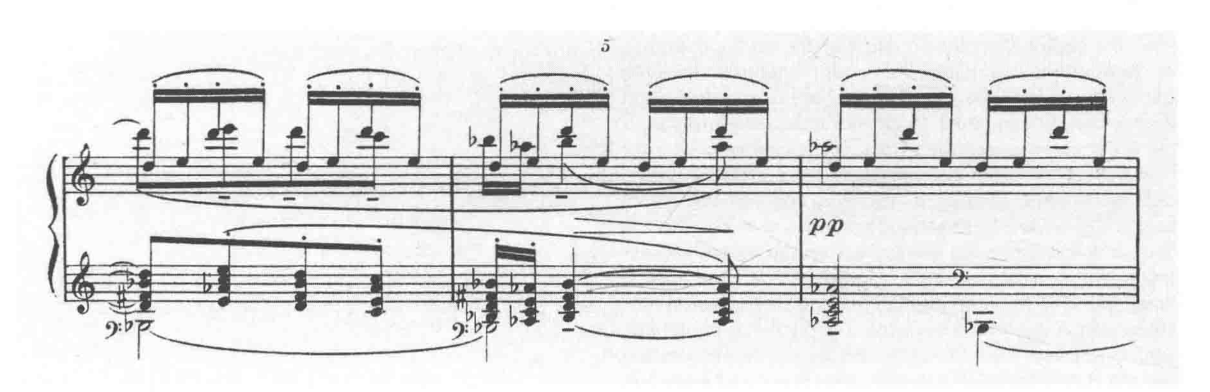
From the 17th century the G clef was increasingly used, especially in instrumental notation. It occurs on the first line for violins and recorders (Lully): this practice was largely French but also occurred in Germany (Bach used it mainly for the VIOLINO PICCOLO). But increasingly it came to appear on the second line, as in modern practice, for all instruments of treble range. It occurs in 17th- and 18th-century English vocal and keyboard music, for example, in the upper staves of songs notated as keyboard music (melody line and bass, without a separate staff for the keyboard right hand; for a later example of this usage, see fig.76 above). Purcell used it in vocal ensemble music for the treble line, with C clefs for alto and tenor lines. The form of the G clef found in *Vinculum societatis* of 1687 (see fig.75 above) occurs throughout the 18th century in English notation.

C clefs were retained in Italian 17th- and 18th-century vocal music, and in German, both scores and parts, for soprano, alto and tenor lines; they still appear in the notation of Wagner, Brahms and Schoenberg and are not wholly obsolete even today. In vocal scores both in Germany and elsewhere, however, modern practice is found as early as the beginning of the 19th century, with G clefs for soprano and alto and a G clef with octave transposition for the tenor (this notation was not however universal at that time, even in England). The C clef on the first line remained normal in German keyboard music until a remarkably late date; Mozart sometimes used it, and although Haydn and Schubert favoured the G clef, the C appears in isolated cases much later (as in fig.110, from an edition of Brahms's organ music, where the alto clef appears occasionally so that leger lines may be avoided).

Diversity of clefs has seemed increasingly arbitrary since the 17th century, and notational reform, whether formulated theoretically or not, has generally tended to reduce the number of clefs and in consequence to be increasingly tolerant of leger lines. A single clef with octave transpositions was advocated by Juan Caramuel (*Ars nova musicae*, 1645–6) and Thomas Salmon (*Essay to the Advancement of Musick*, 1672), but these proposals did not come from the musical profession, and Salmon's were ridiculed by Matthew Locke (fig.111, from *The*

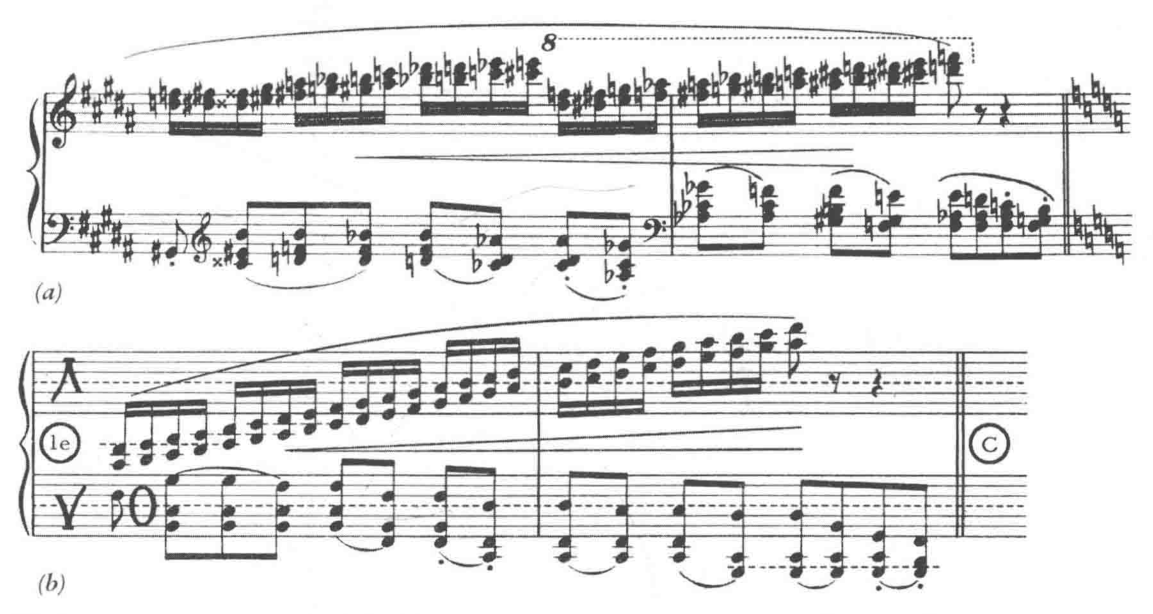
110. 20th-century keyboard notation in which the C clef is still occasionally used (Brahms, 'Sämtliche Werke', xvi; Leipzig: Breitkopf & Härtel, 1927)

111. Thomas Salmon's notation compared with normal staff notation of the period by Matthew Locke ('The Present Practice of Musick Vindicated'; London, 1673); Salmon's 'M' and 'Tr' clefs are designed so that the octave transpositions of each note always occur in the same positions on the staff



Present Practice of Musick Vindicated, 1673; see Baldwin and Wilson, 1970). Other unsuccessful proposals for clef reform were made by Montéclair (*Principes de musique*, 1736) and Lacassagne ('Réflexions sur l'usage des clefs' in *Traité général des élémens du chant*, 1766; *L'uni-cléfier musical*, 1768). In anticipation of modern practice, Grétry sought to eliminate all but the G and F clefs, transposing where necessary (*Mémoires, ou Essais sur la musique*, 1789).

In practice, notational reform has tended to abolish the C clefs, substituting G clefs with octave transpositions where necessary (mainly for the tenor voice and some wind instruments) but retaining the F clef, as in keyboard music. In the 20th century several modified forms of the G clef were introduced in order to specify transposition unambiguously where appropriate. Examples are a doubled G clef (used already by Grétry for a similar purpose), a G clef with a vestigial tenor (C) clef added to it, and a G clef with a figure *8* attached underneath. The latter version seems now to have become standard, and the *8* has been analogously added above or below both G and F clefs to signify transposition up or down an octave. (The addition of other figures for transposing instruments has been proposed, e.g. a *5* below the G clef for an english horn.) Traditional C clefs remain standard for music for the viola and trombone, and for the high registers of the cello and bassoon.



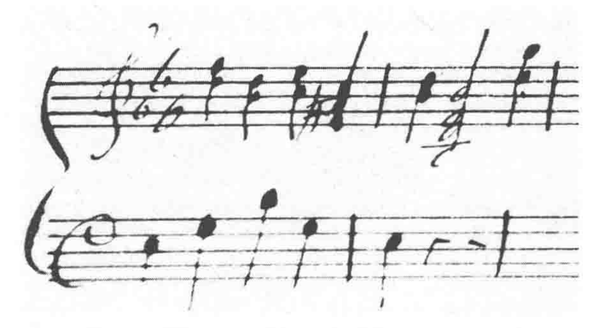
Five-line staves, used in the Middle Ages except in Italy for vocal polyphony, were used for keyboard music with C clefs by Attaingnant (1529–30), but did not become standard until the 17th century. In 16th- and 17th-century English keyboard music, pairs of six-line staves (expanded to seven or eight if the range required) remained normal; the six-line staff was not replaced by the five-line one in English keyboard music until around 1700. In *The Second Book of the Harpsicord Master*, 1700, six-line staves are used; in *The Third Book*, 1702, the pieces are 'now plac'd on five lines, it being now the Generall way of Practice'. Modern practice generally adheres to the use of the treble and bass clefs on the upper and lower of a pair of staves; with this standardization, and with the extension during the 19th century of the range of the piano, leger lines have become increasingly common; they appear as early as 1523 in Cavazzoni's *Recerchari, motetti, canzoni*. (For examples of 16th-century leger lines, see fig.119 below, and *see* LEGER LINE.) In practice more than five leger lines are seldom found, notators preferring to transpose very high or very low passages one or two octaves towards the central range and to use abbreviations such as '8va' or '8va bassa', except in orchestral parts. Some keyboard music since the 18th century has, however, occasionally been written on three or more staves (see §(viii) below).

The standardization of clefs since the 19th century, and their consequent predictability, has allowed notators unusual licence. Some 20th-century notation, for example, includes the simultaneous use of treble and bass clefs on a single five-line staff for notating widely-spaced strands of the texture, when there is no possibility of misunderstanding (see fig.112, from Debussy's *Voiles*, from *Préludes*, i, 1910). Simple horizontal wedge-shapes represent the treble clef when next to the second line and the bass when next to the fourth (for further details of these and other notational licence, see Read, 1964, 2/1969, pp.59ff).

A number of notational reforms proposed since the 19th century have concerned the staff. Of these the most radical is the Klavarskribo system (fig.79), in which the staves run vertically rather than horizontally in order that the appearance of the music may more closely resemble the layout of the piano keyboard, on which the system is based; accordingly, bar-lines are horizontal. Another staff reform based on the keyboard is that of W. Steffens (1961). Other reforms have often necessitated a change

112. Two contradictory clefs on the same staff, each referring to a different strand of the texture (Debussy, 'Voiles', from 'Préludes', i; Paris: Durand, 1910)

113. Comparison of (a) conventional 19th- or 20th-century notation and (b) the Notagraph system of Constance Virtue; the 'le' and 'C' signs are the equivalents of key signatures, and the three Notograph clefs are illustrated



in the number of lines in the staff; Equitone (fig.79) uses two lines to the octave, with notes in five possible positions relative to them: with the lines running through the notes, or tangential to them, or with the notes (touching neither of the lines) closer to one or other of the lines, or midway between them. The use of full and void notes in these positions yields 12 different possibilities to the octave, for the 12 semitones of the equal-tempered system. The Notagraph system (fig.113*b*) of Constance Virtue uses a seven-line staff, with the space between staves divided proportionately to permit further representation of intervals for the most part without leger lines; the staff covers an octave, the step from a line to the adjacent space representing a semitone, and different octaves are distinguished with special clefs (V, O and inverted V, variously placed).

For the use of curved staves and other devices for representing tempo fluctuations, see §(iii) above.

See also CLEF and STAFF.

(vi) Accidentals, key signatures. The sharp and flat signs, inherited from medieval notation, were supplemented from the late 15th century by the natural sign; this had at an earlier period been an alternative form of *b quadratum* and like the sharp and flat was derived from a version of the letter 'b'. In medieval notation, as still during and perhaps after the 16th century (particularly in vocal music), these signs signified that the notes to which they applied were to be solmized using the syllable *fa* (for the flat) or *mi* (for the sharp). Some of these accidentals are 'cautionary signs', warnings that a rule of *musica ficta* was for the occasion to be suspended. When a distinction was drawn between sharp and natural and three signs were used, however, there may have been a change in the significance of the accidental: it then came to signify the raising or lowering of pitch (*see* MUSICA FICTA, §2(iv)). The use of all three signs did not become general until the 18th century. Any lowering of pitch was generally indicated by a flat and any raising by a sharp; the notator's intention was usually clear (at least to contemporaries) until remote chromatic chords became part of the normal musical language and until 'orthography' in accidentals became a concern (see below). The older notation lacking the natural may be found until the end of the Baroque period and, in isolated cases (e.g. fig.114, dating from *c*1841) even later; it survives strongly in a modified form (the sharp and flat being replaced by '+' and '–' signs respectively) in 20th-century jazz and popular music notation (see §(viii) below).

For a similar reason, and because bar-lines were not used in the modern way until a late date, absolute consistency in the notation of accidentals – with a rule that accidentals are required only as shown, and that they hold good until the end of the bar – is not generally found before the 18th century or even the 19th. An accidental before the late 18th century generally applies only to the note next to which it is written or to notes in its immediate vicinity (see Donington, *Interpretation*, 3/1974, pp.131ff). Even as late as the early 19th century, for example in keyboard music printed in London, accidentals may be provided for only one note of an octave, with the performer expected to supply the second. Here as in other

114. A sharp used for a natural in an English manuscript of about 1841, written by an inexpert hand (private collection)

115. Three model cadences (voices written successively) exemplifying special accidentals for micro-tonal intervals (Vicente Lusitano, 'Introdutione facilissima'; Venice, 2/1558); the double cross raises a note by a minor semitone (4 commas), the quadruple cross by a full tone (9 commas)

aspects of the notation simplicity was thought more desirable than precision.

Initial flat signatures (indicating transposition down a 5th once with one flat and twice with two) had been usual in the Middle Ages; signatures with sharps appeared (apart from isolated examples as early as the Middle Ages) in the 17th century, and like flat signatures at this date are to be regarded as key signatures in the strict sense. Nevertheless, Baroque composers often wrote the accidentals of key signatures in more than one octave, contrary to modern practice: this may represent an archaism (medieval signatures may be presumed to refer only to notes at the pitch specified, with octave transpositions remaining unaffected in the absence of any indication to the contrary). Baroque key signatures often contain one flat or (more rarely) sharp fewer than would be included in modern practice, particularly in minor keys, perhaps (as Donington suggested) because G minor, for example, was thought of as the Dorian mode in which the E was theoretically natural, or perhaps because a piece in G minor might have E naturals at least as often as E flats.

The double sharp and double flat, like sharp key signatures, were mainly products of the tonal system in the 17th century. Donington provides tables showing different forms used for writing the natural, sharp, flat, double sharp and double flat in the 17th and 18th centuries (3/1974, p.127). Since that time, there has never been total consistency about the method of cancelling double accidentals: a natural alone, a sharp or flat alone, or (most commonly) a natural with a sharp or flat have all been used.

From the Middle Ages various signs were invented for representing intervals supposed to be those of the enharmonic and chromatic genera of the ancient Greeks. Besides those of Marchetto da Padova, the use by NICOLA VICENTINO (*L'antica musica ridotta alla moderna prattica*, 1555) of dots over notes to raise them by a diesis (*see* DIESIS (ii)) and the special signs (fig.115) of Lusitano (*Introdutione facilissima*, 1553, 2/1558) may be mentioned. Microtonal intervals have also been represented with special signs (see below).

Until the 19th century accidentals were often notated without theoretical accuracy, for the sake of convenience: for example, in the Buxheimer Orgelbuch, where E♭ is notated as the form for *Dis* (D♯), A♭ analogously as G♯ etc., regardless of the incongruity of the notation from a theoretical point of view. Similar considerations, no doubt, led some 17th- and 18th-century notators to write enharmonic equivalents of double sharps or double flats (e.g. G for F double sharp), and sharps for ascending chromatic semitones and flats for descending, as a rule of thumb not based on theoretical considerations. With the appearance in the 19th century of theories of harmony supposedly based scientifically on acoustical laws, 'orthography' – the notation of accidentals according to harmonic grammar – seemed important enough to some to outweigh considerations of practical convenience. According to Lussy, for example, 'every chromatic note, or note foreign to the key or mode in which a melody is constructed, is accented' in certain circumstances (Eng. trans., p.142), and thus the presence of an accidental has rhythmic and accentual implications. Accordingly, the traditional lax notation was misleading for expressive purposes; Lussy (p.151) criticized Beethoven's notation in op.26 (fig.116), submitting that B♮ should be substituted for C♭ in the first chord of the example. (For a more detailed investigation of Beethoven's 'unorthographic' notation in his piano sonatas and string quartets, see Van der Linde, 'Die unorthographische Notation in Beethovens Klaviersonaten und Streichquartetten', *Beethoven-Studien: Festgabe*, ed. E. Schenk, Vienna, 1970, pp.271–325.)

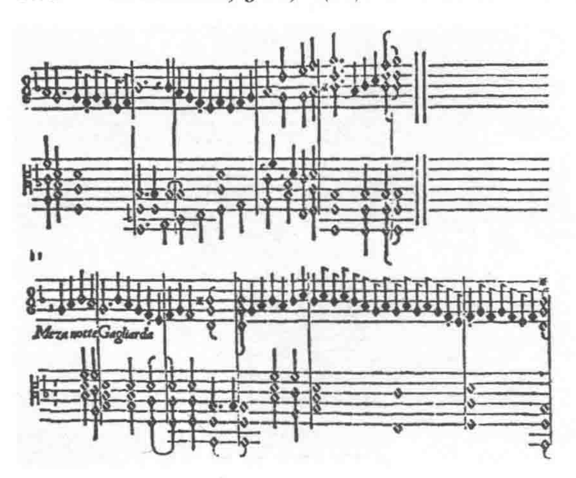
116. Example from Beethoven, Piano Sonata op.26, cited by Lussy as an example of notation incorrect both theoretically and for expressive purposes (M. Lussy, 'Traité de l'expression musicale'; Eng. trans., London, 1885)

117. *Comparison of harp and piano notation: each plays the same chords, but the harp part is notated with performance rather than theoretical orthography in mind (Ravel, Piano Concerto, G; Paris: Durand, 1932)*

For a similar reason Lussy called for 'correctness' of notation in key signatures, since an incorrect key signature would misrepresent the accentuation:

> In the overture to 'Zampa', which starts in D with two sharps, the Prayer is introduced in the key of B♭. The composer, by retaining the signature of D for these sixteen bars, is forced to use about a hundred flats and naturals ... In such cases as this the chords preceded by accidentals do not require forcing.

Despite the general avoidance since the late 19th century of gross incongruity in the notation of accidentals, 'convenience' notation of accidentals, primarily according to the manner of playing the notes, is still required in special notations (such as that of harp music, because the instrument, with a natural scale in C♭, is easier to play in flat keys: in fig.117 the harp and piano parts largely correspond, but the notation of accidentals is different).



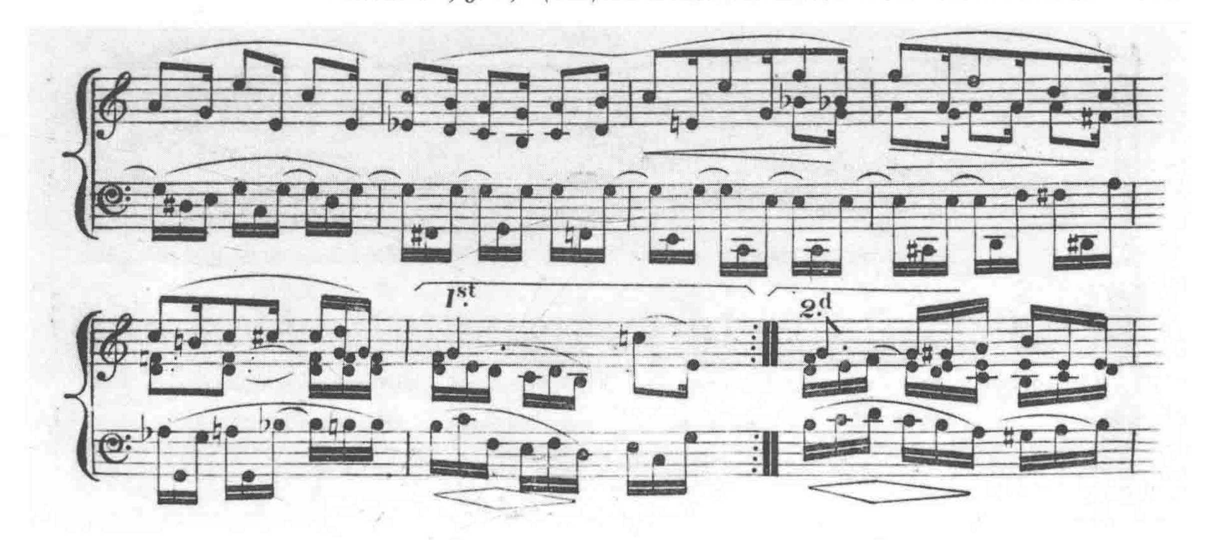
Since the late 19th century notational practice with accidentals has changed chiefly in music where conventional major-minor tonality has been weakened or jettisoned. The simultaneous use of different key signatures is occasionally found, as in Bartók's *Mikrokosmos* or Britten's *Peter Grimes*. Sharps and flats in signatures may be placed at unconventional pitches, indicating a return to the medieval conception of the signature affecting only one pitch, not octave transpositions (for example in *Mikrokosmos*). In works not in the major-minor or any other diatonic system, where key signatures have naturally been abandoned, it has often been found convenient to return to the convention that an accidental applies only to the note to which it is joined; this renders the natural sign redundant, as is stipulated in Busoni's *Sonatina seconda*, 1912: 'die Versetzungszeichen gelten nur für die Note, vor der sie stehen, sodass Auflösungszeichen nicht zur Anwendung kommen'. In some music of the 1960s and 70s, every note is preceded by a sharp, flat or natural sign.

Microtonal intervals have been the subject of speculation in European music for centuries (*see* MICROTONE). For much of the 20th century, composers concentrated on divisions of the equal-tempered semitone, with such intervals as the quarter-tone and the sixth-tone being notated by various altered forms of the sharp and flat signs (see Read, 1964, 2/1969, p.145, and Risatti, 1975, pp.16–17). Fig.118, an example from Hába, one of the earliest 20th-century experimenters, illustrates one such system. With later work on divisions of the octave in which the notes do not always coincide with the 12-note scale (the 20- and 31-note scales, which fall into this category, are both in use, as are many others), this type of notation is not always convenient. Some composers have used up- and down-arrows and/or '+' and '–' in conjunction with signs based on the sharp and flat; such symbols are also found in transcriptions by ethnomusicologists. An alternative is to use a numerical system, in which fractions or cent values make obvious series within the octave; and some composers have used a mixture of numerical and symbolic signs, the latter still based on the sharp and flat (see Darreg, 1975, and 1979; Blackwood, 1991).

Notation of accidentals with signs other than the traditional medieval ones still in normal use is occasionally encountered in keyboard mensural notation, or the mensurally notated sections of Old German organ tablature. In the Buxheimer Orgelbuch, for example, downward stems from notes are to be understood as accidentals rather than indications that notes are lengthened. In some early 16th-century keyboard sources, dots above or below notes are also used for this purpose: examples are Cavazzoni, *Recerchari, motetti, canzoni* (1523), the volumes of keyboard music printed by Attaingnant, and

118. *Special accidentals for quarter-tones (Hába, String Quartet no.2; Vienna: Universal, 1921)*

119. Accidentals notated with dots under the notes (bar 1), or ordinary accidental signs next to the notes (bar 5), fairly close to them (end of bar 1, bass line) or above them (final bar) ('Intabolatura nova di ... balli'; Venice: Antonio Gardane, 1551)



the anonymous *Intabolatura nova di varie sorte de balli da sonare* (1551; fig.119; this volume uses both this notation and conventional accidentals).

See also ACCIDENTAL.

(vii) Dynamics. Indications of dynamics are rare before 1600. The rubric 'tocca pian piano' occurs in Vincenzo Capirola's lutebook (*c*1517; fig.120), but seems to be an isolated example until the polychoral and echo effects of the late 16th and early 17th centuries suggested the exploitation of dynamics; specific indications occur in the *Sonata pian e forte* (1597) by Giovanni Gabrieli and other works of the period. Mazzocchi (*Madrigali*, 1638) used abbreviations for *forte*, *piano* and so on and for crescendo and diminuendo effects; otherwise diminuendo effects in the 17th and early 18th centuries are generally indicated by a series of dynamic markings (e.g. 'lowd–soft–softer' in Matthew Locke's music for *The Tempest*, 1674; and 'forte–piano–pianissimo' in the pastorale from Corelli's Christmas Concerto op.6 no.8, posthumously published in 1714). Later in the 18th century these were supplemented with the modern 'hairpin' symbols for crescendos and diminuendos (Geminiani, *Prime sonate*, 1739, a revision of his op.1, 1716). These 'hairpins' are in early 19th-century music often combined into a characteristic lozenge shape (fig.121), indicating a crescendo immediately followed by a diminuendo, but this sign is invariably divided into two separate signs in modern editions. (It should also be noted that it is frequently difficult to distinguish between diminuendo signs and wedge-shaped accents in the notation of such composers as Berlioz and Schubert.)

In 19th-century practice the superlatives of loudness and softness (*fff*, *ppp*) were extended, with composers prescribing down to *pppppp* and up to *ffff* (Verdi, Tchaikovsky), and a scale of 12 or more imprecise degrees of loudness was constructed. These degrees were specified

120. Italian lute tablature with the dynamic indication 'tocca pian piano' (Capirola Lutebook, c1517; US-Cn Case MS VM C.25, f.49v)

121. Characteristic lozenge-shaped sign combining crescendo and diminuendo in early 19th-century notation (below bottom staff) (Beethoven, Piano Sonata op.111; London: Clementi, 1823)

with great care in some early 20th-century works, where almost every note has its own dynamic marking; in some later 20th-century practice, dynamic markings were graded numerically for greater precision. Other 20th-century devices to make dynamic indications more precise or to give them greater visual impact include the use of progressively fuller note heads on a scale where a void note is inaudible and a full note *fff* (Schäffer), the use of signs (unfortunately resembling accents) to represent various increases in loudness (Stockhausen, *Klavierstück XI*), and the relative size of note heads (see Risatti, 1975, pp.29ff); the last device was proposed in 1903 by Abdy Williams (p.212).

See also TEMPO AND EXPRESSION MARKS.

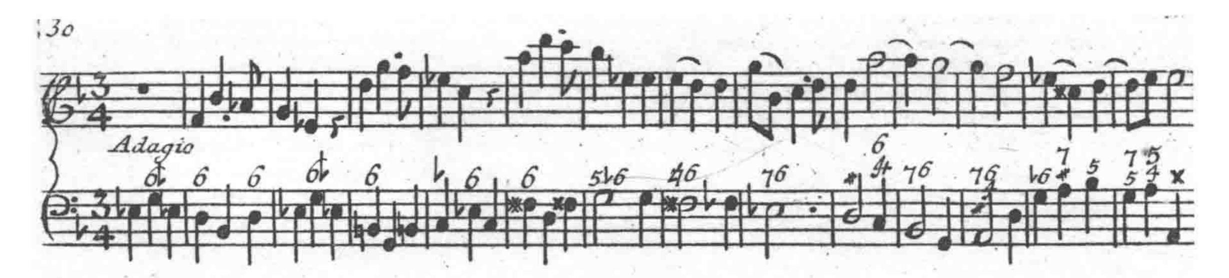
(viii) Scores; harmonic and descriptive notations. Although score notation had been abandoned in polyphony with the adoption of Franconian notation in the 13th century, it lingered in certain peripheral areas of medieval notation until the 15th and 16th centuries (see §3 above). Instrumental notation may be considered a particular case of score notation, in both its tablature form and its purely mensural score form, such as the Faenza Codex (*see* SOURCES OF KEYBOARD MUSIC TO 1660, §2(i)). Instrumental notation of the late Middle Ages, like later scores, frequently includes the visual separation of 'bars' or other metric units by bar-lines or spaces.

Early 16th-century score notation, apart from that in tablatures, some keyboard music (e.g. Cavazzoni, Attaingnant) and surviving medieval repertories in Bohemia, is mostly didactic and intended for inexperienced musicians, as in Agricola's *Musica instrumentalis deudsch* (1529), which illustrates how to put music into tablature. From this period to the second half of the 18th century at least, there is evidence of the use of the *tabula compositoria*, a device with staff-lines and vertical bar-lines, on which polyphony could be written in score to facilitate copying or composition and then erased to permit re-use. Bermudo (1555) claimed that organists played, according to their ability, in descending order of competence, from choirbooks, tablatures and scores.

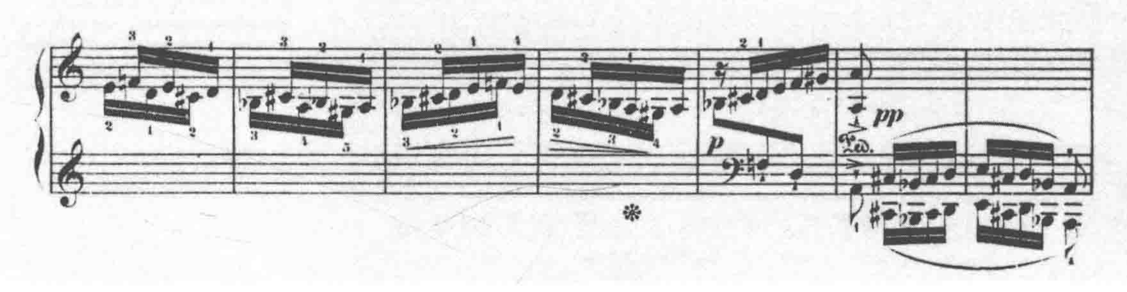
The first complete surviving scores proper are the *Musica de diversi autori ... partite in caselle* (2/1577[11]) and *Tutti i madrigali di Cipriano di Rore a 4 voci* (1577); printed scores are attested not much later outside Italy (M. Gomołka, *Melodie na psalterz polski uczynione*, Kraków, 1580, in score without bar-lines, fig.122; *Balet comique de la Royne*, Paris, 1582). Some of these were intended for keyboard and other instrumental performance, and were compiled after the parts had been completed. The same is true of less comprehensive organ parts, supporting the lowest-sounding voice throughout vocal and instrumental pieces, which are attested from 1587, in a 40-part motet by Alessandro Striggio (i). Such an organ part was often termed a PARTITURA (or *spartitura*), another respect in which it resembles a score.

In the early 17th century THOROUGHBASS notation developed from these organ parts and it too was early associated with the score. It became almost universal in every type of polyphony except that for solo instruments in the 17th and early 18th centuries, whether in score or parts, after which time it declined in secular polyphony. In essence it represents an abbreviated notation for chords, associated with a single bass line in ordinary mensural notation. The symbols used, as with those of *musica ficta*, are often warnings against adopting a particular course of action. The abbreviations are in the form of numerals representing the intervals to be played above the bass line, often supplemented with accidentals. Such accidentals are occasionally found in a partitura comprising the outer voices, as in Banchieri's *Concerti ecclesiastici* (1595) where, as in later practice, they distinguish major and minor chords; numerals as well as accidentals appeared around 1600 in the thoroughbasses of the earliest operas, which were printed in score (Peri, Caccini: see fig.70). Unlike later thoroughbass notation, the early operas often contain numerals in excess of 9, and they thus specify the octave for the elaboration of the bass (in Caccini the numerals extend to *15* and in Cavalieri even beyond that; see fig.109). Not all early thoroughbass sources include numerals and accidentals, partly because of the difficulties of setting them in type.

The placing of the accidentals in early thoroughbass notation is not always consistent; they may appear in almost any position fairly near to the numerals they



122. *Early score notation without bar-lines (M. Gomołka, 'Melodie na psalterz polski uczynione'; Kraków: Lazarus, 1580)*



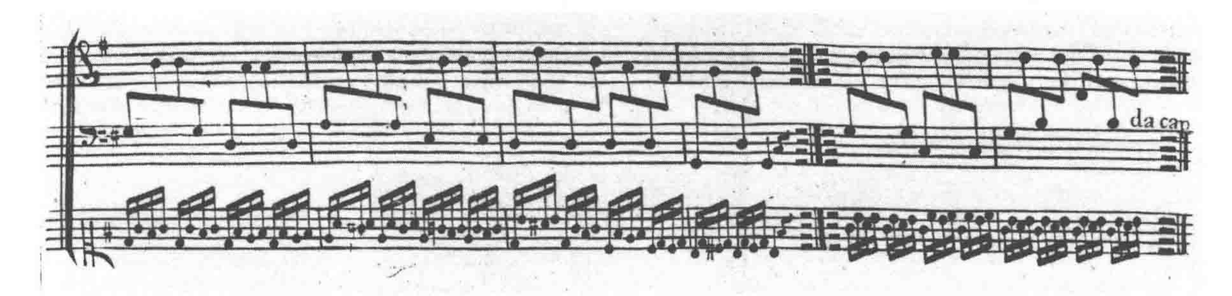
qualify. As in the ordinary staff notation of the period, sharps and flats refer respectively to any raising or lowering of a note. A stroke through the numeral *6* instead of a sharp next to it, signifying that it is to be raised a semitone, was introduced by Scheidt (1622) but not generally adopted until the second half of the 17th century (e.g. by Rosenmüller, 1652), when it was supplemented by a *6* with a flat sign through it as a direction to lower the 6th by a semitone. This practice was extended to other numerals (*4*, *5* etc.) in some of Roger's editions of Corelli, and became general in Italian and Italian-derived practice of the 18th century (fig.123). In the second half of the 18th century a diagonal stroke was introduced (Kirnberger, 1781, p.74, referring to Graun's practice; this sign is also cited by C.P.E. Bach, together with alternatives, *Versuch*, ii, 1762, Eng. trans., 1949, p.196) to be placed under appoggiaturas in the bass to signify that the following bass note was to be harmonized in advance; but this practice is not often attested. For *tasto solo* (i.e. a direction to leave the bass line unharmonized), practice varied in 18th-century thoroughbass notation: some notators used a verbal direction, some staccato dashes (perhaps equivalent to the figure *1*), some the figure *0* and so on.

Thoroughbass was popularized in Germany especially through the diffusion of Viadana's *Centum concerti ecclesiastici* (first published 1602); in England the practice appeared in publications from the 1630s and in France from the 1650s. French thoroughbass used horizontal lines at an early date to indicate the retention of previous harmony, a device used internationally in the 18th century. By the end of the 17th century French thoroughbass notation had developed a good number of distinctive and inconsistent traits, such as inconsistent notation of sharps or the use of strokes through numerals to signify, variously, both diminished and augmented intervals. Many of these traits were tabulated by Rameau (*Dissertation sur les différentes méthodes d'accompagnement pour le clavecin, ou pour l'orgue*, 1732). Some French notational characteristics are occasionally found in German figured basses from about 1750.

While thoroughbass was still mainly a practical, rather than a didactic or theoretical, device, occasional abortive attempts were made to reform its notation. Rameau

123. *Thoroughbass notation with special signs through numerals, including strokes for sharps (bar 10), and simplified flat signs (bar 1; also used in the key signatures) (Corelli, Sonatas op.5; Amsterdam: Roger, c1708)*

124. Direction of stems and beaming used for distinguishing between notes for the right or left hands in piano music (Liszt, 'Rhapsodie espagnole'; Leipzig: Siegel, 1867)



(1732) proposed a system based on his harmonic theories (see Wolf, ii, 327) but later dropped it; Telemann (preface to *Musicalisches Lob Gottes*, 1744) proposed a system of numerals supplemented with horizontal, diagonal and curved strokes, in order to achieve a 'happy mean' between basses with too few figures and those 'resembling an arithmetic book'.

During the 17th century, score notation was used in other areas of the polyphonic repertory, such as solo songs and cantatas. Some of these scores were intended to facilitate conducting, though until the 19th century (and in some areas later) conducting scores might contain little more than a first violin part, or a figured bass supplemented with cues, recitatives in full and so on; the latter type, when intended for a conductor, might be labelled 'M[aestro] D[i] C[appella]'. The keyboard score also spread beyond Italy in the 17th century (M. Rodrigues Coelho, *Flores de musica*, 1620; Scheidt, *Tabulatura nova*, 1624). In 17th-century scores, bar-lines became usual, though not always consistent, at a relatively early date. In early scores they extend only through a single staff; they were extended throughout each system by Bach and others in the 18th century, but the practice was not standardized until the 19th. Similarly, the order in which the parts are set out varies until well into the 19th century (*see* SCORE). For clef reform in score notation, see §(v) above.

Keyboard score notation developed characteristics of its own, some deriving from tablature, from the 17th century onwards. As early as the 17th century some notators avoided pedantic accuracy in the notation of polyphonic textures, omitting rests and simplifying note lengths especially in inner parts, but Bach sometimes maintained the older practice of using precise note lengths even within a complex polyphonic texture. A thoroughgoing adoption of the simpler practice is found in Liszt's notation, with the abandonment of rests or precise note values where these were unnecessary to the performer. Other devices used by Liszt to clarify complex textures include the broken subsidiary beaming of short note values (see §(iv) above), and the use of the direction of note stems to distinguish strands of the texture or the notes to be played by the right or left hands (see fig.124, from his *Rhapsodie espagnole*). Other composers used comparable devices such as the extensive use of small notes (see §(ii) above).

The use of more than two staves in keyboard scores other than partituras, again in the interests of clarity in complex textures, is occasional before the 19th century, usually to distinguish lines for separate manuals, separate instruments or (for the organ) pedals. One of the earliest examples of modern keyboard notation in which three staves are intended to be played by a single performer on a single manual of a keyboard instrument is found in G.J. Vogler's 'Marlborough' variations (fig.125: the clef forms are typical of Austrian and south German usage at this period). This practice too was adopted and extended by Liszt, with piano music written on three or four staves, and appears in the piano notation of Debussy and Rachmaninoff.

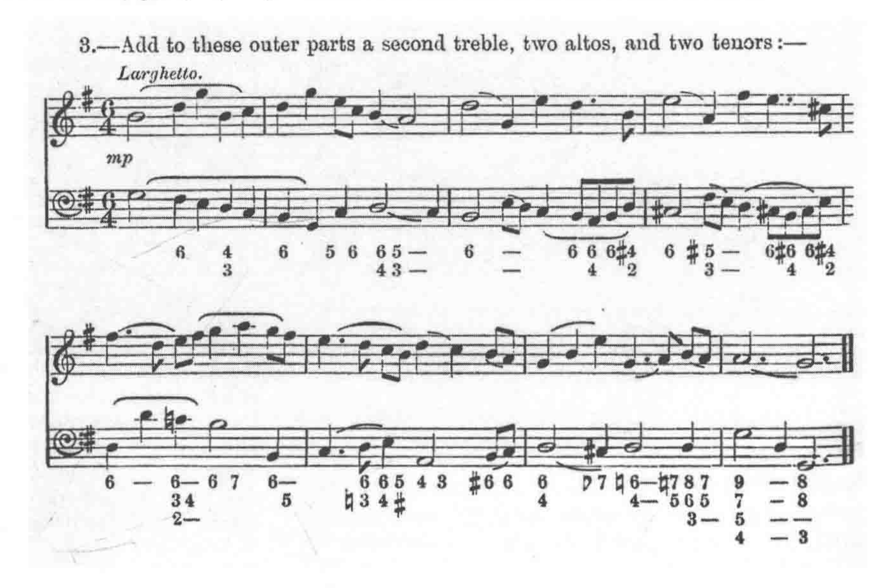
The specialization of keyboard score notation is reflected also in the adoption of fingering indications, found regularly from the 19th century but quite often before that, especially in tablatures; it is also occasionally found from the 16th century in other instrumental music. 19th-century piano music had two distinct fingering conventions: the 'continental', with numerals from *1* to *5* for the thumb and fingers; and the 'English', with a '+' sign for the thumb and numerals from *1* to *4* for the fingers. The latter system, now superseded by the former, was still used well into the 20th century. Pedalling has been shown in piano music since the early 19th century

125. Notation of single-manual keyboard music on three staves (G.J. Vogler, 'Variations sur l'air de Marlborough': Speyer: Bossler, 1791); the two upper staves are to be played by the right hand

126. *Parallel presentation of a melody in ancient Greek and contemporary notation (A. Kircher, 'Musurgia universalis'; Rome, 1650)*

by a number of special signs. Comparable instructions for physical actions, to produce special effects of many kinds, have multiplied since the 19th century in instrumental music: these include signs for playing harmonics and for special methods of attack in string and harp music, bowing in string music and percussive key-clicks in woodwind music (see Karkoschka, *Schriftbild*, 1966; Read, 1964, 2/1969; and Risatti, 1975).

Specialist notations of other kinds have been used in scores to assist the abstract study of music. Descriptive notation for analytical purposes had been part of the European tradition since the Renaissance but had not required material modifications to normal notation: thus Kircher presented a (spurious) 'Pindaric' melody in normal notation (fig.126, from *Musurgia universalis*, 1650) and Hebrew melodies, in which he had been preceded by Johannes Reuchlin (*De accentibus et orthographia linguae hebraicae*, 1518) among others. The great increase from the second half of the 18th century in historical and analytical musicology, and the broadening interests of scholars, prompted notational modifications. Early examples of specialized descriptive notations and formats include the miniature score (an early example is a 19th-century edition of Haydn quartets by Pleyel). Both performing and study scores came to be provided with bar numbers or letters for easy reference, though the numbering of bars, every 50, is found as early as 1688 (William Nott, *A Collection of Simphonies*).



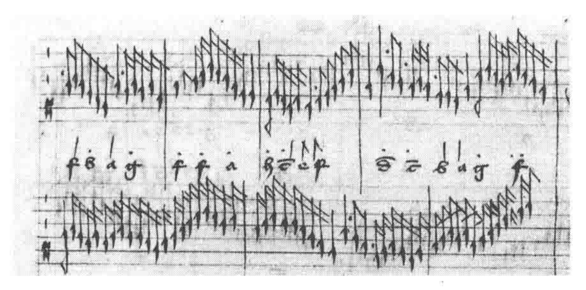
Specialist score notations for presenting the results of analysis were also developed from the early years of the 19th century (e.g. Momigny, 1803–6). In the 20th century, analytical notation was developed into systems of great subtlety, for example by Schenker (*see* ANALYSIS, §II, 4). Non-Western music was presented for European readers in a kind of score comprising the original notation in parallel with a transcription by F.J. Sulzer (fig.127, from *Geschichte des transalpinen Daciens*, 1781–3); this represents one of the earliest ethnomusicological notations. The preparation in the 19th and 20th centuries of the great historical editions of early music (*see* EDITIONS, HISTORICAL) has made standard many novel practices, such as the use of a squared slur to link notes joined in ligatures in the original, or the use of small notes or parentheses to distinguish editorial additions. Ethnomusicological notation has adopted many novel signs to express, for example, intervals outside the European system. For attempts to devise machines to notate melodies, and the notations adapted to them, see §6(i) below.

In the 19th century thoroughbass notation lent itself to adaptation for analytical and other didactic purposes: by this time it was no longer extensively used in practical music-making. The modifications made to it in the 19th century tended mainly to improve it as a theoretical harmonic notation; Honoré Langlé, for instance, proposed a system of nomenclature that would be primarily chordal rather than intervallic; major, minor, diminished and augmented chords, and the various 7th chords, were consistently distinguished, and the relationships between inversions and root positions were shown, with a modified thoroughbass notation including symbols such as '+', '–', '=', circumflexes, inverted circumflexes and dots (*Nouvelle méthode pour chiffrer les accords*, 1801). The figured bass survived in its older traditional form well into the 20th century, however, both as a shorthand harmonic notation and (as in Prout, *Harmony: its Theory and Practice*, 1889 and later editions) as a device for teaching harmony by the advance identification of chords in harmony exercises (see fig.128, from an Oxford DMus examination paper of the early 20th century).

Other types of chordal notation, using letters or numerals for the chords and supplementary symbols to distinguish different types of chord, developed from the early 19th century. The degrees of the scale and the chords based on them were denoted by Roman numerals as early as 1800 (G.J. Vogler, *Choral-System*); H.C. Koch (*Musikalisches Lexikon*, 1802, 'Klangstufe') wrote of indicating 'each note of those of a key, arranged in a scale, by means of a number associated with it'. In *Versuch einer geordneten Theorie der Tonsetzkunst* (1817, 3/1830–32), Gottfried Weber distinguished major and minor chords and keys by the use of upper- and lower-case letters (i.e. as in modern German practice) with superscript numerals to denote diminished chords, 7ths and so on. His proposals were widely adopted and extended (e.g. with the symbol '+' to distinguish an augmented triad, and with distinctions

127. *Parallel presentation of a melody in Byzantine and contemporary notation (F.J. Sulzer, 'Geschichte des transalpinen Daciens'; Vienna, 1781–3, iii)*

128. Thoroughbass notation as used in early 20th-century harmony exercises (E.A. Dicks, 'A Handbook of Examinations in Music'; London, 1912)



drawn between the inversions of chords, by E.F.E. Richter, *Lehrbuch der Harmonie*, 1853, and Otto Tiersch, *Kurze praktische Generalbass-, Harmonie- und Modulationslehre*, 1876). In accordance with Moritz Hauptmann's view of minor chords as inversions of major chords (*see* HARMONY, §4), Arthur von Oettingen used letters of the alphabet with a superscript '+' sign for major chords and a superscript zero for minor chords; in minor chords the 'root' is reckoned as the top note of the triad (e.g. G in a C minor triad) (*Harmoniesystem in dualer Entwickelung*, 1866). Hauptmann and Oettingen also distinguished between notes (for acoustical reasons, depending on the way they were theoretically generated) by using upper- and lower-case letters.

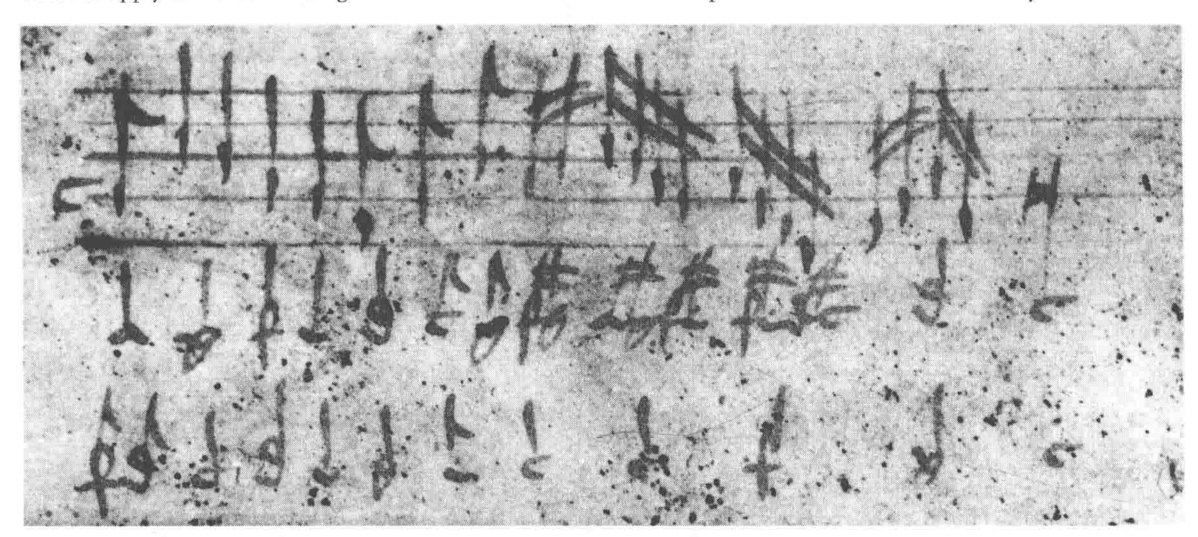
Later in the century Hugo Riemann invented a system of chordal notation which he termed 'Klangschlüssel' (*Skizze einer neuen Methode der Harmonielehre*, 1880; *Musik-Lexikon*, 1882, 'Klangschlüssel'). Intervals were shown by numerals, those of major chords by Arabic ones, as in thoroughbass but always reckoned from the root of the chord upwards, and those of minor chords by Roman, reckoned from the root (in Hauptmann's and Oettingen's sense) downwards. The roots of the chords were identified alphabetically. Intervals shown by simple numerals were perfect or major, except for the minor 7th; major and minor triads were distinguished, when necessary, with Oettingen's symbols. Horizontal strokes above and below the numerals denoted that the note in question was in the bass or in an upper part; the notation, unlike thoroughbass, was in principle independent of a mensurally notated bass line. The sharpening or flattening of notes was shown by wedge shapes, resembling accents in ordinary mensural notation, either in normal form or reversed. In later works Riemann went on to develop a system of 'functional notation' or 'Funktionsbezeichnung' (*Vereinfachte Harmonielehre*, 1893), where he abandoned letters representing pitches in favour of the letters *T*, *D* and *S*, representing tonic, dominant and subdominant functions, qualified as *Tp*, *Dp* or *Sp* as necessary, the *p* (*Parallelklang*) indicating that the 5th above or below the root of the chord had been replaced by a 6th.

Similar systems have been the stock-in-trade of most harmony textbooks since the late 19th century; some of the more influential ones were those of Sechter, Grabner, Prout, Macpherson and Schoenberg. Possibly through their influence some popular music of the 20th century also adopted chordal notations for guitar, keyboard and other 'continuo' instruments, which generally resemble Gottfried Weber's system. This notation has yet to be studied historically. Chords are commonly identified by a letter for the root, qualified with 'mi' for a minor chord or a superscript zero or '+' sign for a diminished or augmented chord; the letter alone represents a major chord. Superscript numerals and accidentals are used as in thoroughbass notation (i.e. the numerals are reckoned as diatonic intervals from the note named, and qualified by accidentals) and, also as in thoroughbass notation, the rhythmic realization is left to the performer to supply from his knowledge of the appropriate style. Common alternatives for accidentals are '+' and '–' signs, used in the same way as sharp and flat signs in the 17th century – to signify any raising or lowering. A tabulation of various types of sign, made in an attempt to introduce uniformity of practice among professional copyists, may be found in Roemer (1973, p.137; see also Read, 1964, 2/1969, pp.410–11, and Brandt and Roemer, 1975). For an example of simple chordal notation of this type, see fig.129. For the notation of pitch (including distinctions

129. Notation for voice and guitar: letters signify major chords unless qualified ('m' and '+' mean minor and augmented chords; numerals, extra notes) (P. Smith, 'Faith, Folk and Clarity'; Great Yarmouth: Galliard, 1967)

130. *Old German organ tablature: the top voice is notated on a staff, the lower voices alphabetically (Buxheimer Orgelbuch, D-Mbs Cim.352b); the alphabetical notation is supplemented with rhythm signs and with lines drawn over letters to indicate a higher octave*

between different octave repetitions of the same pitch) *see* PITCH NOMENCLATURE.



For bibliography see end of §6.

5. ALPHABETICAL, NUMERICAL AND SOLMIZATION NOTATIONS. The most important type of notation to be considered here is TABLATURE, which is fully discussed in its practical aspects under its own heading. For more detailed information the reader is referred to Wolf's *Handbuch der Notationskunde* (1913–19), Apel's *Notation of Polyphonic Music, 900–1600* (1942, rev. 5/1961) and Rastall's *Notation of Western Music* (1983 rev. 2/1998).

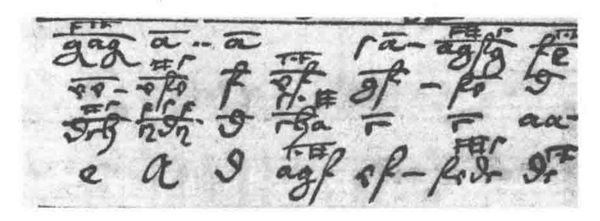
(i) Keyboard tablatures. Wolf suggested that a passage in the treatise of Anonymus 4 (*c*1275) implies the existence of instrumental notation in the 13th century (Wolf, 1919, 5, referring to the passage in Reckow's edition, *Der Musiktraktat des Anonymus 4*, 1967, i, 40, ll.24ff). No known example survives from that date, but the earliest known keyboard sources are nearly all in tablature, which is a distinctive instrumental notation. The term 'tablature' generally signifies a notational system using letters of the alphabet or other symbols not found in ordinary staff notation, and which generally specifies the physical action required to produce the music from a specific instrument, rather than an abstract representation of the music itself. The latter qualification, though perhaps the primary one, does not apply to the German organ tablatures of the late Middle Ages and later: in these, letters are used to identify pitches rather than finger positions.

Most surviving keyboard sources up to the early 16th century are notated in the so-called old German organ tablature. This term is used even though the earliest source of all, the 14th-century Robertsbridge Codex (*GB-Lbl* Add.28550), is of unknown origin and has features of 14th-century Italian mensural notation (*see* TABLATURE, fig.1). 15th-century German tablatures include those of Adam Ileborgh (1448, in a private collection; TABLATURE, fig.2) and Conrad Paumann (1452, Fürstliche Stolberg'sche Bibliothek, Wernigerode, Zb 14), and the Buxheimer Orgelbuch (*D-Mbs* Cim.352b; fig.130). Virdung's *Musica getutscht* (1511) and Schlick's *Tabulaturen etlicher lobgesang und lidlein* (1512) are the earliest known printed keyboard music and there are several early 16th-century manuscript tablatures from the regions of Switzerland and Germany near the Rhine (e.g. fig.131) and from Poland (the tablature of Jan z Lublina): for further details *see* SOURCES OF KEYBOARD MUSIC TO 1660. Each of these early sources generally displays notational idiosyncrasies, but in all of them the top voice is notated in a void or full mensural staff notation and the other voices in alphabetical notation, the letters corresponding with the names of the notes. In both parts of the notation accidentals are specified; in the mensurally notated voice, this may be with unusual signs such as downward stems with slashes. As in most later tablatures special rhythm signs above the letters specify the durations of the notes; they were sometimes joined with beams, as in the 15th-century Buxheimer Orgelbuch.

The number and variety of keyboard sources increase rapidly for the period after 1500. In Italy and France there are printed keyboard sources, using mensural notation throughout, as in the earlier Faenza Codex (*see* SOURCES OF KEYBOARD MUSIC TO 1660, fig.1). Examples are Cavazzoni's *Recerchari, motetti, canzoni* (1523) and the series of keyboard collections published in France by Attaingnant from the 1530s (fig.132). This keyboard mensural notation is closer in a number of respects to 19th- and 20th-century mensural notation than to contemporary vocal notation, for example in the use of bar-lines, but complex score notation was not very well suited to

131. *Old German organ tablature: both the staff notation for the upper voice and the rhythm signs for the lower voices use beams (early 16th-century fragments, GB-A)*

132. *Keyboard notation on two five-line staves, using void notation but without beams ('Dixneuf chansons musicales'; Paris: Attaingnant, 1531); accidentals are indicated by dots under notes*



movable-type printing and came into its own only after the introduction of music engraving. Nevertheless score notation remained normal in French and Italian keyboard music, as it was later in English keyboard sources (*see* SOURCES OF KEYBOARD MUSIC TO 1660, §2(vi)); it was cultivated either in the modern two-staff form or as the partitura (see §4(viii) above).

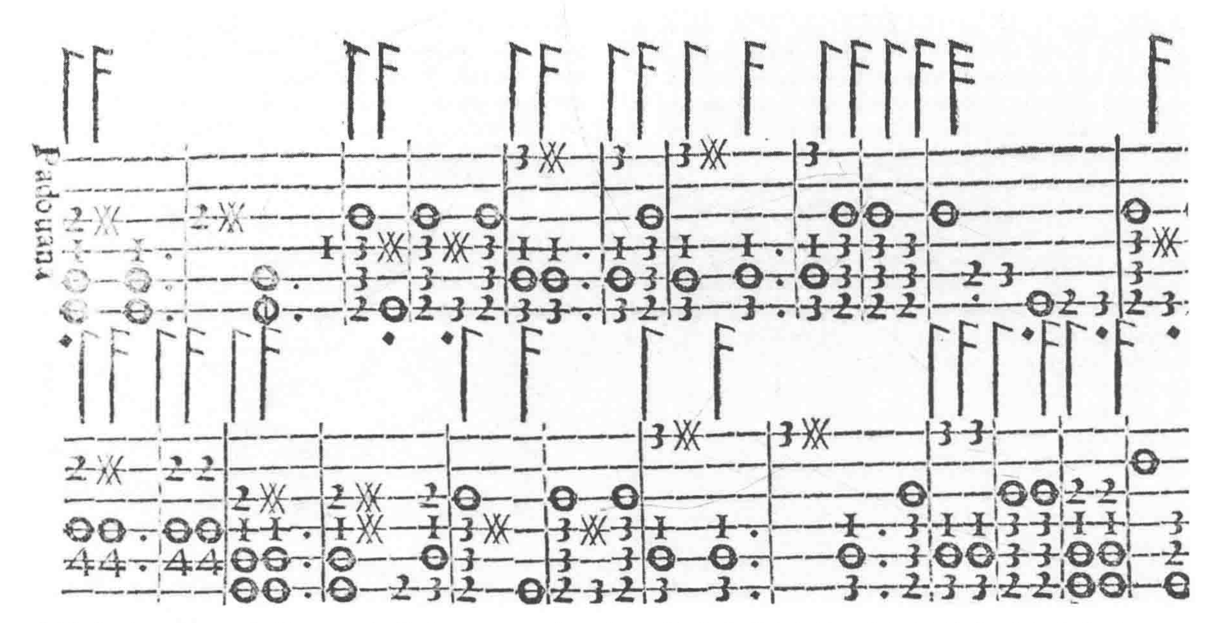
From about 1570 the old German organ tablature was superseded in German-speaking areas by a new German organ tablature, in which letters were used as in the earlier system but now for the highest voice as well as the others (fig.133). This alphabetical notation was supplemented by a uniform system of rhythm signs, derived from those of Italian lute notation. The change may have been due in part to the difficulty and cost of printing the mensurally notated top voice. This system became widely diffused in northern Germany in the 17th century and survived into the 18th, latterly mostly in manuscripts written by organists, including J.S. Bach, for their own use (*see* BACH, §III, 7 and fig.7). It was used by Buxtehude for vocal and single-line instrumental as well as keyboard music (for illustration, *see* BUXTEHUDE, DIETERICH, and Winternitz, 1955, ii, pl.7). A curious mixture of this system, used only for the pedal line, with ordinary mensural notation occurs in the *Tabulatuur-boeck van psalmen en fantasyen* of Anthoni van Noordt (1659; facs. in Wolf, ii, 263); fig.134 shows another curious and in several respects anomalous alphabetical (?) keyboard notation from early 17th-century France.

The only other major keyboard tradition to use tablature was that of Spain. In Bermudo's *Declaración de instrumentos musicales* (1555) various systems are mentioned, using numerals to represent the keys of the keyboard. The latter may be numbered consecutively throughout, or the white keys may be numbered consecutively and the others provided by supplementary accidentals; or the white keys within each octave may be numbered from 1 to 7, with accidentals and octaves distinguished by diacritical marks. Rhythm signs are placed above the music, defining the durations in the fastest-moving part (*see* TABLATURE, fig.3). Such systems are also found in Italy, in the Spanish-influenced *Intavolatura de cimbalo* of Antonio Valente (1576), and they persisted into the 17th century. There is also slight evidence of the use of comparable tablatures with letters or numerals for psaltery music.

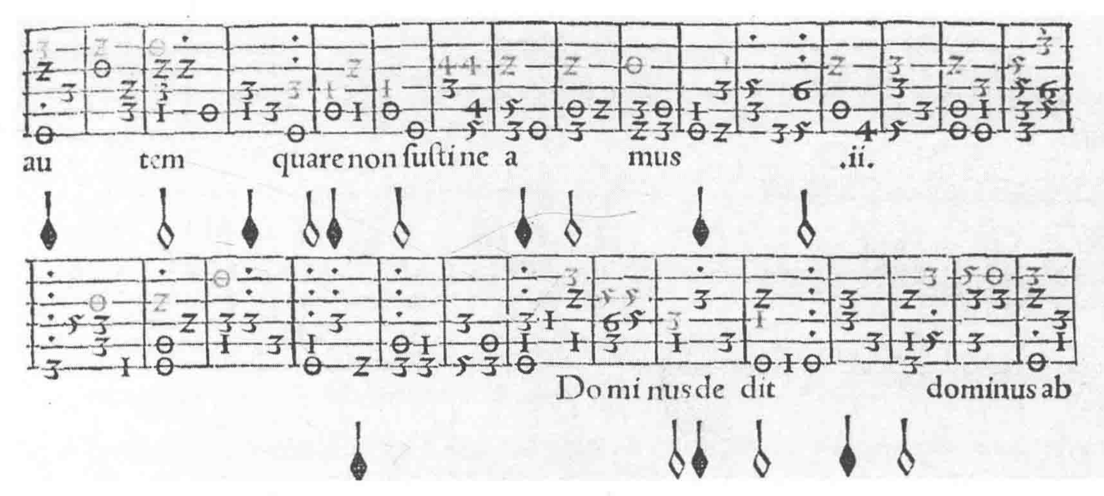
(ii) Tablatures for plucked string instruments. Petrucci's early 16th-century publications include four books in so-called Italian lute tablature (1507–8), of which the second gives rules for playing from the tablature, evidently for the benefit of performers without knowledge of musical theory or notation. The printing of Italian tablatures continued until 1616; manuscript Italian lute tablatures are attested until the mid-17th century. The principles on which Petrucci's tablatures rest remained fundamental to Italian lute tablature: six lines of a 'staff' represent the six courses of the lute, with the course lowest in pitch at the top. Numerals placed on the lines then indicate the fret to be stopped on the relevant course, zero being used for open strings, and rhythm signs placed above the 'staff' indicate the durations of the shortest notes within the texture at any point (*see* TABLATURE, fig.5). These rhythm signs no doubt derive from mensural note shapes but lack the note heads; they were joined with beams as early as the first half of the 16th century. The rhythm signs appear in Petrucci's prints above each note or chord, but even in the early 16th century the notation is sometimes simplified by omitting rhythm signs unless there is a change in note value. The system of rhythm signs normally precludes the specification of simultaneous notes of different durations, but some tablatures employ a cross or sharp-like symbol after numerals to indicate that the note in question is to be prolonged beyond the next note or chord (e.g. fig.135, from Antonio Rotta, *Intabolatura de lauto*, 1546); this device also occurs in German tablature (e.g. Judenkünig, 1523). Normally these Italian tablatures are accommodated on a single 'staff'; a vocal part, if included, is usually but not invariably notated mensurally on a separate staff. Spinacino occasionally placed even the upper voice of a lute piece on a separate staff for the sake of convenience. (For another example of Italian lute tablature, see fig.120).

A similar tablature notation was used in Spain for the vihuela. In the earliest surviving example, Luys Milán's

133. *New German organ tablature: all voices are notated alphabetically, with octaves distinguished as in fig.130 (W. Schonsleder, 'Architectonice musices universalis'; Ingolstadt: Zeller, 1684); metric units are divided by spaces or bar-lines, and rhythm signs (when used) are joined by beams*



134. *French 17th-century keyboard notation, with letters placed on staves but without precise indications of rhythm (GB-A, MS bound with a copy of Arcadelt's 'Primo libro di madregali', 1561)*

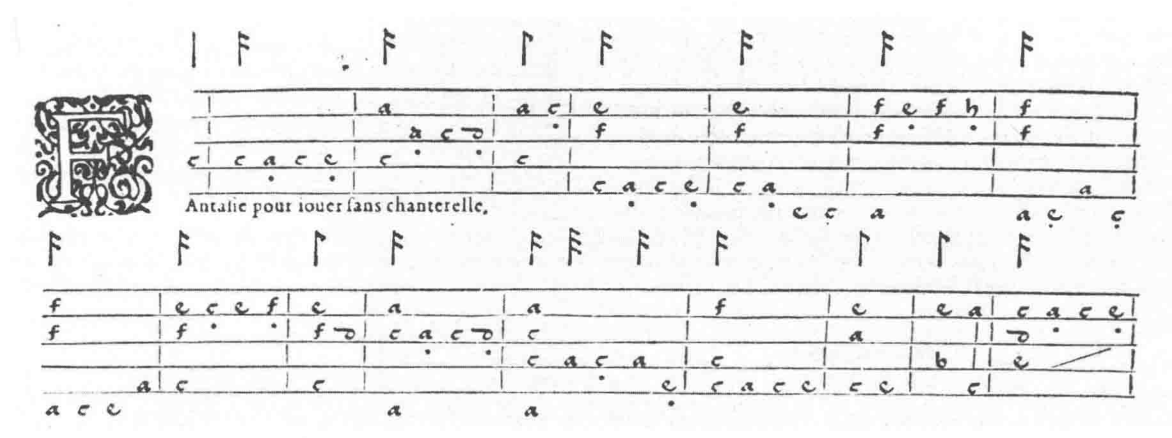


El maestro (1536; *see* TABLATURE, fig.6), and according to Bermudo in other 16th-century Spanish vihuela music the sequence of courses is reversed, so that the highest-sounding course is represented by the top line. Normally, however, Spanish practice and Italian correspond in this respect. Milán and others used complete note shapes for rhythm signs, in a manner otherwise similar to Italian practice; vocal lines are occasionally included in the tablature staff and distinguished from the instrumental accompaniment by being notated in red (fig.136), or (Esteban Daza, 1576, the latest known source) with dots above the numerals for alignment.

The series of printed French lute tablatures, like the Italian, has as one of its earliest examples a publication giving instructions for beginners in playing from tablature: Attaingnant's *Très briefve et familière introduction* (1529: *see* SOURCES OF LUTE MUSIC, fig.3), published only a few months after his *Dixhuit basses dances*, is the earliest surviving source. The 'three short rules' of the *Introduction* establish the principles found in later French tablatures. The chief differences from Italian lute tablature lie in the use of five rather than six lines in the staff, even though there are already six courses, the sixth being given a 'leger line' when necessary; the arrangement of the lines with the highest-sounding course represented by the top rather than the bottom line; and the use of an alphabetical sequence of letters, rather than numerals, for the frets, with 'a' for open strings. Rhythm signs generally correspond with those of Italian lute tablature; fingering is indicated by dots (fig.137), later by numerals. Other later developments in French lute tablature include the adoption of a six-line staff; this is used in isolation in an Attaingnant publication of 1530, but not generally adopted until after the publication of the *Pratum musicum* of Emanuel Adriaenssen in 1584, and then used almost without exception. Various expedients were adopted to notate up to two extra bass courses before the end of the century, and further bass courses introduced during the 17th century and played as open strings (*see* TABLATURE, fig.7; SOURCES OF LUTE MUSIC, fig.8). For details of other subsidiary signs in 17th-century French lute tablatures *see* LUTE, §6.

French lute tablature declined in popularity in France from the early 18th century but had spread to England, the Netherlands, Germany and elsewhere, and it persisted especially in Germany, where French tablatures continued

135. *Italian lute tablature: double crosses signify that notes are to be prolonged (A. Rotta, 'Intabolatura de lauto'; Venice: Antonio Gardane, 1546[32])*

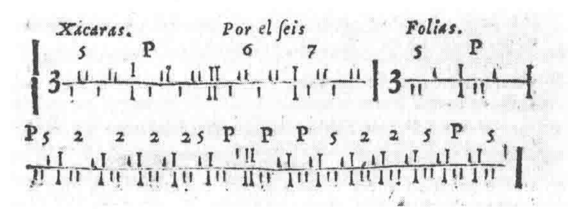


136. *Spanish vihuela tablature, with the vocal line in red (here grey) (E. de Valderrábano, 'Silva de sirenas', ii; Valladolid: Fernandez de Cordova, 1547)*

to be printed until 1771 and to be produced in manuscript until the 1790s. Music for other string instruments such as cittern, bandora, mandore, mandolin, colascione and angélique, was notated in tablatures of this kind, though sometimes with fewer lines if the instrument had fewer courses than the lute.

Before the introduction of French lute tablature to Germany, lutenists there had used a German tablature, said by Agricola to have been invented by the blind 15th-century organist Conrad Paumann. The first surviving printed sources of this tablature are in Virdung's *Musica getutscht* (1511; see TABLATURE, fig.4) and Schlick's *Tabulaturen* (1512), and German tablature persisted for about a century, when it was finally superseded by the French tablature, which had first appeared in German prints during the 1590s. German lute tablature is based on a five-course lute, but early sources are for six-course instruments: the frets of the top five strings are designated by letters of the alphabet, supplemented with a few other symbols, reading across the first frets of all five courses, then across the second frets and so on rather than by a series of symbols repeated for each course. Thus each fret on the instrument has a unique symbol; the necessity for a staff in the French or Italian manner is eliminated, at the cost of increased complexity in the notation. The lowest course, presumably added after the establishment of the notation, is assigned a series of letters independent of the rest of the notation. Open strings are shown by numerals for each course (fig.138; see SOURCES OF LUTE MUSIC, fig.2).

Guitar music from around 1550 is notated in either Italian or French lute tablature; as in tablatures for other instruments, the number of staff-lines varies according to the number of courses. 17th-century guitar tablatures developed features of their own, no doubt because the constant repetition of chords prompted an abbreviated notation. Of the two principal methods the Italian, attested from 1606, uses capital letters to represent single chords (see TABLATURE, fig.8), and the Spanish, attested from 1626, uses numerals for the same purpose (fig.139). These abbreviated systems were used at times in combination with the earlier lute notation (for further details see Wolf, ii, §I, chap.3). Tablatures for guitar remained in use until the late 18th century, when they yielded to ordinary mensural notation on a single staff, written an octave higher than sounding (fig.140).



For much of the 20th century tablatures of a new type were in use for the guitar and ukulele in popular music, with a grid of six vertical and four horizontal lines (guitar) or four vertical and four horizontal (ukulele), providing a

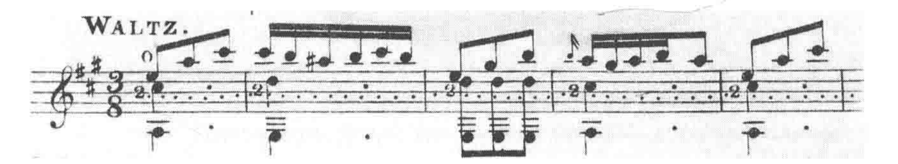
Adieu mes amours.

138. *German lute tablature, with regular bar-lines and rhythm signs (H. Gerle, 'Tablatur auff die Laudten'; Nuremberg: Formschneider, 1533)*

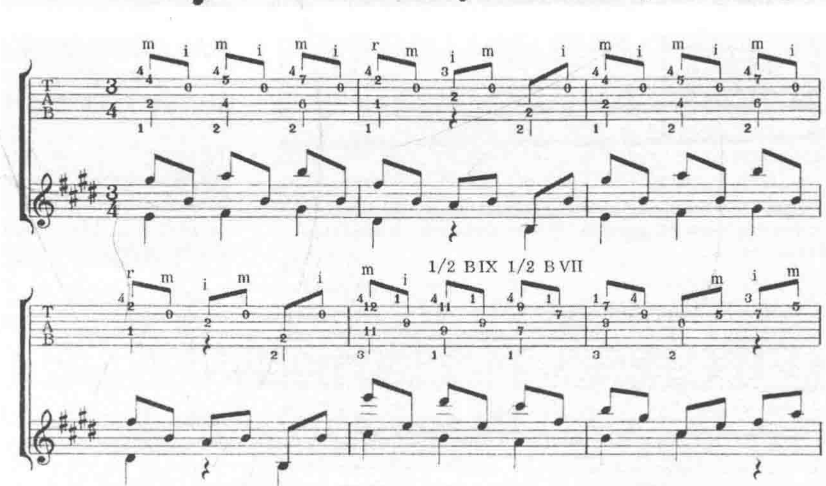


139. *Spanish abbreviated notation for guitar chords: the numerals, letters etc. stand for chords (e.g. '5' for D minor, 'P' A major, '6' A minor) (L. Ruiz de Ribayaz, 'Luz y norte musical'; Madrid: Alvarez, 1677); the vertical strokes show the direction of attack*

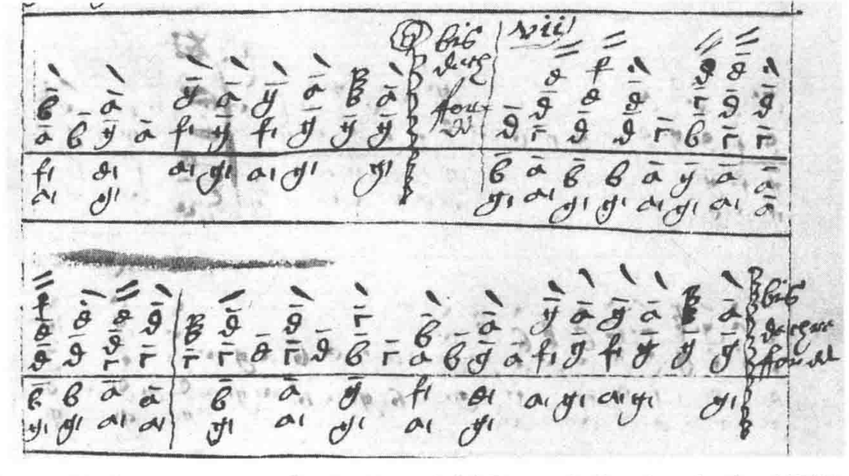
schematic picture of the fingerboard; dots represent the positions of the fingers (fig.141). This tablature chord notation, like the abbreviated representation of chords by capital letters (an alternative to it: see §4(viii) above), lacks any indication of rhythm within the duration of each chord, which is to be supplied by the performer from his knowledge of the style. Some 20th-century guitar music, mostly of a popular nature in the so-called 'finger-picking' styles, uses another type of tablature notation, closer to the lute tablatures of the Renaissance. Many publications of the 1960s and 70s reflect this notation. A six-line staff is used, corresponding to the strings of the instrument; as in French lute tablature the top line represents the string of highest pitch, and as in Spanish vihuela tablature numerals are the basis of the notation. Time signatures, bar-lines and so on are as in staff notation; the letters 'TAB', written vertically, often replace a clef, presumably for ready identification of the tablature when both staff and tablature notation appear in the same book. Otherwise there is no standard practice: the numerals in some tablatures represent the frets, in others the fingering, the notes being identified in some other way (e.g. by capital letters for chords). Rhythm signs are freely used: a vertical or diagonal dash for a crotchet, and stems (without note heads) with flags and beams as in staff notation for quavers, semiquavers and so on. Part-writing may be specified far more precisely in this tablature than in any Renaissance one (fig.142). Special signs are used for ornaments and other effects.

Harp tablatures are also attested from the late Middle Ages, and Spanish vihuela tablature was intended also for the harp. Irish manuscripts have various notational systems, perhaps for harp music; one from the Elizabethan period has various combinations of acute and grave accents, circumflexes and rhythm signs; another has a series of symbols, in part resembling those of Greek notation, representing successive notes in a diatonic series. 17th-century Welsh manuscripts, including that copied by Robert ap Huw (*GB-Lbl* Add.14905), contain another tablature for the harp, which like German organ tablatures uses the letter-names of the notes. It is closer than the Irish sources to other contemporary notation, being written in score with bar-lines and rhythm signs like those of other tablatures of the period (fig.143). Extravagant claims of antiquity have been made for both the Welsh and Irish tablatures and their repertories, but without firm evidence.

French and German harp music appears to have been notated in various ways: alphabetical tablature (Agricola, *Musica instrumentalis deudsch*, 1529, f.XXXII); normal mensural notation; with numerals corresponding to the strings (Mersenne, *Harmonie universelle*, ii, 1637, bk.3, p.171); or by lute tablature. These possibilities are not represented by surviving examples.

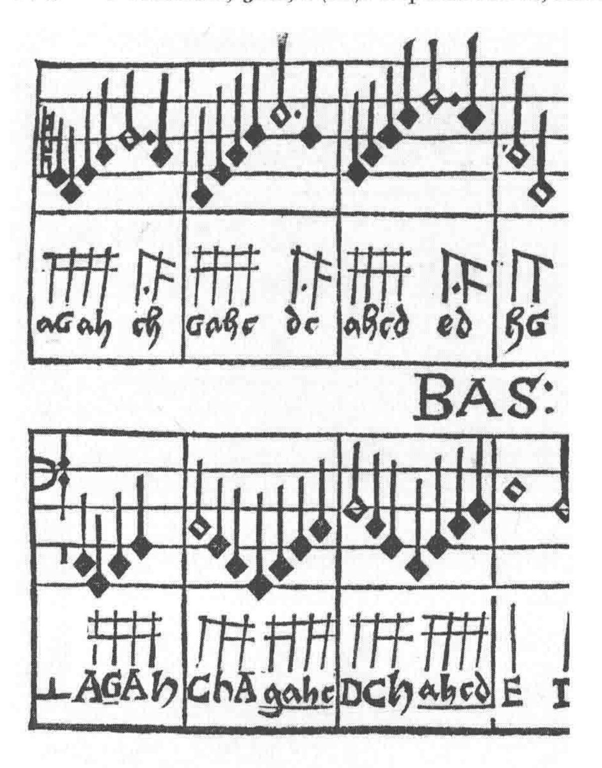


(iii) Tablatures for other instruments. Viol music has normally been notated in ordinary mensural notation, but tablature is occasionally encountered, mostly in didactic



140. *Early 19th-century guitar notation, with detailed fingering (F. Sor, 'Six Divertimentos'; London: Regent's Harmonic Institution, c1820)*

141. Early 20th-century popular song notation, including ukulele tablature and supplementary Tonic Sol-fa notation for the vocal part (M. Wayne, 'Ramona'; London: Francis, Day & Hunter, 1927); tablature symbols are provided only at chord changes



142. 20th-century finger-picking guitar tablature, with staff notation: numerals represent the frets; letters and other numerals above and below the staff represent the fingering (H. Vinson, 'A Folksinger's Guide to the Classical Guitar'; New York: Oak Publications, 1971); special symbols refer to the 'barre' or finger placed flat across all the strings (bar 2); stems in both directions and rests show simultaneous conflicting rhythms

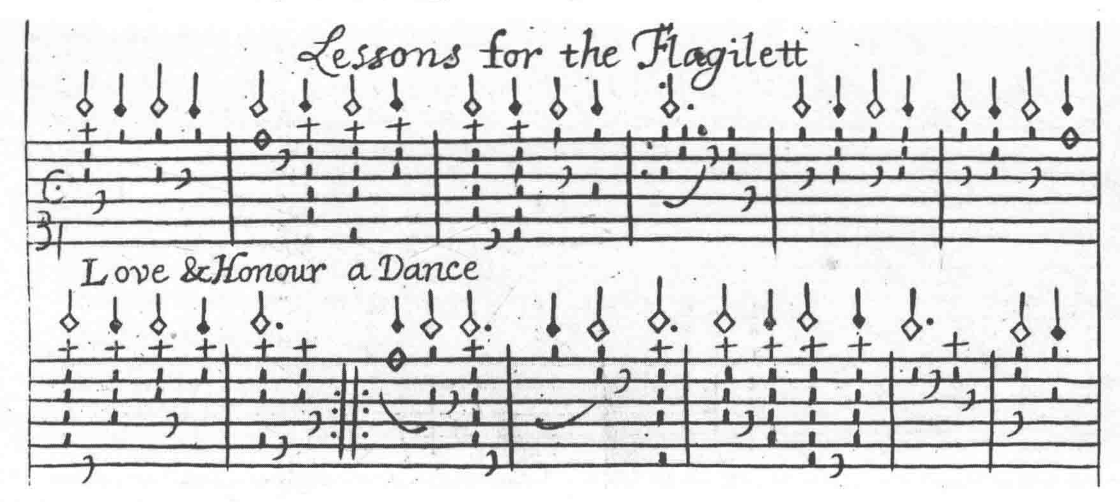
143. Welsh harp tablature: the octaves are distinguished by horizontal and vertical strokes, and the parts for left and right hands by a continuous line; the oblique strokes over the score are rhythm signs (Robert ap Huw MS, 17th century, GB-Lbl Add.14905, f.22r)

works. The earliest sources are German (Virdung, *Musica getutscht*, 1511; Agricola, *Musica instrumentalis deudsch*, 1529; Gerle, *Musica teusch*, 1532) and are notated in German lute tablature or other alphabetical notation (fig.144, from Agricola). In Italy viol tablature is found first in Ganassi dal Fontego's *Regola rubertina* (1542), corresponding in essence to the Italian lute tablature though with modification because of the greater number of frets required (in both types of tablature single symbols, rather than numerals, were used for numbers greater than

144. *Tablature notation (here for bass viol) with its equivalent in mensural notation (M. Agricola, 'Musica instrumentalis deudsch'; Wittenberg, 1529)*

9, in order to avoid ambiguity) and for precision of fingering. In France, in the few instances where mensural notation was not used, French lute tablature was used for viol music (fig.145), sometimes with ancillary signs for special effects, and it was also employed for music for other related instruments such as the *viola bastarda*. French lute tablature was also used for the English lyra viol repertory.

Modified lute tablatures of various national types were occasionally used also for violin music, but with only four staff-lines, corresponding to the strings of the instrument. In the absence of frets, the series of numerals or letters used were not bound to correspond to semitone steps: Italian violin tablatures, from Gasparo Zanetti's *Scolaro . . . per imparar a suonare di violino, et altri stromenti* (1645; fig.146), use numerals to specify diatonic steps, with accidentals added for the semitones as in mensural notation. This notation persisted for more than a century and is still attested in Pablo Minguet y Yrol's *Academia musical* (1752); comparable modifications of French lute tablature were also made, with the letters representing diatonic steps. The older lute notation based on semitone steps also continued to be used for violin music.

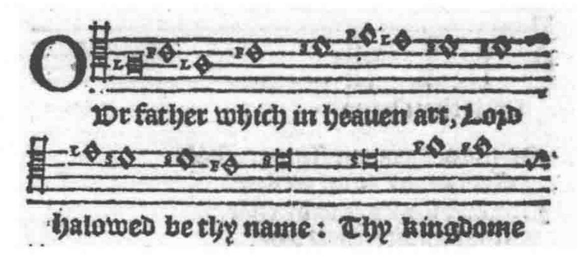


Wind music has nearly always been notated mensurally, but tablatures are occasionally attested, based on the positions of the fingers. A recorder tablature is found in Virdung (1511), using numerals and diacritical marks. Thomas Greeting in his *Pleasant Companion* (1682 edition) used a six-line staff for the six holes of the flageolet with vertical lines for covered holes, crosses for half-covered holes and commas for ornaments (fig.147); Pablo Minguet y Yrol (*Academia musical*, 1752) used an

145. *French lute tablature for viol music; the treble and bass voices are printed in mensural notation, with the tablature equivalent given for didactic purposes (T. Mace, 'Musick's Monument'; London, 1676)*

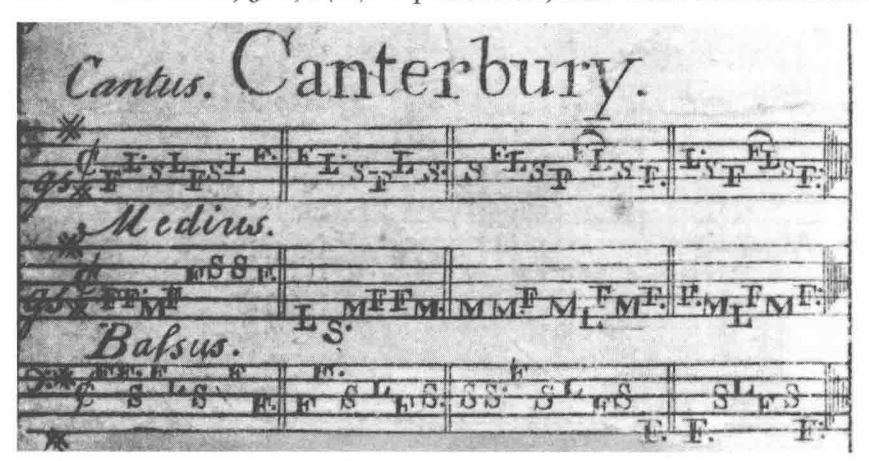
146. *Italian violin tablature using numerals to represent diatonic steps on each string (from G. Zanetti, 'Scolaro ... per imparar a suonare di violino, et altri stromenti'; Milan: Comagno, 1645)*

147. *17th-century flageolet tablature in which each line of the 'staff' represents a hole in the instrument (T. Greeting, 'The Pleasant Companion'; London: J. Playford, 1682 edition)*



148. *Solmization notation with numerals, with mensural notation above, supplemented by solmization syllables (P. Davantes, 'Pseaumes de David, … avec Nouvelle et facile methode'; Geneva, 1560)*

eight-line staff, with the spaces representing the seven holes, and full, void and half-void circles representing covered, open and half-covered holes. Other tablatures were devised for wind instruments such as the musette in 17th-century France, and tablatures have been attested for brass fanfares; numerical tablatures were used in the 19th century for the accordion and other popular instruments.



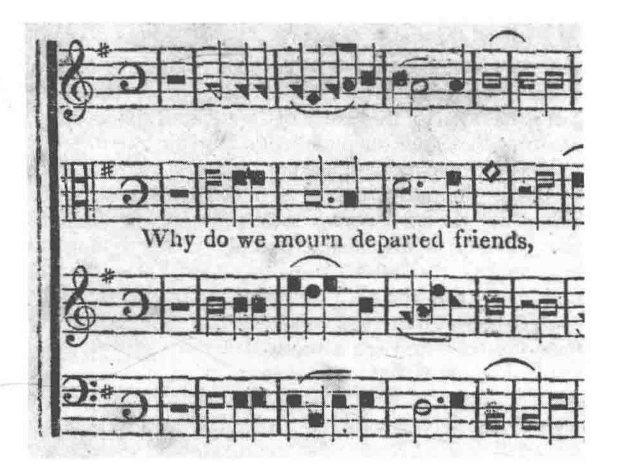
(iv) Vocal notations. Since the 16th century, periodic attempts have been made to construct simple systems of vocal notation, often based on the practice of SOLMIZATION, for the benefit of the musically uneducated. Many of these indicate pitch redundantly in two different ways: by conventional mensural notation supplemented by some alternative means of identifying the pitches, either with the letter-names of the notes or with solmization syllables; or with distinctive note shapes or numerals representing the solmization syllables. These systems multiplied from the 18th century, mainly where rapidly acquired musical literacy was sought, or in pioneering or mission areas, and are associated mainly with popular music (hymns, psalms, ballads etc.).

An attempt to develop a simplified solmization notation with numerals was made by Pierre Davantes (*Pseaumes de David, … avec Nouvelle et facile methode pour chanter chacun couplet des pseaumes sans recour au premier*, Geneva, 1560; fig.148). Numerals from 1 to 9, supplemented by the letters A and B, represent the notes in an ascending sequence beginning on E, C or B (the latter either B♭ or B♮ depending on the hexachord); the numbers are reckoned as in the natural hexachord if written without dots, in the hard hexachord if followed by a dot and in the soft hexachord if preceded by a dot. Vertical dashes are used for rhythm signs. A simpler solmization notation was adopted in a number of psalm books published by John Day in the 1570s, with abbreviations of the solmization syllables joined redundantly to conventional notes on staves (fig.149; see Krummel, 1975, pp.71ff).

Specific solmization notation was uncommon in England. The FASOLA solmization system, later known as 'Lancashire sol-fa', used a reduced series of solmization syllables; it was expounded in popular publications from the early 17th century until the late 19th, as in John Playford's *Breefe Introduction to the Skill of Musick* (1654), and was normally a sight-singing system applied to music in ordinary mensural notation. In America, however, it gave rise to a number of distinctive notational systems for hymn and psalm books, beginning with that of John Tufts (*An Introduction to the Singing of Psalm-Tunes*, 1721; earliest extant edn, 5/1726), in which the letters *M*, *F*, *S* and *L* (for the solmization syllables *Mi*, *Fa*, *Sol* and *La*) are placed on a conventional staff, with dots for rhythm signs (two dots for a breve, one for a semibreve and none for a minim; fig.150). Comparable systems multiplied in the 19th century. In the south and mid-west USA, a number contained distinctive 'shape-notes' (i.e. notes of four different shapes, each representing one of

149. *Metrical psalm notation with a solmization letter by each note 'whereby thou mayst knowe how to call every Note by his right name' (Sternhold and Hopkins, 'The Whole Book of Psalmes'; London: John Day, 1574)*

150. American notation: letters represent solmization syllables, dots duration (J. Tufts, 'An Introduction to the Singing of Psalm-Tunes'; Boston, MA, 1738 edition)



the four fasola syllables); these may have first appeared in Little and Smith's *The Easy Instructor* (1801), whose system eventually prevailed over other early 19th-century systems (fig.151). Such systems are known also as 'patent', 'buckwheat' or 'figured' notes, and the shape-notes have survived into the 20th century. (*See* SHAPE-NOTE HYMNODY; also §4(iii) above.)

From the 17th century many numerical notational systems have been proposed as alternatives to or replacements for conventional mensural notation. One of the earliest was that of William Braythwaite (*Siren coelestis*, 1638; see Krummel, 1975, pp.100ff, including facsimiles), comprising numerals for notes and various different types of comma for rests; other early numerical systems are those of Kircher (*Musurgia universalis*, 1650, ii, 46ff) and Giovanni d'Avella (*Regole di musica*, 1657). Such systems in the 17th century and later relied mainly on numerals, with or without letters of the alphabet, and some used conventional rhythm signs to fix the durations of notes; most used the numerals to count diatonic intervals arithmetically from a given note or notes. An exception is Mersenne's proposal (*Harmonicorum libri XII*, vii, 1648, pp.148ff) to represent notes by inverse intervallic ratio as calculated by the length of string required to produce the note, rather than by frequency; the basis was *c′*, taken as an arbitrary 3600.

Rousseau, in his *Projet concernant de nouveaux signes pour la musique* (1742/*R*) and elsewhere, used the numerals 1 to 7 for the diatonic scale of C major, placed on, above or below lines to distinguish between different octaves; this notation was designed for complex pieces. A second system, for simple melodies, dispensed with lines, using dots over or under numerals to indicate a move to a higher or lower octave (shown with only the first note in the new register). Simple integers were used for time signatures, rather than conventional fractional signatures; subdivisions of a bar, if unequal, were indicated by commas and by horizontal lines over or under groups of notes, functioning like beams in mensural notation. Rhythm signs in the usual sense were thus dispensed with, as in the most influential 19th-century solmization and alphabetical notational systems. Rousseau's notational proposals, though not widely adopted at the time, were taken up on a relatively large scale in the 19th century in France in the GALIN-PARIS-CHEVÉ METHOD, whose influence extended to other European countries (Germany, the Netherlands, Denmark and Russia).

In the English-speaking world notational systems were developed in the 19th century based on seven-syllable solmization systems, which had been advocated from the 18th century as theoretically superior to fasola. The most important of these systems was the TONIC SOL-FA system, perfected by John Curwen from a method of sight-singing. Like some of the 18th- and 19th-century American notational systems described in Marrocco (1964), Tonic Sol-fa jettisoned the staff and conventional note shapes, using instead letters as abbreviations of the syllables representing the degrees of the major scale, with changes of vowels for accidentals. The necessity for rhythm signs, found in most earlier notational systems in which conventional note shapes were abandoned, and even for time signatures, was obviated by the expedient of making the distance between symbols proportional to the duration of the notes, with dots and colons used to separate beats. The notation is supplemented in teaching with hand signs and a device known as a Modulator (*see* MODULATOR).

This economical and ingenious system was well suited to relatively uncomplicated vocal music. Associated in England at first largely with nonconformity, it was adapted for use in Germany and Poland; it was widely diffused through Christian missionary work and popular ballads (in printed popular ballads it sometimes supplements ordinary staff notation: see fig.141 above). Tonic

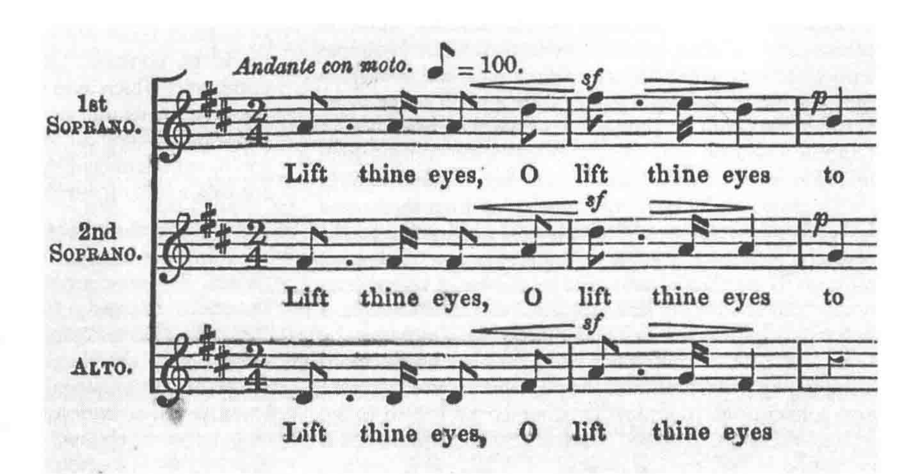
152. Simplified sol-fa, outside white influence, in an English-speaking Aladura church hymnal (for non-Yoruba-speakers in West Africa); the words are holy names, governed by special pronunciation rules ('Hymnbook of the Church of the Lord Aladura'; Ijebu Ode, Nigeria, c1958)



Sol-fa has become independent of white musicians in various parts of the world; it is widely used by African musicians, for example, for vocal music, often without the precise spacing and distinctions between different octaves of 19th-century Tonic Sol-fa (fig.152). A derived notation, using the numerals from 1 to 7 (and 0 for rests) instead of the sol-fa symbols from *d* to *t*, was developed in Japan and is widely used in 20th-century printed music in China and Japan (see L.E.R. Pickens, *NOHM*, i, 1957, 83–104, esp. 101); bar-lines are used as in sol-fa, but bars and double bars underneath the numerals, rather than punctuation marks, show the subdivision of the bars (for a related example see fig.153).

Although Tonic Sol-fa is used by those without musical education, it should not be regarded as a simple rule-of-thumb notation like some other alphabetical notations. Helmholtz, for example, considered it superior to staff notation for theoretical reasons, believing that it was a better means of producing correct intonation from singers (see *Die Lehre von den Tonempfindungen*, Eng. trans., 1875, appx 18). Fig.154 shows Tonic Sol-fa as applied to a fairly complex tonal piece; most of the notational features are self-explanatory.

お　　　　○お＝琴柱の左糸を押さえる
| 88 88 8 7 | 88 87 6 — | 5 77 88 77 | 88888- |
てる てる ぼうず てる ぼう ず あ した てんきに しておくれ

153. Notation for toy koto: the notes are represented by numerals, elsewhere equated with Japanese phonetic equivalents of sol-fa syllables (explanatory leaflet; Ina: Japanese Violin Research Institute, n.d.)

154. (a) Classic 19th-century Tonic Sol-fa and (b) its equivalent in contemporary mensural notation; the sol-fa letters have distinctive forms (Mendelssohn, 'Elijah'; London: Novello, (a) Tonic Sol-fa Edition, n.d., (b) 1903)

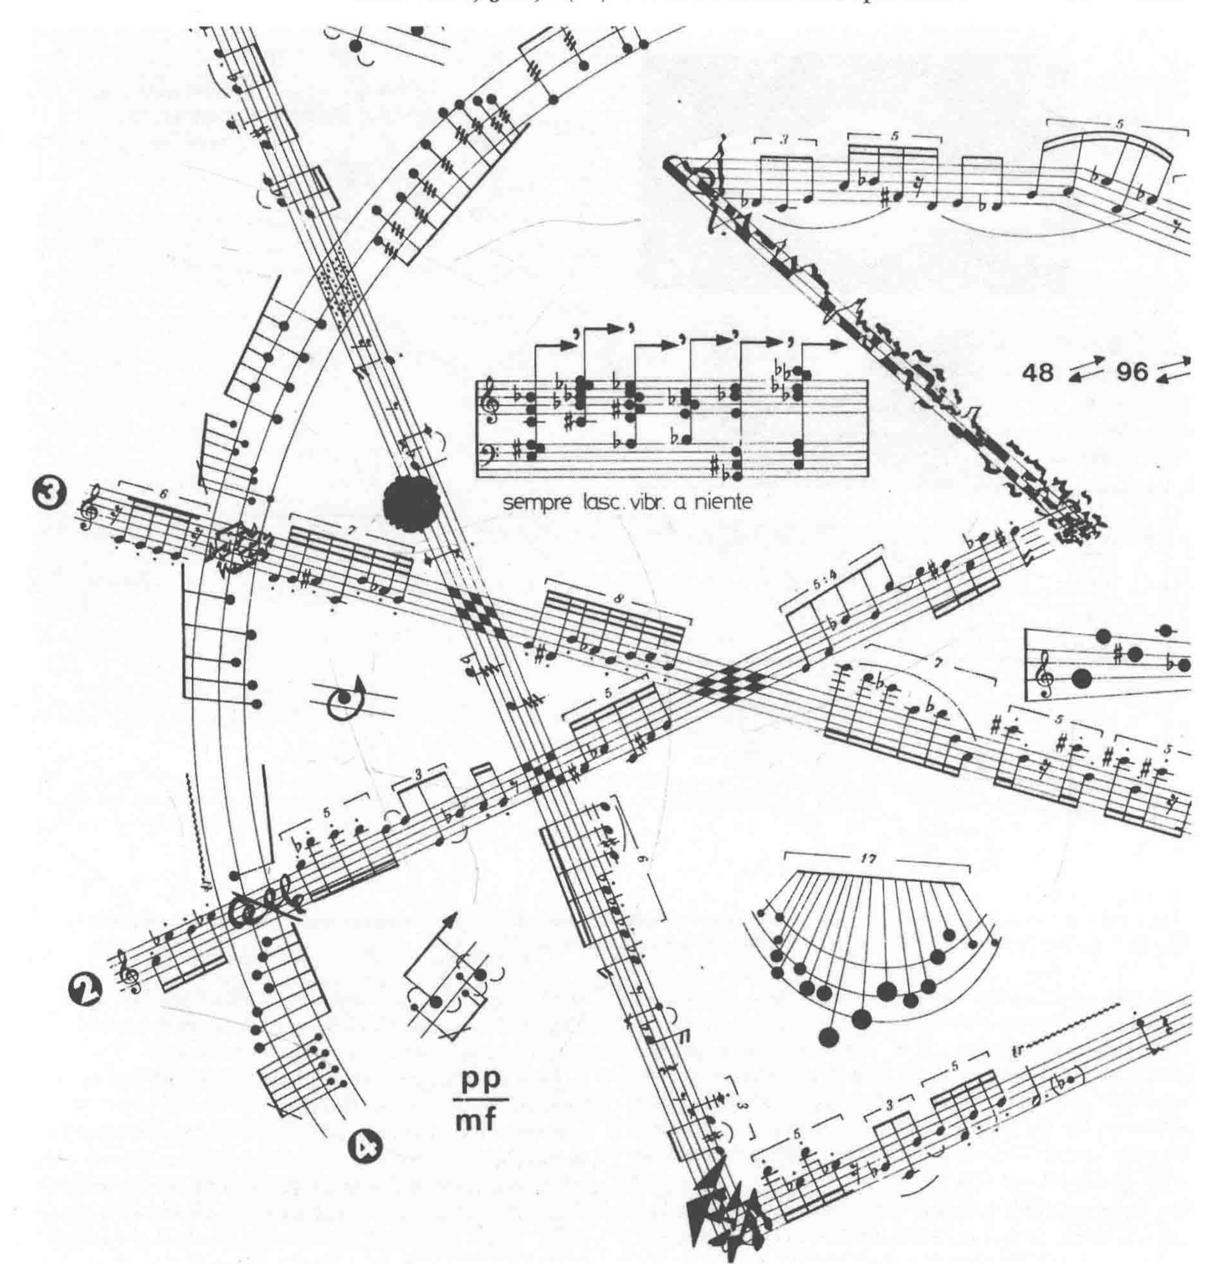
Since the late 19th century the limitations of Tonic Sol-fa have become more apparent because of its clumsiness when the music modulates rapidly and its inapplicability to non-tonal music. Notators accordingly have often preferred conventional mensural notation, which has ousted Tonic Sol-fa even from areas in which it had been well-established, such as English choral music. On the other hand, attempts to construct notational systems based on solmization with more than seven syllables to the octave have had no general success. Such systems include the EITZ METHOD, the systems of J.L. Acheson (*Douzave System of Music Notation*, 1936) and of L. Benke (1967).

For the syllabic notation employed by Scottish pipers to record pipe music ('canntaireachd') *see* SCOTLAND, §II, 6(i).

For bibliography see end of §6.

6. NON-MENSURAL AND SPECIALIST NOTATIONS.

(i) 20th-century non-mensural notation. Although the mensural notational system proved adaptable to the requirements of 20th-century music, there are some areas where it proved less effective. This occurred where the music makes relatively little use of notes of definite pitch or definite duration, or of traditional temperament systems. It occurred also in prescriptive notation for indeterminate music, when precise specification is at a minimum; and, perhaps paradoxically, also in descriptive notation at the other end of the spectrum of precision, when scientific accuracy of notation is required – as, for example, in ethnomusicological notations.



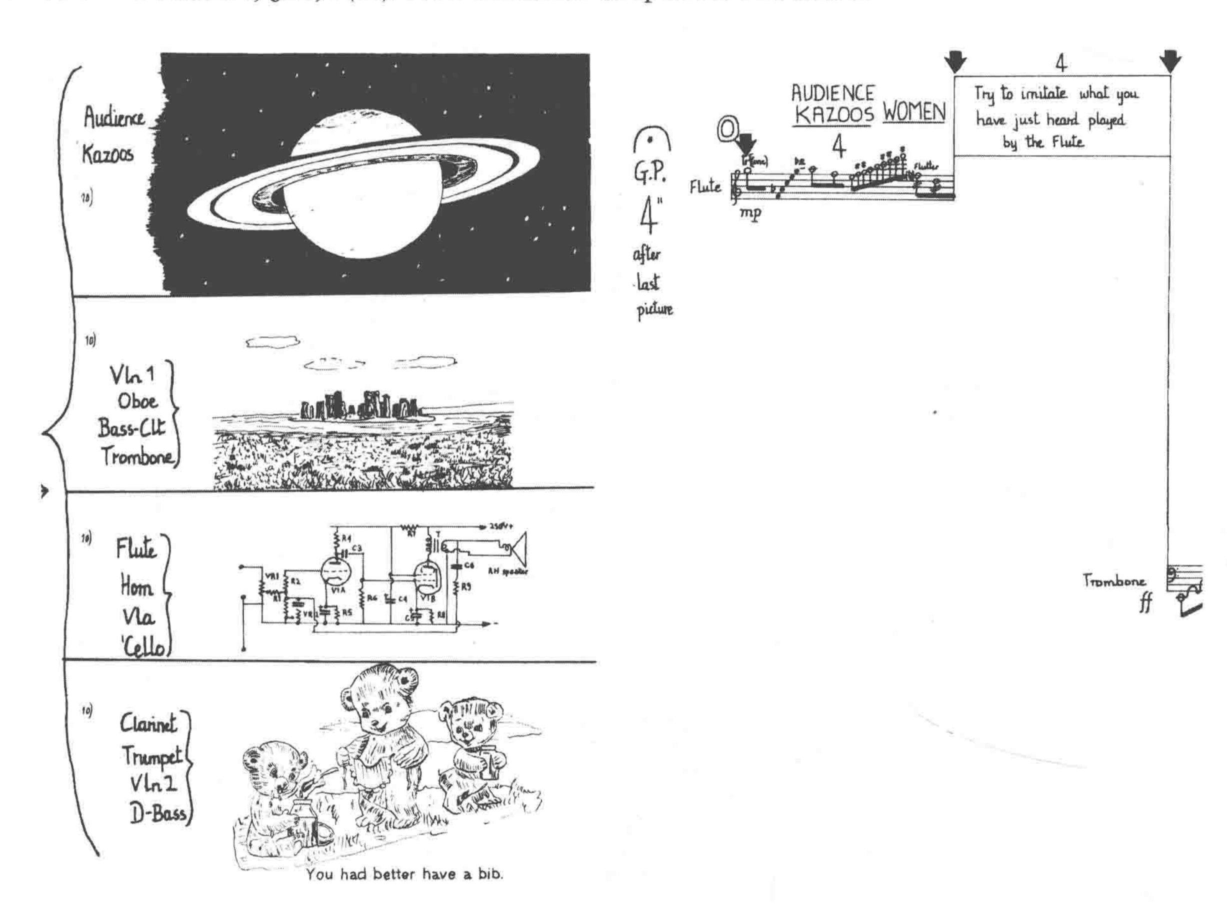
A move away from mensural notation occurred with so-called action notation: expansions of the verbal directions found in earlier notation, or symbols replacing them (e.g. the abbreviations for pedalling, fingering etc.) at the expense of the mensural aspects of the notation. From this, perhaps, developed the graphic notations particularly associated with indeterminacy (graphics, implicative graphics), which were used at least as early as 1950–51 (Morton Feldman, *Projections*). This notation is generally designed to evoke a musical response from the performer by non-specific analogy rather than by direct instruction; thus any two performances should be quite different. According to Karkoschka (*Schriftbild*, 1966, Eng. trans., 1972, p.77), graphic notation strives to 'stimulate without constricting the imagination'. Theoretically, any type of visual pattern may be used, though a certain degree of influence of conventional notation often seems evident, particularly in the choice of shapes associated with articulation and dynamics, and in the idea that a score represents a graph with a pitch range as its vertical axis and a time-scale as its horizontal axis. Graphic notation may be combined with conventional notation within a single score, as in figs.155 and 156. In some cases, such as in the works of Logothetis and Cardew, particular emphasis is placed on developing the aesthetic aspects of graphic notation. The use of abstract patterns as graphics is paralleled by the use of verbal texts not as instructions but as a 'notation' intended to evoke a musical response (as in the *Concert for Orchestra* by George Brecht, whose score comprises the single word 'exchanging'). An intermediate position between graphic and conventional notation is occupied by the so-called 'frame' notation, in which relatively free interpretation is permitted within certain prescribed boundaries; sections of scores in this notation may literally be notated within frames (fig.157).

Notation has sometimes been used for electronic music, although when such music is composed on tape the necessity for notation is not always present. Some pieces have been notated in order that the composer may be protected by copyright; or to provide a study score; or to provide a cue-sheet for performers when electronic music is combined with live performers. Scores of electronic music may thus be either prescriptive or descriptive, and may not always contain representations of every aspect of the music. The notation used may draw on the resources of conventional mensural notation, in so far as these are usable for the purpose, and on those of graphic notation. Proposals have been made for notational reform and notational standardization in electronic music (Fennelly, 1968).

Another area in which mensural notation is clearly inadequate is the precise recording of musical data, particularly those of non-Western music and folk music. Attempts to record music as it is being performed have been made since the mid-18th century, for example by attaching recording machines to keyboard instruments; these were termed 'melographs' at least from 1828, and it was hoped to record improvisations on them. One such instrument, from 1780, survives at the Deutsches Museum, Munich (inventory no.43872). Shorthand notations for recording music at speed were also devised (see §6(ii) below). No wholly satisfactory method was available until the invention of machines to record sound, and even then transcription into visual notation was seldom sufficiently precise for ethnomusicological material, even though efforts were made from the 1920s to divorce ethnomusicological transcriptions from Western mensural notation. But in the 1950s an improved MELOGRAPH (see illustrations in that article) was developed by Charles Seeger. This machine now provides immediate transcriptions of music in threefold graphic form; one section of the 'melogram' represents a pitch-time graph, another an amplitude-time graph and the third a timbre-time graph. The resemblance of this notation to the graphic notation described above is clear.

Unprecedented precision has also been required of notation adapted to the digital computer. If notation is to be converted into a computer programme, ambiguity and redundancy must be eliminated; such programmes have been used for the stylistic analysis, along statistical lines, of various repertories. Accordingly attempts have been made to construct methods of notation adapted to computers which lend themselves readily to transcription between mensural or other notation and a computer programme (see for example Symposium II in Brook, 1970, with details of some of the problems and proposals for solving them; see also Cole, 1974, pp.117ff).

(ii) Musical shorthand. Before the invention of sound recording, a musical equivalent of shorthand was required. The first attempts to devise one were made in France in the early 18th century (e.g. Joseph Sauveur, *Principes d'acoustique*, 1701), though the earliest systems are scarcely shorthand in a practical sense since they either are alphabetical systems or draw heavily on the resources of conventional notation. As late as 1805, P.J. de La Salette claimed as a shorthand system one that required letters of the alphabet, horizontal and vertical



155. Mensural notation combined with graphic notation, which itself is here frequently placed on a 'staff' (B. Rands, '... as all get out ...'; London: Universal, 1975)

strokes for rhythm signs and simplified signs for accidentals (*Sténographie musicale*).

Démotz de la Salle in the 1720s proposed signs more suitable to a shorthand system, which were capable of being rotated and reversed (*Méthode de musique selon un nouveau système*); they were derived from mensural notation, but later systems used simpler geometrical signs (e.g. J.L. Riom's *Sténographie musicale*, 1833), dots, curved lines and so on. All the early systems used separate signs for each note, but Hippolyte Prévost attempted to overcome this drawback by a system in which complete bars could be written as single multiple signs; the system required the use of a five-line staff with two auxiliary dotted lines above and two below. A similar notation was devised to record accompanying harmonies (fig.158, from *Sténographie musicale*, 1833).

(iii) Notation for the blind. Like musical shorthand, musical notation for the blind first developed in the 18th century and the first attempts at it were hampered by too close an adherence to the conventional mensural system. Rameau (*Code de musique pratique*, 1760), Tans'ur (*Elements of Musick*, 1772) and others envisaged, broadly speaking, a conventional notation placed in relief so that it could be read by touch, with note shapes somewhat altered to facilitate their recognition by touch. Several other notations for the blind were devised in the late 18th and early 19th centuries, but the most important was that devised by Louis Braille (*Anaglyptographie*, 1829), which

156. *Graphic notation: the performers (including the audience, as indicated) play what the pictures suggest and imitate passages played from semi-mensural staff notation (D. Bedford, 'With 100 Kazoos'; London: Universal, 1975)*

departed entirely from the conventional signs. Embossed dots were arranged in two adjacent vertical rows of three each, with the upper four dots referring to pitch and the lowest two to duration (for further details of this system, *see* BRAILLE NOTATION). This has superseded all other notations for the blind; revisions of it have not all been adopted universally, and different forms are used in different places.

(iv) Cryptography. From the 17th century at least, musical notation has occasionally been used as a secret code for conveying messages. Even earlier than that, the association of notes with solmization syllables had occasionally suggested their use as a pun, as for example in the use of an interpolated B♭ (= *fa*) replacing the syllable 'fa' in Du Fay's name (*GB-Ob* Can.misc.213); this too is a type of cryptography, and has many later parallels. Many musical codes equate single notes and note shapes arbitrarily with individual letters of the alphabet; there are German examples from the 17th century and later (e.g. Kircher, Gaspar Schott, J.B. Friderici, Michael Haydn), which are comparable to the system described in John Wilkins's *Mercury, or the Secret and Swift Messenger* (1641; see fig.159 and Krummel, 1975, p.128).

Another type of cryptography is represented by the use of motifs comprising notes whose letter-names (or letters derived from them, e.g. E♭ = Ger. Es = S) spell words (for example the use by Bach and other composers of the motif B–A–C–H, that is B♭–A–C–B♮ in German terminology; Schumann's 'Abegg' Variations, 1830; Ligeti's *Fragment*, 1961). These examples belong to the history of composition, however, rather than to that of notation.

An ambitious 'universal' musical language was essayed by Jean-François Sudre (*Langue universelle*, 1867), which was intended to express definite extra-musical ideas in a manner intelligible to all, of whatever nationality. Motifs were associated with ideas (fig.160) and were communicable through performance, notation, cheironomy and in other ways. Although the system achieved surprisingly wide acclaim in France at the time, it soon sank into oblivion.

Notation monogammique (Fr.). A form of musical notation in which differently shaped note heads are employed to distinguish between the degrees of the scale (ex.1). As its

name implies, the same series is equally applicable to any key, the note numbered 1 always being the major tonic, 2 being the supertonic and so on. Devised by Pierre Galin's pupil Edouard Jue de Berneval for his own singing classes in Paris, details of the notation were first published in his textbook *La musique apprise sans maître* (1824). Fétis stated (*Biographie universelle*, 2/1862) that Jue was teaching in London in 1827 and that an English version of his manual was published as *Music Simplified* in 1832. However, internal evidence shows that the book, though undated, was not published until 1840; and Jue began to teach in London at the RAM only in May that year, holding the post until 1842.

Although conceived independently, Jue's notation has clear affinities with the 'buckwheat' or 'shaped' notation popular among gospel singers in Alabama, Tennessee and Georgia, USA (*see* SHAPE-NOTE HYMNODY).

BERNARR RAINBOW

Notched flute. An end-blown flute (open or stopped) with a V- or U-shaped notch cut or burnt into its upper rim to facilitate tone production. No clear line can be usefully drawn between rim-blown flutes (e.g. many used in panpipes) having gently cupped rims and 'notched' flutes with shallow U-shaped notches. An enormous variety of notched flutes used as solo and ensemble instruments are found widely distributed across Africa, East Asia, the Pacific Islands and Central and South America. Notched flutes of bone, with three equidistant finger-holes, were used in the Chavín culture of Peru (900–200 BCE). The coastal Chancay culture of Peru (1300–1438), noted for its white-on-black pottery, produced cane or clay notched flutes with four to eight finger-holes. The modern Chinese XIAO, of bamboo, has its notch cut into a natural node forming the upper end of the flute, the node serving, like the player's lower lip in other varieties, to seal off the upper end of the flute. Thus the *xiao* is intermediate between notched and duct flutes.

See also SHAKUHACHI; for illustrations *see* FLUTE, fig.1*d* and fig.2*c*.

PETER COOKE, JOHN M. SCHECHTER

Note (i). A symbol denoting a musical sound; also in English usage the sound itself.

Note (ii). A term used by Johannes de Grocheio and in several French lais, apparently describing form. *See* LAI, §1(iii).

Note cluster. *See* CLUSTER.

Note de rechange (Fr.). *See* NOTA CAMBIATA.

Note row. *See* SERIES.

Note sensible (Fr.). *See* LEADING NOTE.

Notes inégales (Fr.: 'unequal notes'). A rhythmic convention according to which certain divisions of the beat move in alternately long and short values, even if they are written equal.

1. Definition and early history. 2. French practice. 3. Application outside France. 4. Jazz.

1. DEFINITION AND EARLY HISTORY. As it existed in France from the mid-16th century to the late 18th the convention of *notes inégales* was first of all a way of gracing or enlivening passage-work or diminutions in vocal or instrumental music. As styles changed and the figurations born of diminution entered the essential melodic vocabulary, inequality permeated the musical language. Its application was regulated by metre and note values; it always operated within the beat, never distorting the beat itself. (An anomalous instance of alteration of the beat appears in Gigault; see §2.) The degree of inequality (i.e. the ratio between the lengths of the long and short notes of each pair) could vary from the barely perceptible to the equivalent of double dotting, according to the character of the piece and the taste of the performer. Inequality was considered one of the chief resources of expression, and it varied according to expressive needs within the same piece or even within the same passage; where it was felt to be inappropriate it could be abandoned altogether unless explicitly demanded.

Inequality is usually defined as the uneven performance of evenly written values. Although the practical problem is certainly that of deciding when to alter what appears on the page, the rhythmic convention itself is independent of questions of notation. French composers frequently wrote out inequality with dotted figures, sometimes to resolve doubt, sometimes to ensure a sharply dotted effect, and sometimes for no apparent reason. Outside France, where performers could not be counted on to alter the rhythm in given situations, a composer who particularly wanted inequality had to indicate it. To insist that *notes inégales* are, by definition, always written equal is to insist that a style of performance has no existence apart from notation: that this style is, in fact, a matter of notation. It is, furthermore, to hobble and skew research in the subject (Fuller, 1981 and 1989).

Although the history of *notes inégales* may stretch back to the modal rhythms of the Middle Ages, the first explicit description was by Loys Bourgeois (1550), who explained it in its essential features as an embellishment of diminutions, linked to metre and conferring upon singing a *meilleure grâce*. Similar accounts are to be found in Spanish treatises by Tomás de Santa Maria (1565), who mentioned the short–long alteration of quavers as well as the usual long–short kind, and Cerone (1613), and there are examples of dotted diminutions in manuals by Ganassi dal Fontego (1535), Ortiz (1553), Conforti (?1593) and others. Chailley's thesis (1960) that inequality arose from French declamation cannot be sustained, since it was typically applied not to successions of syllables but to decorative prolongations of single syllables; moreover the Spaniards, whose language was spoken very differently from French, wrote of it in the same terms. Nor is the hypothesis that inequality resulted from paired keyboard fingerings (Babitz, 1969 etc.) a plausible explanation. A closer connection exists between inequality and the tonguing of wind instruments (Haynes, 1997), but *notes inégales* did not originate with any instrumental technique. There are sporadic references to both long–short and short–long inequality in Italian sources of the first half of the 17th century (Caccini, 1601/2; Frescobaldi, 1615; Puliaschi, 1618) and brief mentions of long–short inequality by Bernhard (1657) and Burwell (*c*1660–72; see Dart, 1958), but if the momentum of unequal diminution established in the 16th century continued in the art of performers of the first two-thirds of the 17th, it was largely undocumented by theorists. Parallel to but separate from the performing conventions of inequality, however, there developed a compositional, that is, a written 'dotted manner', like *notes inégales* owing its origin to Renaissance diminutions, but absorbed and transmitted through the concertato style of Monteverdi and his contemporaries and engendering a long line of sometimes obsessively dotted pieces as diverse as the second partita from Biber's *Harmonia artificiosa-ariosa*, Contrapunctus II from Bach's *Art of Fugue*, sonatas by Benedetto Marcello and even the second movement of Schumann's *Phantasie* op.17. The chief characteristic of this style is a relentless nervous energy quite unlike the grace or piquancy which is the normal effect of *notes inégales*; nevertheless there must have been some interaction between the two styles in the 17th century and it is not now possible to draw a clean line between them (Fuller, 1985).

2. FRENCH PRACTICE. More than a century elapsed between Bourgeois' description and the next mention of inequality in French writings. In the preface to his first *Livre d'orgue* (1665) G.G. Nivers recommended that the quavers in a short fugue in the time signature **C** 'and other similar pieces' should be played as if 'half-dotted'. Bacilly (1668) recommended a similarly gentle inequality in divisions; and in explaining that the dotting was left unwritten for fear of tempting the singer to an excessively jerky delivery in the manner of 'the old method of singing that would be very disagreeable today', he provided us with a rare clue to what seems to have been an early or mid-17th-century style of violent inequality, at least in vocal music. Burwell around 1670 (Dart, 1958) and Perrine in 1680 provided evidence of inequality in lute music and Rousseau (1687) in viol music. Although a gradual systematization of the relationship between inequality and metre is discernible in treatises and prefaces from the last two decades of the 17th century, rules were slow to evolve, partly as a result of uncertainties concerning metre and measure – reflected in a chaotic treatment of barring and signatures – at a time when the transition from Renaissance mensuration to modern metre was not quite complete. The modern performer cannot depend on a code that was not yet fully formulated for decisions about inequality in the music of Lully, Charpentier, Louis and the young François Couperin, the young Marais, Mouton, Grigny and others at the pinnacle of French classicism. It is particularly the 'quarter-beat rule' in **C** (see below) whose application is uncertain. Nivers was not the only one to suggest unequal quavers (i.e. half-beats) in that metre; Jullien (1690) did the same. Loulié admitted them ('sometimes' in 'any' metre) and some

scores seem to demand them – notably the offertory from François Couperin's *Messe des paroisses* for organ (1690). Rousseau (1687) was the first to say that quavers were equal in **C**; he also said that one should 'mark' the odd-numbered semiquavers. It is not clear, however, that 'mark' meant 'lengthen' here; it may simply have meant 'emphasize'. Saint Lambert (1702) wrote explicitly of making quavers alternately long and short except in **C**, where it was the semiquavers that were unequal.

A collection of 180 organ pieces from 1685 by Nicolas Gigault (*c*1627–1707; said to have been one of Lully's teachers) amounts to an encyclopedia of applied inequality for this period. The inequality is completely written out with dots but is presumably meant to be treated flexibly according to the expression of the music. The rhythms have been discussed in detail and the arguments presented for accepting this dotting as notated inequality by Pyle (1991) and Fuller ('Notes and *inégales*', 1989 and 'Gigault's Dots', 1994). The most important general observations are: (1) Inequality is the norm for the principal moving values of a piece or passage and even motion the exception. (2) Dotting is applied to the half-beat (quaver) in two-thirds of the pieces in **C** (providing further evidence that the 'quarter-beat rule' was not yet solidified). In two pieces in **C** it is applied, exceptionally, to the beat itself (crotchet) – this in addition to the usual application to semiquaver motion (quarter-beats) under this signature. (3) Dotted and even notes of different values and in different parts are freely mixed. As melodic motion shifts from one value to another (e.g. to a passage in semiquavers in a predominantly quaver motion) or from one part to another, the dotting may shift with it. (4) Even notes may be introduced for short passages or a whole section, apparently for the sake of variety and contrast. (5) Dotting is not affected by the intervallic character of the melodic movement: wide leaps are dotted as well as stepwise movement. (6) Except in crotchet motion in 6/4, the first note of a ternary group is normally dotted. (7) Syncopated notes are not normally dotted, though there are exceptions. (8) Slow accompaniments to expressive *récits* are usually undotted, though imitations of the solo will preserve the solo dotting. (9) *Contrepoint simple* (chordal texture) is not dotted. (10) A four-part *Fugue poursuivie à la manière italienne* (68 bars of densely imitative, more or less *stile antico* counterpoint) is not dotted. There appears to be some connection between learned counterpoint and even rhythm in this collection, though it is not consistent. (Gigault's music shows no trace of the Corellian style that was felt later by most to be incompatible with *notes inégales*; Corelli was only just becoming known in France in the 1680s.) The most illuminating and useful observations concern reversed, or short–long inequality, a subject touched only glancingly by writers. It is found in a little over a third of the pieces, under any signature, in any part and in any style, as occasional and unpredictable rhythmic 'seasoning', most often as a single instance of semiquaver–dotted quaver, rarely demisemiquaver–dotted semiquaver. Two short–long figures in a row always descend scalewise and are most characteristically found in '**C**3' (3/4 time). If there are three, the last two descend scalewise. Only when short–long figures are part of a fugue subject do they dominate the movement of a piece.

Towards 1700, this fluid approach to inequality began to crystallize into a set of rules. These are found first of all in performance manuals in connection with *mesure*, i.e. time beating and metre. The manuals describe in varying detail what note values were normally unequal and occasionally under what conditions. The number, distribution and consistency of these accounts show beyond any possible doubt that inequality was a normal component of musical instruction in France in the 18th century. Further explanations and examples exist in dictionaries, treatises and *avertissements* to editions. The note-by-note treatment of whole pieces can be studied on barrel organs and in instructions for making them. The scores themselves supply examples of notated inequality and written directions for the treatment of particular pieces. Finally, dotted and undotted versions of the same passages may be taken as evidence that the undotted versions were dotted in performance, even though other explanations (such as a change of mind) cannot be ruled out.

The code that emerges from the many dozens of French manuals and treatises that appeared between about 1700 and the Revolution seems at first acquaintance to be remarkably uniform, rational and even 'scientific'. The uniformity extends over all media; there was, astonishingly, almost no evolutionary change from the 1720s to the 1770s to match the innovations in compositional styles and the changing play of foreign influences. These books, however, were addressed to children, amateurs and their teachers: they vary enormously in completeness and competence; they are rarely concerned with the analysis and description of professional performance; and they rarely answer any but the easy questions, leaving to the instructor or to that imaginary oracle, *le bon goût*, the hard ones, such as how unequal the inequality should be, whether it should be consistent and above all, what to do when passages of apparently redundant dotting are mixed with plain notes that the rules say should be played unequally. (See below for further discussion.) Not all performing treatises of the period dealt with the question of inequality, but the ones that did (the majority of those for voice and strings, especially during the middle 50 years of the 18th century) concerned themselves chiefly with listing the note values that were equal and unequal in the different metres; it is this aspect, in which there is (with certain exceptions) general agreement, that lends them an air of authority and system. These lists run to as many as six values and 20 signatures, many of them purely hypothetical (Borin, 1722), seemingly designed as much to impress as to instruct; Dard (1769) specified unequal hemidemisemiquavers in 2/16. In many cases this is all we learn, as if the listed values were unequal in all circumstances without regard to style or expression. In others, inequality is associated with certain genres, ways of cancelling it are described, triplets are mentioned and other problems are discussed, but sporadically and with much disagreement among sources. Many of the treatises rely on great numbers of exercises (*leçons*) with little or no explanation, on the probable assumption that they were to be mastered with the help of a teacher. A few writers discussed one or two aspects – never all – in depth and with intelligence: these included Démoz de La Salle (1728), La Chapelle (1736–52), David (1737); Vyon (1742 and 1744, with an unusual wealth of examples from major composers), Denis (1747, 1757), Labadens (*c*1772), Azaïs (1776) and Mercadier de Belesta (1776). Some, such as J.-J. Rousseau (1768), went no further than

to say that in French music one always dotted quavers a little except in C.

The core of the doctrine was what one might call the 'quarter-beat rule' for duple metres; for triple or compound metres, the rule (never summarized in these terms) was that notes whose value was half the smallest value grouped in three were unequal. Occasional disagreements arose from continued differences about how time was beaten. In simple metres with two or four beats to the bar, notes of the value of a quarter of a beat or less were unequal. Thus quavers were unequal in 2 (2/2) and in ¢ when taken in two beats, and semiquavers were unequal in C (4/4), ¢ when taken in four beats, also in 4/8, which was taken in two beats. Semiquavers were unequal in 2/4 according to most writers, though Loulié (1696) specified unequal quavers.

In the 17th century the time signature '3' could mean any simple triple metre. In the 18th it usually meant only 3/4 and implied the French style; the signature '3/4' was associated at first with Italian style and therefore could be taken to exclude inequality, but as '3' dropped out of use '3/4' gradually lost this connotation. Triple metre could be taken (as today) in one or three beats, depending on the tempo, or in two unequal beats. 6/8, 9/8 and 12/8 were beaten in two, three and four respectively. No matter how beaten, however, in triple metres values of half the denominator were normally unequal. The principal exceptions were courantes in 3/2, in which quavers, not crotchets, were unequal, and sometimes 3/4, which a few writers of the mid-18th century distinguished from 3 in specifying equal quavers and sometimes unequal semiquavers. 'Croches blanches' (whitened quavers and semiquavers with the value of crotchets and quavers) had no special rhythmic significance, as far as can be determined (for three pieces in this notation see *Les folies françoises* in François Couperin's *Troisième livre*, 1722). Underlying all these rules was probably the assumption that the principal unit of melodic movement in a piece corresponded to the theoretically unequal one for that metre. If there were smaller values, they became unequal; this might be called the 'rule of descending inequality'. There was disagreement, however, about what happened to the original values. Some said they became equal, as would appear logical if they occurred simultaneously with the smaller ones in another part. But Morel de Lescer (*c*1760) gave examples of melodies with mixed unequal values: in a very slow 3/2, 'crotchets and quavers are unequal'; in 6/4 with *mouvement marqué*, 'quavers and semiquavers are unequal'. Inequality did not (at least in the 18th century) move up to values larger than the theoretically unequal ones. A useful table summarizing the unequal values for each metre in a selection of sources throughout the period of these manuals is given by Neumann (1965, p.322; reproduced in Hefling, 1993).

It is extremely difficult to evaluate the roles of theory and practice in all of this. To some extent writers were trying to describe usage in a number of well-defined rhythmic styles, each associated with a certain metre and genre. The rules themselves must have influenced practice to some extent among the musicians who grew up with them. But there are many references to how hard it was to give general principles (e.g. Bailleux, 1770) and to the fact that style and taste were the final arbiters. Occasionally an author spelt out exceptions, as did Démoz de La Salle (1728, p.166):

> In the expression of declamatory *airs*, in recitatives, or in solos [*récits*] measured *in two or three simple beats*, theoretically unequal quavers are very often performed equal according to the expression of the words and the style of the melody. And in recitatives, bass solos, or other [pieces] measured *in four simple beats*, quavers which are naturally equal in their motion are, on the contrary, often sung unequal, also according to the style of the melody, and according to how regularly these kinds of *airs* are written and how well they express the text.

What is certain is that inequality suffused French thinking about performance, in which it constituted one of the most important and difficult questions. Borin (1722, p.26) summed it up: 'Expression ... consists principally in knowing what notes are equal or unequal'.

The careful composer who wished to ensure inequality or equality in doubtful situations used symbols or written directions. The dot of addition was the usual sign for inequality; very occasionally, in order to suggest gentle inequality, there was no compensatory shortening of the second note of the pair (Nivers, 1667; Perrine, 1680). The reasoning of Bacilly (1668) with regard to dots has been noted above: they were normally left unwritten in order to avoid tempting the player to jerkiness. He explained written dots in a particular example, however, as a warning 'not to omit them in singing, which would [otherwise] lack all grace' (p.233). La Chapelle (i, 1736), on the other hand, said that dots indicated a greater inequality than usual: to perform plain semiquavers and demisemiquavers in C 'one dwells on the first and takes the second quickly, but when they are dotted one dwells a little longer'; the reason for dotting is 'to indicate those on which one should dwell the most'. The symbol for equality was dots over the notes (hereafter 'equality dots'); strokes meant equal and staccato. The simplest written directions were 'notes égales' or 'croches égales' to cancel inequality, and 'pointé' (sometimes qualified) to ensure it. Most other terms are ambiguous. 'Piqué' as an adverb heading a piece meant sharply (over-)dotted; as an adjective, 'notes piquées', it meant staccato (Rousseau, 1768, 'Piqué'). The expression 'passer les croches', whose strict meaning in this context is simply 'execute the quavers', was used on rare occasions to mean 'execute the quavers unequally'. 'Louré' meant slightly unequal to Loulié but legato and in the style of a loure (the dance or bagpipes) to others. 'Mesuré', 'marqué' and 'martelé' had meanings of their own which might or might not imply equality in a given situation. 'Gracieusement' probably implied inequality where metre and note values permitted.

There was a broad but variable and inconsistent association between articulation and equality or inequality. Detached delivery was associated with equality, as reflected in one or two cases by the use of the term *notes détachées* as a virtual equivalent for *notes égales* (e.g., Labadens, *c*1772), more often in scattered remarks and music examples in treatises. (*Détaché* meant detached by silences, not the modern string *détaché*, for which Labadens's idiosyncratic term was *notes articulées* or *notes assemblées*, and which demanded inequality.) The association of connected delivery with inequality was mostly implicit in the treatment of equality as an exception imposed by detached or *marcato* articulation. The relationship between intervals and inequality was more complicated. In the 18th century inequality was associated with conjunct motion. A few writers (e.g. Couperin, 1717) said so explicitly, and examples of inequality given in the treatises are usually conjunct. It followed that disjunct motion was equal, but statements to that effect

are rare. Montéclair gave a rule of restricted application: 'When the melody proceeds by disjunct intervals, the quavers are ordinarily equal in 3/4' (ex.1).

Ex.1 Montéclair: *Nouvelle méthode* (Paris, 1709), p.15

This was partly a matter of style: the lines in the new Italianate string music were typically far more disjunct than traditional French melody –much more likely to outline chords or imply two parts by leaping between them – and Italian music was (according to most but not quite all) played as it was written. Even when the motion in a recognizably Italian style was conjunct, it was still equal, especially the walking basses imitating those of Corelli's *grave* movements and much cultivated by Couperin and others. Batteries (arpeggios, broken-chord figures, rapid repeated notes, *bariolage* and similar string effects), Alberti basses and similar keyboard accompaniments, all were played evenly. A whole vocabulary of analogous keyboard figuration invented (according to his own claim) by Rameau and imitated to excess by his followers, involving throwing the left hand back and forth over the thumb as well as rapid alternation of the hands, also demanded equality, if only because of its speed (e.g. *Les niais de Sologne* and *Les cyclopes*, 1724, and the *Gavotte avec 6 doubles*, *c*1729–30). The difficulty comes when leaps or arpeggios occur in music that is not obviously Italian. The 17th and early 18th-century repertory for bass viol includes much highly disjunct melodic writing. This was imitated in organ music in the 1650s by Louis Couperin (also a viol player) and cultivated by French organists for 100 years. As has been noted above, Couperin's contemporary Gigault, who did not, to be sure, compose division basses, dotted the most extravagant and rapid leaps without hesitation. Yet it is by no means clear whether this sort of inequality extended to other and later genres.

Only the most careful composers made their intentions clear regarding exceptions to the metrical rules. Cappus (1730) observed after explaining 'equality dots' that 'it would be desirable if all composers took this trouble' (pp.16–17). François Couperin, who considered the French habit of writing one rhythm and expecting another a 'defect', indicated exceptions only sporadically and inconsistently. In ex.2, from a piece (one of *Les folies*

Ex.2 F. Couperin: *Pièces de clavecin, troisième livre* (1722), 'Les vieux galans et les Trésorieres surannées'

françoises) whose main idea is the contrast between equal and unequal motion, redundant dots of addition are used for passages that would normally be unequal anyway and 'equality dots' are placed over the plain notes, even though their equality could have been inferred from the surrounding dotting or the disjunct intervals. His *Les guirlandes* (*Quatrième livre*, 1730), a long piece in 2/4 time moving throughout in semiquavers, is dotted in the predominantly disjunct *première partie* (in which there is much leaping between the parts) while the conjunct

Ex.3 Rameau: *Nouvelles suites de pièces de clavecin* (Paris, *c*1728), Courante p.4

deuxième partie is undotted (the equality is emphasized by the heading *coulament*: 'flowing'), thus reversing the usual relationship between intervals and inequality. In Rameau's magnificent A minor Courante (ex.3), where metre (effectively 6/4) and the predominantly conjunct motion decree *notes inégales*, 15 or so arpeggios suggest *croches égales*. Does one change back and forth according to the intervals? Or is the whole piece either equal or unequal? Rameau's own arrangement of *La Livri* from his *Pièces de clavecin en concerts* (1741) in *Zoroastre* (1749) shows that unequal performance of such arpeggios was not unacceptable to him; it may suggest but does not prove that he expected them to be played unequally in *La Livri* or the Courante (see illustration). Ex.4 shows a type

Ex.4 Lully: *Armide*, passacaille, Act 5 scene ii

of figuration often introduced during the course of chaconnes and *passacailles*. Corrette (1741) and others cited it as cancelling inequality of the quavers (which would in any case be impossible on account of the bass line) but they did not say whether in this case the semiquavers would become unequal in accordance with the 'rule of descending inequality'.

Modern discussions of inequality often list additional contra-indications which are either based on a single, sometimes dubious source or are outright fabrications: the presence of syncopated notes (Lacassagne, 1766, as reported in Borrel, 1934); the presence of rests of the same value as the notes in question (Borrel); the fact that the notes are in an accompanying part (Emy de l'Ilette, *c*1810, as reported in Borrel); allemandes (Dolmetsch's misreading of the sources, 1915); repeated notes, slurs over more than two notes, and motion that is too fast (Quantz, 1752, as reported by Borrel and others); motion that is too slow (Saint Lambert, 1702, as reported by Donington, 3/1974). None of these has the force of a rule and most are refuted by sources. Only the long slur seems at times to be intended to cancel pairing and to suggest to the player that only the first note should be emphasized.

The theory has been advanced that dotting the approach to a cadence compensates for an otherwise unrecorded convention of easing up on inequality at the ends of sections (Newman, 1992). Occasionally in French music (and elsewhere, notably in music by Handel) there are

Rameau's rondeau gracieux 'La Livri': (a) original from 'Pièces de clavecin en concerts' (Paris, 1741); (b) as arranged for Act 3 of 'Zoroastre' (Paris: Boivin, 1750)

dots in the first bar or two of a piece which disappear thereafter, even though the same theme or figures continue; in such cases the dotting is meant to continue as well, according to one or two theorists. That *notes inégales* entailed overdotting is confirmed by at least four French theorists (see Hefling 1993, p.68) and implied by many more. In ex.3, if the running quavers are unequal, then the quaver–dotted crotchet figures would be overdotted. Such overdotting is not dependent on inequality in an accompanying part to 'legitimize' or measure it, however, since the dot itself (or a rest of the same value) is counted as the first of an unequal pair. It is governed by all the considerations that affect inequality in general.

Reverse inequality or 'Lombardic rhythm' (i.e. short–long alteration) had a shadowy existence in French theory. Its use by Gigault has been described. It was mentioned as an afterthought by Loulié (1696, p.71) that in 3 (3/4) the first halves of beats may be made shorter than the second halves. François Couperin's sign for it was a dot over the second of two slurred notes. His heading 'pointé-coulé' for a *courante à l'italienne* (*Concerts royaux*, no.4, 1722) has been cited as a direction for reversed inequality. It is possible that plain slurs over pairs of notes, particularly if they descend stepwise, were sometimes meant to be read as reversed inequality. Couperin's example and explanation were copied by Pierre-Claude Foucquet (*Les caractères de la Paix*, 1749), while Dupuits (1741) used a slur with the dot over the first note. Both signs are extremely rare.

According to most descriptions, the degree of inequality ranged from that of a pair of notes of which the first was 'a little longer' than the second through 'almost as if it were dotted' to the 3:1 ratio of normal dotting. Couperin asked for semiquavers in a harpsichord Allemande to be 'un tant-soit-peu pointées' ('very slightly dotted'; *Premier livre*, 1713). But an anonymous, late 17th-century manuscript treatise seems to go well beyond 3:1 ratio: in a very slow-moving organ trio, 'dotting must be executed with great fire and boldness, because it is the piece that most needs to move, and only dotting will do it ... thus one cannot dot it too much' (see Pruitt, 1986, p.247). Although sharp overdotting was certainly not what was ordinarily meant in the descriptions of *notes inégales*, its occasional use is implied for the earlier 17th century by Bacilly (cited at the beginning of this section) and later by use of the direction 'piqué'. It may also be what was intended for certain pieces (such as ex.2 and *Les guirlandes*) with written dotting of values that would be played unequally even if undotted. For the only French attempt at the analysis of actual performances, including the variable ratios of long to short, one must turn to Engramelle (1775) and his chapter in Bédos de Celles (1778) on the pinning of barrel organs, where he described a method of obtaining ratios of inequality as subtle as 9:7. Such ratios – sometimes varying in the same piece – can be heard on surviving instruments, mostly in clocks (Fuller, 1979 and 1980; Houle, 1987, p.120). Cossart-Cotte (1969) found only one example of unvarying inequality in 500 samples

taken from late 18th-century barrel organs. Although some of this irregularity was doubtless caused by faults in the mechanism or carelessness in pinning the cylinders, it is likely that much of it was intentional. Inequality not only varied in sharpness, it came and went altogether, as in ex.2.

The alteration of ternary groups was generally discouraged, most writers who discussed them at all expressly excluding it from triplets or the quavers in 6/8 etc. But Mercadier de Belesta (1776) and a few others allowed the first note to be lengthened at the expense of the second, producing the rhythm of a French gigue. According to Cappus (1730), quaver triplets were 'most often' even, but 'it sometimes happened' that they were played 'as if the last two quavers were semiquavers, or finally, as if the first had a dot and the second were a semiquaver'. A topic which is often improperly included in discussions of *notes inégales* is the assimilation of duple to triple rhythm (*see* DOTTED RHYTHMS). That this was a widespread habit in all countries in the Baroque period cannot be disputed. But there is a fundamental difference between this kind of alteration and *notes inégales* as defined in this article. The long–short pairing that results cannot vary with the requirements of embellishment or expression, since it must be synchronized with a rhythm that already exists elsewhere in the texture; it does not add a fresh nuance; and its origin and purpose are different (see Collins, 1966). The performance of gigues in 4/4 time or other duple metres raises problems of rhythmic alteration which are again not those of *notes inégales*. Such gigues are common in mid-17th-century French lute music where they are closely related and sometimes identical to the allemande; they are also found in English, French and German sources later in the century and beyond, the best known being those in Bach's First French Suite and Sixth Partita for harpsichord. The only French theoretical source to discuss them says that they can be 'very easily reduced to 3/4 or 3/8, which may suit them better' [than duple execution]. It adds a caution that could be applied to the whole subject of rhythmic alteration: 'to understand this kind of gigue properly you must have played or heard one' (Cleret *fils*, 1786, p.407; see also McIntyre 1965).

The classification of notes into metrically strong and weak ones was a feature of music theory in all countries throughout the 17th and 18th centuries and has occasioned enormous difficulties for those who argue about *notes inégales*. Notes on first beats, first parts of any beat, or first parts of parts were strong in relation to a succeeding note of similar value. Thus notes whose value was half that of the next larger metrical unit (this would exclude, for example, quavers in 6/8) proceeded in strong–weak pairs beginning at the bar-line. At first glance the system appears to have much in common with the convention of inequality, but the differences are fundamental. The strong–weak classification applied to notes of almost any value in any style, and it was an analytical distinction independent of performance. The terminology varied: the French said 'first' and 'second' or 'strong' and 'weak'; the Italians 'good' and 'bad'; the Germans any of these and also, after Printz (1668), 'intrinsically long' and 'intrinsically short'. Walther's explanation ('Quantitas notarum', *Musicalisches Lexicon*, 1732) of these last invites misunderstanding: 'according to [its extrinsic quantity], each note is equal in length to similar ones in performance; according to [their intrinsic quantity], however, [the notes are] of unequal length' – i.e. they are defined metrically as long and short even though they are played equal (for the opposite interpretation see Collins, 1967, p.483). French writings on inequality did not normally appeal to the strong–weak distinction to explain the phenomenon, but Mercadier de Belesta (1776), after a very lucid presentation of strong–weak, continued with a kind of transition to the usual rules for *notes inégales* (p.67, ¶151) that suggests a connection. Nevertheless, inequality was restricted in its application, decorative or expressive, and easily heard, while the strong–weak distinction was universal, structural, and did not need to be heard at all, though attention to it served to enhance performance.

Except for scattered echoes, *notes inégales* disappeared from French theory and pedagogy towards the end of the 18th century; the rhythms persisted, however, in performance and composition, particularly in opera and military music, and not only in France. What changed were musical styles and attitudes to notational exactitude. But even while the practice of inequality was still alive, an ambivalence about unnotated dotting cropped up occasionally, and nowhere more strikingly than in the anonymous treatise here tentatively ascribed and dated as ?Labadens (MS, *c*1772, *F-Pn*). After stating that 'articulated [here meaning 'connected'] notes are always alternately ... long and short', the author continued in the following paragraph: 'The principle of making audible ... the longs and shorts, being contrary to the rules of good taste, should only be used in learning the music, to distinguish essential from passing notes .... No more should one make the notes unequal unless their values are different [the redundancy results from the careless handling of the distinction between 'intrinsic' and 'extrinsic' quantity]; there are, however, many passages in a given piece of music where one should make articulated notes unequal without it being indicated, but this knowledge is only acquired by experience'.

3. APPLICATION OUTSIDE FRANCE. Whether the conventions of *notes inégales* should be applied to the music of non-French composers, particularly J.S. Bach, is a question which has engaged the attention of scholars and performers ever since Dolmetsch (1915) recommended it for parts of Handel's *Messiah* and Bach's *St Matthew Passion*. After World War II a number of writers (Babitz, Donington, Dürr, Geoffroy-Dechaume, Sachs and others) took up and enlarged on Dolmetsch's views, analysing early fingering, bowing and tonguing, amassing instances of passages in both dotted and undotted versions, and combing the theorists in order to show that inequality was a normal resource of Baroque music in all countries (though not in all styles), and therefore that one might, should or must – depending on the recklessness of the argument – sometimes alter evenly written notes in non-French music. Then Frederick Neumann (1965) dismantled the entire structure of post-Dolmetsch research on inequality, piece by piece. This unleashed a controversy lasting several years during which the 'left', represented chiefly by Donington, Collins and Babitz (in order of increasingly vehement advocacy of a broad application of *notes inégales*), were stimulated to uncover a great deal of new evidence in their favour, while Neumann on the 'right' resolutely defended Germany and Bach against the alien taint by discrediting their authorities and refuting their evidence. The battle – which seems to have engaged

the passions of few outside the English-speaking world – never entirely died down, and it flared up again in 1988, reaching a climax with the publication of Hefling (1993), which occasioned an acrimonious exchange whose resonance continued beyond Neumann's death and had not ended at present writing (1999). The entire controversy, though distorted by arbitrary assumptions on both sides (especially the assumption that *notes inégales* are by definition written equal) and weighted down by futile struggles over isolated authorities such as Quantz, is indispensable reading for anyone wishing to pursue the subject.

The real issue was not whether Bach and other non-French composers used *notes inégales* – countless scores show that they did. Although never clearly stated, the issue was rather whether they ever failed to write them out when they wanted them. The evidence is different for different countries. Purcell's normal treatment of running quavers in 3/4 time was to dot them (examples include 'Thou tun'st this world' and 'The Airy Violin' from the *Saint Cecilia Ode*, 1692). English harpsichord music from Locke onwards is full of written inequality, most commonly in preludes and allemandes (Alcock, Clarke, Croft, Felton, Gunn, Richard Jones, Moss, Nares, Roseingrave [Introduction to Scarlatti's sonatas], J.C. Smith, Symonds); pieces by G.B. Draghi and Handel (e.g. the opening movements of the sixth, seventh and eighth suites of the *Suites de pieces pour le clavecin*, i, 1720) are in this tradition. But unwritten inequality too is suggested by multiple versions of pieces from Jenkins to Handel (Johnson, 1967, found that the most frequent discrepancy in mid-17th-century English ensemble manuscripts involved even quaver figures in one source appearing as dotted figures in another), and dotting was explicitly recommended by Burwell and North – 'tho' not express'd', to give 'a life and spirit to the stroke' (see Wilson, 1959). Whether these references are to isolated pairs or continuous inequality is not certain; but Corrette (1740), who had been to England, clearly meant the latter when he stipulated that quavers were to be dotted in English 'vaudevilles and contredances' in 6/4, such as *Bartholomew Fair*, *Hunt the Squirrel*, *Lilliburlero* and *Hoopt Pettycoat*. Versions of pieces by Handel for automatic instruments also show some added inequality, both in the scores (Squire, 1919) and on the instruments themselves, for instance the last movement of op.4 no.2 on a late 18th-century barrel organ (Fuller, 1974 and 1980). In 1771 Anselm Bayly advised unequal quavers as possible in an anthem by Greene (see Pont, *JAMS*, xix, 1966).

The French influence was strong in the low countries, not only in French-speaking regions but among the Dutch as well, as can be seen from the correspondence of Constantijn Huygens from the mid-17th century and the activity of the Amsterdam presses later on. A treatise in Dutch by Frischmuth (1758) specified unequal semiquavers for allemandes and unequal quavers for courantes.

French dance music had become thoroughly naturalized in Italy by the 1660s, as specific labels and styles of pieces by Uccellini, Giuseppe Columbi, G.M. Bononcini (i) and G.B. Vitali show – the aria and allemande especially being frequently dotted (Klenz, 1962). The recommendations of Frescobaldi and others have been noted. Lorenzoni (1779), who cited Loulié, Rousseau and Quantz, recommended normal inequality to enhance the distinction between 'good' and 'bad' notes, and many more clues to rhythmic alteration have been collected by Collins, Pont, Donington and others. But none of this adds up to an expected norm of inequality, and certain typical italianisms expressly demanded that at least the quavers should be even, as in 'walking' basses and vigorous allegros. French authors disagreed with each other and sometimes with themselves about Italian music. In *L'école d'Orphée* (1738) Corrette said of the metre ¢ that it was 'much in use in Italian music .... The quavers are played equal and second semiquavers are hurried'. A similar rule (i.e. specifying unequal semiquavers) was given for 3/8 time, and Handel, Giovanni Bononcini, Pepusch, Alessandro Scarlatti and Porpora were cited for examples. At the same time the French 3 with unequal quavers was distinguished from the Italian 3/4 with unequal semiquavers. In Corrette's flute tutor (1740) the wording was much the same, except that 'semiquavers are also sometimes played equally in the allegros and prestos of sonatas and concertos'. In his cello method (1741) the reference to unequal semiquavers in 3/4 was dropped, and the courante from Corelli's op.5 no.7 was cited as a piece in 3/4 where the quavers must be equal – not a contradiction but a shift of emphasis.

Loulié (1696), Brossard (1703) and Rousseau (1768) excluded inequality from Italian music; others besides Corrette seem to admit it (Mussard, 1779; Rollet, 1760). Azaïs (1776) wrote that foreigners in France played unequal quavers in 3/4. The uncertainty about foreign music must have reflected a diversity of practice among musicians in Paris. There are so many imponderables – not least the possibility that some visiting Italians may have tried to please French audiences by adopting their style of playing – that it is advisable to keep an open mind on the subject. In French music composed under Italian influence the situation was still more complicated, as there were real efforts at stylistic synthesis from Lully onwards. What Couperin expected from his players in *Les goûts réünis*, an essay in the combination of French and Italian styles, and what Mondonville meant when he wrote that in his *Pièces de clavecin avec voix ou violon* (1748) one must 'distinguish the phrases which are in French style from those which require the Italian style', are among the problems posed.

French dancing-masters, musicians and their music spread over Germany from the early 17th century, and knowledge of French performing style kept pace. In 1664 Johann Caspar Horn published five ballets 'to be played in French style', and much later Marpurg (1749) remarked on how Quantz, Benda and Graun played 'in a very French manner'. Georg Muffat (1698) explained *notes inégales* clearly and authoritatively to the Germans, and direct French influence on Froberger, Kusser, J.C.F. Fischer, J.S. Bach and a legion of others is documented. (It is worth noting, however, that when Bach and Walther copied Grigny, Le Roux, Dieupart and Clérambault, they did not translate *notes inégales* into dotted notation.) The French overture became an obsession; Telemann is estimated to have composed some 1000 overture-suites. Yet although Printz (1678) recommended inequality as a device to keep the tempo under control, and C.P.E. Bach (1753–62) as a way to treat two semiquavers following a quaver in the accompaniment of an adagio, only one German writer besides Muffat treated the convention in terms approaching those of the French, that is, as a normal way of playing a substantial amount of music;

this was Quantz (1752). As he did not say that his remarks applied only to French music – indeed they include no mention of French music at all – his passage has acquired a kind of scriptural status for those who wish to alter even rhythms in Bach, and it has become a principal target of attack by the right. But even the most subtle exegesis cannot make Quantz say that Bach wanted his rhythms to be altered in performance; the most that can be concluded is that Quantz himself might have played Bach that way, and perhaps that the trio sonata from *The Musical Offering* was subjected to inequality when (or if) it was played at Potsdam. On the other hand the best efforts of a Frederick Neumann can produce nothing but silence to prove that Bach did not want alteration.

The ubiquity of *notes inégales* in French performance of the 17th and 18th centuries is beyond dispute, yet at the end of the 20th century there was still, even among the most brilliant and historically informed specialists, a reluctance to apply them with anything resembling the frequency with which all the evidence indicates that they were applied in earlier times. The visceral revulsion felt by the great musicologist Charles Van den Borren (1936) when he declared himself 'literally overwhelmed at the thought that anyone could reconcile the finicky requirements that Muffat [1695] enumerates with the style, so simple so sober, so genuinely inspired by the *grand siècle*, that Lully offers us throughout his work', and in particular, at 'that deformity, devoid of logic, which consists in the unequal performance of equal quavers' (a revulsion that informed the researches of the indefatigable Frederick Neumann) still inhibits efforts to discover the elixir of vitality that must have enlivened the old performances. The favourite recipe in recent years has been sheer velocity. The secret must lie elsewhere, however: in the subtlety and variability that is only hinted at in the verbal descriptions but is made more concrete, if crudely, in automatic instruments. As noted below, something comparable may be heard today in jazz, but the incorporation of *notes inégales* into the performance of early music can only be accomplished by experimentation, and specifically through practice in executing ratios of long to short that are less or much less than the 3:1 of strict dotting and then in varying these ratios in response to the expression. Sharper inequality should not be neglected, but it is much easier.

Modern discussions of inequality in Baroque music often conclude with an appeal to 'good taste' as the final arbiter in good performance. The idea comes directly from innumerable similar appeals by 18th-century French writers, and is dangerously misleading. It is indeed taste that decides, but the taste of the period when the music was written. Alien taste is laboriously acquired, and never completely so except by imitation; one need only imagine with what degree of authenticity some future musician might succeed in reproducing the 'taste' of a Charlie Parker from written documents alone. Taste is the most inconstant of values, and it was a conflict of taste far more than of objective findings which lay at the root of the inequality controversy of the 1960s and fuelled its partisan zeal.

5. JAZZ. *Notes inégales* may have lived on in France after the 18th century in the semi-popular styles of *opéra comique*; in any case they reappear in a context far removed from the elegance of the *ancien régime* (though not nearly so far from the French opera of New Orleans) – in American jazz. Here they permeate a living tradition of improvised diminution whose rhythmic conventions are remarkably reminiscent of the old French code. Jazz is organized rhythmically in layers corresponding to chord changes at each half-bar or larger unit, a crotchet beat, and a melodic line in mostly smaller values. Inequality operates only at the last level but there it was until the 1940s, and with many players still is, virtually omnipresent on duple subdivisions of the beat, even when the motion is extremely rapid. As with the old code, the degree of inequality is freely variable from extremely subtle to pronounced. But with the exception of triplets, quintuplets etc., which are played evenly, strict equality must be expressly demanded in a written part by some direction like 'straight eighths' – an exact American equivalent for 'croches égales'. The peculiar syncopation so often cited as characteristic of jazz is the result of a rhythmic shift of the syncopated note corresponding to the displacement of metrically weak values caused by the inequality. In the 1940s, with the style known as 'bebop', the second note of a pair was often deliberately accented; later this effect was mixed freely with other dynamic shapings. Although 'solos' are improvised, they are often transcribed from recordings for purposes of study and teaching; such transcriptions rarely show the inequality, and yet no musician would think of playing the notes in their exact values. To do so would negate the style of the music.

DAVID FULLER

Notes portées (Fr.). *See* PORTATO. *See also* BOW, §II, 3(iii).

Note values. The various systems of letters, neumes and other symbols used for the notation of Western monophonic and polyphonic music before about 1150 did not indicate exact note values or exact pitch. Such systems served merely to remind the performer of the melodic outline of musical phrases that had already been memorized. With the increasing development and sophistication of polyphony in the late 12th century, the need arose for a system of notation in which the relative values of the different symbols were more precisely defined. After the formative period of 'square' notation (*c*1175–*c*1225), the two single-note neumes of the later neumatic system, the *virga* and *punctum*, became the *longa* (long) and *brevis* (breve) of early mensural music. Although the new forms retained the outward appearance of the neumes from which they derived, they acquired for the first time an exact metrical relationship to each other.

The transcription of the music of this period in accordance with the theory of RHYTHMIC MODES results in a basic relationship of three breves to each long (*see* NOTATION, §III, 2). By the end of the 13th century the use of the *maxima* (large) and the *semibrevis* (semibreve) was admitted, although the latter value was found only in pairs or sets of three, four, and so on, and not yet as an independent unit. The introduction of the *minima* (minim) was a feature of early 14th-century music, with the *semiminima* (crotchet) following later in the century. The *fusa* (quaver) and *semifusa* (semiquaver) date from the 15th century.

The notation of the period from the 13th century to the 16th century is known as 'mensural' (i.e. measured) notation, so as to distinguish it from that of plainchant (*see* NOTATION, §III, 3). During this period the interrelationship of the various note values was codified in the treatises of Franco of Cologne (*c*1260) and other theorists. For much of this time a note would have been equal in value to either two or three of the next smaller value, depending on the mensuration of the composition. Such a system was in marked contrast to modern 'orthochronic' notation, in which a fixed duple relationship always obtains between any note value and its next larger or smaller value.

Although the evolution of clearly defined note values developed primarily within staff notation, the conventional note forms were retained to indicate note values in some of those tablatures in which the pitches themselves were indicated exclusively by letters or numbers. However, the overwhelming majority of tablatures used an extension of this system, whereby note values were indicated by the use of dots or vertical strokes with flags (i.e. standard note shapes but without heads). In all lute tablatures, and in some keyboard tablatures, the value of only the shortest of the notes to be played simultaneously could be notated precisely.

The notational system used for Western medieval music did not include the dotted note as such, although the prevailing ternary metre results in modern transcriptions in compound and triple times. When, later, a note could be divided into either three or two, according to the mensuration in force, a two-beat note could be increased in value by one half by the addition of a dot (*punctum additionis* or *punctum augmentationis*), found in sources of the 15th century onwards. The use of the tie, permitting the addition of the values of two or more successive notes, was important in licensing a range of hitherto unavailable temporal values, although in its earliest uses (in early 16th-century keyboard scores) it did form values that were otherwise available.

The notation of the last 700 years has been characterized by a general trend towards the adoption of smaller note values as the basic unit of movement. As a result much early music has been printed in modern editions with the note values reduced to conform to the wide (though by no means universal) acceptance of the crotchet as the standard pulse. The extent of this reduction varies between one-sixteenth for early medieval music to a half for music written in the 16th century. This practice, however, was

TABLE 1

Latin	*American*	*English*	*French*	*German*	*Italian*	*Spanish*
maxima	–	large	maxime	–	massima	maxima
longa	–	long	carrée à queue	–	longa	longo
brevis	double whole note, double note	breve	carrée, brève, double-ronde	Doppelganze (-Note), Doppeltaktnote	breve	breve
semibrevis	whole note	semibreve	ronde	Ganze (-Note)	semibreve	redonda
minima	half-note	minim	blanche	Halbe (-Note)	bianca	blanca
semiminima	quarter-note	crotchet	noir	Viertel (-Note)	nera	negra
fusa	eighth-note	quaver	croche	Achtel (-Note)	croma	corchea
semifusa	16th-note	semiquaver	double croche	Sechzehntel (-Note)	semicroma	semicorchea
fusella	32nd-note	demisemiquaver	triple croche	Zweiunddreissigstel (-Note)	biscroma	fusa
fusellala	64th-note	hemidemisemiquaver	quadruple croche	Vierundsechzigstel (-Note)	semibiscroma	semifusa

challenged in the last quarter of the 20th century and many editions now use the original note values.

Before Beethoven's time a given note value usually indicated only its nominal duration, with little or no attempt being made by the use of rests to distinguish between those parts to be apportioned to sound and silence respectively. In practice the duration of a musical note is frequently less than its written value, although the extent to which this is so depends on the degree of articulation involved. Many 20th-century composers have found conventional notation insufficiently precise to indicate the exact durations desired, and this has resulted in widespread experimentation in the visual representation of musical duration. Perhaps the most useful result of this experimentation has been the duration line, which makes both note heads and rests unnecessary. However, despite its use in some particularly efficient notations, such as Equitone (*see* NOTATION, §III, 4(iii), fig.79), it has not gained general acceptance. Attempts to introduce irregular divisions of the semibreve (one-fifth, one-seventh, etc.) using special note head shapes such as the lozenge and the triangle have also failed to become widely used.

The modern international nomenclature of the various note values is usually based on one or more of three systems. The names for the larger values often derive directly from medieval Latin, while those for the smaller values are frequently based on the physical appearance of the note forms (black, white, hook, etc.). In standard German and American usage the note values are expressed as an arithmetical fraction of a semibreve, the referential unit of much early temporal theory. This system, the only completely consistent and logical one, has also been used in France. The original Latin names, together with their main European and American equivalents, are given in Table 1; alternative names for the values of a semibreve or less are also listed in individual articles.

See also NOTATION, §III and RHYTHM.

JOHN MOREHEN/RICHARD RASTALL

Notker (*b* nr St Gallen, Switzerland, *c*840; *d* St Gallen, 6 April 912). Monk of the Benedictine abbey of ST GALLEN, poet and scholar. The *Casus monasterii Sancti Galli* of Ekkehard IV of St Gallen (*c*1040) paints a lively picture of the monastery school while Notker and his fellow monks Ratpert and Tuotilo were active. Although the two latter are known to have composed music, Notker (called *Balbulus*, 'the stammerer') seems to have been only exceptionally active as a composer of chant, if at all. The work for which he is best known in the history of music is the *Liber hymnorum*, a collection of texts set to the melodies of liturgical sequences, organized in a cycle for the Church year. This was completed in 884. Other important works include a *Vita Sancti Galli* (life of St Gallus) in verse, the *Gesta Karoli* (the deeds of Charlemagne), and a martyrology.

Of particular interest for the study of musical notation is Notker's *Epistola ad Lantbertum*, in which Notker explains to a monk Lantbert what the supplementary letters for neumatic notation signify ('quid singulae litterae . . . significent'); in the *Casus monasterii Sancti Galli* their invention was attributed to one 'Romanus', which has led to their common designation today as 'Romanian' or SIGNIFICATIVE LETTERS. (Original source *CH-SGs* 381, facs. in PalMus, iv, 1894/*R*, pls.B–D, and Arlt and Rankin, 1996; critical edn, Froger, 1962.) One of the principal St Gallen chant books, the cantatorium *SGs* 359, which is particularly rich in significative letters, was written during Notker's lifetime. Notker is nevertheless not known as a music scribe. However, he was one of the leading scribes of literary texts in the monastery and his hand has been identified in numerous sources (Rankin, 1991).

Although Ekkehard IV ascribed the sequence melodies 'Frigdola' and 'Occidentana' to Notker, these melodies are also known from contemporary West Frankish sources, and it seems certain they were part of a widely known corpus originating some time earlier. The hymn *Ave beati germinis* is attributed to him in *SGs* 381 (second quarter of the 10th century). The antiphon *Media vita* is not by him, being first attributed to him in 1613 by J. Metzler, historian of St Gallen.

In the preface to his collection of sequence texts (ed. von den Steinen; for translation *see* SEQUENCE (i)) Notker explains how as a boy he had difficulty in remembering the 'melodiae longissimae' but saw in the chant book of a monk from Jumièges fleeing from the Norsemen how verses could be set to them, making them easier to remember. He decided he could write better texts for the melodies and received advice on his first efforts from his teacher Iso. His teacher Marcellus had the finished pieces copied out and given to the boys to sing. Notker names his first two texts, *Laudes Deo concinat* and *Psallat ecclesia*, and gives the melody titles of two others for which he provided words.

From this preface it is clear that Notker's texts were the first to find a permanent place in the liturgy at St Gallen. They quickly gained a dominant position in the chant repertory of Germany and Central Europe. For example, they had been adopted in Mainz by the third quarter of the 10th century (*GB-Lbl* Add.19768) and in Regensburg by the end of the century (*D-BAs* Lit.6). This was no doubt due in part to the outstanding quality of the texts. Not only do they approach the standard of classical Latin, but they are of substantial theological and exegetical complexity, exhibiting both considerable density of language and striking imagery, while fitting in sympathetic manner the contours and internal structure of the melodies to which they are sung. In all these respects they make a far more distinguished impression than almost any other early sequence texts.

Surviving manuscript sources of Notker's sequences date back to the end of his life or soon after (Rankin). The first full sequentiary from St Gallen, also bearing Notker's preface, dates from after his death (*SGs* 381) and already includes pieces not by Notker. The attribution of many texts to Notker, apart from those mentioned by him in the preface, rests on their unique style and quality. Von den Steinen established a canon of 32 sequences of the type with double verses and 8 shorter ones with a-parallel verses, and these have generally ben accepted as authentic (*see* SEQUENCE (i)).

No critical music edition of the sequences with Notker's texts has yet been attempted, although facsimiles or transcriptions of a number of sources have been published. In the context of a thorough re-examination of the early sequence, Crocker (1977) has studied Notker's pieces in parallel with West Frankish sequences having the same melody; he includes transcriptions of almost all recoverable items.

Notker was one of the leading literary figures of his time, known and admired at the imperial court: the *Liber hymnorum* was dedicated to the imperial chancellor,

Luitward, bishop of Vercelli; the *Gesta Karoli* were written at the behest of the Emperor Charles the Bald (876–87). Notker was canonized in 1513.

DAVID HILEY

Notker Labeo [Notker III, Notker the German] (*b c*950; *d* St Gallen, 29 June 1022). Monk and teacher at the Benedictine abbey of ST GALLEN. His many translations from Latin to Old High German are among the earliest German literary texts; of the 11 translations Notker reported making, four are extant and include two philosophical works by Boethius, two books of Martianus Cappella's *De nuptiis Philologiae et Mercurii*, and an interlinear psalter. Of special interest to music historians are five short essays in Old High German on musical topics, perhaps intended for elementary music instruction at St Gallen, where Notker taught and directed the school. A brief key in Latin to the meaning of the significative letters (*litterae significativae*; also known as Romanian or St Gallen letters) is sometimes ascribed to him, but belongs to his namesake of a century earlier, NOTKER, also of St Gallen.

The not entirely secure ascription of the five little essays to Notker rests principally on three points: the age of the five extant manuscripts (11th century); the language; and the preservation of the largest group (four out of five) in a St Gallen manuscript, whose text was published by Gerbert under Notker's name (*GerbertS*, i, 95–102), although the works are anonymous in the manuscripts. This ascription was later supported by Kelle on stylistic grounds. Of the five, the essays 'On the Eight Notes', 'On Tetrachords' and 'On the Eight Modes' are found only in the St Gallen manuscript. 'On the Monochord' is found in two other manuscripts only, and 'On the Measurement of Organ Pipes' in four of the five known manuscripts.

The monochord division results in a double octave with the pitches labelled according to the Greek Greater Perfect System, and in addition a cyclic alphabetical series from F (*proslambanomenos*) to F (*nētē hyperbolaiōn*) supplemented by another 'nameless note' below F. Notker's F must correspond to the A of our diatonic gamut. In the essay 'On the Eight Notes', the 'nameless note' is designated E, and the alphabetical notation serves to define the compass and final note of each of the eight church modes. The essay 'On Tetrachords', the briefest of all, contains especially interesting remarks on a three-octave lyre (*lirun*). The essay on modes (*modis* as opposed to the *tonis* of the second section) is also distinguished by its references to instruments, the lyre at the beginning and the organ at the end. This is odd in the context of a discussion of the ancient Greek octave species. The organ pipe measurements of the fifth essay produce a two-octave gamut from G to G. None of the sections, with the exception of that on the eight modes, seems to be directed towards sophisticated readers, thus suggesting that they are elementary lectures. At the same time, they are not a complete course in fundamental plainchant, and may therefore be either the surviving fragments of a larger work no longer extant or independent fragments of diverse origin.

Notker's translation of the first two books of *De nuptiis Philologiae et Mercurii* is important for having made Martianus Capella's opening allegory more widely available than would otherwise have been possible, and while Notker apparently did not translate book 9 (*De Harmonia*) of this work, the first two books contain passing references to music within the framework of a greater cosmology.

LAWRENCE GUSHEE/BRADLEY JON TUCKER

Notot, Joseph Waast Aubert. *See* NONOT, JOSEPH WAAST AUBERT.

Notre Dame school. A name given by modern scholars to the group of musicians active in Paris between about 1150 and about 1250. Most were ecclesiastics, and would have been associated with the Cathedral of Notre Dame or with one of the group of churches that stood on the site before work on the cathedral began in about 1160, but some may have had affiliations with other churches in Paris, such as the abbey of St Victor, or with religious houses elsewhere in Europe. This 'school' cultivated, among others, the polyphonic genres of organum, conductus and the liturgical motet, producing large repertories that were collected in the so-called *Magnus liber organi* associated with the composers Leoninus and Perotinus. Perhaps the most important achievement of these musicians was their transformation of polyphony from a performing practice into 'composition' in the modern sense; from an idiom that had for the most part been generated extemporaneously in performance to one in which the music was 'composed' before its performance. There appeared in the music of the Notre Dame school an ordered system of consonance and dissonance and a coherent rhythmic language that for the first time in Western music was expressed in its notation. These developments laid the foundations of the contrapuntal and rhythmic practice that would prevail for the next three centuries, and paved the way for the mensural

notations in which late medieval and Renaissance music was written and transmitted.

EDWARD H. ROESNER

Nottara, Constantin (*b* Bucharest, 1/13 Oct 1890; *d* Bucharest, 19 Jan 1951). Romanian composer and violinist. He studied theory with Kiriac-Georgescu, composition with Castaldi and the violin with Robert Klenck at the Bucharest Conservatory (1900–07), and then continued his studies under Enescu and Berthelier (violin) in Paris (1907–9) and under Klinger (violin) and Schatzenhalz (composition) at the Berlin Royal Academy (1909–13). His career as a violinist embraced orchestral playing in the Bucharest PO (1905–7, 1918–20), leading a string quartet (1914–33) and teaching at the Bucharest Conservatory (1916–47). In addition Nottara was conductor of the Bucharest Municipal Orchestra (1929–32) and of the Radio Bucharest SO (1933–8). He was also active as a critic. His father had been a great actor, and Nottara was from the outset of his career attracted to writing for the theatre; his operas are strongly influenced by the *verismo* manner, but his ballets are more personal in their reference to Romanian folklore. This also formed the source for much of his concert music, which often has an idyllic pastoral serenity. His violin miniatures became deservedly popular.

WORKS
(*selective list*)

STAGE

La drumul mare [On the Highway] (op, 1, C. Nottara, after A.P. Chekhov), 1932, Cluj, Romanian Opera, 3 Oct 1934

Cu dragostea nu se glumeşte [Love is Not a Joke] (comic op, 3, Nottara, after A. de Musset), 1933, Bucharest, 8 Feb 1941

Se face ziuă [At Dawn] (op, 1, Nottara, after Z. Bârsan), Bucharest Radio, 1943

Nuntă ţărănească [Country Wedding] (ballet), 1950

Ovidiu [Ovid] (op, 5, S. Zaleski, after V. Alecsandri), 1950, rev. and completed W.G. Berger, 1960; excerpts Bucharest Radio, 1966

VIOREL COSMA

Nottebohm, (Martin) Gustav (*b* Lüdenscheid, Westphalia, 12 Nov 1817; *d* Graz, 29 Oct 1882). German musicologist, teacher and composer. After studying in Berlin (1838–9) and in Leipzig (1840–45), where he knew and was taught by both Mendelssohn and Schumann, he moved permanently to Vienna in 1846. There he gave lessons in theory and the piano, composed, and in later years devoted himself increasingly to various scholarly activities. His circle of friends included Brahms, Joachim and many of the important scholars of his day. Although Kalbeck, in his biography of Brahms, described Nottebohm's character in unflattering terms, Brahms and Nottebohm were frequent companions and even lodged together for a time in 1870. Brahms also referred private pupils to Nottebohm and recommended his scholarly articles to the publishers Rieter-Biedermann.

Nottebohm's compositions, mostly small piano pieces and chamber works with piano, achieved no lasting popularity, and it is for his scholarly accomplishments that he is remembered, though the full significance of his work has become somewhat obscured. At a decisive period for musicology, he and such contemporaries as Jahn, Köchel, Pohl, Thayer, Spitta and Chrysander developed a new approach to biography, based on documentary fact rather than personal reminiscence, and a new methodology for editing music through critical evaluation of all the available source materials. Nottebohm, one of the first acknowledged experts in textual criticism, was asked by Breitkopf & Härtel in 1862 to work on the revised edition of Beethoven's works, a project that extended to 1865. These editorial duties probably led to his preparing for Breitkopf & Härtel a thematic catalogue of Beethoven's works (published in 1868) to supplant the firm's anonymously compiled earlier catalogue (1851). This and Nottebohm's Schubert thematic catalogue, which appeared in 1874, remained standard reference sources until the 1950s, when they served as the bases for Kinsky's Beethoven and Deutsch's Schubert catalogues. From 1875 Nottebohm worked on the edition of Mozart's works; his death prevented him from supervising preparation of the Bach edition.

Nottebohm's most original work, however, resulted from his close study of Beethoven's manuscripts, above all the sketches and exercises. These had already attracted some attention as curiosities among collectors and had been consulted by Thayer and others for purposes of establishing the chronology of Beethoven's works, but Nottebohm was the first to study them systematically. He sought out the manuscripts in libraries and private collections and described them in a series of short articles dealing with points of textual, chronological and purely musical interest. In addition, he published two longer monographs which surveyed in detail the contents of individual sketchbooks. These articles and monographs provided procedural models and source materials for a century of further scholarship on Beethoven's sketches. Most of the short articles, which appeared originally in various journals, were later revised and incorporated into two books: *Beethoveniana* (1872) and *Zweite Beethoveniana* (published posthumously in 1887). A third book, *Beethovens Studien* (1873), elaborated a subject treated on a smaller scale in the articles, Beethoven's studies in counterpoint and declamation, clarifying the confused account that Ignaz Ritter von Seyfried had published in 1832.

Nottebohm's manuscript studies led to substantial revisions of the chronology of Beethoven's works and to an improved understanding of his creative processes. Although Nottebohm insisted that the significance of his observations was essentially biographical rather than aesthetic, it was musical curiosity that led him to examine the sketches and exercises, and it was his exceptional knowledge of Beethoven's works and his facility in relating the sketches to them that earned him the great respect of his contemporaries. Thayer deferred to him

openly in matters of musical judgment, and Nottebohm's work was assimilated almost at once into the biography of Beethoven begun by Thayer and completed by Deiters and Riemann.

DOUGLAS JOHNSON

Nottingham. City in the English East Midlands. Records in the Corporation Archives beginning in 1464 show town waits, numbering three to seven men, appearing regularly (except during 1647–53 and 1672–1704) until 1836, when the office was discontinued. The records of the chamberlains of Nottingham for 1558–92 and 1614–40 show payments to the waits of 35 other towns for visits to Nottingham. Local patrons of music included Sir Henry Pierrepont (1546–1615) and Sir Francis Willoughby (*c*1547–96), who built Wollaton Hall near Nottingham, and whose Lute Book, compiled 1560–85, contains mostly anonymous English music. The Wollaton Hall organ was probably built in the second half of the 17th century. Records of music at the parish church of St Mary the Virgin date back to the late 16th century, and its musicians continue to play an active role in the city's musical life.

The earliest known public concerts were held during race week in 1707, 1709 and 1726. A theatre founded on St Mary's Gate in the early 1760s, also known as the 'Musick Hall', was a venue for concerts and musical entertainments. During the 1760s musical societies gave winter seasons of subscription concerts. William Hanbury promoted a music festival in 1763; the Nottingham General Hospital held an annual benefit festival from 1782, the year it opened. Samuel Wise (?1730–1801) was organist of St Mary's from 1755 and also a composer. From 1756 to 1787 he promoted annual concerts at the Ladies' Assembly Rooms on Low Pavement and in 1772 organized a music festival at the St Mary's Gate Hall. A cantata by Henry Hargrave, *On Wedlock*, addressed to the ladies of Nottingham, was performed in 1763.

The composer, violinist and conductor Henry Farmer (1819–91), author of popular violin tutors, published and sold music in the High Street from about 1840. Mary Bowman-Hart's Musical Guild offered singing classes to working-class men and women in the 1880s and had 400 members in 1886. The Nottingham Empire Theatre of Varieties, opened in 1898, featured leading music-hall performers and was open until 1958; it was demolished in 1969. The Albert Hall (cap. 2550) opened in 1876 as a concert hall and in 1902 became the Albert Hall Methodist Mission. It burnt down in 1906 and was rebuilt in 1909 (cap. 1400), then altered and refurbished in 1987–8 to form a Great Hall (cap. 700) and two smaller rooms. The Royal Concert Hall (cap. 2496), opened in 1983, is the northern base of the Royal Philharmonic Orchestra; the adjacent Theatre Royal, opened in 1876, houses Opera North's touring productions. The Midland Sinfonia (renamed the English Sinfonia in 1966), was founded in 1961 by Neville Dilkes, and was based in Nottingham until 1984 when it moved to Sandy in Bedfordshire. Formed in 1979, the Holme Pierrepont Opera Trust produced early English operas at the nearby Holme Pierrepont Hall, becoming in 1985 the touring company Opera Restor'd.

In 1846 the Mechanics Institution formed a Vocal Music Club, later the Sacred Harmonic Society. The present Nottingham Harmonic Society was established in 1856 by Alfred Lowe and was conducted from 1897 to 1902 by Henry Wood. The Nottingham Music Club (founded 1923) presents an annual chamber music season, and the Nottingham Bach Society (founded 1954) regularly performs large-scale choral works. The Nottingham Sinfonietta was founded in 1974, and renamed the Nottingham PO in 1985. There are two annual festivals: the Nottingham Festival (founded 1970) and the competitive Nottingham Music and Drama Festival (established 1902). BBC Radio Nottingham (established 1968) broadcasts a wide range of music. The University department of music, originally part of the department of education, became separate in 1925. From 1956 to 1982 the Nottingham University Opera Group produced a series of lesser-known operas, including the British premières of Dvořák's *Dimitrij* (1979) and Berwald's *Drottningen av Golconda* (1982). In 1994 the department moved to the University Arts Centre which includes the Djanogly Recital Hall.

ROSEMARY WILLIAMSON

Notturno (It.: 'nocturnal'). Term used in the 18th century mainly for works performed outdoors, not in the evening but at night (generally around 11 p.m.). In Salzburg Mozart used the term as the title of his *Serenata notturna* K239 for double orchestra and his Notturno K286/269*a* for four orchestras: Hausswald suggested that he preferred this term for works elaborately scored, using 'Nachtmusik' for simpler ones (such as the Trio K266/271*f* and *Eine kleine Nachtmusik* K525; *see* NACHTMUSIK). The form is related to the SERENADE, as the style and sequence of movements in K239 and 286 make clear. Mozart later applied the term to vocal works, the *notturni* for three voices and wind instruments (K436–9, 346/439*a* (incomplete) and perhaps 549). For Michael Haydn, on the other hand, the title signified a soloistic work; his two string quintets of 1773 (ST187/P108 and ST189/P109) are both authentically called 'Notturno'.

Although Haydn's eight *notturni* of 1790 in two to four movements (HII:25*–32*), originally written for the King of Naples and later arranged for the London concerts which he organized with J.P. Salomon, should possibly be considered orchestral pieces, they are chamber-like in character; set for solo instruments, the *notturno* became popular among composers of southern Germany, Austria, Bohemia, northern Italy and Paris (including Boccherini, Bonnay, Johann Brandl, Camerloher, Ferrari, Ignaz Fränzl, Gyrowetz, Michael Haydn, Holzbauer, Kammel, Kirmayer, Kreubé, Maschek, M.L. Neubauer, Paluselli, Piombanti, Polz, Pugnani, G.B. Sammartini, Vanhal, Anton Wranitzky). Chamber works bearing the title 'notturno' either had more than five movements, like the serenade, or two to four movements, like the DIVERTIMENTO. In England the term usually signified a two-movement work, the first in moderate tempo (often in march rhythm), the second a slow minuet (for example J.C. Bach's *Six Trios or Notturnos* for two violins and viola or bass, op.2 (*recte* op.4), *c*1765).

The later NOCTURNE for solo piano had no direct connection with the notturno.

HUBERT UNVERRICHT/CLIFF EISEN

Notula. A term used by Johannes de Grocheio and in several French lais, apparently describing lai form. *See* LAI, §1(iii).

Nouguès, Jean(-Charles) (*b* Bordeaux, 26 April 1875; *d* Paris, 28 Aug 1932). French composer. Born into a wealthy family, his overriding aim was to devote his life to the composition of operas and to obtaining their performance, although he also composed songs. Almost entirely self-taught, he studied for a short time with Gaston Sarreau. *Le roy du Papagey* was written before he was 16. Over 8000 performances of his works took place during his lifetime.

La mort de Tintagiles, a Maeterlinck setting following Debussy's *Pelléas* by only three years, shows little influence of the declamatory style of that opera. Maeterlinck's mistress, Georgette Leblanc, created the important role of Ygraine. *Quo vadis?* was Nouguès's most celebrated work and is a large-scale affair dealing with the plight of Christian martyrs in Rome. *La danseuse de Pompéï* is concerned with the destruction of Pompeii. Criticized for its lack of plot, it was Nouguès's last large-scale opera.

Nouguès's musical style is conventional and he attempted to emulate the style of several other composers. He was considered by some to be little more than an amateur who was trying his hand at naturalistic operas, a judgment hardly borne out by his undeniable success at having his works performed.

RICHARD LANGHAM SMITH

Nourrit, Adolphe (*b* Montpellier, 3 March 1802; *d* Naples, 8 March 1839). French tenor, son of LOUIS NOURRIT. He studied with the elder García for 18 months, initially against his father's wishes, then made his début at the Opéra in 1821 as Pylades in *Iphigénie en Tauride*. He was coached intensively by Rossini and created the roles of Néocles in *Le siège de Corinthe*, Count Ory, Aménophis in *Moïse et Pharaon* and Arnold in *Guillaume Tell*. Among the other roles he created were Masaniello (*La muette de Portici*; see illustration), Robert (*Robert le diable*), Eléazar (*La Juive*) and Raoul (*Les Huguenots*). From December 1826, when he succeeded his father as first tenor at the Opéra, until his resignation in October 1836, he created the principal tenor roles in all major new productions, generating an entire repertory for the acting tenor. His success in *Moïse* and *Le siège de Corinthe* was so great that in 1827 he was appointed *professeur de déclamation pour la tragédie lyrique* at the Conservatoire, where his most famous student was the dramatic soprano Cornélie Falcon.

Adolphe Nourrit as Masaniello in Auber's 'La muette de Portici': engraving by Pierre Maleuvre

Moïse marked a turning-point in singing at the Opéra, as the singers turned to the more open-voiced, italianate production favoured by Rossini. Here, as in all the scores written for Nourrit, the dynamics and the thickness of the orchestration below his voice part indicate that he could not have been singing in falsetto in his upper register (as has often been stated). He had a mellow, powerful voice that extended to *e♭″*; *d″* was the highest he ever sang in public. As Nourrit's status at the Opéra increased, so did his influence upon new productions. His advice and collaboration was sought by composers; he wrote the words of Eléazar's aria 'Rachel, quand du Seigneur' and insisted that Meyerbeer rework the love-duet climax of Act 4 of *Les Huguenots* until it met with his approval. He also wrote four ballet scenarios including *La Sylphide* (1832), whose combination of magic and Scottian realism was inspired by *Robert le diable*. In addition, he was concerned more broadly with the social aspects of singing, particularly with the missionary role of the performer. In the early 1830s he was involved with the ideas of the Saint-Simonians, and after his retirement dreamed of founding a grand *opéra populaire* which would introduce opera to the masses (see Locke).

About 1 October 1836, Charles Duponchel engaged Gilbert Duprez as joint first tenor at the Opéra. Nourrit accepted this arrangement in case he should fall ill (among other reasons). He sang *Guillaume Tell* superbly with Duprez in the audience on 5 October. On 10 October, during *La muette de Portici*, with Duprez again in the house, Nourrit suddenly went hoarse. After the performance Berlioz and George Osborne walked the tenor up and down the boulevards as he despaired and talked of suicide; on 14 October he resigned from the Opéra. During this time he continued to enjoy success as a salon performer; he was the first to introduce Schubert's lieder to Parisian audiences at the celebrated soirées organized by Liszt, Urhan and Alexandre Batta at the salons d'Erard in 1837. The intimacy of the salon apparently suited him particularly well; criticized for a weak voice, he showed great nuance of feeling and dramatic range. His farewell performance from the Opéra was on 1 April 1837. He immediately set out to perform in the provinces, but a liver condition (possibly the result of alcoholism) and its effects on his singing forced him to cut short his tours. While listening to Duprez at the Opéra, on 22 November 1837, he decided to go to Italy in the hope of succeeding Rubini on his retirement, and left Paris in December 1837.

The following March he began to study in Naples with Donizetti. He worked to eradicate nasal resonance, but as a result lost his head voice. He wanted Donizetti to write the opera for his Naples début, *Poliuto*; when it was forbidden because of its Christian subject matter, Nourrit felt betrayed. His wife, arriving in July 1838, was shocked at the sound of his voice and his thinness; he was being leeched regularly and was constantly hoarse. But his Naples début in Mercadante's *Il giuramento* (14 November 1838) was a success. As his liver disease advanced, his mental health deteriorated and his memory began to fail. On 7 March 1839 he sang at a benefit concert, was disappointed in his performance and upset by the favourable reaction of the audience. The following morning, he jumped to his death from the Hotel Barbaia.

Nourrit's brother, the tenor Auguste Nourrit (1808–53), was for some time theatre director at The Hague,

Amsterdam and Brussels, and took over his post at the Conservatoire after his death.

EVAN WALKER/SARAH HIBBERD

Nourrit, Auguste. French musician, brother of ADOLPHE NOURRIT.

Nourrit, Louis (*b* Montpellier, 4 Aug 1780; *d* Brunoy, 23 Sept 1831). French tenor, father of ADOLPHE NOURRIT. He entered the Paris Conservatoire in 1802 and began to study with Pierre Garat in the following year. In 1804 he was listed as a member of the Imperial chapel with other members of the Opéra company. He made his Opéra début on 3 March 1805 as Renaud in Gluck's *Armide*, and later appeared with success as Orpheus. Fétis considered that his engagement marked the beginning of a revival in French singing, his predecessors having been more concerned with generating dramatic excitement than with purity of line. He was a reticent actor at first but later gained assurance, and in 1812 he replaced Etienne Lainez as the Opéra's principal tenor. He sang in the premières of Cherubini's *Les abencérages* (1813) and Spontini's *Olimpie* (1819), and in 1824 sang with his son Adolphe in Daussoigne's *opéra féerie Les deux Salem*; their similarity of appearance and voice apparently inspired the work's central theme, but did not guarantee its success, and the opera was dropped from the repertory after 13 performances. In 1826 father and son again appeared together in the première of Rossini's *Le siège de Corinthe* (9 October). Although his voice was still in good condition, Louis retired two months later, leaving his son to take over the more florid and demanding new tenor repertory. He lacked ambition as a performer, and throughout his career at the Opéra he also worked as a diamond merchant.

PHILIP ROBINSON/SARAH HIBBERD

Nova (Sondag), Jacqueline (*b* Ghent, 6 Jan 1935; *d* Bogotá, 13 June 1975). Colombian composer of Belgian origin. She studied with Fabio González-Zuleta, Olav Roots and Blas Emilio Atehortúa at the Bogotá Conservatory, graduating in composition. She is considered one of the finest Colombian composers of the 20th century and a progressive exponent of trends that dominated contemporary music in the 1960s, including aleatory and electronic techniques. One of the first Latin American women to obtain international acclaim for her compositions, she won a first prize in Caracas in 1966 for the chamber work *Doce móviles* (subsequently published by Pan American Union). Her *Metamorfosis III* (1966) was given its première by the Colombia SO, conducted by Roots. In 1967 she was awarded a scholarship for two years' study at the Di Tella Institute, Buenos Aires, where she studied with Ginastera and Nono. Several works were first performed in Buenos Aires, including *Asimetrías* (1967), conducted by Armando Krieger, the electronic work *Oposición-fusión* (1968) and *Cantos de la creación del mundo* (1972; performed by Nueva Música), which was later performed in France (1973). The oratorio *Hiroshima* (1972) was commissioned by Colcultura. (C. Barreiro Ortiz, ed.: *A proposito de Jacqueline Nova*, Bogotá, 1983)

SUSANA FRIEDMANN

Nova, Vangjo (*b* Korça, 27 Jan 1927; *d* Jannina, Greece, 6 Jan 1992). Albanian composer and choral conductor. After early guitar lessons, he studied harmony and solfège with Trako at the Jordan Misja Art Lyceum, Tirana (1946–51), and counterpoint with Zadeja (1951–3). He was assistant to Trako as conductor of the State Chorus, and later assistant conductor of the Albanian Philharmonia and the Opera. From 1972 until his retirement in 1983 he taught harmony and solfège at the Jordan Misja Art Lyceum.

Along with Trako and Uçi, Nova played an important role in the early development of socialist Albania's musical life, composing everything from songs and choruses to stage music and cantatas. His music is simple, tuneful and rarely devoid of charm, even when having recourse to easily recognizable models, such as Rachmaninoff and Grieg in *Tarracat e bregdetit* ('Citrus Groves over the Seashore', 1969), one of his most renowned works. His opera *Heroina* was staged to considerable acclaim for the inauguration of the Tirana Theatre of Opera and Ballet in 1967.

GEORGE LEOTSAKOS

Nováček, Ottokar (Eugen) (*b* Fehértemplom [now Bela Crkva, Serbia], 13 May 1866; *d* New York, 3 Feb 1900). Hungarian violinist and composer, of Czech descent. He studied successively with his father Martin Joseph Nováček, with Jakob Dont in Vienna (1880–83) and with Schradieck and Brodsky at the Leipzig Conservatory, where he won the Mendelssohn Prize in 1885. He played in the Gewandhaus Orchestra and in the Brodsky Quartet, originally as second violin and later as viola. He subsequently emigrated to the USA, where he was a member of the Boston SO under Nikisch (1891) and was appointed principal viola in the New York Symphony Society Orchestra (1892–3); he also played in the reformed Brodsky Quartet. In 1899 a heart condition forced him to retire from playing. His works include a piano concerto (1894, first performed by Busoni), *Perpetuum mobile* for violin and orchestra, three string quartets (published in 1890, 1898 and 1904), eight *Concerto caprices* and other works for violin and piano, and six songs to texts by Tolstoy.

E. HERON-ALLEN/R

Novaës, Guiomar (*b* São João da Boã Vista, São Paulo, 28 Feb 1895; *d* São Paulo, 7 March 1979). Brazilian pianist. One of the youngest children in a very large family, she studied with Antonietta Rudge Miller and Luigi Chiafarelli in São Paulo before being accepted as a pupil of Isidore Philipp at the Paris Conservatoire in 1909. She remained with him for two years and received a *premier prix* for piano in 1911, having made her orchestral début with the Châtelet Orchestra under Pierné earlier the same year. In 1915 she gave a highly successful recital at the Aeolian Hall, New York, which marked her US début, and in subsequent years she won acclaim there as one of the most spontaneous and poetic pianists of her generation. She was married in 1922 to a civil engineer, Octavio Pinto, also a pianist and composer. Novaës's career continued into the 1970s, a recital at Hunter College in 1972 marking her last New York appearance. Although she made a number of discs for Victor in the 1920s, as well as piano rolls, she was most extensively recorded by Vox in the 1950s, leaving interpretations of Chopin's F minor Concerto (with Klemperer) and Schumann's *Carnaval* that bear witness to an irrepressible individuality and eloquence.

JAMES METHUEN-CAMPBELL

Novák, Jan (*b* Nová Říše na Moravě, 8 April 1921; *d* New-Ulm, 17 Nov 1984). Czech composer. His musical talent was evident from childhood in his abilities in violin and piano studies, and later in his attempts at composition during his school years. After completing a classical education in Brno, he entered the Brno Conservatory in 1940 and joined Petrželka's composition class, having previously taken a brief course with Theodor Schaefer. Forced to interrupt his conservatory studies for two and a half years during the Nazi occupation, Novák completed his course only in 1946, submitting a string quartet and the *Taneční suita* ('Dance Suite') for orchestra. He then studied briefly with Bořkovec at the Prague Academy (AMU) and in 1947 left for the USA on a study trip financed by a Ježek Foundation scholarship that he won for his Serenade for small orchestra. He completed a summer course with Copland in Tanglewood and for five months studied with Martinů in New York. On 25 February 1948, the date of the communist takeover in former Czechoslovakia, Novák returned home and settled in Brno, where he would earn his living from composition. In 1963 he was one of the founders of 'Toůrčí skupina A' (Creative Group A) or 'Parasiti Apollonis', which brought together Brno theoreticians and composers united by a common view of the role of contemporary music and an interest in new compositional techniques. His liberal views and uncompromising attitude, however, brought him into conflict with the communist authorities; he was discriminated against in a number of ways and in 1961 he was expelled from the Union of Czechoslovak Composers. It was partly this that made him leave Czechoslovakia after the Soviet invasion of 1968. With his family he lived in exile in Denmark, in Italy (1970–77) and finally in the Federal German Republic. He is buried in Rovereto, Italy.

Even Novák's student compositions display an acute musicianship which, when disciplined by a growing technical mastery, placed him among the most talented representatives of the young postwar generation. His early works received concert and broadcast performances. The *Dance Suite* contains a number of characteristic traits: clear construction, transparent orchestration and a feeling for clearcut rhythms. These elements were strengthened still more by his studies with Martinů, with whom Novák formed a close personal and artistic friendship. The late 1940s and the early 50s saw the composition of a number of chamber and piano works which Novák later suppressed. One exception was his song cycle *Carmina sulamitis* (1947) on the Latin text of the Song of Songs, which also demonstrates his exceptional sensitivity to the voice. His aim, fully realized in this cycle, was to create a vocal style which would be clearly intelligible, unsentimental in quality, but also eminently singable. The alternation of long melismas, supported by the pulsing rhythms of the orchestra, with declamatory passages allows the singer to show off all aspects of her voice.

In this early phase, this successful song cycle remained however an isolated experiment. Novák concentrated on chamber pieces and concertos, among which the first representative work is the Oboe Concerto (1952), a composition of neo-classical formal clarity which exploits the virtuoso possibilities of the solo instrument. These elements can be seen as a legacy from Czech music of the 17th and 18th centuries. The work's sense of humour, its musical wit and playfulness, reflect Novák's basically optimistic character. The Oboe Concerto was followed by the Concerto for two pianos and orchestra (1955). At its first performance the composer played in the duo part with his wife Eliška, a graduate of the Brno Conservatory; the Nováks often appeared in piano duet recitals. The enthusiastic reception of the concerto by the Brno audience was in sharp contrast to official reaction, which branded Novák's style as foreign to the spirit of Czech music. With

uncompromising obstinacy Novák in the early 1950s defended his right to his own, modern-orientated path. His music upset the arbiters of the dogmatic, aesthetic norms; his wit and humour were often taken as ridicule, cynicism and deliberate provocation.

Novák's talent was established beyond dispute by his composition for nonet, entitled *Baletti à 9*, in which he again demonstrated his sense for rhythm and for timbre combinations, timbre being treated as an essential element of the music. The composition, which brought a new dimension and a folklike tunefulness to what were essentially dance forms, preserved, like all Novák's works of the period, a basically tonal character.

With the ballet *Svatební košile* ('The Spectre's Bride'), composed in 1954 on the subject of the ballad by Karel Jaromír Erben, Novák came into contact with the theatre for the first time. Nevertheless, the ballet demonstrated a sophisticated dramatic flair, and it was followed by incidental music for many plays and films. The climax of this activity came in 1965 with the Brno première of *Komedie o umučení a slavném vzkříšení Pána a spasitele našeho Ježíše Krista* ('Play of the Passion and Glorious Resurrection of the Lord Our Saviour Jesus Christ'), in which Jan Kopecký's adaptation of the folk Passion play was in close sympathy with Novák's musical conception of the subject.

Novák's first creative period, characterized by Martinů's obvious influence, began with his piano *Variace na téma Bohuslava Martinů* (1949) and closed with the orchestral version of ten years later. These seven variations and double fugue on an 11-bar theme from the closing section of Martinů's *Field Mass* are proof of the technical mastery of form and instrumentation that Novák had achieved by this time: he had proved himself a composer of rich invention with a wide range of expression.

A new creative period began with the Capriccio for cello and orchestra (1958), a virtuoso concerto work making striking use of jazz elements. In the middle movement, 'Circulus vicioso', he first employed a 12-note series as thematic material. He also used 12-note techniques in the lyrical *Dulces cantilenae* (1961), in which he returned for his text to the Song of Songs, this time in a different Latin version by the Czech humanist Campanus Vodňanský. The use of dodecaphony did not however mean a basic change of attitude towards form. As is shown by the composer's gently ironic introduction to these songs and to the following work, *Passer Catulli* (1962), he saw these compositional techniques as a musical game.

During the 1960s the strength of tonality in Novák's work gradually diminished. Most of Novák's works from this period are settings of the composer's own Latin texts, the Latin of medieval codices or classical Latin. The rhythm of the Latin hexameter became an ostinato motif in the large-scale oratorio *Dido* (1967) for mezzo, speaker, male choir and orchestra. This three-part work brought together Novák's dramatic flair, his individual vocal style and his predilection for the Latin language. Other scores using unusual Latin texts include *Apicius modulatus* (1971), a humorous piece based on the cookbook by Apicius, and the opera *Dulcitius* (1974), based on a miracle play by Roswitha von Gandersheim. For his basic rhythmic material Novák drew increasingly on the verses of Virgil during this final period. An analytical study of Latin texts, their metres, lengths of syllables and the intonation of correctly declaimed Latin informed the rhythm of his music and its melodic outline also, particularly in works such as *Odarum contentus* (1973). Through this most universal of languages Novák succeeded in creating a highly individual musical expression.

ALENA NĚMCOVÁ

Novak, Johann Baptist [Janez Krstnik] (*b* Ljubljana, *c*1756; *d* Ljubljana, 29 Jan 1833). Slovenian composer. He was a civil servant in Ljubljana, and one of the founder-members of the Philharmonic Society in 1794. He conducted the orchestra of the society in 1799–1800 and between 1808 and 1825 was its musical director. In 1790 he wrote incidental music for T. Linhart's play *Ta veseli dan, ali Matiček se ženi* ('A Happy Day, or Matiček is Getting Married'). The music was given such prominence that the play became in effect an opera. Linhart's plot leant heavily on Beaumarchais's well-known comedy, and Novak, who must have known it through Mozart's setting, renamed it *Figaro* (in the National and University Library, Ljubljana). His only other extant work is an occasional cantata, *Cantate zum Geburts oder Namensfeste einer Mutter* (*I-Tscon*); of another occasional cantata, *Krains Empfindungen*, performed in 1801, only the text survives.

BOJAN BUJIĆ

Novák, Pavel [Zemek, Pavel] (*b* Brno, 14 Oct 1957). Czech composer. He studied composition and oboe at the Brno Conservatory (1971–7). He then attended the Janáček Academy in Brno (1977–81), graduating in oboe, then studied composition there with Miloslav Ištvan (1983–8). Novák is a teacher of composition and theory at the Brno Conservatory.

During his studies he was influenced by the compositional method of his teacher Ištvan, then he began to develop in a rather different direction, with evolutionary forms. From 1986 he worked with some London ensembles (The Schubert Ensemble and The Composers' Ensemble). In 1992–3 he studied with George Benjamin at the RCM in London. Elements of diatonicism and consonance, and melodic writing in instrumental music more closely resembling a vocal idiom, became more pronounced features of Novák's style during the 1990s. Classical rhythmic structures in multiples of two, with metrical fluctuations within an otherwise regular beat, became more emphasized in Novák's works. In his evolutionary forms the ideas themselves fashion the structure, so that one element (rhythm, melody, colour) dominates. Behind this musical language stands an interest in Czech and Moravian folklore, and devout Catholicism.

PETR KOFROŇ

Novák, Vítězslav [Viktor] (**Augustín Rudolf**) (*b* Kamenice nad Lipou, 5 Dec 1870; *d* Skuteč, 18 July 1949). Czech composer and teacher.

1. LIFE. His father, Jakub Novák, came from an ancient southern Bohemian peasant family. He worked as a medical doctor and served the deputy president of the choral society Čechorod of Počátky. His mother, Marie Pollenská, was a forester's daughter, who played the piano. The family moved to Počátky in 1872, where Novák attended primary school and learnt the violin with Antonín Šilhan and the piano with Marie Krejčová. In 1882 Novák's father died, after which the family moved to Jindřichův Hradec, where Novák studied at the local grammar school. The conductor of the local fire brigade band, Vilém Pojman, who taught him music from the fourth form, was the first to recognize and develop his musical gift. Novák gave his first public performances in Jindřichův Hradec at the age of 17 and composed songs and piano pieces from the age of 16. Among them were four attempts at setting Mácha's poem *Máj* ('May'), a classic of early Czech romantic poetry. After passing his final examinations (1889), Novák moved to Prague with his family.

For two semesters he read law at Prague University, and then philosophy, following the advice of the professor of music history and aesthetics, Otakar Hostinský. He graduated in 1893. At the same time he studied composition at the Prague Conservatory (Sept 1889–July 1892). In the beginning his studies were not particularly successful: his ardently romantic personality did not readily submit to the strict disciplines of harmony and counterpoint. Independent development of his talents came only when he began attending the composition class of Dvořák, who succeeded Karel Stecker in the academic year 1891–2. In that period, in addition to a couple of smaller pieces, Novák wrote his Violin Sonata in D minor and *Korzár* ('The Corsair'), an overture for orchestra. While Dvořák was away in New York, Novák orchestrated his Serenade in F for small orchestra in Karel Bendl's composition class (1894–5). Between 1891 and 1896 he attended Josef Jiránek's piano class.

His first compositional successes brought some much-needed improvement of his precarious financial situation. He received a scholarship from the Apt Foundation of the Prague Conservatory (1894–6) and a state scholarship of 400 gulden (1896–8). Brahms became interested in some of Dvořák's pupils, including Josef Suk and Oskar Nedbal, and recommended Novák's piano cycles for publication by his Berlin publisher, Simrock: opp.6, 9, 10, 11 and 13 were published between 1895 and 1898.

An important turn came in 1896, when Novák was invited by Rudolf Reissig (1874–1939), his friend from the conservatory, to explore the authentic folklore of Moravian Valašsko in Velké Karlovice (Vsetín district), an area famous for its natural beauty. Novák spent many summers on holiday in Velké Karlovice and went on numerous trips across Slovácko (Moravian Slovakia), Lašsko and Valašsko. Later he went even further afield into Slovakia. Inspired by the first impressions from his summer holidays, he decided to study the standard Czech and Moravian folksongs collections (Erben, Sušil, Bartoš). His own observations and notations of interesting songs made him familiar with the essence of folk music of the area. He also got to know the folk singers, musicians and folksong collectors, Martin Zeman, Hynek Bím, Jan Nepomuk Polášek and, most importantly in 1897, Leoš Janáček, the greatest authority on Moravian folklore at the turn of the century. Meeting outstanding figures then determining the nature of the rapid development of Czech nationalism in the late Austro-Hungarian Empire gave Novák an insight into the cultural atmosphere of Brno and Moravia. His friends and acquaintances included leading cultural figures such as the architect Dušan Jurkovič, the painter Jožka Úprka, the writers Alois and Vilém Mrštík, Josef Merhaut, František Mareš and many others. When Rudolf Reissig, after working briefly in Kroměříž, moved to Brno, where he became chorusmaster of the Beseda Brněnská (succeeding Janáček), he began systematically performing various works by Novák, beginning in 1899. This continued until 1920, when Reissig moved to the Prague Conservatory. The Novák cult in Brno even overshadowed the achievement of Janáček for a time. Both Novák and Janáček continued to be heard in Brno, thanks to the conductors Břetislav Bakala, Jaroslav Vogel and František Jílek, all pupils of Novák and later renowned Janáček conductors.

Vítězslav Novák: portrait by 'Dr Desiderius', pen and ink wash, 1926

From 1896 Novák turned not only to folklore but also to exploring the landscape of south-eastern Moravia and Slovakia, as an active walker, swimmer and mountaineer. His first stay in Velké Karlovice in 1896 was supported by a powerful emotional experience linked at the start of an unhappy love affair with the singer Josefína Javůrková, the recipient of the strain of 'eternal longing' detected by commentators in Novák's music. From then on a strongly personal synthesis of eroticism, nature and folklore can be traced in all his works. In the beginning, elements of folksongs represented merely an exotic aspect in his music, but from 1896 Moravian and Slovak folklore penetrated most of his compositions, resulting in a highly individual musical language. In addition to the Piano Quintet in A minor, written during the winter season of 1896–7 immediately after Novák's trip to Velké Karlovice, creative folklorism also imbued the original series of *Písničky na slova lidové poezie moravské* ('Songs on Moravian Folk Poetry'), in which he provided original folk texts with settings based on his own melodic invention and his imaginative piano accompaniments. Later, he orchestrated these songs.

In addition to his regular stays in Velké Karlovice and, at the beginning of 1906, in the Znojmo region around Bítov Castle, Novák visited almost every European country apart from Russia. Novák's knowledge of foreign languages – German, English, French, Spanish and Russian – literature, philosophy, fine arts and a vast repertory of European and Czech music, made him one of the leading figures of Czech culture and placed him among the most successful composers of the time. Unlike Janáček, Novák managed to become involved in the social and musical life of Prague. In 1901 the 'Podskalská Filharmonie' came into existence in Prague as a friendly association of artists around Novák (who lived in Podskalská ulice). After the death of Fibich in 1900 Novák took over some of Fibich's pupils, at the same time preparing his own applicants for study at Prague Conservatory. In time he developed an enviable reputation as a teacher. In September 1909 he opened a masterclass in composition at the Prague Conservatory, teaching over 100 composers until his retirement in 1939, including many Czechs, Slovaks and southern and eastern Slavs. Even after leaving the conservatory he continued to give private lessons to young composers. One of his last pupils was Ilja Hurník.

Novák's major achievements of the period include orchestral works, *Maryša* (1898), the symphonic poem *V Tatrách* ('In the Tatras', 1902), the *Slovácká suita* ('Moravian-Slovak Suite') for small orchestra (1903), the symphonic poem *O věčné touze* ('Eternal Longing', 1903–5), the Serenade in D for small orchestra (1905), the symphonic poem *Toman a lesní panna* ('Toman and the Wood Nymph', 1906–7) and the cantata *Bouře* ('The Storm') on words by Svatopluk Čech (1908–10). These works, together with piano works such as the *Sonata Eroica* (1900) and *Pan* (1910, orchestrated 1912), made Novák one of the founders of Czech modernist music of the early years of the 20th century.

A turning point in Novák's career came with his marriage (in 1912) to Marie Prášková, the daughter of a businessman from Skuteč, and Novák's former pupil from

the conservatory. The marriage gave him an emotional anchor and provided a stable family background. He began work on larger compositions, including the cantata *Svatební košile* ('The Wedding Shift', 1912–13), four operas and two ballets. Although he enjoyed maximum official recognition at the time when the first independent Czechoslovak state came into existence, he was no longer seen as a progressive figure. Despite that, he was a member of many domestic and foreign music societies, academies and juries, and his works were continued to be published by Universal Edition, and by domestic publishers. In the 1920s Novák was elected rector of Prague Conservatory on three occasions. His works were performed in Vienna, in Germany and in other foreign countries, and his premières in Prague and Brno were major social and musical events.

In the 1930s his orientation slowly began to change, youthful romanticism being replaced by a more reflective style as in the *Podzimní symfonie* ('Autumn Symphony', 1931–4), followed by a turn towards objective patriotism directly related to political events of the time. On the eve of the Munich tragedy he wrote the *Jihočeská suita* ('South Bohemian Suite', 1936–7) for orchestra and the Third String Quartet (1938), embodying feelings of resentment and of patriotic pride. In the protests against the Munich events and the establishment of the Protectorate, Novák remained silent for three years. Then, in the middle of the greatest national catastrophe, in 1941, he wrote his symphonic poem for large orchestra and organ *De profundis* (1941), the *Svatováclavský triptych* ('St Wenceslas Triptych') for organ and orchestra and a one-movement Cello Sonata. During the occupation he showed great personal courage, putting in his music allegories of national political resistance which even the Nazis were able to recognize (the *St Wenceslas Triptych* was referred to as 'ein schönes Werk, aber sehr politisch gefärbt' – 'a beautiful work, but very politically coloured'). During this period Novák spent most of his time in Skuteč, writing his memoirs (*Vítězslav Novák o sobě a o jiných*), some small compositions and the *Májová symfonie* ('May Symphony', 1943), a herald of liberation. For his lifetime achievement as a composer he was appointed National Artist in composition together with Josef Bohuslav Foerster, on 23 November 1945. He composed music until the very last day of his life. When he died in Skuteč the female chorus *Hvězdy* ('Stars') to a text by his wife and the unfinished cantata *Na orloji věčna léta vteřinami jsou. . .* ('On the Tower Clock Eternal Years are Mere Seconds') lay on his desk.

2. Works. Novák wrote works in all genres though his career was carefully paced and the larger works for chorus and orchestra and the stage works appeared only after his 40th year, suggesting a rational choice rather than a natural bent in these areas. His creative personality was in place by the turn of the century. A natural inclination towards gloomy romanticism and self- dramatization had been tempered by a rigorous academic training. This left him with an easy ability in the standard forms, mostly in chamber music and songs, and an orientation towards a conservative idiom. His two strongest attributes were already well in evidence: a fine ear for melody and orchestration. What took him out of a conventional late-Romantic idiom derived from Brahms, Grieg and Tchaikovsky was his encounter with Moravia. A decisive work is the First String Quartet op.22 (1899). The sonata-form first movement shows its provenance: Dvořák and even his rival Suk lurk in the background (in the careful craftsmanship and the harmony rather than in the cut of the melodies). But in the remaining movements Novák pulls abruptly away from this tradition; the solemn little scherzo is not only humorous, but folk-inflected in its harmonic and melodic vocabulary; the final movement may have had a Dvořákian *dumka* in mind with its alternation of the wild and the ruminative but in fact it looks more towards a Hungarian *topos*. Novák designated these two movements respectively as from 'Valašsko' (next door to Janáček's Lašsko) and 'Slovácko' (the Moravian-Slovak setting of both Janáček's *Jenůfa* and Foerster's *Eva*). The result is a delightful amalgam that could not be further from Janáček's earthiness or Suk's smoothness and was wholly Novák's own. Not everyone approved. Zdeněk Nejedlý castigated its 'pictorialism' (quite inappropriate in a string quartet, he declared) but, however misguided, he had clearly detected something that departed from the official Smetana road.

Novak had already taken this road in his orchestral overture *Maryša* (1898). A miniature tone poem, it contains clearly-drawn portraits of the three protagonists: that of the heroine Maryša is derived from a familiar Moravian folksong. It was only a small step to the *Moravian-Slovak Suite* (1903), set like *Maryša* and the second movement of the String Quartet op.22 in the Slovácko region of Moravia, whose folk rituals it evokes. But three of the five movements (describing respectively children at play, love-making and a nocturnal scene) could have been set anywhere. And what might be thought of as the defining movement as far as location is concerned, 'U muziky' ('With the band') is only skin-deep in its ethnographic gestures: open string chords with 4th and 5ths, Scotch snaps and other Moravian rhythmic fingerprints but all safely contained as a fruitful exoticism rather than the root-and-branch re-examination of musical language undertaken by Bartók and Janáček. The same point is made in the Piano Trio op.27 (1902). For all its Moravian mirror rhythms it is the fine ensemble writing and above all the striking one-movement form encompassing all the elements of a four-movement structure which impress today.

But Moravian exoticism had clearly released something within Novák and he went on to his best known works such as the tone poems *In the Tatras* and *Eternal Longing*. The first is monothematic and is an example of the composer's response to nature, here of the Tatra mountains of Slovakia seen in a variety of moods and weathers. The second proposes a simple narrative based on one of Hans Christian Andersen's prose poems but also allows the depiction of natural phenomena such as the 'strange forms' that lurk in the ocean or the flight of swans. It is ravishing music, achieved by comparatively simple means. Like much of Novák's music of the time its simplicity and confidence is deceptive, as can be seen from its long gestation (1903–5), a point made by the later revisions (1905, 1907) of *In the Tatras* (1902). A later work in this succession of orchestral pieces, the overture *Lady Godiva* (1907), also illustrates how careful Novák needed to be to tap into what was personal and distinctive. Stepping outside into foreign territory (Czech commentators enterprisingly detect a 'Scottish atmosphere' in Novák's musical reworking of the Coventry legend), he reverts to gestural Romanticism and a rather too obvious sonata

form with its competing 'masculine' first subject (depicting the violent Earl Leofric), 'feminine' second subject (the gentle Lady Godiva) and conflicted development. Another work from the period, the Serenade in D (1905), is admirable in its craftsmanship and achieves its aim of delighting, but lacks both the urgency and the personal identity of most of the other orchestral works of the period and shows how easily Novák could descend to note-spinning.

In his music up to about 1908 Novák seems to have found a personal voice when his imagination was released by Moravian *topoi* or when writing programmatically for orchestra (especially in a response to nature) where his precise aural imagination was given free rein. When Novák capped this with two large-scale works in other genres, namely the cantata *The Storm* and the 'symphonic poem for piano' *Pan* commentators believed that he broken free of these creative restraints. However, both pieces are problematic. Like *In the Tatras*, *Pan* is essentially monothematic, in this case a structure of almost an hour derived from a four-note initial theme. Its second movement 'Hory' ('Mountains') is a typically atmospheric evocation of nature but the demanding third movement 'Moře' ('Sea') descends into a collection of tired Lisztian virtuoso devices: the resultant texture has neither the luminosity of contemporary French piano music nor the poignant directness of Suk's *Things Lived and Dreamt* or Janáček's *On the Overgrown Path* and *In the Mists*. The piano textures themselves seem insufficient and it is revealing that Novák went on to orchestrate the work.

The Storm has different limitations. Technically it is a cantata with chorus (mainly male) and several soloists, but its vocal sections are embedded in an orchestral continuum of surprisingly generous proportions. At its triumphant première in Brno in 1910 it demonstrated how closely in touch Novák was with developments elsewhere in Europe. Its virtuoso deployment of the orchestra for instance recalls both the virtuosity of Strauss and incandescence of Skryabin. But the verbal text (a youthful narrative poem by Svatopluk Čech) is undistinguished and unconsciously comic; Novák's setting of the words is confined to ballad-like insertions which seldom breach the stanzaic structure of the poem. By far the most effective parts of this piece are the long orchestral sea interludes in which Novák was able to continue the concerns of *Eternal Longing* and *In the Tatras*.

After *The Storm* Novák faltered. His next oratorio, *The Wedding Shift* (1913) was castigated as presumptuous after Dvořák's famous setting of Erben's text and the clutch of operas that he then embarked on are retrospective works mostly based on Czech classic 19th-century plays. His best-known opera, *Lucerna* ('The Lantern'), has a cast of characters that could have come straight out of Dvořák's *Rusalka* or *The Jakobin*. Both *Karlštejn* and *The Lantern* were composed to rhymed verse which Novák did little to override rhythmically. His settings fall into regular, almost singsong rhythmic periods (as in *The Storm*) that can give a very formal, mannered impression, especially in dialogue. Significantly, in his final opera Novák returned to the surer ground of symphonic writing: *Dědův odkaz* ('The Grandfather's Legacy') has great swathes of symphonic interludes, postludes and dances. There is also an abrupt turnabout regarding choral writing (virtually absent from the previous operas) with the chorus consituting a particularly important element. Even more significantly the final stage works that Novák attempted were ballets, whose designation as 'pantomimes' refers to the detailed stage directions. In the case of *Signorina Gioventù* there is a prologue where the action is explained in a melodrama with a speaker and orchestra.

The unadventurous idiom of these later works show how out of sympathy Novák had become with Modernist developments in music. Whereas the elderly Janáček espoused the novelties that he picked up at his sorties to ISCM festivals, all Novák seemed able to do was to enhance the brilliance of his orchestration and flirt with mild bitonality. It is astonishing in the *South Bohemian Suite* of 1936–7 how little he had in fact advanced from the *Moravian-Slovak Suite* of 30 years earlier. He has all his old skill in evoking a dreamy romantic atmosphere in the first two movements. The most distinctive element is the grim Hussite march of the third movement in which he reacted to the ominous events in Germany that would soon destroy the Czechoslovak Republic. A nationalist impulse accounts for the urgency of his most effective late-period works, the war pieces of the 1940s, *De profundis* and *St Wenceslas Triptych*. The former work is based on a gloom-to-transfiguration trajectory, emphasized by the control of orchestral colour (very low instruments at the start, harp and celesta at the end). Remarkable in its muscular counterpoint, it is one of the most potent artistic responses to political events to come from the region.

WORKS

STAGE

op.	
49	Zvíkovský rarášek [The Zvíkov imp] (comic op, 1, L. Stroupežnický), 1913–14, Prague, National, 10 Oct 1915
50	Karlštejn (op, 3, O. Fischer (after J. Vrchlický), 1914–15, Prague, National, 18 Nov 1918
56	Lucerna [The Lantern] (musical fairy tale, 4, H. Jelínek, after A. Jirásek), 1919–22, Prague, National, 13 May 1923
57	Dědův odkaz [Grandfather's Legacy] (lyric op, with sym. interludes, 3, A. Klášterský, after A. Heyduk), 1922–5, Brno, National, 16 Jan 1926
58	Signorina Gioventù (ballet-pantomime, prol, 7 scenes, after S. Čech), 1926–8, Prague, National, 10 Feb 1929
59	Nikotina (ballet-pantomime, 7 scenes, after Čech), 1929, Prague, National, 10 Feb 1929
78	Žižka (incid music, F. Rachlík), 1948

ORCHESTRAL

—	Korzár, ov., after Byron, 1892
—	Serenade, F, small orch, 1894–5
—	Piano Concerto, e, 1895
18	Maryša, dramatic ov., after V. and A. Mrštík, 1898
26	V Tatrách [In the Tatras], sym. poem, 1902, rev. 1905, 1907
32	Slovácká suita [Moravian-Slovak Suite], small orch, 1903
33	O věčné touze [Eternal Longing], after H.C. Andersen, 1903–5
36	Serenade, D, small orch, 1905
40	Toman a lesní panna [Toman and the Wood Nymph], sym. poem, after Czech trad., 1906–7
41	Lady Godiva, ov. to tragedy by J. Vrchlický, 1907
64	Jihočeská suita [South Bohemian Suite], 1936–7
67	De profundis, sym. poem, 1941
70	Svatováclavský triptych [St Wenceslas Triptych], orch, org, 1941

CHORAL

19	2 balady na slova lidové poesie moravské [2 Ballads on Words from Moravian Folk Poetry], chorus, pf duet, 1898

23 2 balady na slova lidové poesie moravské, chorus, pf duet, 1900
— 2 sbory [2 Choruses], female chorus, pf, 1901

Novelli, Antonia Maria. *See* LAURENTI family, (4).

Novello. English family of musicians and music publishers of Italian origin. They exerted a widespread and stimulating influence on taste and musical practice in 19th-century England.

(1) Vincent Novello (*b* London, 6 Sept 1781; *d* Nice, 9 Aug 1861). Organist, choirmaster, conductor, editor, publisher and composer. His father, Giuseppe Novello, a Piedmontese who had settled in London as a pastry-cook, married an English wife, and gave his sons Francis and Vincent the best education he could. Vincent became a choirboy at the Sardinian Embassy chapel, where he received organ lessons from Samuel Webbe. On Webbe's recommendation he was appointed organist, when not yet 17, to the Portuguese Embassy chapel in South Street, Grosvenor Square, where his brother Francis was already

principal bass. He held this office for 25 years, and made the chapel famous by his playing and by his choir's regular performances of Haydn's and Mozart's masses, with which he had become acquainted through the friendship and fine musical library of the Rev. C.I. Latrobe. These works had not previously been heard in England, and music lovers from all over London flocked to hear them; a writer of the 1830s even ranked 'the introduction of the German masses to the Roman Catholic chapels' with the foundation of the Philharmonic Society as a major influence in what he called 'the improvement of our national taste'. Novello was a member of the Philharmonic Society from its foundation in 1813, and frequently directed its concerts from the keyboard. He also worked as conductor and accompanist with Angelica Catalani's opera company at the King's Theatre, and thus acquired, as Mary Cowden Clarke recorded in her memoir of her father, 'that facility in reading from score, which was, at that time, a rare accomplishment'.

Novello's ventures as editor and publisher began as a modest offshoot of his work as choirmaster. In 1811 he brought out, at his own expense, a two-volume *Collection of Sacred Music*, compiled from the manuscript music in use at South Street chapel. This was followed by *Twelve Easy Masses* (which included three of his own) and by further collections of motets. All these he brought within the scope of organists less gifted than himself by providing a written accompaniment instead of the customary figured bass. His series of masses by Haydn and Mozart was also published, as his daughter stated, 'at his own cost of time and money, in order to introduce them, in accessible form, among his countrymen in England'. The operative words are 'in accessible form': hitherto such works had been available, if at all, only in full score. Novello brought them out in vocal score, again with accompaniments arranged by himself for organ or piano, and with separate vocal and orchestral parts, which until then were only to be had by laborious copying. Although several of these masses were later shown to be spurious, it does not detract from the importance of the undertaking. Choral societies were comparatively rare in the first decades of the century, but multiplied rapidly throughout the country as soon as vocal scores and orchestral parts could be obtained easily and cheaply. In London Novello himself took an active part in the affairs of such bodies as the Classical Harmonists and Choral Harmonists, and his own family circle was the proving ground for much music for home and amateur performance.

A request from the Cambridge University Senate that he should examine and report on the great collection of manuscript music bequeathed to the university by Viscount Fitzwilliam in 1816 led to another editorial enterprise, the five-volume collection of Italian church music, mainly of the 17th century, which appeared in 1825 as *The Fitzwilliam Music*. Between 1826 and 1829 Novello also brought out five volumes of Purcell's sacred music; they included the G minor Evening Service and four anthems, all of which Novello copied in a single day from unpublished manuscripts in York Minster that were destroyed by fire in the following year. Although he was a Roman Catholic, he nevertheless contributed the collection known as the *Cathedral Choir Book*, several volumes of Boyce's services and anthems, and others by Greene, Croft and Nares to the worship of the Church of England. He also edited Handel's and Haydn's oratorios and produced four-hand arrangements of opera excerpts from Mozart and Spohr.

When news reached London in 1829 that Mozart's sister was ailing and in want, Novello helped to organize a subscription on her behalf and, with his wife, travelled to Salzburg in order to present her with the money and collect material for his projected biography of Mozart, to him 'the Shakespeare of music'. The book was never written, though his pupil Edward Holmes used the material in his *Life of Mozart* (1845). The notes and diaries which Vincent and Mary Novello kept on their travels were published in 1955 as *A Mozart Pilgrimage*. The music of J.S. Bach was Novello's other great love, at a time when Bach's music was known to few in England outside a tiny group of organists (called 'the Sebastian Squad' by its moving spirit Samuel Wesley) whose devotion did much to prepare for the later Bach revival.

In 1808 Novello married Mary Sabilla Hehl (*b* c1789; *d* Nice, 25 July 1854), a gifted woman of German-Irish descent; through her immense vitality their home became a centre for a wide circle of friends in the literary, artistic and musical worlds. Charles and Mary Lamb, Leigh Hunt and Shelley, Charles Cowden Clarke and his pupils Keats and Edward Holmes were among those who were drawn into such musical evenings as Lamb described in 'A Chapter on Ears' (*Essays of Elia*, 1823); later the young Mendelssohn and the brilliant singer Maria Malibran brought fresh life to these gatherings. Of the 11 children born to Vincent and Mary Novello, apart from those discussed below, Mary (Victoria), who married Charles Cowden Clarke, became famous for her *Complete Concordance to Shakespeare* (1844–5); Edward Petre, who died at 21, was a painter of real promise (see illustration); Cecilia, actress and singer, married the actor J.T. Serle; and Sabilla achieved some distinction as a singer, teacher, writer and translator.

Novello was frequently asked to design and demonstrate new organs, and was responsible for part of the design of the organ for the new Birmingham Town Hall completed in 1834. For three years, from 1840 to 1843, he was organist at the Roman Catholic chapel in Moorfields, which was then the pro-cathedral for London. In 1848 he moved to Nice for the sake of his wife's health.

(2) (Joseph) Alfred Novello (*b* London, 12 Aug 1810; *d* Genoa, 16 July 1896). Music publisher, eldest son of (1) Vincent Novello. He was apprenticed in York (as his sister Clara recorded) 'to learn the music selling business', and was only 19 when he set up on his own as a music publisher. 'Alfred's shop', as the family called it, was at first only 'a couple of parlour windows and a glass door' in their home in Frith Street. But from this modest beginning the great publishing house of NOVELLO & CO. developed, as Alfred brought his own practical capacity and business flair to the service of his father's ideals. His acquisition of the copyright of Mendelssohn's *St Paul* in 1837, an act of personal friendship and regard as well as of musical judgment, contributed enormously to the financial success of his venture. He was a fine bass singer, both as a soloist in oratorio and as a member of the choir of the Roman Catholic chapel at Lincoln's Inn. He also had strong literary and scientific interests and founded two journals, the *Musical World* (1836; new ser. 1838) and the *Musical Times* (1844), which from 1853 to 1856 was edited by his sister Mary Cowden Clarke. During her editorship Alfred, who for years had associated himself

'The Novello Family and Friends' by Edward Petre Novello, c1831 (National Portrait Gallery, London, on deposit Bodelwyddan Castle, Clwyd); (from left to right) Mrs Blaine Hunt, Sabilla Novello, Charles Cowden Clarke, Mary Victoria Novello (Mrs Cowden Clarke), Florence Novello, Alfred Novello, Clara Novello, Cecilia Novello (Mrs Serle), Vincent Novello, Edward Holmes, Charles Stokes, Edward Novello, Emma Novello and Mrs Mary Sabilla Novello

with the campaign for the repeal of the taxes on newspapers, magazines and advertisements (the so-called 'taxes on knowledge'), used the periodical to provoke a test case which hastened their eventual repeal. He announced his intention to retire at the end of 1856 and, with the Cowden Clarkes, settled first in Nice and later in Genoa.

(3) **Clara (Anastasia) Novello** (*b* London, 10 June 1818; *d* Rome, 12 March 1908). Soprano, fourth daughter of (1) Vincent Novello. Her voice and musical ear were first noticed by her father's pupil Edward Holmes, who began to give her lessons before she was five. In 1829, when she was 11, her parents took her to Paris to compete for a place at the Institution Royale de Musique Classique et Religieuse founded in 1817 by Alexandre Choron. One of the adjudicators who admitted her was Rossini, who became her friend for life. After the Revolution of 1830 she returned home, and became increasingly involved in her father's musical activities; through him she was regularly engaged to sing at the series of Ancient Concerts, and won an enviable reputation for musicianship and reliability. In 1832 she sang the solo soprano part in the first performance in England of Beethoven's Mass in D, given privately at the home of Thomas Alsager. She appeared, for the first time at a Three Choirs Festival, in Worcester in 1833, and in 1834 she was one of the singers chosen to perform at the Royal Musical Festival in Westminster Abbey. After an extended concert tour in Scotland and the north of England, organized by her indefatigable mother, she sang in Birmingham in 1837 in the performance of Mendelssohn's *St Paul* which marked the inauguration of the new town hall. Mendelssohn then arranged for her to sing at the Gewandhaus concerts in Leipzig during the following winter. This was the beginning of a series of triumphs in the courts and musical centres of Germany.

In 1839 she went to Milan, studied for the operatic stage, and made her début in Pauda in 1841, in the title role of Rossini's *Semiramide*. When the first Italian performance of his *Stabat mater* was to be given there in 1841 he chose her as soprano soloist. Later that year, on his advice, she accepted a contract to sing at Fermo, a small city in the papal states. There she met a young aristocrat of an ancient local family, Count Giovanni Baptista Gigliucci, whom she married in 1843. For the first six years of their married life she devoted herself exclusively to her husband and children, and increasingly shared his involvement in the struggle for Italy's independence; in 1849 the collapse of the short-lived liberal resurgence in Rome and the papal states drove them from

Fermo into exile. A chance remark of her husband's led to her being offered an operatic contract in Rome, and their precarious circumstances led them to decide that she should resume her professional career in order to provide for the needs of the family. Other operatic engagements followed, but it was only on her return to England in 1851 that, as 'Madame Clara Novello', she found her true second career and vocation as an oratorio singer. She appeared regularly at the Three Choirs Festival, sang before royalty at state concerts and at the opening of the re-erected Crystal Palace in 1854 and, in her own words, 'opened most of the new town halls' in the developing industrial cities of the north. A certain temperamental reserve had kept her from achieving greatness in opera, but her religious faith, integrity and self-command and the power and purity of her voice gave a unique quality to her singing in oratorio.

Her husband had joined the liberation movement led by the House of Savoy, and the union of the former papal states with Piedmont in 1861 led to their return from exile and Clara's final retirement from professional life. She survived her husband by 15 years. A volume of her reminiscences, much edited from her own rough draft by her daughter Valeria, appeared in 1910.

ROSEMARY HUGHES

Novello, Ivor [Davies, David Ivor] (*b* Cardiff, 15 Jan 1893; *d* London, 6 March 1951). British composer, lyricist, librettist and actor. His career as a composer was determined for him by his mother, CLARA NOVELLO DAVIES, an internationally known voice coach and choir leader. She had ambitions for her son to be a composer of operas; however, the nearest he came to this was in *The Dancing Years* (1939), when he played an Austrian composer who conducts his own work at the Vienna Opera House. His early natural aptitude for writing attractive melodies was developed during a childhood at the centre of Cardiff's musical world, and was given more shape and discipline by several years as a scholar at Magdalen College Choir School, Oxford, and a brief spell as a pupil of Dr Herbert Brewer. Brewer dismissed his pupil with the assertion that he would have no career in music, but in 1914 Novello wrote *Keep the home fires burning*, which became an anthem of World War I, bringing him wealth and fame at the age of 21. During the rest of the war he wrote West End musical revues, but then concentrated on acting, spending the 1920s and early 30s as a silent movie star (including in Hitchcock's *The Lodger*, 1926), and as a popular matinée idol on stage, usually in plays he had written himself.

In 1935 he returned to composition with *Glamorous Night*, the first of a series of enormously popular musicals with which he was to save the fortunes of the Theatre Royal, Drury Lane. Dominating the British musical theatre from the mid-1930s to the early 1950s, his shows were heavily influenced by the operettas that he had grown up with (he saw *Die lustige Witwe* 27 times), but had a highly individual style of their own. Blending musicals with opera, operetta and both modern and classical dance, these shows were considered something of an anachronism in their own time, but that was part of their appeal. His last full-scale production in this style, *King's Rhapsody* (1949), was a selfconsciously romantic counter-blast to the modern musical: crown princes, ballrooms, royal yachts, beautiful princesses and a full-scale coronation combined to produce an evening of escapism that broke box-office records in a London tired of austerity. The huge casts and expensive sets that characterized Novello's shows have increasingly made them commercially unviable, as does the absence of their creator and star, whose stage presence was an essential part of their success.

The songs, however, have retained their popularity and are frequently heard on the radio or in concert performances. Best remembered for lush and attractive melodies like 'We'll gather lilacs' from *Perchance to Dream* (1945), his body of work tends to be categorized as 'romantic', just as his shows are invariably described as 'Ruritanian'. In reality, the shows combined foreign courts and romantic settings with the latest technology and references to current political events: the hero of *Glamorous Night* was a television inventor, while *The Dancing Years* deals, in part, with the Nazi Anschluss. His music was far more varied than his current reputation suggests. Romantic hits such as 'Someday my heart will awake', 'Shine through my dreams' and 'Fold your wings of love around me' were complemented by rousing operetta choruses like 'Uniform' and jazz age numbers that instantly evoke the inter-war years, such as 'Wait for me' and 'Why isn't it you?'. 'Rose of England' is a stately patriotic piece that stands comparison with Elgar or Walton, while 'If only he'd looked my way' is an exquisite anthem to unrequited love.

Novello's versatility extended to comedy: one of his most popular songs was 'And her mother came too', written for the Charlot revue *A to Z*. One reason for the song's success was that Novello crafted it exactly to suit the character and delivery of its singer, Jack Buchanan. Throughout his career he wrote with singers, or actresses, in mind, creating roles and melodies to suit their individual style. For Mary Ellis, who had sung at the New York Metropolitan Opera, he wrote 'My Dearest Dear' which fully utilized the range and purity of her voice, while for Elizabeth Welch, who started her career in cabaret, he wrote 'Shanty Town' and 'Dark Music', both of which

would have been at home in a night club revue. His last leading lady was Cicely Courtneidge, for whom he wrote *Gay's the Word* (1951), whose 'Vitality' became her theme song, describing her own exuberant personality as much as the Edwardian musical stars about which her character was singing. It was not just a well-made and well-placed song within the context of a particular show, but was Novello's tribute to the operettas of his youth. A bridge between the Edwardian and the postwar musical worlds, and between the English theatre and Broadway (several of his leading ladies were American), Novello was, until the advent of Andrew Lloyd Webber, the 20th-century's most consistently successful composer of British musicals.

WORKS
(selective list)

STAGE

unless otherwise stated, music and lyrics by Novello and dates those of first London performance; where different, writers shown as (lyricist; book author)

Theodore & Co (musical play, 2, C. Grey and A. Ross; H.M. Harwood and G. Grossmith), London, Gaiety, 19 Sept 1916, collab. J.D. Kern, P. Braham, M. Gideon and P.A. Rubens

See-Saw (musical show, 2, A. Eliot, H.C. Sargeant and A.P. Weigall), London, Comedy, 14 Dec 1916, collab. Braham, W. Redstone

Tabs (revue, 2, R. Jeans; H. Grattan and Jeans), Vaudeville, 15 May 1918, collab. G. Le Feuvre, P. Thayer, M. Lillie, A.W. Ketèlbey

Arlette (operette, 3, Grey and Ross; A. Hurgon and G. Arthurs, after C. Roland and L. Bouvet), London, Shaftesbury, 6 Sept 1917; collab. G. Le Feuvre; rev. as How Do, Princess, Manchester, 16 March 1936, addl. material by M.W. Dixon

Who's Hooper (musical comedy, 2, C. Grey; F. Thompson after A.W. Pinero: *In Chancery*), London, Adelphi, 13 Sept 1919, collab. H. Talbot

A Southern Maid (musical play, 3, D. Furber and H. Graham; D. Clayton Clathrop and H. Graham), Daly's, 15 May 1920, collab. H. Fraser Simson

The Golden Moth (musical play of adventure, 3, F. Thompson and P.G. Wodehouse), London, Adelphi, 5 Oct 1921

A to Z (revue, D. Thitheradge and H. Trix), Prince of Wales, 11 Oct 1921, collab Trix [incl. And her mother came too]

Puppets! (revue, 2, D. Titheradge), Vaudeville, 2 Jan 1924 (1923)

PAUL WEBB

Novello & Co. English firm of music publishers, established in London. The origins of the firm can be traced back to Vincent Novello (*see* NOVELLO family, (1)), who undertook the publishing expenses of the various anthologies he compiled and edited, starting with *A Collection of Sacred Music as Performed at the Royal Portuguese Chapel* (1811). His eldest son J. Alfred Novello (*see* NOVELLO family, (2)) established the business as a full commercial enterprise by opening premises in Soho in 1829. One of the first publications of Novello & Co. was the completion of the edition of Purcell's sacred music which the elder Novello had started in 1828. Alfred Novello soon discovered the artistic and commercial possibilities of cheap editions of standard works. The growth of interest in choral music through the massed singing classes of John Hullah and others was both fostered and catered for by the firm with publications such as *Novello's Choral Handbook* and Mainzer's *Singing for the Million*, and by Alfred Novello's own commercial tours. Together with the issue, from 1846, of cheap vocal scores of Handel's oratorios, these gave tremendous impetus to the amateur choral movement in Britain.

The founding of *The Musical Times and Singing Class Circular* in 1844 was a further important step in the firm's history. Each number contained one or more choral pieces in the octavo size of the journal, thus starting the 'Octavo Editions' which soon became almost universal practice for choral music. In order to reduce costs further Alfred Novello established his own printing office in 1847, and broke many of the restrictive practices of the printing trade. From then on most of the editions were produced from a fine new music type, which proved very economical for large editions, though about 1900 the firm began to revert to engraving for many of their publications. A further contribution to the cause of cheap music was the repeal of the various taxes on paper and advertisements between 1853 and 1861, for which Alfred Novello had long campaigned. The volume of the firm's business increased steadily, and in 1849 and 1851 various plates and copyrights were bought from Coventry & Hollier. Books on music were also produced, and included a new edition of Hawkins's *History*, issued in parts in 1852–3.

On Alfred Novello's retirement in 1857 Henry Littleton (*b* London, 2 Jan 1823; *d* London, 11 May 1888), who had been employed by the firm since 1841, took over as manager, becoming a partner in 1861 and sole proprietor in 1866. Under his direction the firm expanded even more rapidly. In 1857 it began the regular publication of modern anthems by composers such as Goss, Hopkins and Monk, and in 1861 it published the first edition of *Hymns Ancient and Modern*. In 1867 the business of

Ewer was acquired, along with many Mendelssohn copyrights (including *Elijah*), and the firm became Novello, Ewer & Co. Littleton soon directed more attention to the publication of secular music, with ventures such as octavo vocal scores of operas, beginning with *Fidelio* in 1870, and the catalogue came to include orchestral music as well. The firm also undertook concert promotion on a large scale, including the Oratorio Concerts and the management of the 200 free concerts given at the International Exhibition of 1873–4. It engaged Verdi to conduct four performances of his Requiem in May 1875, and from 1881 began an association with Dvořák. The firm came almost to monopolize the oratorio, and besides publishing many new works it often printed works and selections for particular festival performances. Prices were further reduced during the 1860s, and the firm pioneered pocket and Tonic Sol-fa editions. It issued the first volume of the Purcell Society editions in 1878, and has remained the society's publisher.

Henry Littleton retired in 1887, and was succeeded by his sons Alfred (*b* London, 15 Feb 1845; *d* London, 8 Nov 1914) and Augustus (*b* London, 8 Nov 1854; *d* London, 22 April 1942), who in turn became chairmen. In 1898 the firm became a limited company. At the end of the 19th century it began an interest in school music, with the founding of *The School Music Review* in 1892, and later with *Music in Schools* (from 1937) and its successor *Music in Education* (1944–78). From the turn of the century many important English composers, most notably Elgar, were associated with the firm. Elgar's music was championed in particular by the Novello editor A.J. Jaeger (*b* Düsseldorf, 18 March 1860; *d* London, 18 May 1909), who joined the firm in 1890 and, besides writing analytical notes for Elgar's works, helped promote the music of Horatio Parker and Coleridge-Taylor. During the late 1920s and 30s Bantock, Holst, Bliss and, later, Moeran published with Novello. In 1936 Adolf Aber (*b* Apolda, Thuringia, 28 Jan 1893; *d* London, 21 May 1960), formerly a partner in the firm of Friedrich Hofmeister, joined the board of directors and enriched the Novello catalogue by adding to it works by German composers such as Scheidt, Schicht and Kuhnau. After World War II younger composers such as Joubert, Leighton and McCabe were taken on; in the early 1970s the firm's list was considerably expanded, with Richard Rodney Bennett, Thea Musgrave, David Blake, Jonathan Harvey and Aulis Sallinen among those associated. The traditional association with oratorio was strengthened with the publication in 1959 of Watkins Shaw's critical performing edition of *Messiah* (intended to replace the old one by Ebenezer Prout). The business of Elkin & Co. was acquired in 1960, and those of Goodwin & Tabb (including its large orchestral hire library) and Paxton in 1971. The firm has acted as agent for several overseas publishers, including Hänssler, Henle, Leuckart, Molenaar, Möseler, Müller, Ricordi, Rubank and Zimmermann. In 1970 Novello became part of the Granada group of companies; in 1988 it was taken over by Filmtrax and in 1993 by Music Sales. *The Musical Times* ceased to be a Novello publication from 1988 and underwent a further change of ownership in 1995. Much of the firm's manuscript music and business archive was presented to the British Library in 1986–9, but a number of the other important retained manuscript scores were subsequently sent for auction in 1989. The remainder of the historical archive still in the firm's hands, including the letters from Dvořák, Elgar, Mendelssohn and Stanford, was dispersed by auction in May 1996.

Novello-Davies, Clara. *See* DAVIES, CLARA NOVELLO.

Novelty piano. A term, used particularly in the 1920s, that was applied to a variety of piano music based on ragtime. Novelty piano music drew on sources as diverse as popular dance music, folk ragtime and the music of the Impressionists (especially in its use of the whole-tone scale and the parallel 4th). Its most recognizable unifying feature was the 'novelty break' – a stylized interruption of the melody and texture. This was often based on the motif of a tritone resolving onto a 3rd, although whole-tone passages and various figures used by dance orchestras and jazz bands of the 1920s were also employed. The novelty style was influenced by piano-roll arrangements, and many works demanded considerable pianistic skill; indeed, their composers were among the most adept pianists in the popular field.

The word 'novelty' was used in association with various rags including Scott Joplin's *Euphonic Sounds: a Syncopated Novelty* (1909), but it was with the release on piano roll of Zez Confrey's *My Pet* in 1918 (published in 1921) that the identity of novelty piano was established. In such works as *Kitten on the Keys* (published in 1921, though released earlier on piano roll), *You Tell 'em Ivories* (1921), *Greenwich Witch* (1921), *Poor Buttermilk* (1921), *Coaxing the Piano* (1922) and *Nickel in the Slot* (1923) Confrey explored familiar territory with an inventiveness that places him among America's most imaginative composers. Another exponent was Roy Bargy, whose *Sunshine Caper*, *Jim Jams* and *Pianoflage* all appeared in 1922. In New York Rube Bloom, Arthur Schutt and Phil Ohman made contributions to the genre. Billy Mayerl adopted the style successfully and wrote novelties which are still played.

With the resurgence of ragtime in the 1950s the novelty style was revived to some degree. But the appearance in 1950 of the influential ragtime history *They All Played Ragtime* by Blesh and Janis initiated an attitude of dismissing novelty piano as frivolous and 'inauthentic'. The efforts of David Jasen, however, have fostered a more objective view of the style.

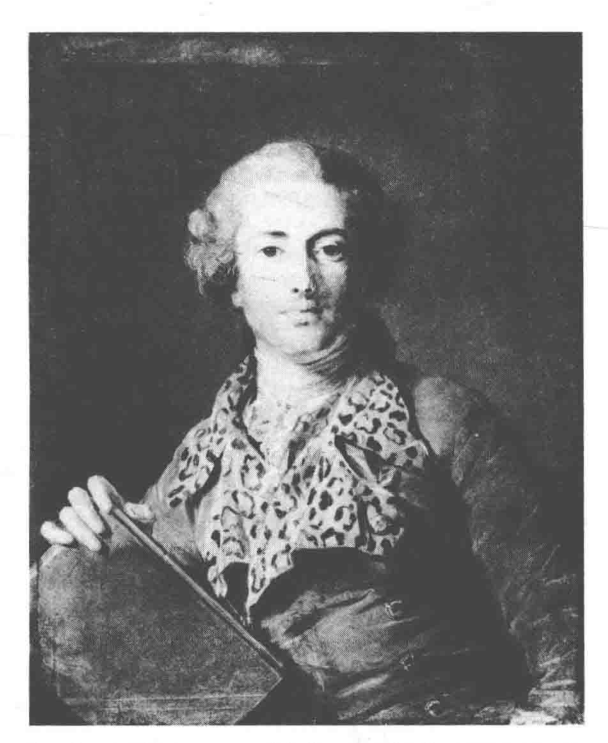
DAVID THOMAS ROBERTS/R

Novembergruppe. German group of artists, formed in Berlin and taking its name from the November Revolution of 1918. It was then formed as an association of visual artists of the Expressionist, Cubist and Futurist schools, with no intention of championing a particular style; rather, it aimed to provide a public forum for modern art and bring it closer to the people of the new Republic. In 1922 it admitted musicians; those who joined included Heinz Tiessen, Max Butting (head of the music section, 1923–6), Philipp Jarnach, Kurt Weill, Wladimir Vogel, H.H. Stuckenschmidt (head of the music section, 1926–7), Stefan Wolpe, Felix Petyrek, Hanns Eisler, George Antheil (a member only in name), Jascha Horenstein and Gustav Havemann. It organized recitals, the 'Novembergruppen-abenden', in the years 1923–5, which, though generally on a small scale, always attracted the attention of the Berlin press. They followed the principle of the group as a whole in transcending generic frontiers, and representatives of the different arts often held discussions at the concerts. The works performed consisted of contemporary chamber music and songs, particularly from the Viennese School and by representatives of the Berlin avant garde such as Artur Schnabel and Eduard Erdmann, as well as new music by members of the group themselves. Between 1925 and 1927 the recitals took a radical and Dadaist turn, with concepts such as 'mechanical music' and 'static music' questioning traditional forms of performance and composition. Several composers left, and once those composers who had remained turned their professional interest to such new, modern genres as radio and film music, *Zeitoper* and worker's music, their activities within the group became superfluous and few recitals were given between then and 1933.

NILS GROSCH



Noverre, Jean-Georges (*b* Paris, 29 April 1727; *d* Saint Germain-en-Laye, 19 Oct 1810). French-Swiss choreographer. Son of a Swiss soldier and a Frenchwoman, he rejected a military career for the dance at an early age; by 1740 he was a pupil of the Parisian dancing-master Marcel, and later of Louis Dupré, first dancer of the Paris Opéra. He probably made his début in a troupe directed by Dupré and J.-B. Lany in Monnet's Opéra-Comique at the Foire St Laurent in June 1743 in Favart's vaudeville *Le coq de village*, and in October he danced at Fontainebleau. His early contacts at the Opéra-Comique with Marie Sallé and with Rameau's music were seminal. In 1744 he joined Lany in Berlin, where he danced in Hasse's *Arminio* (1745) and probably in works by Graun.

Noverre returned to France with Lany about the end of 1747 and became ballet-master at Marseilles (according to his *Petite réponse*) or at Strasbourg (Tugal), and choreographed his first work, *Les fêtes chinoises* (1748). It was probably at Strasbourg in 1749–50 that he met the dancer and actress Marie-Louise Sauveur, whom he married. In April 1750 he became principal dancer at Lyons, partnering Marie Camargo. There, in 1751, he staged *Le jugement de Paris*, his first serious pantomime ballet (ten years before Angiolini and Gluck's *Don Juan*). During his engagements at Strasbourg (1753–4) and Paris (1754–5, at the Opéra-Comique) he seems to have been restricted to more conventional entertainments; but with ever-changing asymmetrical patterns, carefully co-ordinated costumes, scenery and lighting and occasional mimed episodes, he considerably altered the effect of traditional entrées. Having failed to gain a post at the Opéra, Noverre arranged with David Garrick to direct a troupe of dancers at Drury Lane Theatre, London, in 1755–7. Unfortunately anti-French sentiment ran high at the time of his visit and his elaborate staging of *Les fêtes chinoises* (8 November 1755) was a failure and provoked infamous riots.

During convalescence after an illness Noverre wrote a book on dancing and the theatre, *Lettres sur la danse*, and then put his ideals into practice at the Lyons Opéra where he collaborated with the composer François Granier in 13 new works during 1757–60, including three of a serious nature (though his lighter, colourful pantomime ballets were the most successful). He gained considerable renown with the appearance in autumn 1759 of the *Lettres* (publication date 1760): although esteemed by the literary élite, the treatise was bitterly criticized by Noverre's colleagues. In 1760 he moved to the Württemberg court at Stuttgart, where he worked with the composers Jommelli, F. Deller and J.J. Rudolph. Of his 20 new ballets there, *Médée et Jason* (1763) proved his most popular work, and like several of his Stuttgart ballets it was produced all over Europe. Noverre later complained that, when the company dispersed in 1767, 30 dancers became *maîtres de ballet*, and were 'spread out into Italy, Germany, England, Spain and Portugal … and rendered only very imperfectly the products of my imagination'.

After negotiations for a Warsaw post and, through Garrick, for a London one, Noverre accepted the important position of ballet-master to the imperial family and the two theatres at Vienna. This was the highpoint of his career. He staged at least 38 new ballets and revived many earlier ones, as well as choreographing some operas (including Gluck's *Alceste* and *Paride ed Elena*). Under his supervision Starzer (at the Burgtheater) and Aspelmayr (Kärntnertor-Theater) wrote ballets which, like some of those by Noverre's Stuttgart collaborators, proved to be their best music: these contained, besides conventional closed forms for the set-piece dances, rhapsodic and overtly programmatic sections to accompany mimed episodes, anticipating developments in other instrumental genres.

Having failed to negotiate contracts with Stuttgart or London, Noverre accepted in 1774 an invitation from Milan's Regio Ducal Teatro. Gasparo Angiolini replaced him in Vienna. The Milanese had already seen several Noverre ballets in productions by his pupils. His own efforts, however, were poorly received; his notices in printed programmes show his growing bitterness. Angiolini's critical publications and the barrage of anonymous pamphlets reflect an Italian aesthetic viewpoint that would be echoed in France where, after spending spring and summer 1776 managing a company at the Vienna Kärntnertor-Theater, he took up the long-sought-after position at the Paris Opéra, always the centre of his ambitions and the chief object of his reformist ideals.

Jean-Georges Noverre: portrait by Jean-Baptiste Perronneau, pastel on paper (Bibliothèque et Musée de l'Opéra, Paris)

He blamed the intrigues against his leadership, instigated by his rivals Gardel and Dauberval, for his failures and eventual resignation; but comments by dispassionate observers were not unlike those voiced at Milan. Apart from a uniquely French disapproval of his insistence on producing independent ballets in preference to dances complementing an opera, criticism centred on the works themselves: his chosen themes were thought unsuited to representation in dance, and his lengthy productions neglecting pure dance for pantomime were often found enigmatic. His pretentious programme notes decrying opposition to his aesthetic ideas aroused hostility. Paris audiences preferred his lighter works including the revival of *Les petits riens* to music mainly by Mozart (1778); others failed utterly. His employment continued until July 1781, but his resignation had been accepted in November 1779 and he was largely inactive in the interim.

In November 1781, with dancers from Paris, Noverre began a brilliant season's engagement at the King's Theatre, London, concentrating on splendid revivals of works which had earned him his reputation during his Stuttgart and Vienna days. He was in retirement from June 1782 until March 1787, when he revived three ballets at Lyons; in London for the 1787–8 and 1788–9 seasons, he again relied mostly on proven successes of earlier years, the few new works being spectacular divertissements of the kind he had long decried.

At the Revolution, Noverre escaped to the French countryside at Triel. But financial necessity forced a resumption of his career: he spent two seasons as a choreographer in London, where his only important new creation was the successful *Iphigenia in Aulide* (1793). His last known production was an allegorical ballet for Paisiello's cantata *La vittoria* (1794) celebrating the English victory over the French. He retired to St Germain-en-Laye and spent his last years revising and amplifying his earlier writings with observations on the rise and decline of pantomime ballet since his *Lettres*; he sadly viewed the current French taste for virtuosity and spectacle as a relapse into the infantile state from which he had laboured to raise his art.

In his work and his writings Noverre was most immediately influenced by the theories of Louis de Cahusac (*La danse ancienne et moderne*, 1754) and Denis Diderot (*Troisième entretien sur le fils naturel*, 1757), as well as the programmatic and individualistic dance music of Rameau, the expressive dancing of Marie Sallé, the realistic acting of Garrick, and the dramatic accompanied recitatives in the Italian operas of Hasse and Jommelli. Although Hilverding, Angiolini and others had worked towards the dramatic pantomime ballet, it was Noverre's *Lettres sur la danse* which focussed attention on the function of theatrical dance. He viewed the *ballet en action* as a union of dance, ballet and pantomime (preface to *Euthyme et Eucharis*):

> Dance is the Art of steps, of graceful movements and of lovely positions. Ballet, which borrows a part of its charms from Dance, is the Art of Design, of forms and of figures. Pantomime is purely that of feeling and of the emotions of the Soul expressed through gestures.

While Noverre fired composers so as to create forward-looking descriptive music, he detested the practice of fitting choreography to pre-composed music; for Angiolini, who was also a composer, the music dictated to the dance.

Noverre's writings, which have been many times reprinted, have contributed more than his ballets to a distorted view of his importance: he continues to receive credit for reforms put into practice by several other choreographers at the same time. Nevertheless, the elegance and urgency of his prose and his practical, far-seeing approach make his treatise an undisputed landmark. He demanded an end to repressive traditions like irrelevant and stereotyped, cumbersome costumes, head-dresses and masks, and to the continuing dominance of past musical styles, choreographic routines and all aspects of the 'marvellous'. He also urged aspiring ballet-masters to obtain a knowledge of great paintings, in order to apply the laws of perspective, lighting and colour gradation; of literature and history, to select interesting subjects for portrayal and to costume them correctly; of contemporary drama, to establish a realistic acting style; of stage machinery and geometry; and of contemporary music, to know what could be expected of composers. The ballet was to be considered as a whole, including the need for diversity, satisfied by the elimination of traditional static, symmetrical groupings, introducing rapidly changing tableaux and using different dancing styles to suit different characters and themes; virtuoso displays had their place only if they did not interfere with dramatic truth. His own productions were so strongly unified that revivals often included not just the original choreography but also the costume designs and musical scores. He saw his work as achieving 'a revolution in dance as striking and as lasting as that achieved by Gluck in music'. (For a list of Noverre's ballets see *Grove6*)

KATHLEEN KUZMICK HANSELL

Novikov, Anatoly Grigor'yevich (*b* Skopino, 30 Oct 1896; *d* Moscow, 23 Sept 1984). Russian composer. He attended the historical philology faculty of the Moscow Teaching Institute, concurrently studying at the conservatory with Aleksandr Krein (cello), Paskhalov (composition) and Podgoretsky (choral conducting). Glière gave him further composition lessons. He directed army amateur choirs and orchestras (1928–38), collaborated with A.V. Aleksandrov in the Red Army Song and Dance Ensemble and was a deputy of the supreme soviet of the RSFSR. He gave his attention entirely to mass songs, which have achieved popularity in the USSR. They are marked by patriotic themes, epic breadth, warm sincerity and features of Russian folk music. The *Gimn demokraticheskoy molodyozhi mira* ('Hymn of the Democratic Youth of the World') achieved broader fame. His honours included the title People's Artist of the RSFSR, the Order of Lenin and the State Prize.

WORKS
(*selective list of songs*)

1930s–1940s: Gimn demokraticheskoy molodyozhi mira [Hymn of the Democratic Youth of the World] (L. Oshanin), Partizanskaya dumka [Partisan Thought] (Ya. Shvedov), Pesnya mira [Song of Peace] (Oshanin), Pesnya o Chapayeve (S. Bolotin), Pesnya o novoy Moskve (S. Vasil'yev), Pesnya pro Kotovskogo (Ye. Bagritsky), Samovarïsamoplï (S. Alïmov), Vasya-Vasilek (Alïmov)
1950s: Belaya beryoza [White birch] (Vasil'yev), Dusha naroda – partiya moya [The Soul of the Nation – my Party] (Oshanin), Marsh kommunisticheskikh brigad (V. Kharitonov), Pesnya moskovskikh studentov (Oshanin)
1960s–1970s: Gde-to ot zastavï za verstu [Somewhere a Verst from the Gates] (Kharitonov), Marsh kosmonavtov (Yu. Kamenetsky), Oblaka [Clouds] (P. Gradov), Pesnya russkogo serdtsa [Song of the Russian Heart] (Oshanin), U mavzoleya [At the Mausoleum] (R. Selyanin), U menya sem'ya bol'shaya [With my Great Family] (Gradov), Vernïye brat'ya [Faithful Brothers] (M. Vershinin)
Russ. folksong arrs.

GALINA GRIGOR'YEVA

Novo Portu, Francisco de. *See* MERGOT, FRANCISCUS.

Novotná, Jarmila (*b* Prague, 23 Sept 1907; *d* New York, 9 Feb 1994). Czech soprano. She studied in Prague with Emmy Destinn, and later in Milan. She made her début in Prague as Mařenka in *The Bartered Bride* in June 1925. In 1928 she sang Gilda at the Verona Arena, and from 1933 to 1938 sang at the Vienna Staatsoper, making regular appearances at Salzburg as Octavian, Eurydice, Countess Almaviva, Pamina, and Frasquita in Wolf's *Der Corregidor*. In Vienna she created the title role in Lehár's *Giuditta* opposite Richard Tauber. Her American début was as Butterfly at San Francisco in 1939, and she was a valued member of the Metropolitan Opera from 1940 to 1956 where her repertory included Donna Elvira, Pamina, Octavian, Violetta, Freia and Mélisande. She returned to Europe after World War II and was heard again at Salzburg, in Paris and in Vienna. She appeared in *The Merry Widow* in San Francisco and on Broadway in the title role of Korngold's adaptation of *La belle Hélène*. Her recordings, which range from her early years in Prague to her postwar Salzburg *Rosenkavalier*, evince her charm and interpretative depth as well as occasional flaws in technique. She also made an evocative wartime recording of Czech and Slovak folksongs accompanied by the exiled Czech premier Jan Masaryk.

HAROLD ROSENTHAL/ALAN BLYTH

Novotni [Novotny], **Franz** [Ferenc; Francesco] **Anton** (*b* ?1749; *d* Pécs, 5 Nov 1806). Composer of Bohemian descent. He may have been a relative of Franz Nikolaus Novotný (1743–73), though this surname was extremely common. He studied with Leopold Kozeluch in Vienna, then moved to Pécs, south Hungary, in April 1782 to replace the deceased Bálint Depisch as composer and

musician at the episcopal court of Count Pál László Esterházy. In 1800 he became Kapellmeister, and in 1805 he oversaw the complete rebuilding of the cathedral organ. Novotny's compositions survive in Austrian (*A-Wn*) and Hungarian (*H-Bn*) archives. The collection from Pécs includes some 20 masses, graduals, motets, vespers and offertories and also two symphonies (both ed. in The Symphony 1720–1840, ser.B, xii, New York, 1984), all in the standard forms, styles and orchestration of the time.

DOROTTYA FÁBIÁN SOMORJAY

Novotný [Novittni, Novotni, Nowotny], **Franz Nikolaus** (*b* Eisenstadt, 6 Dec 1743; *d* Eisenstadt, 25 Aug 1773). Organist and composer of Bohemian descent. Both his grandfather and his father were in the service of the Esterházy family as court officials and musicians, the former as a bass singer and the latter, Johann Novotný (1718–65), as organist. F.N. Novotný worked in the court treasury and succeeded his father as organist on 30 August 1765. His compositions, including much church music, were esteemed by Haydn and performed by him. Many works survive in Austrian, Hungarian, German, Czech and Italian archives (particularly *A-Ee*, *Ek*, *Wgm*, *Wn* and *D-SWl*), identified only by surname.

CAMILLO SCHOENBAUM

Novotný, Václav Juda (*b* Vesce, nr Telč, 17 Sept 1849; *d* Prague, 1 Aug 1922). Czech writer on music and composer. While studying history and philosophy in Prague he attended Ambros's music history lectures and studied with Bennewitz (violin), František Blažek (harmony) and Pivoda (singing). At first he was a violinist at the Provisional Theatre and then turned to music journalism, contributing to *Dalibor* (which he also edited, 1875, 1879–80), *Hudební revue* and other journals and newspapers. He was a personal friend of Smetana, and went with him in 1875 to consult foreign specialists about the composer's deafness. He also accompanied Dvořák on his second visit to England in 1884. His translations of almost 100 opera librettos into Czech were valuable in building up the National Theatre repertory; his revisions (Dvořák's *King and Charcoal Burner*, Smetana's *Dalibor* and *The Two Widows*) were less successful. His reputation as a composer rests chiefly on his songs and some 300 skilful folksong arrangements, though he also composed two operas, church music, choruses and vocal duets.

JOHN TYRRELL

Nowak, Leopold (*b* Vienna, 17 Aug 1904; *d* Vienna, 27 May 1991). Austrian musicologist. He studied the piano and organ at the Vienna Academy, and musicology with Adler and Lach at Vienna University (1923–7), where he took the doctorate in 1927 with a dissertation on the Gesellschaftslieder of Heinrich Finck, Paul Hofhaimer and Heinrich Isaac. In 1932 he completed the *Habilitation* with a work on the history of the basso ostinato, and subsequently taught at Vienna University until 1973. In 1946 he succeeded Robert Haas as director of the music collection of the Österreichische Nationalbibliothek. The building had been largely destroyed by bombing, but under his direction it was rebuilt and opened to the public in 1954. During his time in office (until 1969) he also organized and catalogued a series of exhibitions, including those on Bruckner (1946) and Bach (1950), and he did much for the preservation of Bruckner documents and records. He was also interested in Catholic church music and Austrian folk music and was a member of the Vienna diocesan commission for church music and the Vienna Catholic academy. He became a member of the Gesellschaft zur Herausgabe der Denkmäler der Tonkunst in

Österreich in 1930 and of the Music Research Commission of the Austrian Academy of Sciences in 1946.

Nowak was a centrally important Bruckner scholar. His major achievement was the preparation of a critical edition of Bruckner's complete works. In 1946 he became the musicological director of the undertaking, and was personally responsible for new, revised editions of nearly all the symphonies and masses, which are widely accepted as authoritative. He also contributed extensively to the biographical and critical literature on Bruckner.

Nowak also worked on Haydn and Mozart. For the new Mozart edition he produced a critical edition of the Requiem, which makes an unprecedentedly clear distinction between Mozart's incomplete autograph text and the text as amended by Eybler and Süssmayr. He was awarded the Goldene Mozart Medaille in 1985.

RUDOLF KLEIN/BENJAMIN KORSTVEDT

Nowak, Lionel (*b* Cleveland, 25 Sept 1911; *d* Bennington, VT, 4 Dec 1995). American pianist and composer. He made his début as a pianist at the age of four and studied with Beryl Rubenstein and Edwin Fischer; as a teenager he was an organist and choirmaster. At the Cleveland Institute he studied composition with Herbert Elwell, Roger Sessions and Quincy Porter (diploma, 1936). He taught at Fenn College (1932–8) and in 1938 became the composer and music director for the Doris Humphrey-Charles Weidman Modern Dance Company, a position which he held until 1942. From 1942 to 1946 he taught at Converse College and conducted the Spartanburg (South Carolina) SO. He was professor of music at Syracuse University (1946–8) and then joined the faculty at Bennington College. He toured as a pianist and lecturer for the Association of American Colleges Arts Program (1945–63) and he helped to plan the 1963 Yale Conference on Music Education; he was also chief consultant to the

Manhattanville College (Purchase, New York) Music Curriculum Project (1965–72). The style of his dance scores is accessible; from the mid-1950s he made increasing use of serial techniques. The *Concert Piece* (1961) is among his recorded works. After suffering a stroke in 1980, Nowak paid special attention to composing piano pieces for the right hand alone and commissioned works from Otto Luening, Vivian Fine and others.

WORKS

Dance scores: Square Dances (D. Humphrey), pf, 1938; Danzas mexicanas (J. Limón), pf, 1939; On my Mother's Side (C. Weidman), 1939; The Green Land (Humphrey), pf, 1941; Flickers (Weidman), 1942; House Divided (Weidman), 1944; Story of Mankind (Humphrey), orch, 1946

BARBARA L. TISCHLER

Nowakowski, Józef (*b* Mniszek, nr Radom, 16 Sept 1800; *d* Warsaw, 27 Aug 1865). Polish composer and teacher. He was a pupil at the Cistercian school at Wąchock, where he also studied music theory, the piano, horn and trombone. He was a member of the chapel at Wąchock and at Radom; he also taught at Ciepielów, near Opatów, the estate of Joachim Karczewski. He studied composition with Elsner and the piano with Wilhelm Würfel at the Warsaw Conservatory (1821–6). In 1833 he embarked on a major tour of Germany, Italy and France, and afterwards made several visits to Paris. In 1833 he was elected a member of the Société Académique des Enfants d'Apollon in Paris. He made his home in Warsaw, where he gave private piano lessons and also taught at the Aleksandryjski Institute (1840–44) and the Institute of Music (1861–4). In 1860 he became a member of the music society in Lemberg. Most of Nowakowski's music is for piano, and is influenced by Chopin. He also wrote a textbook, *Szkoła na fortepian* ('Manual of piano playing', Warsaw, 1850).

WORKS

Orch: 2 syms, no.1, D, 1830, no.2, D, 1846; 4 ovs.; Concertino, trbn, orch, arr. trbn, pf (Kraków, 1870)

Chbr: 2 pf qnts, op.10 (Warsaw, 1833), op.17 (Paris, 1857); Str qt

Kbd: Rondeau pour la polonaise, op.1 (Leipzig, 1826); 12 études, op.25 (Paris, 1847); fantasias; nocturnes; mazurkas; polonaises

Vocal: Hymn do Bogarodzicy [Hymn to the Mother of God], SATB (Warsaw, 1861); Pieśni i piosenki szkolne [School Songs and Ditties] (Poznań, 1860); other songs

ALINA NOWAK-ROMANOWICZ

Nowak-Romanowicz [née Nowak], **Alina** (*b* Warsaw, 14 Jan 1907; *d* Katowice, 19 Jan 1994). Polish musicologist. She studied the piano with J. Turczyński and theory with P. Rytel and K. Sikorski at the Warsaw Conservatory (1926–32), art history at Warsaw University (1929–32) and musicology with Jachimecki at Kraków University (1931–5). She lectured at the State Music School in Katowice (1947–52, 1957–9), and in the musicology department at Kraków University (1960–73); she worked at the state publishers, Polskie Wydawnictwo Muzyczne, in Kraków (1956–61). In 1961 she obtained the doctorate with a dissertation on Józef Elsner; this is founded on a wealth of source material and combines biography with a penetrating analysis of the works, considered in the context of European music. Her work on Polish music of the age of Enlightenment and early Romanticism, in which questions of musical style are seen in the light of contemporary Polish social, political and artistic conditions, made a valuable contribution to the history of Polish music. Nowak-Romanowicz also devoted much attention to national elements in Polish music at the turn of the 18th century, and made a number of performing editions of work by Elsner, Dobrzyński and other Polish composers.

ZOFIA HELMAN

Nowka, Dieter (*b* Cottbus, 7 July 1924). German composer. He studied with Grabner at the Hochschule für Musik in Berlin-Charlottenburg (1942–3), and from 1947 to 1952 he worked as a répétiteur and conductor in Cottbus, Stendal and Schwerin. His studies were completed in the master classes of Eisler and Max Butting at the German Akademie der Künste in Berlin (1952–4). From 1975 to 1989 he taught composition and music theory at the Hochschule für Musik Weimar, becoming a professor there in 1986. Awards made to him have included the Cottbus Carl Blechen Arts Prize and the Schwerin Fritz Reuter Arts Prize. Taking elements from dance music, he has written pieces of wide appeal. He made an intensive study of the folk music of his native district between 1952 and 1961, and since that time he has used 12-note music and aleatory elements.

Nowotny, Franz Nikolaus. *See* NOVOTNÝ, FRANZ NIKOLAUS.

Nowowiejski, Feliks (*b* Wartenburg [now Barczewo, nr Olsztyn], 7 Feb 1877; *d* Poznań, 23 Jan 1946). Polish composer, conductor and organist. He studied in Berlin at the Stern Conservatory, at the Königliche Musikakademie (Bruch's masterclasses), and at the university, where his teachers included Friedlaender and Bellermann. In addition he attended the Regensburg Kirchenmusikschule and took lessons with Dvořák in Prague. He won the Paderewski Prize of Bonn (1903) and the Meyerbeer Scholarship, and between 1902 and 1905 he made study tours of Europe, Asia and Africa. After a further stay in Berlin as a choirmaster and teacher (1905–9) he returned to Poland. He was director of the Kraków Music Society from 1909 to 1914, and from 1919 he taught at conservatories in Berlin and Poznań, where he was a professor of church music and organ. In 1935 he received the Polish State Music Prize.

Nowowiejski's earliest works, among them the first two symphonies, are in a Germanic late Romantic style considerably influenced by Bruch and Dvořák. He then began to draw on newer techniques, but with evident reserve. The greatest success was enjoyed by his more eclectic pieces, such as the large-scale oratorio *Quo vadis*, after Sienkiewicz's celebrated novel. First performed at Amsterdam in 1909, this work was soon repeated over 200 times in 150 cities throughout Europe and America. None of his later compositions achieved this measure of popularity, though their quality is no less. Most of his music derives from Polish folktunes. In Poland he is best known as the composer of the hymn 'Rota'.

WORKS
(*selective list*)

STAGE AND ORCHESTRAL

Emigranci Obieżysasy [The Emigrants] (op, 3, Z. Kollaren), op.46, 1917, unperf.; Legenda Bałtyku/Wineta [Baltic Legend] (op, 3, W. Szalay-Groele and K. Jeżewska), op.28, Poznań, Wielki, 28 Nov 1924; Malowanki ludowe [Folk Pictures] (op-ballet, 1, after folk poetry), Poznań, Wielki, 1 Dec 1928; Tatry [The Tatras]/Leluja (op-ballet, 4, E. Zegadłowicz, after folk legends), op.37, Poznań, Wielki, 27 Feb 1929; later as Król Wichrów [King of the Winds]

Beatrice, sym. poem (after Dante), 1903; Sym. no.1, 1903, lost; Sym. no.2 'Symfonia kolorów', 1904; Ellenai, sym. poem, after J. BOGUSŁAW SCHÄFFER/R

Noyers, Jean de. *See* TAPISSIER, JOHANNES.

Nozeman [Noseman], **Jacob** (*b* Hamburg, 30 Aug 1693; *d* Amsterdam, 10 Oct 1745). Dutch composer, violinist and organist. He was the son of the travelling actor Johannes Nozeman and was born during one of his father's tours. He grew up in The Hague and Leiden, where his father most often performed. His brother Gillis Nozeman became a dancing-master in Leiden. Jacob moved to Amsterdam, probably shortly after his father's death in 1710. He played at the theatre there from 1714 to 1716, and in 1719 he became organist of the Remonstrantse Kerk, remaining in this post until his death. Shortly after his death a fine portrait of him was engraved by C.F. Fritsch.

His violin sonatas are well written; typical of the period, they are a mixture of the *sonata da chiesa* and *da camera* types. The op.1 set are in the italianate Baroque style, and they are all in minor keys. The more versatile and detailed pieces of op.2 are typical of the transition from the late Baroque to the early pre-Classical style, and are all in major keys. As late as 1782 Michel Corrette included movements and fragments from Nozeman's op.2 in his *L'art de se perfectionner dans le violon*. Nozeman's op.4, unfortunately lost, included pastorales, *musettes* and *païsennes* for harpsichord.

WORKS

op.

RUDOLF A. RASCH

Nozzari, Andrea (*b* Vertova, Bergamo, 1775; *d* Naples, 12 Dec 1832). Italian tenor. He studied in Bergamo and made his début in 1794 at Pavia. After singing in Rome, Milan, Parma and Bergamo, in 1803 he was engaged at the Théâtre Italien in Paris, appearing in Paer's *Principe di Taranto* and *Griselda*, Paisiello's *Nina* and Cimarosa's *Il matrimonio segreto*. From 1812 he was engaged in Naples, where he sang in Spontini's *La vestale*, Mayr's *Medea in Corinto* and Gluck's *Iphigénie en Aulide*. At the S Carlo he created roles in eight operas by Rossini: Leicester in *Elisabetta, regina d'Inghilterra* (1815); Rinaldo in *Armida* (1817); Osiride in *Mosè in Egitto* and Agorante in *Ricciardo e Zoraide* (1818); Pyrrhus in *Ermione* and Roderick Dhu in *La donna del lago* (1819); Erisso in *Maometto II* (1820) and Antenore in *Zelmira*, as well as the title role of Donizetti's *Alfredo il grande* (1823). At the Teatro del Fondo he created the title role of Rossini's *Otello* (1816), amazing the public with the force and agility of his singing and the nobility of his bearing. He retired in 1825.

ELIZABETH FORBES

NSA. *See* NATIONAL SOUND ARCHIVE.

Nucci, Leo (*b* Castiglione dei Pepoli, Bologna, 16 April 1942). Italian baritone. A pupil of Giuseppe Marchese, he sang Rossini's Figaro at Spoleto in 1967, then sang in the chorus at La Scala during further study and made his fully professional début in 1975 at Venice as Schaunard. He appeared at La Scala in 1976 as Figaro, at Covent Garden in 1978 as Miller (*Luisa Miller*), and as Anckarstroem (*Un ballo in maschera*) at the Metropolitan in 1980, the Paris Opéra in 1981 and Salzburg in 1989. Nucci's repertory also includes Marcello, Lescaut, Sharpless, Mamm' Agata (*Le convenienze ed inconvenienze teatrali*), Barnaba (*La Gioconda*), Yevgeny Onegin and Gounod's Mercutio, but his sonorous voice, strong technique and histrionic ability are best displayed in Verdi, in such roles as Giorgio Germont, Luna, Macbeth, Posa, Amonasro, Rigoletto, Iago and Falstaff, and in Donizetti. Nucci's many Verdi recordings sometimes lack subtlety of characterization, though he is heard to advantage on disc as Anckarstroem (with Karajan) and as Donizetti's Malatesta and Belcore.

ELIZABETH FORBES

Nucci, Lucrezio. Italian music printer who worked with GIOVANNI BATTISTA GARGANO until 1617 when his place was taken by Matteo Nucci.

Nucella (*fl* 1401–36). Italian composer. A French-influenced three-voice ballata in Ars Subtilior style, *De bon parole tal pronto se fa*, is ascribed to him in the lost Strasbourg manuscript (*F-Sm* 222, no.149; ed. in PMFC, x, 1977, p.101), according to Coussemaker's transcription. The ascription refers to a singer and papal scriptor, Nicolaus Savini Mathei alias Ricci de Nucella Campli, first documented in the chapels of the Roman schismatic popes (Boniface IX, Innocent VII, Gregory XII), and, for some time during the same period, a canon and singer at S Pietro in Rome. His toponymic surname derives from the church in the diocese of Teramo of which he was provost; he is referred to by the nickname 'Nucella' (or 'Nocella') in documents from 1404 to 1413. He was heavily beneficed in the Italian diocese of Teramo, Sora and Gaeta. Later he is to be found in the service of popes Martin V and Eugenius IV (Planchart, reported in Di Bacco and Nádas); altogether he is documented in papal letters from 1401 to 1436. He does not, however, appear in any of the extant chapel lists of singers of the post-schismatic period, by which time he may no longer have

been in steady musical employment but was still serving the curia in an administrative capacity.

Nucius [Nux, Nucis], **Johannes** (*b* Görlitz, Lower Silesia, *c*1556; *d* Himmelwitz, nr Strehlitz, Upper Silesia [now Strzelce Opolskie, Poland], 25 March 1620). German composer and theorist. His *Musices poeticae* is a major treatise about compositional practices in the early 17th century.

1. LIFE. Nucius was a private pupil in composition of Johannes Winckler, who became Kantor at the Gymnasium at Görlitz in 1573. Even after 40 years he prized Winckler's instruction, the principles of which, as he said in the introduction, were the basis of his *Musices poeticae*. About 1586 he took his vows as a Cistercian monk at the monastery of Rauden, Upper Silesia, where he probably received the broad humanist education that appears to have influenced his later writing. By 1591 he had become deacon at Rauden and in that year published the first of his two books of motets, which he dedicated to his abbot. Also in 1591 he was made abbot of the small monastery of Himmelwitz. In 1598, in order to devote more time to composition and writing, he delegated many of his administrative tasks to one of the priors. In the last two years or so of his life, however, he was much involved in directing the rebuilding of the monastery and church after a disastrous fire on 22 June 1617, which destroyed more than half of the buildings. His death followed a crippling illness and blindness.

2. WORKS. Although he was isolated from the mainstream of musical development, Nucius achieved a degree of fame, which was based primarily on his treatise. For example, as Feldmann (1958) has shown, the *Opusculum bipartitum* of Joachim Thuringus (1625) is in large part derived from his work, and references to him occur in Praetorius's *Syntagma musicum* (1618), Mattheson's *Critica musica*, i (1722–3), and Walther's *Musicalisches Lexicon* (1732). *Musices poeticae* is in essence a counterpoint manual. It is divided into nine chapters: 1. 'De definitione musices poëtice: de differentia sortisationis & compositionis', 2. 'De concordantiis ac discordantiis', 3. 'De concordantiarum successionibus & aliis cognatis questionibus', 4. 'De discordantiarum usa seu collocatione', 5. 'Quid es sonis?', 6. 'De praxi modo jungendi plures voci', 7. 'De regulis quibusdam generalibus, ac appellationibus 4. vocum, earumque proprietatibus, & figuris musicis', 8. 'De clausulis formalis, & commutatione vocum inter se' and 9. 'De modis musicis'. The substance of the contrapuntal theory derives largely from the treatises of Gaffurius and Glarean. Although Nucius apparently had no contacts with a major centre of musical performance he was familiar with the music of many 16th-century composers: he referred to works by Josquin, Johann Walter, Senfl, Clemens non Papa, Handl, Kerle, Lassus, Vaet, Wert and others. The first chapter, in defining counterpoint, retains the 16th-century distinction between *compositio* and *sortisatio* (i.e. between composed and improvised counterpoint sung to a cantus firmus). It explains and illustrates three types of counterpoint: *simplex* – note-against-note; *floridus seu fractus* – counterpoint composed to a cantus firmus; and *coloratus* – counterpoint in the usual sense of linear writing. Chapters 2–4 are routine discourses on consonances and dissonances. Chapter 5 examines various aspects of musical tone. In chapter 6 Nucius took up actual compositional procedures. He suggested in a rather conservative vein that students should learn to write counterpoint by first composing the tenor and discant parts, to which they should then add a bass and alto, and he concluded by discussing various contrapuntal procedures related to specific intervals and the origins of the names for the voice parts. In chapter 8 he discussed cadential formulations and in the final chapter indicated the nature as well as the affective character of the 12 modes.

The most significant chapter of *Musices poeticae* is the seventh, for its valuable information about the musical devices that will most appropriately underscore the meaning of a text. Nucius was the first theorist after Joachim Burmeister, and the first talented composer, to employ rhetorical terminology to explain certain exceptional compositional procedures. Like Burmeister he called them musical figures; whereas Burmeister assembled 24 such figures in his *Musica poetica* (1606), Nucius gave only seven, though he commented that he could easily have enlarged them into a catalogue. These are his essential expressive devices: (1) *commissura* – a passing-note dissonance; (2) *fuga* – various forms of melodic imitation; (3) *repetitio* – repeating a melodic or harmonic section; (4) *climax* – parallel 10ths or 3rds between two parts; (5) *complexio* – repetition of an initial passage at the end of a section; (6) *homioteleuton* – insertion of a sudden rest, creating rhetorical emphasis through silence; and (7) *syncopatio* – syncopation. Further emphasizing the composer's responsibility to stress the emotional content of a text, Nucius advised him to be guided by (1) affective words, i.e. 'laeteri', 'gaudere', 'lacrymari', 'timeri', 'ridere' etc.; (2) words of motion and placing, i.e. 'stare', 'currere', 'saltare', 'quiescere', 'salire' etc; and (3) adverbs of speed and number, i.e. 'celeriter', 'velociter', 'cito', 'tarde', 'bis', 'semel' etc. Finally he suggested that words such as 'night', 'day', 'light' and 'dark' could be expressed through white or black notation.

Nucius is all the more valuable as a theorist because he was an excellent composer. His extant music, though not extensive, provides ample opportunity for comparing his provocative theoretical concepts with his own practice (see Feldmann, 1956). It is all contained in his two motet collections, which comprise 102 pieces, 97 to Latin texts, five to German. Though rooted in the music of Lassus and other composers of the second half of the 16th century, his style is not without striking personal characteristics. As one would expect from his concern as a theorist for expressive text-setting, the motets are laden with affective musical devices, both to enhance the general emotional content of the words and to emphasize and

illustrate particular words and phrases. Those in the first book are in five and six parts; several of those in the second are in seven and eight parts. In both there is a marked tendency towards homophonic writing, with little use of cantus-firmus technique or canonic writing.

Nucius lived at a time of transition between the Renaissance and Baroque periods: it was in the 17th century that the dramatic and expressive potential of music in relation to texts became paramount in the styles of most composers, and he reflected this development in both his music and his treatise.

Nueva canción. Latin American song genre. *Nueva canción* (or 'new song' movement) has been largely defined by Chilean musicians, active before and during the first democratically elected socialist coalition government of President Salvador Allende (1970–73). Little of the music and song of *nueva canción* is political in any overt sense, rather it expresses the energies, hopes and experiences of the times. The groups Quilapayún, Inti Illimani and singers such as VÍCTOR JARA (1932–73), Patricio Manns, and Angel and Isabel Parra epitomise a generation of musicians across the continent and beyond whose formative years in the 1950s and 60s were rooted in ideals of social justice and equality.

The pioneering example of three key folklore collectors and musicians, VIOLETA PARRA (1917–67) in Chile, ATAHUALPA YUPANQUI (1908–92) in Argentina and Carlos Puebla (1917–96) in Cuba, helped pave the way for the rediscovery of the rural sounds of Latin America. In Chile this included the rediscovery of the oldest instruments and traditions of the Andes which had survived since pre-colonial times, including the small armadillo-backed string *charango*, the *kena* bamboo flute and panpipes. A 'Latin American' cultural identity emerged in a music whose sensibilities and lyrics were poetic, some of it drawing on popular poetry of early hispanic origin, epitomised by Violeta Parra's 'Canto a lo poeta y a lo humano', modelled on complex poetry of rural *payadores* (improvising poets). The centre of *nueva canción* was the Santiago Peña de los Parra (a small nightclub run at weekends by Angel and Isabel Parra), a meeting point for musicians, where Jara, the Parras and Manns sang regularly. The songs of Víctor Jara (who was murdered after the 1973 Chilean coup d'état) characterize the period in both musical style and verbal content, two of the most loved being 'Plegaria a un labrador' (which won the July 1969 first festival of *nueva canción)* and 'Te recuerdo Amanda'.

After 1973, in European exile, Inti Illimani became the heart and soul of the solidarity movement until they were finally allowed to return home in 1998. In the 1970s and 80s, when tough military dictatorships dominated the Americas, *nueva canción* musicians, persecuted by these regimes met up at peace concerts and festivals held in Nicaragua, Mexico, Peru, Cuba, Argentina and Brazil. Musicians involved included MERCEDES SOSA, Leon Gieco and Víctor Heredia (Argentina); Chico Buarque, Wagner Tiso and Milton Nascimento (Brazil); Silvio Rodríguez and Pablo Milanés (Cuba); Carlos and Luís Enrique and Mejía Godoy (Nicaragua); Daniel Viglietti (Uruguay); Amparo Ochoa and Gabino Palomares (Mexico). In Spain, despite no direct links to the genre, a similar sensibility survives in singers of Catalan *nova canço* (*see also* NUEVA TROVA. In the post-dictatorship ambience of the 1990s individual careers have blossomed while strong supportive friendships between many of these musicians remain of significance.

Nueva trova. Cuban song genre. A reinterpretation of *trova*, the romantic troubadour traditions of the island (which developed from those brought by Hispanic colonizers and immigrants), *nueva trova* is also closely linked to the Latin American NUEVA CANCIÓN movement. Musically the fundamental elements have been those of the classic troubadour (vocals and acoustic guitar), with songs then interpreted by bands of varying size and style. Songs describe the everyday experience of living; a hallmark is a poetic lyric imbued with a sense of metaphysical emotion and existential questioning, with a pervasive use of metaphor and a non-gendered approach to the complexities of love. The Cuban tradition of 'double meaning' is not, as with old troubadours, used for sexual wit, but instead for the doubts of inner experience within a thematic framework of time and death.

Nueva trova emerged in the late 1960s, when a collective of young musicians came together at the Cuban Cinematographic Institute (ICAIC), under the direction of classical guitarist and composer LEO BROUWER. They

included Vicente Feliú, Silvio Rodríguez, Pablo Milanés, Noel Nicola, Sara González, Eduardo Ramos and Pablo Menendez, musicians who re-defined the subject matter of Cuban song, while demonstrating innovative use of popular music forms with intuitive use of older Cuban elements. Born in the decade before the 1959 revolution they were not only politicized by growing up in the revolution but also questioned the experience. Milanés, for example, had undergone 'special military service', a euphemism for labour camps involving cane cutting and designed to change the behaviour of those regarded as bohemian. Championed by Haydée Santa Maria, who ran the seminal cultural centre Casa de Las Americas, he and the others who formed the ICAIC collective became part of the Protest Song Centre which existed at Casa for a time; it provided a forum for the singing of nueva trova and was set up in the wake of the 1967 'Festival de la canción protesta'. Participants rejected the term 'protest' as they felt it did not accurately describe their music, which was not necessarily an expression of political protest. Many subsequent festivals and concerts in Cuba and elsewhere have also nurtured significant networks of musical friendship.

In the 1980s, the songs of Rodríguez and Milanés became a phenomenon in the Spanish speaking world, generating a large amount of foreign money for the Cuban state. In the 1990s, a new generation has emerged, for whom growing up in the revolution has exposed a different set of conflicts. The lyrics and more eclectic musical influences (notably rock) of Carlos Varela and Gerardo Alfonso, reflect the preoccupations of youth whose horizons have openly moved beyond revolutionary strictures.

JAN FAIRLEY

Nuitter [Truinet], **Charles-Louis-Etienne** (*b* Paris, 24 April 1828; *d* Paris, 23/24 Feb 1899). French librettist, writer on music and librarian. His real name was Truinet, of which 'Nuitter' is an anagram. He studied law and by 1849 was practising in Paris. In the 1850s he began writing librettos in his spare time. His first performed work, a vaudeville entitled *L'amour dans un ophicléide* (1854), was followed by more vaudevilles and later by operas, *opéras comiques*, *opéras bouffes*, operettas and ballets. Usually writing with collaborators, in particular Beaumont (Alexandre Beaume), Nérée Desarbres and Etienne Tréfeu, he produced more than 60 works, many of which reveal facility and wit. He wrote for Offenbach (*Les bavards*, *Vert-vert*, *La princesse de Trébizonde* and many more), Delibes (*La source*, *Coppélia*), Guiraud (*Le Kobold*, *Gretna-Green*, *Piccolino*), Lalo (*Namouna*), Lecocq (*Le coeur et la main*) and at least 18 other composers. One of the first Frenchmen to appreciate Wagner, he translated *Tannhäuser* (with E. Roche and R. Lindau, 1861), *Rienzi* (with Jules Guillaume, 1869), *Lohengrin* (1870) and *Der fliegende Holländer* (1872). His other translations (most with collaborators) include Weber's *Oberon* (1857), *Preciosa* (1858) and *Abu Hassan* (1859), Bellini's *I Capuleti e i Montecchi* (1859), Mozart's *Die Zauberflöte* (1865) and Verdi's *Macbeth* (1865), *Aida* (1877), *La forza del destino* (1883) and *Simon Boccanegra* (1883). In about 1863 Nuitter began to catalogue the Opéra archives and in 1866 he became official archivist there, abandoning his law career. With Théodore Lajarte he reorganized the archives and the Opéra library. He rescued many documents from destruction, ensured that the Palais Garnier (completed in 1875) had adequate facilities for the archives and library, and, often at his own expense, acquired compositions, autographs, documents and an important collection of journals for the Opéra. He wrote, in a journalistic style, books on opera and the Opéra including *Le nouvel Opéra* (Paris, 1875), *Histoire et description du nouvel Opéra* (Paris, 1883) and, in collaboration with Ernest Thoinan (A.E. Roquet), *Les origines de l'Opéra français* (Paris, 1886/*R*); various articles (notably in *La chronique musicale*) describe little-known works in the Opéra's collection.

Numantino, Martín de Tapia. *See* TAPIA, MARTÍN DE.

Number opera (Ger. *Nummernopera*; It. *opera a numeri*). Term for an opera consisting of individual sections or 'numbers' which can readily be detached from the whole, as distinct from an opera consisting of continuous music. The term is best applied to the various forms of 18th-century opera, including *opera seria*, *opera buffa*, *opéra comique*, ballad opera and Singspiel as well as to some 19th-century grand operas. Under the influence of Wagner's ideas about the relationship between opera and drama, the number opera became unfashionable, and

neither his operas nor those of late Verdi, Puccini and the *verismo* school can be so called, although arias can easily be detached (at the point designed to accommodate the applause). In spite of the widespread adherence to Wagner's aesthetic of continuous music drama, some notable 20th-century works can be considered number operas, such as Berg's *Wozzeck* (1925) and Stravinsky's deliberately archaic *The Rake's Progress* (1951).

For bibliography *see* OPERA, §VII.

□

Numbers and music. Numbers appear in musical notation in a variety of ways, sharing, for instance, tempos, pulses, figured basses and bar numbers; they are also used to describe intervals (e.g. 3rds, 4ths, 5ths) and tunings of the scale in temperaments. This article, however, is concerned with numbers that can be neither heard nor seen but are used in the process of constructing a composition. For other uses of numbers in music *see* CRYPTOGRAPHY, MUSICAL, and RHETORIC AND MUSIC.

1. Introduction. 2. Up to 1600. 3. 1600 to 1750. 4. 1750 to 1900. 5. From 1900.

1. INTRODUCTION. In the past 50 years some startling claims have been made about how Renaissance and Baroque composers might have used numbers in their music. The numbers are generated from the score by counting, for example, how many breves, bars, pulses or notes there are, or how many times a word is repeated, in a phrase, section, complete voice or movement. Characteristic of this so-called 'numerological' approach is the swift move from counting to interpreting. When a number recurs or is deemed significant it is treated as symbolic and interpreted either by traditional symbols or through the use of a number alphabet.

The number alphabet was first introduced to musicology by Friedrich Smend. Smend and his colleague Martin Jansen spent many years trying to discover the meanings of numbers that recur in the works of J.S. Bach. They began from the premise that every numerical relationship in the score was consciously placed there by the composer and could therefore be considered symbolic. In 1943 Smend added the use of the natural-order number alphabet (A = 1, B = 2, C = 3 etc.; IJ = 9, UV = 20, Z = 24) to their growing list of interpretative methods. Jansen was alarmed by this, arguing that the method could make any number mean many things, but his early death in 1944 cut short his moderating influence.

In 1947 Smend wrote publicly about the number alphabet in the third and fourth of six booklets of programme notes for a series of performances of Bach's church cantatas in Berlin. He unwittingly introduced several factual errors, however, which in turn misled him as he interpreted the numbers: he gave examples of only two number alphabets, whereas over 40 may be found in various printed German sources of the 17th and 18th centuries, and he confused two distinct number alphabet traditions, the cabalistic gematria, which is a means of interpreting the Bible, and the poetical paragram (see §3 below), which is a means of generating ideas used by poets. Since 1947 other musicologists have experimented with Smend's theory, with varying degrees of credibility. Some fundamental errors have been perpetuated, including the inaccurate use of the term 'cabalistic gematria', indiscriminate use of the natural-order number alphabet and historically incongruous interpretations of numbers.

There is value in Smend's work, however. It has recently been shown that, since at least the 1630s, the poetical paragram had been a widely known technique for generating ideas before writing a poem (Tatlow, 1991). In Bach's day it was one of the techniques listed among the *loci topici* (*see* RHETORIC AND MUSIC, §I, 2, and §3 below) in poetry textbooks. Although the paragram technique does not appear in books on music theory, it is possible that musicians may have applied it to music.

Musicology is left with a dilemma. Counting notes and pulses frequently reveals a numerical correlation between the sections of a musical work. This could imply that the composition was organized numerically at an early stage, and the temptation for the modern analyst is to assert that the numerical relationships were devised by the composer. Yet there is slender historical evidence to support this: little is known from music theory or surviving sketchbooks about the pre-compositional processes of composers before Beethoven. Without a firm historical basis it is both premature and irresponsible to draw conclusions about compositional procedure from numbers in the score. A separation must be maintained between numerical analysis, comment upon the compositional process and speculative interpretation of the numbers. There is also a need to consider whether there is any historical justification for the analytical techniques used to generate the numbers; and if so, whether the numbers in the score were created consciously by the composer and whether the numbers are wholly structural or have some further significance.

2. UP TO 1600. Number was of fundamental importance to both the Judaeo-Christian and the Greek view of the Creator and Creation, and therefore also to that of Renaissance man. Plato wrote: 'The body of the universe was created to be at unity owing to proportion; in consequence it acquired concord' (*Timaeus*, trans. H.D.P. Lee, 1965, p.44); and the anonymous verse from the Apocrypha frequently quoted in music treatises reads: 'Thou hast arranged all things by measure and number and weight' (*Wisdom of Solomon* xi.21).

Numbers as proportions feature prominently in the music theory of this period, reflecting the classical Greek ideas of the schools of Pythagoras and Aristoxenus. Although it is possible to imagine ways of introducing proportions at every stage of the compositional process, Renaissance treatises discuss proportions solely in their capacity of describing intervals and duration. Following Pythagoras, intervals were expressed as ratios, based on the division of the monochord: the octave as 2:1, the 5th as 3:2, the 4th as 4:3, the major 3rd as 5:4, major 6th as 5:3, minor 3rd as 6:5 and the minor 6th as 8:5. During the early 17th century these were rejected in favour of more complicated arithmetical expressions of each interval. Numbers as proportions were also used to express duration in different mensural notation systems. In some compositions there is an exact proportional relationship between individual sections. In Du Fay's motet *Nuper rosarum flores*, for example, the mensuration within the four sections is in the ratio 6:4:2:3 (Warren, 1973), and in Leonel Power's Mass *Alma Redemptoris mater* the relationship between the cantus-firmus and non cantus-firmus sections is 48:12:48:24, or 4:1:2:1 (Sandresky, 1979).

These two works also illustrate another aspect of the interpretation of numbers and proportions in studies of

Renaissance music, the claim that proportions in certain compositions are identical to those of specific buildings. Alberti's design for the upper façade of S Maria Novella, Florence, supposedly has the proportions 4:1:2:1, corresponding with the proportional design of Power's mass (Sandresky, 1979), and the proportions 6:4:2:3 of Brunelleschi's dome for Florence Cathedral have been claimed to correspond with those of Du Fay's motet (Warren, 1973). It has been argued that Warren's architectural figures are faulty, and that the proportions 6:4:2:3 were used by Du Fay in imitation of those specified by God (*1 Kings* vi.1–20) for building Solomon's temple (Wright, 1994). Interestingly, it is the interpretation of the proportions that has received criticism rather than the method of generating the proportions from the music, which could be considered conjectural.

Similarly, some 20th-century analysts have sought to demonstrate the use of Fibonacci numbers as a conscious compositional device in Renaissance music. The ratio between the successive terms of the FIBONACCI SERIES (in which each is the sum of the previous two, thus: 0, 1, 1, 2, 3, 5 etc.) is an arithmetical expression of Euclid's golden ratio. Although the Fibonacci series was first described in 1202, it was not widely known to be connected to Euclid's formula until the mid-19th century. It is thus extremely unlikely that works composed before 1600 were deliberately constructed to express the golden ratio, and any attempt to prove otherwise is little more than an interesting 20th-century analytical exercise.

Many biblical numbers had significance for the Renaissance musician. In his *De mystica numerorum significatione* (Bergamo, 1583), Petrus Bongus discussed the symbolic significance of specific numbers, showing that there is frequently more than one interpretation of a number. More importantly, though, Bongus did not describe how, if at all, the numbers are incorporated into a musical composition.

Following the work of Friedrich Smend there has been an awakening of interest in number symbolism in Renaissance music. The use of the misleading term 'cabalistic gematria' by some scholars has perpetuated the confusion over the use and implications of number alphabets. The natural-order number alphabet is invariably used to decode recurring numbers, while others, such as the Hebrew milesian alphabet (א=1, ב=2, . . .י=10, ל=20, . . .ק=100, ת=400) associated with Jewish or Christian cabbalism, may be overlooked. Number alphabets have been used to reveal the name of a person closely associated with the composition hidden in the music. Some scholars have applied this technique to works by composers such as Jacob Obrecht (9+1+3+14+2 14+2+17+5+3+8+19 = 97), Ockeghem (14+3+10+5+7+8+5+12 = 64), Du Fay (4+20+6+1+23 = 54), Josquin des Prez (9+14+18+16+20+9+13 = 99, 4+5+18+17+5+24 = 88) and Tinctoris (19+9+13+3+19+14+17+9+18 = 121) (Elders, 1985).

There are certain problems in the application of these techniques. Methods of number counting can appear more subjective than scientific; and ambiguities in the music can lead to inconsistencies in choices such as whether or not to count a repeat, whether a long is worth two or three breves, whether or not a corona adds to the duration, and where to divide a section or group of notes. Additional problems for music of this period are the lack of autograph sources and the issue of errors introduced by a scribe. Until there is more historical or documentary evidence to support number counting techniques, the naive musicologist could easily find himself spinning neat sequences of numbers to no scholarly purpose. Musicology of this nature must for the present be treated as analytical exploration.

3. 1600 TO 1750. Numbers expressed as ratios or fractions appear in many music treatises published between 1600 and 1750, as a result of their authors' preoccupation with tuning systems. Numbers linked to letters, pitches and rhythms also appear in descriptions of cryptographic techniques (*see* CRYPTOGRAPHY, MUSICAL). Numbers as ratios expressing the consonant intervals of the octave were observed by Kepler to be similar to those between the speeds of the planets in their orbits (*Harmonices mundi*, bk 3, 1619). The medieval view that musical ratios and harmony reflect the nature of God was endorsed by Kircher in his widely distributed treatise *Musurgia universalis* (1650). Numbers with symbolic values are rarely referred to, although Werckmeister believed that the triad represented the Trinity (1 = God the Father, 2 = God the Son, 3 = God the Holy Spirit). As Werckmeister gave no practical examples of how or when the triad should be interpreted symbolically in a specific composition, however, this seems to be a perpetuation of the general medieval view set out in Kircher's work.

The lack of historical evidence of the use of compositional numbers seems extraordinary in view of the quantity of writing on Bach and number symbolism. A series of number techniques based on Smend's work has evolved and become accepted by dint of repetition. Yet in treatises of this period there is virtually no discussion of the use of numbers in the construction of a composition, either proportionally or symbolically, nor any description of numbers used as a pre-compositional aid to invention.

A popular way of generating ideas at this time was through the *ars combinatoria*. In his dissertation *De arte combinatoria* (1666) the mathematician and philosopher G.W. Leibniz described the principle of a universal language, and 12 years later he produced a fully developed artificial language which he believed could be translated into music by using intervals instead of consonants and vowels.

The *loci topici* or *loci dialectici* (which despite their classical-sounding title, were not known to the ancient Greeks) became popular as devices for generating philosophical and rhetorical arguments in the early 16th century, and were also applied to poetry and music. The classification of *loci* species varied from author to author. In a lecture given at Leipzig University in 1695 the poet Erdmann Neumeister described 15 species: *locus* (i) *notationis*, (ii) *definitionis*, (iii) *generis & specierum*, (iv) *totius & partium*, (v) *causa efficientis*, (vi) *causae materialis*, (vii) *causae formalis*, (viii) *causae finalis*, (ix) *effectorum*, (x) *adjunctorum*, (xi) *circumstantiarum*, (xii) *comparatorum*, (xiii) *oppositorum*, (xiv) *exemplorum* and (xv) *testimoniorum*. The *locus notationis* itself was subdivided into (i) *derivation*, ii) *aequivocation*, iii) *synonyma*, iv) *anagramma* and v) *artificium cabbalae*. Under *locus notationis* (v) *artificium cabalae* five different number alphabets are listed, each of which could be used in several ways to generate ideas in poetry. Among these is the poetical paragram, a technique adapted from cabalism simply to stimulate the imagination. As the words 'Margaretha' and 'Meine Seele' have the same numerical value using the natural-order number alphabet,

Margaretha = 88	M a r g a r e t h a 12+1+17+7+1+17+5+19+8+1
Meine Seele = 88	M e i n e S e e l e 12+5+9+13+5 18+5+5+11+5

the poet could use them as the starting point of his poem. Neumeister's work was published in 1707 by the poet and librettist 'Menantes' (C.F. Hunold). Both men were known to J.S. Bach, who was probably familiar with this publication but there is no proof that he adapted the paragram technique to musical invention.

Several German theorists, from Burmeister (*Musica poetica*, 1606) to Spiess (*Tractatus musicus compositorio-practicus*, 1745), used rhetorical models and the *loci topici*, in their discussions of music (*see* RHETORIC AND MUSIC, §I). Mattheson used the terms *inventio*, *dispositio*, *elaboratio* and *decoratio* to structure his discussion of compositional procedure in *Der vollkommene Capellmeister* (1739). In the section on *Inventio* he applied Neumeister's 15 *loci* to musical composition, but included neither number alphabets nor any adaptation of the poetical paragram to music in his illustration of the *locus notationis*. Following the many experiments in using the *ars combinatoria* for musical invention (notably by Leibniz, Euler, Riepel, Christian Wolff and Gottsched), Lorenz Mizler von Kolof produced his own theoretical explanation of music. An important debate between Mizler and Mattheson about numbers in music is documented in Mizler's journal the *Neu eröffnete musikalische Bibliothek* (founded in 1737) and Mattheson's treatise *Plus ultra* (1754–6). In response to Mattheson's assertion that mathematics is not the basis of music (Harriss, 1981, p.46), Mizler wrote:

> Mathematics is the heart and soul of music . . . Without question the bar, the rhythm, the proportion of the parts of a musical work and so on must all be measured . . . Notes and other signs are only tools in music, the heart and soul is the good proportion of melody and harmony. It is ridiculous to say that mathematics is not the heart and soul of music [*Neu eröffnete musikalische Bibliothek*, ii, 1743, p.54]

It is highly likely that Bach was aware of these discussions, as he knew both men and in 1747 became the 14th member of the society founded by Mizler in 1738 in order to stimulate discussion about music among composers (numerologists have made great play of this since BACH = 2+1+3+8 = 14 in the natural-order number alphabet). But the analyst must be cautious: documentary evidence that Bach's sympathies lay with Mizler rather than Mattheson may not necessarily be a sufficiently firm foundation on which to build a theory of Bach's pre-compositional numerical method.

The evidence that comes closest to implying the use of number in the pre-compositional organisation of a work comes not from Mattheson's section on *Inventio*, but from his section entitled *Dispositio*. Again combining artistic forms, he likened compositional construction to architecture:

> DISPOSITIO is a neat ordering of all the parts and details in the melody, or in an entire musical work, almost in the manner in which one arranges or draws a building, makes a plan or sketch, a ground plan, to show where e.g. an assembly room, an apartment, a bedroom etc. should be situated. [Harriss, 469]

Although numbers are not specified, one could argue that Mattheson strongly implied their use since architectural plans at that time were ordered numerically. Mattheson's clearest articulation of pre-compositional planning can be read in paragraph 30:

> §30 [the composer] should outline his complete project on a sheet, sketch it roughly and arrange it in an orderly manner before he proceeds to the elaboration. In my humble opinion this is the best way of all through which a work obtains its proper fitness, and each part thus can be measured to determine if it would demonstrate a certain relationship, similarity, and concurrence with the rest: in as much as nothing in the world is more pleasing to the hearing than that. [Harriss, 478]

Again Mattheson does not specify numbers, but a recommendation that could easily be a practical demonstration of Mattheson's principles appears in volume iv (1754) of Mizler's *Bibliothek* (pt 1, p.108). In a section that directly follows the announcement of Bach's presentation to the society of canon BWV1076, the anonymous author writes:

> In the winter the cantata should be somewhat shorter than in summer ... From experience one can specify the duration, namely that a cantata 350 bars long of varying mensuration takes roughly 25 minutes to perform, which in winter is long enough, whereas in summer it can be 8 to 10 minutes longer and so give a cantata of roughly 400 bars.

Although Bach may not have devised these guidelines, he would, as a society member, have been involved in the discussions and endorsed the recommendations. In 1619 Michael Praetorius had made a similar recommendation for measuring the duration of a composition:

> 80 tempora take half of a quarter of an hour, 160 tempora take a quarter of an hour, 320 tempora half an hour, 640 tempora an hour. In this way one can so much better judge how long the song or work is so that the sermon may begin at the correct time and the other church ceremonies adapted accordingly.

In both of these examples numbers are used as a tool to measure the length of a church cantata in bars and in minutes. It is an indication that in this period there was an increasingly pragmatic approach towards composition.

4. 1750 TO 1900. Among the music treatises of the late 18th and early 19th centuries is a corpus of material that recommends using numbers for composition. At least 20 different methods of composing music by numbers were published between 1757 and 1812, the first being *Der allezeit fertige Polonoisen- und Menuettencomponist* (1757) by J.P. Kirnberger, a pupil of J.S. Bach. According to Kirnberger:

> Anyone who is familiar only with dice and numbers and can write down notes is capable of composing as many of the aforesaid little pieces as he desires.

Kirnberger's method was repeated and adapted several times, including in two publications attributed to Haydn (1793) and Mozart (1793). A different method, based on the use of a nine-sided top, was first published in H.-F. Delange's *Le toton harmonique* (1768) and in an anonymous *Ludus melothedicus* (1760s). C.P.E. Bach published a variant of this second method as 'A Method for Making Six Bars of Double Counterpoint at the Octave Without Knowing the Rules' in the first part of Marpurg's *Historisch-kritische Beyträge zur Aufnahme der Musik* (1754). A publication that uses neither system but allows random selection of any number between eight and 48 is Piere Hoegi's *A Tabular System whereby the Art of Composing Minuets is Made so Easy that any Person, without the Least Knowledge of Musick, may Compose Ten Thousand, all Different, and in the most Pleasing and Correct Manner* (London, ?1770). This is the epitome of instant composition: it shows a healthy playfulness with compositional method, at variance with

the received view of the closed master–pupil apprenticeship of earlier generations and the later cult of the inspired genius. Analyses of surviving polonaises by Kirnberger or of C.P.E. Bach's double counterpoint have yet to be made to assess whether they used these methods in their own compositions.

Based on principles taken from Smend, the natural-order number alphabet, traditional symbolic numbers (such as 3 = the Trinity, 33 = number of years of Jesus's life) and cabalistic techniques (such as triangular numbers, or the cubing, squaring or doubling of a number to increase its potency) have infiltrated musicological studies of this period. It has been claimed, for example, that certain works by Mozart, with his Masonic associations, and Beethoven demonstrate a well worked-out numerological plan.

The study of numbers in the background compositional design of works written before 1900 has great potential for musicology; but until a historically consistent theory can be formulated that resolves the problems described in the introduction, number studies will remain at best interesting speculation.

5. From 1900. That the fate of numbers in music greatly improved around 1900 and thereafter can be attributed to various changes in how music was made and perceived: the arrival of recording technology, which facilitated numerical measurements (of duration, frequencies etc.); intensified interest in folk music and in non-European cultures, bringing an awareness of other scales and, perhaps most significantly, other ways of handling rhythm, not as a hierarchy of nested elements (beat, bar, phrase) but as pulse, which might invite composers to count up to more than four; and an increased systematization of composition. These phenomena were linked. For example, the study of ethnic music was greatly assisted by recording, at a time when mechanization in other forms (in agriculture, for instance) was placing such music under threat. And the triumph of the machine in the 20th century – including most particularly the computer revolution that began in the late 1940s – must have had a part in changing ideas about the brain and therefore about creativity, which could now be seen as dependent on processes of selection and arrangement, and so able to profit from systematic methods.

One of the earliest and most influential of such methods, serialism, was not meant by Schoenberg to be any more (or any less) systematic than tonal composition, and even the works of Webern, who used serialism highly systematically, do not appear to have recourse to numbers in any but the most traditional ways (such as rhythmic augmentation and diminution). Schoenberg was undoubtedly no stranger to numerology – he changed the name 'Aaron' to 'Aron' so that the title of his opera would have 12 and not 13 letters – but there is no evidence that he used numbers in the substance of his music. With Berg, though, there is abundant proof, and not only in his serial works. Indeed, a pre-serial composition, his *Kammerkonzert*, is one of the most conspicuously number-infested pieces he achieved, being constructed in units of 30 bars, on three themes, with three basic colours (piano, violin, wind): three and its multiples everywhere to celebrate the triumvirate of the Second Viennese School. Berg's conception of a 'Hauptrhythmus', in this work and others, could also have sprung from an arithmetical turn of mind. In his *Lyrische Suite* the guiding numbers, affecting both lengths in bars and metronome markings, are 23 and 50: the former, which has an important role too in *Lulu* and the Violin Concerto, he felt to be his personal number, for the reason, as he told Willi Reich, that he had suffered his first asthma attack on the 23rd of the month.

A more concealed use of numbers to control formal proportions (i.e. to do what Berg did openly) has been proposed in other music of roughly the same time, notably that of Debussy and Bartók. In both cases the golden section (*see* Golden number) is a favoured analytical goal: Howat (1983) found this in *Reflets dans l'eau*, *La mer* and other works of Debussy; Lendvai (1971) has it in Bartók's Sonata for Two Pianos and Percussion. However, neither composer said much about his compositional technique, nor left sketches to indicate that forms (or, to follow Lendvai, rhythms and scales) were numerically derived. The appearance of the Fibonacci series in a rhythmic pattern at the start of the slow movement of Bartók's Music for Strings, Percussion and Celesta (1–2–3–5–8–5–3–2–1) is suggestive, but no more, and Somfai (1996) discounted the notion that Bartók used numbers in any non-traditional way.

The new importance of pulse in Stravinsky's music, particularly during the decade from *Petrushka* (1910–11) onwards, led to rhythms based on numbers. For example, the first of the Three Pieces for string quartet (1914) has overlaid ostinatos repeating at different intervals through time, and the tempos of *The Wedding* are geared in the ratios 2:3:4. But number is less an issue here than mechanical regularity, as it is in Satie's assemblage of music by time-lengths in his music for the film episode in *Relâche* (1924). Working for the cinema encourages a composer to think in terms of absolute duration, and the arrival of film provided at least a parallel for, if not a stimulus to, the new sense of time (pulsed, chronometrical) and form (edited, cross-cut) in Stravinsky and Satie. The latter in particular, together with information brought back from Bali by McPhee, prompted Cage to base most of his works of the late 1930s and the 1940s on durational frames based on numbers, and now musical arithmetic is often to the forefront. In Cage's *First Construction (in Metal)* for percussion ensemble (1939), for instance, the sequence 4–3–2–3–4 governs the grouping of the work's 16 sections and also the grouping of bars within each section.

At the same time Messiaen was beginning to use numbers consciously in formal and rhythmic construction, influenced perhaps by Stravinsky and certainly by the importance of number in Christian symbolism. Again, pulsed rhythm was part of the game. In his work with rhythmic cells, Messiaen preferred 'non-retrogradable' (i.e. palindromic) patterns as well as figures whose lengths were determined by prime numbers. To these in the late 1940s he added, with a nod to serialism, the use of durations embodying the arithmetical series from one to 12 (e.g. demisemiquaver to dotted crotchet) and a system of rhythmic 'interversion', by which sequences of numbers expressed as durations would be changed by rule. If, to give a simplified example, the sequence 1–2–3–4 were followed by 2–3–4–1, the next sequence would have to make the same changes (1 to 2, 2 to 3, etc.) and so would be 3–4–1–2. Such procedures were stimulated by a reverence for number as part of the divine order; as for numerical symbolism, that tends to determine more often the number of movements in a work: seven (the perfect

number) in *Les corps glorieux*, *Visions de l'amen*, *Chronochromie*, *Sept haïkaï* and each part of *La Transfiguration*, for example; eight (perfection plus) in *Quatuor pour la fin du temps* and *Saint François d'Assise*; or 12 in *La nativité du Seigneur*.

Messiaen's contemporary Babbitt looked not at all to the extra-humanity or symbolic significance of numbers but rather to how mathematics might help composers to explore serialism more cogently. Combinatoriality, being a branch of set theory (*see* SET), provided an understanding of how Schoenberg and Webern had worked with like or unlike hexachords, and so suggested extensions to their procedures. The differences from Messiaen are most conspicuous at the rhythmic level, for Babbitt's inventions – the use of small durational sets amenable to inversion and retrograding, and the 'time point' system, by which the key phenomenon is the point at which an event occurs in the bar – are consonant both with Schoenbergian pitch serialism and a traditional (if highly sophisticated) understanding of rhythm as metrical.

The period immediately after World War II, when Babbitt produced his first acknowledged works, also saw a growth in number music as a result of Messiaen's influence on the younger composers who were his pupils (Boulez, later Stockhausen and Xenakis) and of new means of sound programming – not only electronic music but also, in the case of Nancarrow, the player piano. Nancarrow used this instrument from the late 1940s onwards in order to realize patterns of arithmetical durations (invented, it would seem, independently of Messiaen) and, most usually and variously, overlays of different tempos and/or metres executed by different canonic lines. In his Study no.1, for example, there are five simultaneous tempos related as 2:3:5:8:14; Study no.33 uses the tempo relationship √2:2; and Study no.27 has, around one voice in constant tempo, others in accelerandos or ritardandos defined in terms of percentages, the change being by 5%, 6%, 8% or 11% from one sound to the next.

Like the player-piano roll, magnetic tape was a handicraft medium (in the 1950s and 60s works could only be created by splicing together lengths of tape), and so invited the planning of rhythms and forms in measured durations. If no composer of electronic music equalled Nancarrow's rhythmic virtuosity, many used number systems, often by analogy with serialism. For instance, the sequence of whole numbers from one to six is important in Stockhausen's early pieces, both electronic and instrumental; later he used the Fibonacci series, most conspicuously in his *Klavierstück IX* (1961). The frequencies of electronic music also had to be determined, and here too Stockhausen used arithmetic to derive new tuning systems. Xenakis at the same time was using numerical calculations, especially from the mathematics of probability (Poisson distributions, Markov chains), to determine pitches, durations and timbres in events conceived globally; the tasks were eminently suited to computers, which he began to use in 1956.

To the extent that computers are number machines, all computer music is number music – but then any violinist playing in just intonation is also spinning integers. Numbers, in short, may be essential but not evident, and they are perhaps only likely to be evident when, as often in Messiaen and Nancarrow, and sometimes in Cage and Stockhausen, they are simple integers controlling durations, tempos or structural proportions. Nevertheless, the ubiquity of computers since the early 1980s may have encouraged composers, both in and outside the field of computer music, to think of music as a play of numbers: the later works of Ligeti, often based on numerical rules and systems that gradually produce results of high complexity, offer many examples. Ligeti is also, with John Adams, among the composers who have been spurred by the graphic results of fractal mathematics to create similar self-similar musical constructions. Minimalist music, too, may be number music: Glass's *Einstein on the Beach* begins with the chanting of numbers. And Lendvai's study, however dubious its application to its ostensible subject, surely helped promote interest in musical numbers among composers two and three generations younger.

Numerology. *See* NUMBERS AND MUSIC.

Nummi, Seppo (Antero Yrjönpoika) (*b* Oulu, 30 May 1932; *d* Tampere, 1 Aug 1981). Finnish composer, critic and music administrator. He studied composition with Kilpinen (1949–54) and made several study trips abroad (e.g. to China, Italy, France and Germany). He was librarian of the Sibelius Academy, Helsinki (1956–61), music critic of the daily papers *Kauppalehti* and *Uusi Suomi* (1956–70), programme director of the Jyväskylä Arts Festival (1956–9 and 1962–8) and director of the Helsinki Festival (1969–77). He retired in 1977 and moved to Rome, where he devoted himself to composition. His belief in music as a social force was reflected in his many activities: he was founding member of the Finnish Music Library Association (1954) and the Finnish section of Jeunesses Musicales (1957), and he introduced the concept of the modern art festival to Finland. As a writer he had a special talent for exciting public debate. Before his involvement in music administration he occasionally performed as an accompanist of lieder. He was a conservative as a composer: he carried on the tradition of the German lied, citing Schumann, Wolf, Kilpinen and the Italian Renaissance madrigal as his main sources of inspiration. He wrote about 250 songs on ancient Chinese poetry (e.g. Li-Tai-Po, Jyan-Tsen and Tu-Fu) and on contemporary Finnish poetry. Other works included five madrigals (1959–60), some chamber music and piano pieces. The vocal lines of his lieder have some archaic and on occasion exotic features, and the piano accompaniment is clear and delicately drawn, like a woodcut.

ILKKA ORAMO

Nunc dimittis (Lat). The canticle of Simeon, *Luke* ii.29–32, sung at Compline in the Latin rite and as the second canticle at Evensong in the Anglican Church. At Compline it is sung with an antiphon to the appropriate psalm tone (e.g. *LU*, 271, 784); in the Office of the Dead it is sung without antiphon 'in directum' (*LU*, 1744); at the Feast of the Purification before Mass it is sung with the antiphon *Lumen ad revelationem gentium* between each verse (v.4, textually identical with the antiphon, being omitted: *LU*, 1357).

The *Nunc dimittis* was set in polyphony rather rarely before 1550, but there is an anonymous setting with the antiphon *Lumen* in the Pepys manuscript of about 1465 (*GB-Cmc* Pepys 1236) and a *Nunc dimittis* by Costanzo Festa. There are several settings each by Palestrina and Lassus, and one by Victoria; a large number are also found in the various collections of music for Compline published in Italy during the 17th century, when attendance at this Office seems to have been a fashionable act of piety. A paired *Magnificat* and *Nunc dimittis* by Tallis anticipates later Anglican practice, in which these canticles are regularly set, either on their own or in the context of a Full Service (*see* CANTICLE, §4, and SERVICE). From England also come organ compositions based on certain antiphons to the *Nunc dimittis*, namely two anonymous settings and one by Redford of *Glorificamus te*, and three settings by Redford and one by Wynslate of *Lucem tuam* (EECM, vi, 1966; MB, i, 1951, 2/1962).

JOHN CALDWELL

Nunes, Em(m)anuel (Tito Ricoca) (*b* Lisbon, 31 Aug 1941). Portuguese composer. He studied composition in Lisbon with Francine Benoit at the Academia de Amadores de Música (1959–63) and with Fernando Lopes Graça at the University (1962–4). He attended summer courses at Darmstadt (1963–5), moved to Paris (1964), then attended the Hochschule für Musik in Cologne (1965–7), studying with Pousseur (composition), Jaap Spek (electronic music) and George Heike (phonetics) and taking courses with Stockhausen. He returned to Paris in 1970 and a year later and won a *premier prix* for aesthetics at the Paris Conservatoire.

With a grant from the Portuguese government (1976–7) and as composer-in-residence in Berlin at the invitation of the Deutscher Akademischer Austauschdienst (1978–9), he organized courses at the University of Pau and at the Hochschule für Musik in Freiburg. Since 1979 he has lived alternately in Paris and Oeldorf (Cologne). From 1981 he has run seminars in composition in Lisbon sponsored by the Gulbenkian Foundation and has organized conferences and seminars in various European and North American cities. Since 1986 he has been professor of composition at the Institut für Neue Musik in Freiburg and is regularly asked to lecture at the Paris Conservatoire.

Many of his works have been performed during festivals and on the radio throughout Europe.

Nunes's work can be divided into three periods. The first, starting with *Degrés* (1965) and ending with *Impromptu pour un voyage I* (1973), displays a preference for open forms and the spatial distribution of instruments. The second phase, starting with *The Blending Season* (1973), is typified by the use of electro-acoustics (either live or on tape) and by greater instrumental effects; the first vocal compositions belong to this phase. The third phase opens with *Nachtmusik I* (1977–8), the start of a large cycle entitled *Die Schöpfung*. The agogic, temporal and spatial aspects are significant features of this cycle, one of the highlights of which is *Tif'ereth* (1978–85).

Throughout his work, two constants are evident. The first is the linking of works in pairs, such as *Purlieu* and *Dawn Wo*, or *Fermata* and *Ruf*, in which one is presented as a complement (in the sense of a positive or negative entity) to the other. The second is the revision or development of works which gives rise, on the one hand, to new versions and, on the other, to a new form of complementarity. This applies to *73 Oeldorf 75 – I* and *II*, where the enlargement of the body of instruments modifies the discursive outline of the work, producing not a modified version, but a new work intimately associated with the first.

Nunes da Silva, Manuel. *See* SILVA, MANUEL NUNES DA.

Nunes Garcia, José Maurício. *See* GARCIA, JOSÉ MAURÍCIO NUNES.

Núñez, Adolfo (*b* Madrid, 21 Sept 1954). Spanish composer. He studied music at the Madrid Conservatory (1969–84), obtaining higher degrees in guitar and composition, and industrial engineering at the University of Madrid (1971–8). He completed his musical education through lessons with Bernaola, Ferneyhough, Donatoni, Brncic, Francisco Guerrero and Luis de Pablo, and with Chowning at the Center for Computer Research in Music and Acoustics at the University of Stanford, California, receiving his Master's degree in composition and in computer music. Since 1986 he has directed the Laboratorio de Informática y Electrónica Musical at the Centro para la Difusión de la Música Contemporánea. In 1983 he received the first prize in the Third National Competition of Polifonía Juvenil of Cuenca, and his works were performed during the International Gaudeamus Week in the Netherlands. In 1986 he won the second prize in the Paul and Hanna Competition (Stanford University). His works were also chosen for the International Computer Music Conferences in 1987 and 1991.

Núñez makes effective use of counterpoint to develop complex rhythms enhanced by skilfully contrived aggregations of timbre. He uses fractal mathematics to produce electronic sounds of great richness which often dialogue and interact with live instruments.

JOSÉ IGES

Núñez, Juan Carlos (*b* Caracas, 19 Sept 1947). Venezuelan composer and conductor. He received piano lessons from Sergio Moreira, then studied at the Escuela Superior de Música José Angel Lamas in Caracas with Vicente Emilio Sojo, Evencio Castellanos, Moisés Moleiro, Inocente Carreño and Francisco Rodrigo. In 1972 he won the national composition prize with the *Toccata sinfónica*. In disagreement with the methodical imitation of old forms as a training tool, he abandoned his formal studies in composition, and from 1973 to 1976 studied conducting in Warsaw with Stanisław Wisłocki at the State Higher School of Music. After returning to Caracas he conducted many of the country's principal orchestras, including the

Orquesta Sinfónica Venezuela, Orquesta Filarmónica de Caracas, Orquesta Filarmónica Nacional, Orquesta Sinfónica Municipal de Caracas and the National Youth Orchestra Juan José Landaeta. Between 1982 and 1985 he lived in New York. In 1994 Núñez became professor of composition at the Instituto Universitario de Estudios Musicales. He also founded the Cátedra Latinoamericana de Composición Antonio Estévez, a programme devoted to helping young composers.

Núñez was one of the first composers of his generation to promote the practice of popular music and improvisation as part of the professional sphere of the classical composer. A good part of his activity lies in collaboration with popular singers and ensembles. His prolific output explores diverse contemporary techniques, but a rhetorical or theatrical/incidental discourse remains predominant. He has won several national prizes, although the import and influence of his music has been controversial, and his polemical stance has contributed to the re-examination of entrenched viewpoints on the teaching of composition and the role of the composer in society. His views and achievements are well represented in his *Tango Cortázar* (1984) for orchestra and in his opera *Chúo Gil* (1982–90).

JUAN FRANCISCO SANS, CARMEN HELENA TELLEZ

Nunn, Trevor (Robert) (*b* Ipswich, 14 Jan 1940). English director. After studying at Cambridge and gaining a director's scholarship to the Belgrade Theatre, Coventry, he joined the Royal Shakespeare Company in 1965, becoming its youngest artistic director in 1968, a post he held until 1986. His early success at the company made generous use of original music and choreographed movement. For *The Comedy of Errors* (1976) Nunn and composer Guy Woolfenden used the text as the book for a musical comedy. In 1981 he directed Lloyd Webber's *Cats*, employing many of his stylistic solutions to its staging from his Dickens production, *The Life and Adventures of Nicholas Nickleby* (1980): a troupe of performers playing many parts, the use of shared narration, ingenious use of 'fringe' techniques, and designs by John Napier, which literally thrust the performance into the heart of the audience.

Subsequent collaborations with Lloyd Webber on *Starlight Express* (1984), *Aspects of Love* (1989) and *Sunset Boulevard* (1993) lacked the originality of *Cats* and became progressively more conventional. Although *Cats* became the longest running musical in theatre history, in purely commercial terms its success was exceeded by *Les misérables*, directed by Nunn with John Caird for the Royal Shakespeare Company in 1985; quasi-operatic, *Les misérables* suited Nunn's bold and fluid style. Of his opera productions, including *Idomeneo*, *Così fan tutte* and *Billy Budd* for Glyndebourne, only *Porgy and Bess* (1988) truly benefited from his approach.

Nunn's grounding in Elizabethan and Jacobean drama suited him well for the changing musical theatre of the 1980s, where the wit and sophistication of musical comedy were supplanted by heightened emotion and a non-cerebral appeal, more akin to the operatic experience. Nunn contributed to the move towards the musical as 'event'. Ironically, when he replaced the ailing Michael Bennett, late in the development of *Chess* (1986), he produced his finest achievement in the genre. He was appointed director of the Royal National Theatre in 1997.

ROBERT HOWIE

Nuno, Jaime (*b* S Juan de las Abadesas, nr Ripoll, 8 Sept 1824; *d* Bayside, NY, 18 July 1908). Catalan composer. He was a choirboy at Barcelona Cathedral from 1833 to 1840 and later studied briefly in Italy with Mercadante. On returning to Catalonia, he conducted local orchestras at Sabadel and Tarrasa and composed church music and dance music until becoming a military reservist in 1845. In 1851 he was sent to Havana as director of the band of the Queen's Regiment with a commission to organize Cuban military bands on the same model. In 1854 the Mexican president Santa Anna invited him to Mexico City with the rank of infantry captain. On 6 May 1854 Santa Anna initiated a competition for new music to fit the text of the national anthem written in November 1853 by Francisco González Bocanegra. The judges, all native Mexicans, awarded first prize to Nuno's anonymously submitted music on 14 August 1854, and it was given its première in the Gran Teatro Santa Anna, later renamed Nacional, on 15 September 1854, conducted by Giovanni Bottesini.

Two months after Santa Anna's deposition on 9 August 1855, Nuno followed him to Havana and from there went to New York in the company of the contralto Vestivalí. In 1857 he directed the orchestra that played at Thalberg's concerts there, in 1860 he conducted an opera company doing a season at the Teatro Tacón in Havana and in 1862 he was contracted to direct a touring Italian opera troupe organized in New York by Mazzolini and Biaceki. During the 1864 visit of this troupe to Mexico City he spent five months conducting opera at the Teatro Imperial (formerly Nacional). The troupe then visited Havana, and was eventually dissolved in 1869. Recommended by Gustave Schirmer, Nuno next established himself as a singing teacher and church organist in Buffalo. Invited to Mexico City for a third stay in 1901, he arrived on 12 September for a triumphal tour lasting a month. In 1904 he made a fourth visit, this time in search of a suitable invitation to settle there. Received coldly, he returned to Buffalo and in 1906 settled with his son at Auburndale, Bayside, where he died.

ROBERT STEVENSON

Nuorvala, Juhani (Aarne Kaleva) (*b* Helsinki, 5 Dec 1961). Finnish composer. He studied composition with Hämeenniemi at the Sibelius Academy in Helsinki (1984–5, 1986–91, diploma 1991) and musicology and aesthetics at Helsinki University during the 1980s. He has also studied with Murail (1987, 1989) and Lindberg (1985); he spent 1993–4 in New York, where his teacher was Del Tredici. In addition he has attended composition courses directed by Cage, Grisey, Nono, Takemitsu and Andriessen, among others.

Nuorvala's music has exhibited many different styles. The transition from one style to the next has not been a slow process: often a new work has had quite a different stylistic goal to its predecessor. In the 1980s his interests lay closest to minimalism and the spectral music as represented by his teacher Murail, and in the 1990s pulsation and polyrhythmics became more clearly apparent. The early *Kajauksia, väreitä* ('Rings and Ripples', 1985) for female voice and six players has minimalist ingredients. *Pinta ja säe* ('Surface and Phrase', 1991), which won an award in the Vienna Modern Masters competition, is more obviously spectral music. The work is built on a positioning of contrasts: long tunes, often coloured by micro-intervals, form the 'surface' while more elastic melodic figures are the 'phrases'.

Both pulsation and Nuorvala's earlier devotion to rock music are particularly noticeable in the orchestral work *Notturno urbano* (1996), the main theme of which takes its cue from rock music, and in the earlier *Dancescapes* (1992) for string quartet. *Kellarisinfonia* ('Garage Symphony', 1995) has also felt the impact of rock and jazz. It approaches big band music, yet its harmonies are atonal. *Twitching Gait* (1993), composed during his studies in New York, is built on alternating polyrhythmic figures, and some of its melodic characteristics veer towards jazz. Nuorvala has been called Finland's most 'American' composer; his crossover approach, using elements of jazz and rock, is indeed conspicuously unusual among younger Finnish composers.

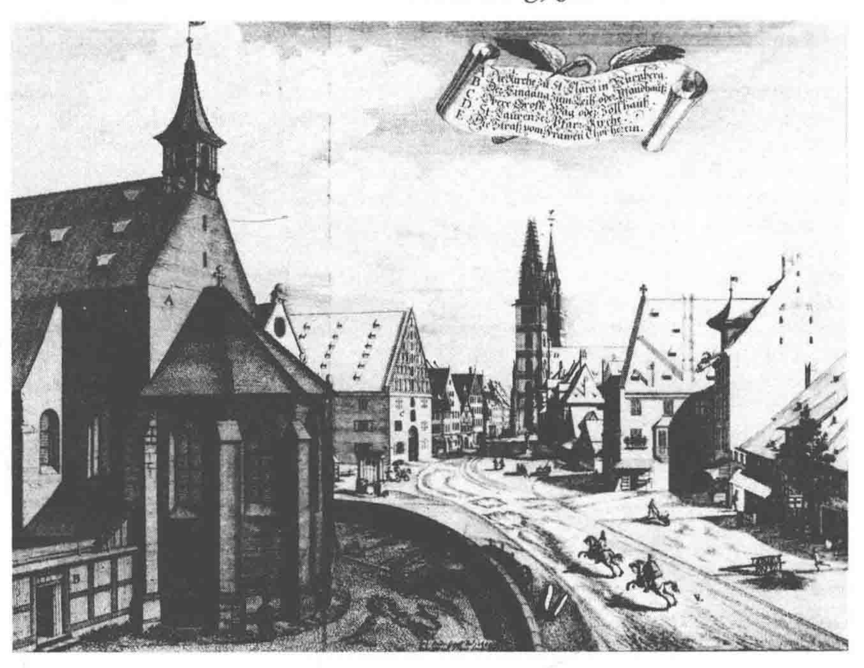
Nuremberg (Ger. Nürnberg). City in Bavaria, Germany. Its importance as a musical centre reached a peak in the 17th century and afterwards waned with the decline of its instrument making and music printing industries. The city was founded as an imperial stronghold in the 11th century, and between the 12th and 14th centuries grew to be an important trade centre on routes linking Germany with the Mediterranean and eastern Europe. The castle lost its rights and privileges early to the town and by the mid-15th century the corporation was firmly in place. Because of this there were no aristocratic courts where the arts could flourish, but rather the city embraced craftsmanship and corporate rule. The ecclesiastical reins were also held by the city council, and Nuremberg joined the Reformation in 1524, apparently the first imperial city to do so. The Counter-Reformation had little effect on the city, although in 1649 Catholics were permitted to hold services in a chapel. By the early 17th century Nuremberg had become the largest city in the area, but afterwards declined, particularly as a result of the Thirty Years War (1618–48) and a plague in 1634.

1. To 1600. The church was at the centre of Nuremberg life. The two parts of the city, separated by the river Pegnitz, were served by the two large parish churches of St Sebaldus and St Lorenz, a number of smaller churches built in the 12th, 13th and 14th centuries (notably the Frauenkirche, the Kirche zum Neuen Spital (Spitalkirche), the Jakobskirche and the Egidienkirche), and ten churches associated with abbeys and convents. The main churches had organs by the 14th century, and by the mid-15th century some had two. Conrad Paumann, an early organ master, was born and probably trained in Nuremberg; he was organist at St Sebaldus from 1446 until 1450, when he transferred to Munich. Both his *Fundamentum organisandi* (1452) and the *Lochamer Liederbuch* (compiled in Nuremberg, 1452–60) reflect the city's musical repertory in the mid-15th century during which period the town band was also important. This had developed from the *Stadtpfeiffer* known from 1219, when musicians received a pound of pepper and a pair of leather gloves for assisting at the celebration of the removal of imperial taxes. The *Stadtpfeiffer* were recorded as early as 1363 in the city salary lists, and by the mid-15th century the band had grown to include trumpets and trombones as well as lutes and fiddles.

The city's sacred music suffered a setback at the Reformation, when the organ and polyphonic music were suppressed. They were not fully restored until 20 years later, about 1544. The chief 16th-century musicians were the teachers in the church schools of St Sebaldus, St Lorenz, and the Spital- and Egidienkirche, whose pupils provided music for the services. The theologian Cochlaeus wrote his *Tetrachordum musicae* (printed in seven editions between 1511 and 1526) for his pupils at St Lorenz, where he was rector from 1510 to 1515. The Nuremberger Sebald Heyden, a pupil of Cochlaeus, was Kantor and then rector at St Sebaldus, at which time he wrote his treatise *Musicae*, first printed in 1532.



Music printing in Nuremberg began before 1500. Johannes Sensenschmidt, Johann Petreius and Georg Stuchs were among the earliest figures active there; in the 16th century they were followed by Johann Stuchs, Hieronymus Höltzel, Hans Weissenburger, Friedrich Peypus, Hieronymous Formschneider, Johann Petreius and Nicholaus Knorr. Instrument making was important in Nuremberg very early on. In 1427 Hanns Franck fashioned the first German trumpet and trombone. The Neuschel and Schitzer families were prominent in the 16th century, Georg Voll was active as an organ builder about 1540, and Hans Haiden and Sebastian Lindauer built string instruments. The Meistersinger, all local craftsmen, were most active in Nuremberg in the late 15th and 16th centuries (e.g. Hans Sachs) and are not known to have had any connection with the sacred music of the city (*see* MEISTERGESANG).

Nuremberg was now established as a major commercial city, and the size and stature of the town band reflected its importance. The band was present at all major civic events and was also available for private functions such as weddings, when the use of both band and church music was regulated by sumptuary laws. In 1590, for example, the patriciate was allowed two or three choirs, organs and performers. Established craftsmen were allowed only one organ and two *Stadtpfeiffer*. The reputation of Nuremberg's music-printing and instrument-making skills became renowned, with the Neuber, Haas and Hainlain families dominant in these fields. Lutheranism was installed as the dominant religion, and the council appointed church leaders, musicians and teachers in the schools attached to the churches. All major musicians and composers who were to emerge from Nuremberg during this and the next century were employed as church Kantors, organists or music teachers at some time in their profession.

Outside the church, group of amateurs formed 'Musikkränzleine' ('music circles'), sometimes assisted by professional musicians. Members were largely patricians, councillors, lawyers and doctors. The first such formal group was formed in 1568 and consisted of 13 men meeting weekly for a meal and music. They had the reputation of being followers of Melanchthon, and there appears to have been a preponderance of names connected

1. Frontispiece to the records of the 1588 musical society: 'Music', coloured wood engraving after M. de Vos (GB-Lbl Add.25716, f.1r)

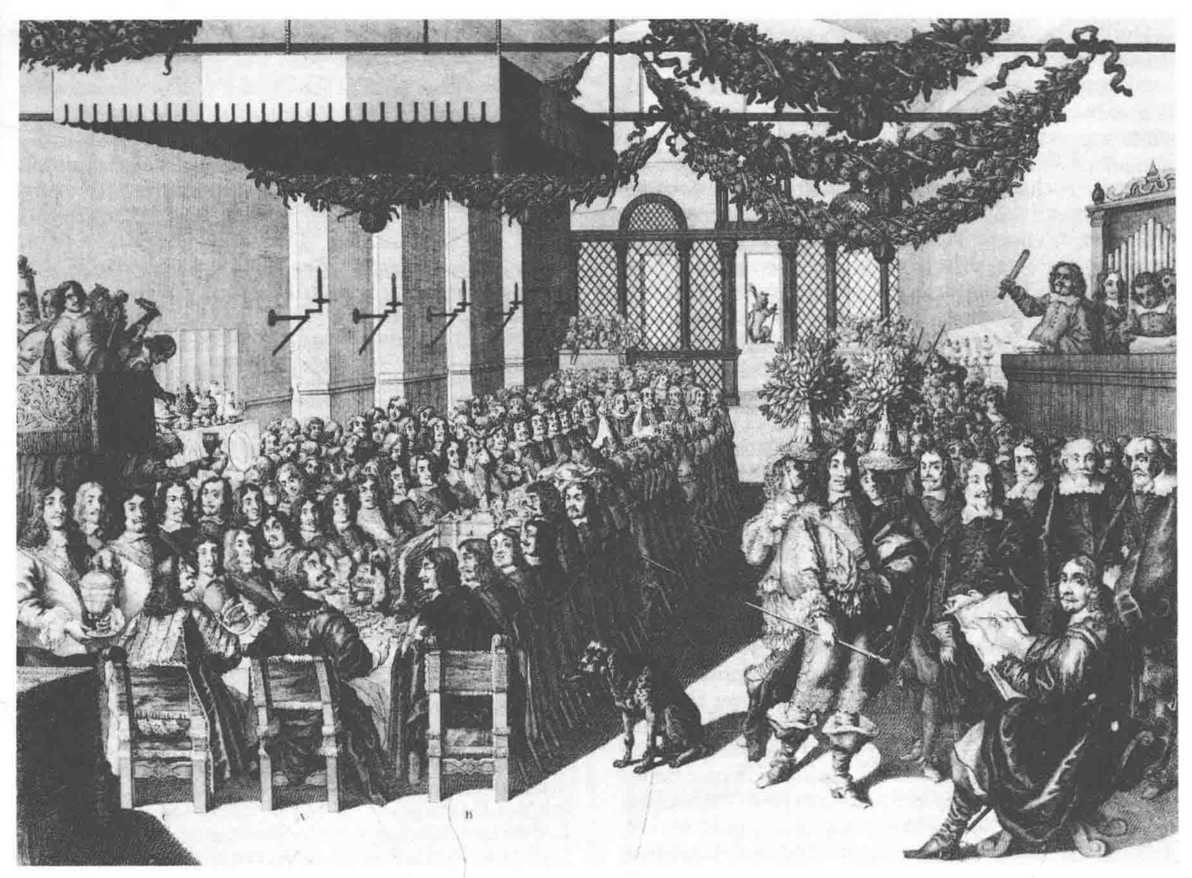
2. Churches of St Lorenz (background) and St Klara (foreground) in what is now called Königstrasse, Nuremberg: engraving by Johann Ulrich Krauss after Johann Andreas Graff, 1680

with the church of St Sebaldus. The only musician of repute among the members was Johann Heyden, second son of Sebald Heyden and organist at St Sebaldus. A second society was set up by Ivo de Vento, who worked in or visited the city in the 1570s. He dedicated a book of four-part songs to members of the 1572 society, all members of the Nuremberg council. Leonhard Lechner, a pupil of de Vento, worked in Nuremberg from 1575, taking up a post as musician at St Lorenz's school. By 1582 he had became the town's principal musician, and before he left two years later he had written many madrigals, folksongs and masses, as well as promoting music among young men. He wrote for one specific group of young men, all of whom belonged to prominent Nuremberg families.

During this time the Nuremberg patricians began to send their sons to other German courts or European countries, especially Italy, to broaden their cultural horizons. The arts were then imported on their return, and occasionally with them came recognized musicians. Lassus, for instance, visited Nuremberg in 1581. Meanwhile the Behaim family was instrumental in bringing the arts to the young, educated patrician. Andreas, a poet, and from 1571 Rektor at St Lorenz's school, was also a founder member of the 1568 musical society. His son Paul studied in Italy and returned to Nuremberg to become a prime mover in setting up a new music circle in 1588 (fig.1). Here again a meal formed part of the meeting and fines were levied if rules were not complied with. No music from this society is extant, but the group had a preference for the Italian style. In 1594 there were visitors from Venice and in 1597 Giovanni Gabrieli visited the society meeting. Composers for the society included Friedrich Lindtner, Kantor at the Egidienkirche from 1574 until his death in 1597.

2. 1600–1700. Together with Hamburg and the Leipzig–Dresden area, Nuremberg was a leading centre of German music in the 17th century. At the beginning of the century the Hassler family was pre-eminent. Hans Leo Hassler studied in Italy after early training in Nuremberg; he was the first of many German composers to learn the Italian Baroque style at its source. His brother Kaspar was highly regarded as an organist at Nuremberg churches throughout his life; another brother, Jakob, studied in Italy with support from the Nuremberg city council, but occupied positions elsewhere. Hans Leo, after being employed by the Fugger family in Augsburg (1586–1600), was active in Nuremberg (1601–4) as *Oberster Musiker* ('head musician'), a position seemingly created for him. It was apparently under him that the long tradition of Sunday musical Vespers resembling the music-making of a collegium musicum, was established at the Frauenkirche. In the introduction to his *Kirchengesäng: Psalmen und geistliche Lieder* (1608) Hassler mentioned that the works it contained were specially sung in the Frauenkirche, which did not have its own grammar school to provide a choir, and was the only church in which Communion was not celebrated. The city council provided extra funds for the Sunday afternoon performances, at which there were biblical readings but no sermon. Organists from other churches, instrumentalists and vocalists employed by the city, apprentices and the best singers from the choirs of the church schools all came together for these concerts, which were conducted by the *Oberster Musiker*. The town band also came under his jurisdiction. In the year 1648–9 the group included four strings, three trombones and three bassoons, and some of the musicians doubled on the cornett or the recorder. Little of Nuremberg's 17th-century repertory has survived, and there are no records of what was performed at the Frauenkirche. The repertory is likely to have included polychoral sacred concertos and, later in the century, cantatas; organ music was probably also played.

Hassler's successors were less distinguished; they included Matthias Nicolai, a city assessor, director until his death in 1636, J.A. Herbst (1636–44) and Georg Walch, a bass employed by the city (1644–56). On Walch's death in 1656 the position was shared by Heinrich Schwemmer and Paul Hainlein, an organist and city musician, who continued until their deaths late in the century.



With few exceptions, the most important musicians of 17th-century Nuremberg were organists: those to hold appointments in the city included Valentin Dretzel (ii), Hainlein, Kaspar Hassler, Kindermann, Johann Krieger, Löchner, A.M. Lunssdörffer, Johann Pachelbel, Schedlich, Schultheiss, Johann and S.T. Staden and G.C. Wecker. The exceptions included Johann Philipp Krieger, whose early positions were as organist but whose chief activity was as Kapellmeister. The most coveted organist's post was that of St Sebaldus, followed in importance by St Lorenz; of the organists listed above, only the Kriegers, Kindermann and Schultheiss were not promoted to one of the two parish churches.

The main corpus of extant 17th-century Nuremberg music consists principally of sacred strophic songs for one or more voices with and without continuo, occasionally incorporating a ritornello for strings; such music could serve for domestic devotion or at weddings and funerals. The melodies have a forthright, natural style resembling folksong, and often outline the prevailing harmony; they contain few long melismas, though two notes to a syllable is a common mannerism. The melodic structure is unified by using chiefly notes of equal value and often by an echoing of melodic or rhythmic motifs. There is little repetition of text or melodic phrases, and the melody seldom reflects nuances of the text. A four-generation teacher–pupil tradition and the common stylistic traits of this music clearly constitute a 17th-century Nuremberg school. Johann Staden, who may have studied with the Hasslers, taught his son Sigmund Theophil, Kindermann and Schedlich; Kindermann taught Schwemmer, Wecker and Lunssdörffer; and Schwemmer and Wecker taught Johann Krieger, Pachelbel and probably also J.P. Krieger. A pupil of the last generation would have learnt singing and music theory from the schoolteacher Schwemmer; if he showed aptitude for music he would take part in performances at the Frauenkirche with the city's leading musicians, and would then go to Wecker for instruction on keyboard instruments and in composition.

Like all 17th-century Lutheran music, that of the Nuremberg school has a basic style of composition that is largely an extension of 16th-century practice, but with the addition of concertato techniques and a continuo part that is essentially a contrapuntal line. Other traits common to the choral works of the Nuremberg school are an instrumental melodic style with sparse use of musical–rhetorical figures, a simple harmonic style and a lack of rhythmic vitality. Only Kindermann and J.P. Krieger made expressive use of chromaticism and unprepared dissonance. The most gifted composers either left the city, tried to leave it or returned to it for only a short time. The Kriegers were never employed in Nuremberg; Herbst returned as Kapellmeister for eight years but left again; and Pachelbel, driven from Stuttgart by the French invaders in 1692, only returned to Nuremberg for the last ten years of his life. Johann Kindermann did not leave, but all his life sought positions elsewhere. With the exception of Johann Staden, the other composers remained in Nuremberg during their entire professional lives, but were comparatively unimportant figures. Nuremberg's lack of appeal to musicians is partly explained by the effects of the Thirty Years War. During this time the city lost much of its foreign trade and consequently incurred many debts; however, the city paid its musicians well despite the war. The chief reason was probably the conservative and bourgeois Nuremberg culture, which

3. Detail of a spinet lid painted in 1619 by Frederik van Valkenborch (seen to the extreme right, holding a palette); also identifiable are Johann Staden (playing the claviorgan), to his left Lucas Friedrich Behaim (bass viol), and also on the extreme right the organ builder Stephen Cuntz (with an organ pipe) and instrument maker Paul Wissmaier (with a tuning hammer) – the other three players are probably relatives of Behaim, and may have become members of the 1626 musical society

4. Banquet with music at the Nuremberg town hall, 25 September 1649, celebrating the end of the Thirty Years War: engraving by Georg Daniel Heumann, 1649; the conductor on the right is S.T. Staden

emphasized a civic pride in German art while neglecting foreign accomplishments.

However, as in the 16th century, the city's musical life was enriched by amateur music circles where foreign music was enjoyed. Both Kriegers dedicated instrumental works to such groups, including the Schönerischer Music-Collegio and the Kaufmännische Collegium Musicum. The 1588 society, after its demise in 1602, was set up again in 1626 by Lucas Friedrich Behaim, son of Paul Behaim (fig.3). The records finish abruptly in 1629. Johann Staden and his son Sigmund Theophil Staden, organist at St Lorenz, were major composers for this society. S.T. Staden also mounted an elaborate concert in 1643, tracing the development of music from earliest times under the title 'Entwerfung des Anfangs, Fortgangs, Änderungen, Brauchs und Missbrauchs der Edlen Music'. The concert included music of the angels, music recorded at the beginning of the world and music of the Hebrews, all by Staden himself, and works of Lassus, Hassler, Giovanni Gabrieli and Johann Staden.

However, the chief circle in Nuremberg at that time in the field of the arts was the Pegnesische Blumenorden, which also sponsored concerts. Founded in 1644 by Harsdörffer and Johann Klaj, the Blumenorden consisted largely of local poets and clerics, who wrote most of the song texts for the Nuremberg composers. In 1649, at a banquet celebrating the end of the Thirty Years War, music was performed by a group of 43 musicians, also under the direction of S.T. Staden (fig.4). Löhner and S.T. Staden were the only Nurembergers to write operas, and in 1667 the first opera house in Nuremberg was established.

3. After 1700. Success with the manufacture of brass instruments apparently continued well into the 18th century, and one of the city's instrument makers, J.C. Denner, was noted for the manufacture of the chalumeau and clarinet. Among printers active in the 18th century were Johann Ulrich Haffner, Johann Ernst Altenburg and Balthasar Schmidt, who was also a composer. However Charles Burney, travelling through Europe in the mid-18th century commented that only in Nuremberg was music engraved rather than printed with type, and that there was only one musician of note: Agrel, the town musical director until 1765. Nuremberg was now heavily in debt and reduced to provincial status. It was visited by Mozart in 1780 ('an ugly town', he wrote in a letter), Haydn in 1792 and Beethoven in 1795. Works by these composers were also played in the city.

Only in the 19th century did Nuremberg begin to emerge once again as a musical centre, though of lesser status than in its golden age. In 1821 the town music director Blumröder formed a singing school, the forerunner of the conservatory. In 1829 the first men's group was organized, followed in 1842 by a Mozart society. Wagner visited Nuremberg in 1835, and a church music festival was established in 1885.

During the 20th century the city's opera and orchestra became major musical attractions, if of no more than local importance. A new opera house was built in 1905. Before the Hitler years there was a tendency to embrace contemporary music (Stravinsky played his Capriccio here), and the city became well known as a centre for operetta. Richard Strauss brought *Frau ohne Schatten* and *Feuersnot* in 1924–5 and Weill's *Der Protagonist* was given as part of its première tour in 1927–8. All the major opera singers performed in Nuremberg during these years, and such musicians as the bass-baritone Jaro Prohaska and producer Rudolf Hartmann began their careers in the city, and Richard Holm was born there. From 1928 until the war years the city introduced not only major light opera works but new chamber works at the Ars Nova concerts.

The Nazi era brought its own musical style, and carried Nuremberg to the fore when the city became the party conference centre in 1933. *Die Meistersinger* was performed as the highpoint of the first day's events, and was to return at the conference every year. Nuremberg sponsored the young musician Hans Grimm. Gottfried Müller, born in Dresden in 1914, achieved some fame for his stirring national songs as a teenager, and after the war continued his musical career. In 1961 he was appointed professor of composition at the Nuremberg Conservatory. Other musicians' connections with Nuremberg are tenuous. Distler was a native, but left the city after his secondary schooling. The Berg family included wealthy Nuremberg merchants, but Berg himself had no connection with the city. Hans Gebhard moved to Nuremberg to pursue a career in music; he taught at a girls' school, directed the Chor- und Orchesterklub in the Nuremberg Merkur society, and specialized mostly in choral music, especially with young people. His brother Max became conductor of the Gesang- und Orchesterverein and a professor at the conservatory. Karl Thieme moved to Nuremberg as a school musician before being appointed lecturer in music at Erlangen University, Nuremberg. Willi Spilling (1909–65) was born in the city and studied there and in Berlin before becoming an assistant at Erlangen University. He was the founder of the Collegium Musica and a chamber trio. From 1948 he led the music department at the Nuremberg studio of Bavarian Radio. He was also instrumental in reviving the Ars Nova concerts under the auspices of Bavarian Radio.

After the war the city was able once again to return to its cultural pursuits, and a number of amateur, semi-professional and professional musical groups were founded: the Städtisches Orchester, the Fränkische Landesorchester (later the Nuremberg SO), several chamber orchestras, the Singgemeinschaft, the Madrigalchor and the Nürnberger Philharmonische Chor. The city's historical interest in the organ has been continued with an annual international organ week (Musica Sacra), sponsored by the city council since 1952. A chair in musicology at the University of Erlangen-Nürnberg (founded in 1743) was inaugurated in 1956; its first incumbent was Bruno Stäblein, who established a tradition of plainchant study there. In 1963 the Meistersingerhalle – the first major concert hall complex in the city – was opened. A historical collection of musical instruments, established in 1859 in the Germanisches Museum, has grown into a sizeable collection, but of the little surviving Nuremberg music, that held by the Staatsarchiv was transferred in 1894 to Munich (*D-Mbs*).

HAROLD E. SAMUEL/SUSAN GATTUSO

Nurïmov, Chary (*b* Bairam-Alisk, 1 Jan 1941). Turkmen composer. He graduated from the Gnesin Institute in Moscow where he studied with Litinsky and after some postgraduate work joined the Ashkhabad Institute of Arts (1972). He became head of the Turkmen Composers' Union in 1977 and has received numerous awards and prizes including People's Artist of the Turkmen Republic (1986) and the State Prize of the USSR (1987). He wrote the first Turkmen ballet, *Gibel' sukhoveya* ('Death of the Arid Wind'), in 1967. This and his other works – which include a popular Trumpet Concerto – combine Western tradition with Turkmen folk music; some of his compositions were inspired by the beauty of particular melodies found in Turkmen songs and dances.

WORKS
(*selective list*)

Sym. no.3, 1963–88; Gibel' sukhoveya [Death of the Arid Wind] (ballet), 1967; Tpt Conc., 1968; Tekinskiye freski [The Tekin Frescoes], 11 insts, 1969; Conc.- Poem, 1v, orch, 1971; Bessmertiye [Immortality] (ballet), 1972; Gazel'l [Ghazels], ob, perc, pf, str, 1976; Kugitanskaya tragediya [A Kughitang Tragedy] (ballet), 1977; 3 Qts, 1980–86; Dagestan Conc. [no.1], 1984; Dagestan Conc. [no.2], 1985; film scores, incid music, choral music and songs

RAZIA SULTANOVA

Nürnberg (Ger.). *See* NUREMBERG.

Nürnberger. German family of bowmakers. Christian Gottlob Nürnberger (*b* Markneukirchen, 31 Dec 1792; *d* Markneukirchen, 17 Aug 1868), whose father and grandfather were both violin makers, was the first bowmaker of the family, being first recorded as such in 1823. His son, Franz Albert Nürnberger (i) (*b* 19 Aug 1826; *d* 26 May 1894) made very high quality bows in an old German style; they are unsigned. Franz Albert (i) and his son, Franz Albert (ii) (*b* Markneukirchen, 24 April 1854; *d* Markneukirchen, 15 Feb 1931), were founding members of the Bogenmacherinnung Markneukirchen, where they are recorded as Albert sen. and Albert jun.

Franz Albert (ii) began a very successful business relationship with the Wurlitzer Company, Cincinnati, early in the 20th century. About this time he began to offer a new Tourte-type model, which became the typical 'Nürnberger bow'. His bows are made of the finest materials and they were as highly regarded as those of his French counterparts. His son, Carl Albert Nürnberger (*b* Markneukirchen, 28 Oct 1885; *d* Markneukirchen, 2 March 1971), became his successor. It was Carl Albert, working with his brother Philipp Paul (*b* 29 Jan 1882; *d* 6 April 1946), who perfected the 'Nürnberger bow'. His bows were played by some of the most famous artists of his time, including Fritz Kreisler, Eugène Ysaÿe and David Oistrakh. Carl Albert was succeeded by his son, Karl Albert (*b* 22 April 1906; *d* 9 Oct 1972), and grandson, Christian Albert (*b* 12 Dec 1947).

Expert knowledge is required to distinguish the work of the various members of the family, as the stamp ALBERT NÜRNBERGER was used for most of the 20th century.

KLAUS GRÜNKE

Nussio, Otmar (*b* Grosseto, 23 Oct 1902; *d* Lugano, 22 July 1990). Swiss conductor, composer and flautist of Hungarian descent. He studied at Milan and in Rome under Respighi, then in 1936 settled in Zürich, teaching the flute at the conservatory until 1938 when he became director of the Orchestra della Radio della Svizzera Italiana until 1966; he maintained this position until 1968; his other function was head of programming of the musical department of Radio della Svizzera italiana. In 1953 he founded the Concerti di Lugano, of which he was the artistic director until 1966. His music avoids modern elements and is characterized by a faithfulness to traditional forms, a descriptive quality and skilful orchestration. His celebratory *Vita ticinese* (1941) reveals his attachment to the typically Swiss *Festspiel.* In his later years he turned to poetry: his collection *Il caleidoscopio d'un ottuagenario* was published in 1985.

Nüssle. *See* NISLE family.

Nut (i) (Fr. *sillet*; Ger. *Sattel*, *Obersattel*; It. *capo tasto*). In string instruments, the thin ridge inserted between the pegbox and fingerboard, and at a right angle to them (*see* VIOLIN, fig.5). It is generally of ebony or other hardwood, but sometimes of ivory (especially in early instruments). The strings, secured at the lower end of the instrument, run over the bridge and then over the nut to the pegs or other tightening devices. The nut serves to raise the strings sufficiently above the fingerboard to allow the open strings to sound freely in a given length from nut to bridge and, like the bridge, it holds the strings at fixed distances apart by means of grooves cut in its top.

For the meaning of 'nut' when speaking of a bow *see* FROG.

DAVID D. BOYDEN/R

Nut (ii). In harpsichords the term that usually denotes the non-sounding bridge located on the wrest plank near the tuning pins. Some harpsichords have free soundboard wood under the nut. In a virginal, if both bridges are placed on free soundboard (which is usual) the left-hand bridge (assuming the tuning pins are on the right as seen from the keyboard) is usually designated the nut. Usage on this point is not consistent.

Nuwera, Abdel-Halim. Egyptian composer and conductor. *See* EGYPT, §II, 2(v).

Nux, Johannes. *See* NUCIUS, JOHANNES.

Nuyts, Frank (*b* Ostend, 3 Feb 1957). Belgian composer and percussionist. He studied music theory and percussion at the Ghent Conservatory, where he now teaches percussion. He studied composition at the IPEM with Goethals, who influenced his early works in the use of total serial techniques and a preference for South American atmosphere (e.g. *Alejandome del camino*). In the early 1980s Nuyts found his own way: in *Sonivers II* he uses cellular development and tries to reconcile serialism with tonality. His music became more playful and humorous, using driving and swinging rhythms (*Rastapasta* and *Woodnotes*). After performing his music with groups such as Membra and De Giek, in 1989 Nuyts founded Hard Score, which uses synthesizers, digital keyboards, drums and percussion to recreate the uninhibited qualities of a rock band. He has written homages to stars from the pop world in *Prince's Pride*, *Death, where's thy Sting* and *Za-va-pa (zencore)*, parts of the cycle *Quirks*. In 1993 he returned to traditional instruments in some large compositions, without however renouncing the ideas tried out in Hard Score (with which he is still involved). In 1980 he was awarded the Tenuto Prize by Belgian Radio and Television for his orchestral work *Alsof de hand nooit meer weggaat. . .*; in 1995 he received the Ghent culture prize.

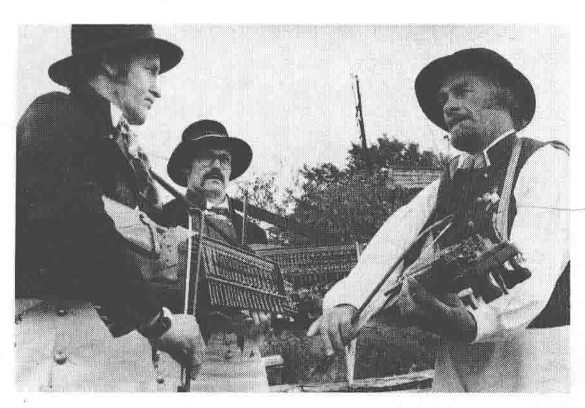
YVES KNOCKAERT



NWA [Niggaz with Attitude]. American rap group. They first gained public prominence with the album *Straight Outta Compton* (Ruthless, 1988), produced by band members Dr Dre (Andre Young) and DJ Yella (Antoine Carraby), with raps by Eazy-E (Eric Wright), MC Ren (Lorenzo Patterson) and Ice Cube (Oshea Jackson). Furiously energetic, raw and confrontational, tracks such as 'Fuck tha police', 'Straight outta Compton' and 'Gangsta Gangsta' precipitated an FBI investigation and media outcry. NWA countered with the claim that they were simply journalists recording the reality of black life in deprived areas such as South Central Los Angeles. Despite a lack of radio or television support the album sold in large quantities and launched the West Coast style of rap known as GANGSTA RAP. Soon after, the group began to split apart. Claiming unpaid royalties, Ice Cube left to pursue a highly successful solo career. His departure was followed by Dr Dre, who became one of the most significant rap producers and entrepreneurs of the mid-1990s, working with Snoop Doggy Dogg and Tupac Shakur among others. NWA's album *Efil4zaggin* (Ruthless, 1991) was even more extreme in its language and subject matter than *Straight Outta Compton*. In the UK, copies were seized under the Obscene Publications Act and only returned after a successful court action by Island Records, the distributing company. After a career of acrimony and controversy, NWA splintered into solo projects, finally ending with the AIDS-related death of Eazy-E in 1995.

DAVID TOOP

Nyckelharpa [nyckelgiga] (Swed.; Ger. *Schlüsselfiedel*). A bowed chordophone with a key mechanism, formerly known in England as 'keyed fiddle'. Like the HURDY-GURDY, the strings are stopped by tangents held in keys placed at right-angles to the neck and pressed by the fingers; they are played with a short hand-held bow, however, not with a rosined wheel.

As far as can be ascertained, the *nyckelharpa* first existed in Scandinavia; it has survived until modern times within a small area of Sweden centred around the province of Uppland. The earliest iconographical sources are chiefly to be found in 15th- and 16th-century frescoes, although a relief on the south portal of Källunge church, on the island of Gotland, dating from about 1350, depicts a figure playing an instrument that appears to be a *nyckelharpa*. The oldest extant *nyckelharpan*, from the 16th and 17th centuries, have two different forms: one with an elongated body in the shape of a figure-of-eight with a flat bottom and a flat belly, separately made; the other with either a pear- or a boat-shaped body, made in a single piece with the neck, and with a slightly vaulted belly. The boat shape became normal from the late 17th century, with marked middle bouts, a high border and a strongly vaulted belly with two oval soundholes. During the 20th century the body came to resemble that of the violin family, with a slightly vaulted belly and two f-holes. The bottom and the belly are now often made separately and the wooden tuning-pegs are supplemented or even replaced by a guitar-like tuning mechanism.

One of the two earliest types of *nyckelharpa* was known as the *enkelharpa* (single harpa). It had one melody string and one or more drone strings. The bridge was flat, so that the melody string and one or two of the drone strings could be bowed simultaneously. On the other type, known as the *mixturharpa*, the keys were fitted with a second tangent, thereby permitting one or more of the strings adjacent to the melody string to be stopped simultaneously. Sympathetic strings were first added during the 17th century. In an 18th-century type, known as the *kontrabasharpa* (contra-drone harpa), the extra tangent was applied to a bass string on the opposite side of the drone strings from the main melody string, thus creating a second melody string. This type of instrument has survived until modern times in an unbroken tradition. The *silverbasharpa* was developed in the 19th century from the *mixturharpa* by the addition of a second row of keys below the first, permitting the 'mixture' string to be stopped independently of the main melody string (while still bowing the drone string). The modern chromatic *nyckelharpa* was created by August Bohlin in 1923. This had a third bowed string with its own keys, and the principle of applying several tangents on each key was abandoned. Instruments with four rows of keys and four

Nyckelharpan played by Curt Tallroth (left), Leif Alpsjö (centre) and Nisse Nordström (right); the latter two instruments are by Sahlström nyckelharpas

bowed strings are also played. On three- and four-row instruments the shape of the bridge is similar to that of the violin, so that each melody string may be bowed separately. The four-row type is generally tuned in fifths (*g–d′–a′–e″*, or a fifth lower); the *silverbasharpa* and the three-row *nyckelharpa* are tuned *c–g–c′–a′*.

From a low point in the mid-20th century when the *nyckelharpa* was played by only a few hundred musicians, there has been a resurgence of interest in the instrument since about 1970, due largely to the influence of the maker, composer and performer Eric Sahlström (1912–86); Åsa Jinder and the Nordman group have also played an important role in increasing the instrument's popularity. The *nyckelharpa* is now heard in other genres besides traditional music (chiefly popular music) and its use has begun to spread outside the Nordic region, albeit on a limited scale. The World Championships in *Nyckelharpa* Playing, held at various locations in Sweden, has attracted participants from Britain and the USA.

Nygryn, Georg. *See* ČERNÝ, JIŘÍ.

Nyiregyházi, Ervin (*b* Budapest, 19 Jan 1903; *d* Los Angeles, 13 April 1987). American pianist of Hungarian birth. At the age of two he began to play the piano, and at four he started to compose; as a child prodigy, he was the subject of a detailed study (see Révész). He took piano lessons first with Lamond and, from 1914, with Dohnányi. His public appearances, including a performance of Liszt's Second Piano Concerto under Nikisch in Berlin (1918) and a New York début (1920), aroused highly favourable comment. His career, however, failed to develop, and although he performed occasionally in the 1920s and 30s (Schoenberg was much impressed by his free, romantic style in 1935) he was reduced to working chiefly in film studios in the Los Angeles area. He continued to compose, and is thought to have written over 700 works. In 1974, in San Francisco, he was again heard in a semi-private recital, and made such an impression that he was taken up by those interested in the history of piano playing, notably the International Piano Archives, and made several recordings. In style he was influenced by Liszt, Busoni and Paderewski; his slow tempos, textual freedoms and individuality of interpretation aroused particular comment.

Nylandensis, Theodoricus Petri. *See* THEODORICUS PETRI NYLANDENSIS.

Nyman, Michael (Laurence) (*b* London, 23 March 1944). English composer. He studied composition with Alan Bush at the RAM (1961–4) and musicology with Dart at King's College, London (1964–7). He also spent time collecting folk music in Romania (1965–6). After showing early promise as a composer, he fell silent for almost a decade, during which he worked variously as an editor, librettist and performer, and as a music critic for *The Spectator*, *The Listener* and the *New Statesman*. It was in *The Spectator* in 1968 that he first applied the description 'minimal' to music, though the claim that he introduced the term to music criticism has been disputed (see Strickland, 241–4). Nyman's earliest work, dating from the mid-1970s, shows the influence of John Cage's aesthetics and the techniques of experimental and minimalist music, both of which he had charted in his book *Experimental Music* (London, 1974). For instance, the multiple piano piece *1–100* (1976) employs a series of 100 chords, descending gradually across the range of each piano part in a circle-of-fourths motion, to control both the note-to-note details and the overall form. Durations meanwhile are indeterminate, the performers proceeding through the music at their own pace.

Like many musicians associated with the English experimental movement, Nyman found himself teaching in fine art rather than music departments, holding posts (from the late 1960s) at Trent Polytechnic, Nottingham University and Goldsmith's College, London. These liberating creative environments led him towards a tactile and intuitive approach to sound and timbre. Pre-existing materials form the basis of much of his early music, including *In Re Don Giovanni* (1977) and his first film scores for the director Peter Greenaway. While his use of quotation suggests parallels with the early work of Bryars and Christopher Hobbs, the techniques of layering, stratifying, reordering and superimposing that Nyman uses to transform his material more closely resemble those of film and popular music production. Also during this period he began to develop with an ensemble of his own the vibrant and uncompromising sound world of the 'street band' he had employed for the National Theatre's production of Goldoni's *Il Campiello* (1976). The Michael Nyman Band fused the abrasive, amplified timbres and motoric rhythms of rock with the string and brass writing of the classical tradition. For more than a decade, it provided Nyman with plenty of scope for timbral variety, dynamic flexibility and textural contrast, from the forthright articulation and rhythmic propulsion of the score for Greenaway's *The Draughtsman's Contract* (1982) to the gentle, understated textures of the chamber opera *The Man who Mistook his Wife for a Hat* (1986). Increasingly

Michael Nyman, 1993

during the 1990s, however, Nyman sought ways in which to incorporate this sound into an extended orchestral context, or even, for instance in the Trombone Concerto (1995), to dispense with it altogether.

Whereas Nyman's compositions during the 1980s referred explicitly to the works of past composers, the works of the following decade were marked by a concern with self-quotation, in particular the reworking of materials drawn from film scores or other dramatic contexts into independent, large-scale concert pieces. The score for *Prospero's Books* (1990), itself partly derived from *La traversée de Paris* (1989), proved particularly fertile in this respect: it gave rise not only to a suite (1994), but also to *Ariel Songs* (1990–91), *Masque Arias* (1991) and parts of *Noises, Sounds and Sweet Airs* (1994), otherwise based largely on *La princesse de Milan* (1989).

The 1990s also saw a significant change in Nyman's style: a move towards a more intimate expressivity characterized by sustained and resonant textures, and a broader approach to melodic writing. Early examples are found in the more reflective moments of *Prospero's Books* (1990) and the subtle shifts of mood and emphasis in the *Six Celan Songs* (1990). Allied with this lyricism was an increasing gravitation towards folk music. In the String Quartet no.3 (1990) Nyman drew on the Romanian sources he had studied in the 1960s, while in the score for Jane Campion's *The Piano* (1992) a series of traditional Scottish melodies is subjected to melodic, rhythmic and harmonic transformations.

Though Nyman draws on his knowledge and experience of American minimalism, distinctive elements of his musical language set it apart from those influences. He has spoken of his more 'intuitive' approach to process, in which 'the ear rather than the process is the initial and final arbiter' (1977, p.7). Moreover, the prominence of the bass in his music, as well as suggesting the influence of rock, creates a harmonic stability and rootedness more characteristic of the European tonal tradition than of American minimalism. It is this often curious confluence of classical harmonic functions and rock rhythms and textures that provides Nyman's music with a rich and effective fusion of the codes of 'high' and popular art.

WORKS
(selective list)

DRAMATIC

Il Campiello (incid music, C. Goldoni), 1976, London, National Theatre, 20 Oct 1976; The Masterwork (Award Winning Fish-Knife) (performance art work, collab. P. Richards and B. McLean), 1979, London, Riverside Studios, 1979; The Man who Mistook his Wife for a Hat (chbr op, C. Rawlence, after case study by O. Sacks), 1986, London, Institute of Contemporary Arts, 27 Oct 1986; The Fall of Icarus (dance score), 1989, collab. F. Plessi and F. Flamand, Brussels, Théâtre de la Monnaie, Oct 1989; La Princesse de Milan (dance op, K. Saporta, after W. Shakespeare: *The Tempest*), 1989, Avignon, 24 July 1991; Letters, Riddles and

Writs (TV op, J. Newson, after Mozart), 1991, BBC, 10 Nov 1991, staged London, Shaw, 24 June 1992; Noises, Sounds and Sweet Airs (op), 1994, Tokyo, Globe, 7 Dec 1994

MICHAEL NYMAN BAND

for a combination of the following: 2 s sax + a sax, bar sax + fl/pic, hn, tpt, b trbn/euphonium, pf, 3 vn, va, 2 vc, b gui

Film scores: The Draughtsman's Contract (dir. P. Greenaway), 1982; A Zed and Two Noughts (dir. Greenaway), 1985; Drowning by Numbers (dir. Greenaway), 1988; Monsieur Hire (dir. P. Leconte), 1989; The Cook, the Thief, his Wife and her Lover (dir. Greenaway), 1989; La mari de la coiffeuse (dir. Leconte), 1990; Prospero's Books (dir. Greenaway), 1990; The Piano (dir. J. Campion), Michael Nyman Band, orch, 1992; The Diary of Anne Frank (dir. S. Araki), 1995; Gattaca (dir. A. Niccol), 1997

Other: In Re Don Giovanni, 1977, arr. str qt, 1991; Bird List, 1979, rev. 1985; Water Dances, 1984, arr. 2 pf; Memorial, 1985 [from film score The Cook, the Thief, his Wife and her Lover]; La traversée de Paris, S, SATB, Michael Nyman Band, 1989; 6 Celan Songs, A, Michael Nyman Band, 1990; L'orgie parisienne (A. Rimbaud), S/Mez, Michael Nyman Band, 1990; Ariel Songs (W. Shakespeare), S, Michael Nyman Band, 1990–91 [from film score Prospero's Books]; The Final Score, 1992; The Upside-Down Violin, Michael Nyman Band, orch, 1992; MGV (Musique à grande vitesse), Michael Nyman Band, orch, 1993; Prospero's Books, suite, 1994 [from film score]; After Extra Time, 1996

PWYLL AP SIÔN

Nystedt, Knut (*b* Oslo, 3 Sept 1915). Norwegian composer. His first teachers were Arild Sandvoild (organ) and Reimar Riefling (piano). He later studied theory and composition with Brustad and in the USA with Copland in 1947; Fjeldstadt gave him instruction in conducting. Between 1946 and 1982 Nystedt held the position of organist and choirmaster at the Torshov Church in Oslo. In 1950 he founded Det norske solistkor, with which he toured throughout the world, often presenting new works in the choral repertory. The group quickly acquired an outstanding reputation.

Nystedt's first compositions were in a national Romantic style, making conscious use of folkloric elements within a modal harmonic and melodic language. After World War II he moved rapidly in the direction of neo-classicism, influenced primarily by Hindemith as well as Poulenc and Honegger; the extrovert and strongly rhythmic *Symphony for Strings* op.26 (1950) is typical of this period. With the renewal of Norwegian church music in the late 1950s Nystedt composed a collection of motets for the Protestant liturgy and was subsequently a much sought-after choral composer in the USA. In the 1960s he became attracted to the timbral developments in the music of Ligeti and Penderecki. This preoccupation is evident in the cantata *Lucis creator optime* op.58 (1968), one of his most significant works, in which he reaped the benefits of his practical experience in both choral and orchestral music. In the 1970s Nystedt played a significant role in introducing neo-romantic and pluralist traits into Norwegian music. In works such as *Shells* (1973) he developed new choral techniques with, again, a strong emphasis on timbral possibilities. Characteristic of his compositional technique is his integration of modern timbral experiments into a tonal framework with clear traditional points of reference. With unfailing artistry he has shown a remarkable ability to adapt new musical developments to his own, personal style. His inventiveness continued unabated in the 1980s and 90s.

WORKS

HARALD HERRESTHAL

Nystroem, Gösta (*b* Silvberg, Dalarna, 13 Oct 1890; *d* Särö, 9 Aug 1966). Swedish composer and painter. The son of a headmaster, organist, amateur painter and botanist, he grew up in Österhaninge. His father encouraged him to play the piano and gave him lessons in harmony and composition; until he was 11 he sang in the church choir, and from the age of 12 he deputized for his father as organist. At 15 he began private piano and harmony studies with Lundberg and Bergenson in Stockholm, and in the next year, after he had been refused admission to the conservatory, he studied in Strängnäs to become a primary-school teacher. He was able to study at the Swedish Royal Academy of Music in 1913–14, while taking private composition lessons from Hallén, but he was discontented there and went to Copenhagen, where he studied painting and composition for four years. After brief music studies in Germany he went to Paris in 1920, and there he remained for 12 years in the company of Scandinavian and French artists. He had lessons in composition and instrumentation from d'Indy and Sabaneyev and in conducting from Chevillard. After his return to Sweden he became a pugnacious music critic for the *Göteborgs Handels- och sjöfartstidning* (1932–47). He made painting trips along the Mediterranean coasts of Spain and France, and he held exhibitions in Copenhagen, Stockholm and Paris. Apart from his father, the greatest influences to which he admitted were from painters: Piero della Francesca, Braque and Adrian-Nilsson.

As a composer Nystroem worked best on a large scale, sufficient to allow his music to grow steadily and organically from its initial ideas. Much of his early work, including a piano concerto, a ballet and two oratorios all written in a late Romantic style, was lost when he moved to Paris in 1920. In such works as the symphonic poem *Ishavet* ('The Arctic Ocean', 1924–5) he revealed a powerful and individual, though somewhat ornate, orchestration influenced by Debussy, Ravel and Stravinsky's *The Rite of Spring*. Thereafter he was influenced by his study of Baroque polyphony, and during the 1930s he achieved a synthesis of neo-Baroque features and Romantic emotional ardour. For example, in the Concerto no.1 for string orchestra (1929–30) and the *Sinfonia breve* (1929–31), the latter an artistic breakthrough, he brought together strict linear construction, polyrhythm and harsh dissonance, producing a style that was found shocking at the time. This style was perfected and brought to a dramatic culmination in the *Sinfonia espressiva* (1932–5), where an ever more intensified development through the four movements leads from the sound of a solo violin to a fully orchestrated, fugued mass of sound.

Later Nystroem's music became more harmonic in conception and more lyrical in expression; nature, and in particular the sea, became a dominant stimulus. Marine Impressionism had already featured in *The Arctic Ocean*, a description of a voyage in the northern Arctic with Amundsen, and the manner was pursued in the incidental music to *The Tempest* (1934), the *Sånger vid havet* ('Songs by the Sea', 1942), the *Sinfonia del mare* (1947–8), which, built in an effective symphonic curve around the song 'Det enda' ('The Only Thing'), brought Nystroem popularity, the opera *Herr Arnes penningar* ('Herr Arne's Money', 1958) and the powerful *Concerto ricercante* (1959), constructed in one sweeping stream. His last works saw a return to taut contrapuntal structure combined with a mature, elegiac tone, as in the *Sinfonia seria* (1963), the *Sinfonia tramontana* (1965) and the two string quartets.

WORKS

DRAMATIC

Radio op: Herr Arnes penningar [Herr Arne's Money] (B. Malmberg, after S. Lagerlöf), 1958

Ballet: Ungersvennen och de sex prinsessorna [The Young Gentleman and the Six Princesses], 1950–51, 2 suites, 1950–51

Incid music: Konungen [The King] (P. Lagerkvist), 1933, excerpted as Teatersvit no.1; Stormen [The Tempest] (W. Shakespeare), 1934, excerpted as Teatersvit no.2; Bödeln [The Executioner] (Lagerkvist), 1934, excerpted as Teatersvit no.3; Vår ära och vår makt [Our Honour and our Power] (N. Grieg), 1935; Köpmannen i Venedig [The Merchant of Venice] (Shakespeare), 1936, excerpted as Teatersvit no.4; Madame Bovary (G. Baty), 1938; Vävaren i Bagdad [The Weaver in Baghdad] (H. Bergman), 1943; De blinda [The Blind] (M. Maeterlinck), radio score, 1949

ORCHESTRAL

Rondo capriccioso, vn, orch, 1917, rev. 1920; Ishavet [The Arctic Ocean], sym. poem, 1924–5; Babels torn, sym. poem, 1925; Sym. no.1, 1920s; Suite lyrique, 1928, arr. pf as Regrets; Conc. no.1, str, 1929–30; Sinfonia breve (Sym. no.1), 1929–31; Sinfonia espressiva (Sym. no.2), 1932–5, rev. 1937; Va Conc. 'Hommage à la France', 1940; Sinfonia concertante, vc, orch/pf, 1940–44

Ouverture symphonique, 1945; Sinfonia del mare (Sym. no.3) (E. Lindqvist), S, orch, 1947–8; Palettskrap [Palette Sketches], suite, 1950; Sinfonia shakespeariana (Sym. no.4), 1952; Partita, fl, str, hp, 1953; Vn Conc., 1954; Conc. no.2, str, 1955; Conc. ricercante, pf, orch, 1959; Sinfonia seria (Sym. no.5), 1963; Sinfonia di lontano, 1963; Sommarmusik (E. Malm), S, chbr orch, 1964; Sinfonia tramontana (Sym. no.6), 1965

CHORAL AND CHAMBER

Choral: Herre, vem får bo i din hydda [Lord, who shall abide in Thy tabernacle?] (Ps xv); Huru skön och huru ljuv [How fair and how pleasant] (Bible: *Song of Solomon*); Säg mig du [Tell me, o thou] (*Song of Solomon*); 3 havsvisioner [3 Sea Visions] (E. Diktonius, Lindqvist, V. Ekelund), 1956; Golfiner (C.E. Claeson), 1966

Chbr: Valse solennelle, pf, 1914; Valse marine, pf, 1920; Regrets, pf, 1923–4; Rondo capriccioso, vn, pf, 1927; Str Qt no.1, 1956; Prélude pastorale, pf, 1960; Str Qt no.2, 1961

SONGS

for 1v, pf unless otherwise stated

Hjärtat (H. Bergman), 1916; Ångest (Lagerkvist), 8 songs, 1923–8, 4 orchd; Det satt en katt vid Kattegatt (A.M. Roos), 1923; Nocturne (A. Österling), 1924, orchd; Gubben och gumman skulle mota vall [The old man and the old woman would turn out to graze] (trad.), 1927, orchd; Som ett blommande mandelträd [Like a blossoming almond-tree] (Lagerkvist), 1927; 3 sånger ur Stormen (Shakespeare), 1934, orchd; 3 kärleksvisor [3 Love Songs] (Song of Songs, Österling, Lagerkvist), 1917–42, orchd; Sånger vid havet [Songs by the Sea] (Lindqvist, E. Södergran, H. Gullberg, R. Jändel), 1942, orchd

Brunnen [The Spring] (J. Hemmer), 1944; Den röda blomman [The Red Flower] (A.G. Bergman), 1944; En frivillig [A Volunteer] (M. Stiernstedt), ?1945; Att älska i vårens tid [To Love in the Springtime] (G. Rybrant), 1948; På reveln [On the Spit] (Österling, Malm, Lindqvist), 1949; Lyssna, hjärta [Listen, Heart] (R. Tagore), S, A, fl, triangle, small gong, pf, 1950; Viser (M. Lorentzen), ?1950; Det enda [The Only Thing], 1951 [from Sym. no.3]; Den lyse nat [The Bright Night] (Lorentzen), 1951; Själ och landskap [Soul and Landscape] (Nya sånger vid havet) [New Songs by the Sea] (Lindqvist), 1952

Andakt [Devotion] (J. Oterdahl); Der er i skogen [In the Wood] (J. Welhaven); I ljusningen [At Dawn] (H. Martinson); Jag diktar för ingen [I Write for No-One] (Ekelund); Lillebarn [Child] (B. Bergman); Natt vid sätern [Night on the Mountain Pasture] (C. Günther); Ord mot det tomma [Words against the Emptiness] (B. Malmberg)

ROLF HAGLUND

N.Z. Cracoviensis (*fl* 1st half of the 16th century). Polish composer and organist. Eight works attributed to 'N.Z.' and one to 'N.Z. Crac.', are known from the organ tablature from the monastery of the Holy Ghost, Kraków (this large manuscript of 362 pages, written about 1548, was destroyed during World War II, but there is a microfilm in the Isham Memorial Library, Cambridge, Massachusetts). Six of these nine compositions were also copied in Jan z Lublina's tablature (*PL-Kp* 1716; ed. in CEKM, vi, 1964–7), five without ascription while the sixth is initialled N.C. It is not known whether this is a copyist's error for N.Z., or whether N.Z. is identifiable with N.C. (i.e. Nicolaus Cracoviensis, also called Mikołaj z Krakowa), who also has works attributed to him in the two tablatures. All N.Z.'s pieces are based on cantus firmi, seven on chorale melodies and two on sacred songs. The chorale-based works are all in four parts: these are Kyrie 'Fons bonitatis' and *Sanctus solemne*, both intended for alternatim performance, the introit *Gaudeamus omnes*, *Ecce panis* (a single stanza from the sequence *Lauda Sion*; an anonymous piece in *PL-Kp* 1716 based on the entire sequence may also be by him), the antiphon for St Stanislaus *Ortus de Polonia* (ed. Z.M. Szweykowski, *Muzyka w dawnym Krakowie*, Kraków, 1964) and the hymns *Crux fidelis* and *Tantum ergo*. The works based on song melodies are *Nasz Zbawiciel* [Our Saviour] (ed. in MAP, ii/4, 1994) and *Cristus iam surrexit*; both are in three parts. The cantus firmi usually migrate; free counterpoint with instrumental traits dominates, but imitation is used in some works. Dominant-tonic cadences are comparatively frequent. *Nasz Zbawiciel* is in the form of variations: the song melody is heard first in the lowest part, then in the middle and highest parts.

PIOTR POŹNIAK

Oakeley, Sir **Herbert (Stanley)** (*b* Ealing, London, 22 July 1830; *d* Eastbourne, 26 Oct 1903). English composer, organist and educator. He was the second son of Sir Herbert Oakeley, 3rd baronet. His musical gifts began to show when he was only four; at the age of nine, guided by his mother, he began to compose. He was educated at Rugby and at Christ Church, Oxford, graduating BA in 1853 and MA in 1856. At Rugby opportunities for music were few but in Oxford he studied the organ and harmony with Stephen Elvey, the university organist. Visits to clerical friends at Durham and Canterbury strengthened his leaning towards the Church and at one time he thought of taking holy orders. In Leipzig he studied under Plaidy, Moscheles and Papperitz, then he went to Dresden to study the organ with Johann Schneider, and finally to H.K. Breidenstein at Bonn.

In 1865 he was appointed to the Reid Chair of Music at Edinburgh University; he resigned in 1891 on grounds of health and became professor emeritus. His occupancy had been a lively one, full of innovations. He procured a splendid organ for the music classroom, on which he gave many fine recitals (he was particularly gifted in improvisation). He turned the annual concert established by General Reid's will into a three-day festival (1872), bringing the Hallé Orchestra from Manchester, with some of the most famous artists of the time. In 1865 he founded the Edinburgh University Musical Society for students, which still gives public concerts. His greatest achievement was, however, to persuade the Senatus to make of the Reid School a true faculty of music, with full academic curriculum and power to confer degrees.

Oakeley still found time to compose much, church music especially, but also for the piano, orchestra and voice. His compositional style was generally in keeping with late Victorian fashion; the best-known works included the hymn tunes 'Abends' and 'Edina', his quadruple psalm chant in F and his sacred partsong 'Evening and Morning'. From 1858 to 1866 he was music critic of *The Guardian*. He wrote and directed the music on the unveiling of the Albert Memorial in Charlotte Square, Edinburgh, in 1876; he was then knighted and appointed Queen's Composer in Scotland. He was the recipient of many honorary doctorates and other distinctions from universities in Britain and abroad and other bodies.

WORKS

some MSS at GB-Er

all printed works published in London

A Jubilee Lyric (cant), op.29, Cheltenham Festival, 1887 (1887)

Orch works, incl. Edinburgh Festal March, op.22 (1874); Funeral March, op.23 (1875); 6 Hymns, op.31; Minuet and Trio in Olden Style (1885); Suite in Olden Style, op.27, Cheltenham Festival, 1893 (1893)

Church music, incl. Full Service, E♭, op.9 (*c*1880); Psalms and Hymns for Men's Voices (1889); 7 anthems, opp.26, 32, 34, 39–42 (1903); many other anthems; hymn tunes

Partsongs and songs, incl. 3 Vocal Quartets, op.16 (1858/9); 6 Part Songs, op.17, male vv (*c*1859); Scottish National Melodies, op.18, male vv, orch (*c*1859); 4 Choral Songs, op.25, male vv (?1866); 20 Songs, ded. Queen Victoria (1887)

Pf works, incl. 3 Romances, op.33 (1895); Andante, D, org (1887)

JEAN MARY ALLAN

Oakland. Town in California, near San Francisco, USA. It has its own symphony orchestra (founded 1933), and Oakland public library and museum hold music collections. It is also the seat of Mills College, since the 1930s an important centre for new music. *See* SAN FRANCISCO, §§2, 3 and 5.

O Antiphons [Great Antiphons]. In present-day liturgy a set of seven antiphons to the *Magnificat*, each text beginning with the exclamation 'O': 'O sapientia', 'O adonai', 'O radix Jesse', 'O clavis David', 'O oriens', 'O Rex gentium', 'O Emmanuel'. One of these is sung on each of the seven days preceding Christmas Eve (see *AM*, 208–11). In the Middle Ages and the Renaissance, the number of antiphons was sometimes as many as 12, with added texts such as 'O virgo virginum' (the most popular), 'O Gabriel', 'O Thomas Didyme', 'O Rex pacifice' and 'O Hierusalem' (for example, a sequence of 11 antiphons beginning on 13 December is found in the 11th-century manuscript *GB-Lbl* Harl.2961). It would appear, however, that the first seven were conceived as a separate entity. For one thing, the texts of all seven follow the same basic pattern, first addressing Christ by different titles ('Wisdom', 'Key of David' etc.), then begging him to come to us ('Veni'). Perhaps more striking is the acrostic that results when the first letters of the antiphons are read in reverse order: 'ero cras' ('tomorrow I will be with you'), appropriate to the Advent season.

The antiphons originated at the latest in the 8th century: they were known to Alcuin (735–804) and Amalarius of Metz (775–850), and extensive paraphrases of the texts appear in a poem written before 800 by the English poet Cynewulf. The antiphons are all sung to the same 2nd mode melody. They inspired only a few polyphonic settings, the best-known being Josquin's *O virgo virginum*. The texts of the seven plus *O virgo virginum* are troped in the tripla of a series of related isorhythmic motets in *I-Tn* J.II.9 (14th century). Attaingnant published

settings of all seven in a book of motets for three, four, five and six voices, *Liber septimus XXIIII* (RISM 1534⁹); there are also settings by J.W. Michl in St Peter und Paul, Weyarn. In the late 17th century, Marc-Antoine Charpentier composed settings for three voices and basso continuo.

RICHARD SHERR

Oasis. English rock group. It was formed in Manchester in 1992 by Noel Gallagher (*b* Old Trafford, 29 May 1967; lead guitar and vocals), his brother Liam Gallagher (*b* Burnage, 21 Sept 1972; lead vocals), Paul 'Bonehead' Arthurs (*b* 23 June 1965; rhythm guitar: later replaced by Gem Archer), Paul 'Guigsy' McGuigan (*b* 19 May 1971; bass guitar: later replaced by Andy Bell) and Tony McCarroll (drums: later replaced by Alan White, *b* 26 May 1972). After signing to the indie label Creation, the band's first single, *Supersonic* (1994), set down the blueprint for their trademark style of slow-tempo, catchy pop songs. Liam Gallagher's sullen, declamatory delivery owes much to previous groups associated with Manchester, particularly the Happy Mondays, but Oasis grafted a melodic, song-based aesthetic onto their work, largely foreswearing the dance-oriented music of their local scene. Their excellent first album, *Definitely Maybe* (1994), contained the sublime tracks *Live Forever* and *Slide Away*. Unabashed admirers of Lennon and McCartney, their Christmas single for that year, *Whatever*, complete with a string section and sing-along chorus, was an artful Beatles pastiche. *What's the Story (Morning Glory)* (1995) contained a string of successful UK hits such as *Roll with It*, and the rock ballads *Wonderwall* and *Don't Look Back in Anger*. *Be Here Now*, the most eagerly anticipated album of the year and an instant UK number one, was similar in style, if with a harder rock edge. Oasis's fusion of 1960s Beatles-inspired melodies, 1970s Slade-influenced glam rock and 1980s Happy Mondays' indie styles has made them one of the most commercially successful British bands of the 1990s. The Masterplan, a collection of 'B-side' releases, entered the UK charts in 1998. For further information see P. Hewitt: *Getting High: the Adventures of Oasis* (London, 1997).

DAVID BUCKLEY

Obadiah the Proselyte (*fl* Oppido, Apulia, early 12th century). Norman-Italian baronet. A convert to Judaism, he was responsible for the earliest surviving manuscript source of Jewish music; *see* JEWISH MUSIC, §I, 3.

Obbligato (i) (It.: 'necessary'). An adjective or noun referring to an essential instrumental part. The term is often used for a part ranking in importance just below the principal melody and not to be omitted. Obbligato is the opposite of AD LIBITUM when the latter qualifies the mention of a part in a title. On the title-page of Corelli's *Concerti Grossi* op.6, for example, the concertino parts are designated 'obligato' while the ripieno parts are described as 'ad arbitrio, che si potranno radoppiare' (as you wish, when you are able to double the parts). Used in connection with a keyboard part in the 18th century, obbligato designated a fully written-out part instead of a figured bass. Sometimes obbligato means simply independent, as in C.P.E. Bach's *Orchester Sinfonien mit zwölf obligaten Stimmen* (1780).

In music for voice with instruments, 'obbligato' refers to a prominent instrumental part in an aria or other number. The archetype of the obbligato part is the instrumental solo which, with a basso continuo, constitutes the accompaniment of vast numbers of late Baroque arias. The direct antecedents of the late Baroque phenomenon are to be found in the *concertato* style of the early 17th century. Schütz's *Benedicam Dominum in omni tempore* (*Symphoniae sacrae*, i, 1629) for soprano, tenor, bass and continuo, with obbligato 'cornetto, o violino' is an early example, and the trumpet arias in later 17th-century opera carry on the development. Examples in Mozart's operas include one for horn in *Mitridate* (1770), one with flute, oboe, violin and cello in *Die Entführung* (1782) and the arias with clarinet and basset-horn in *La clemenza di Tito* (1791). An especially ornate violin obbligato appears in the Benedictus of Beethoven's Mass in D. Such parts were often less formal in the 19th century, but prominent obbligato writing for flute in particular is not unusual in Romantic opera – for example in the cadenza of the traditional version of the Mad Scene in *Lucia di Lammermoor* (1835) – and the cello and english horn are often assigned an obbligato role in melancholy contexts.

DAVID FULLER/R

Obbligato (ii). The term *recitativo obbligato* (or *recitativo strumentato*) is sometimes used for 'accompanied recitative'; that is, recitative accompanied by the orchestra instead of the continuo alone (*see* RECITATIVE).

DAVID FULLER/R

Obbligato (iii). The term 'obbligato homophony' is sometimes applied to the symphonic textures of Haydn and his contemporaries, characterized by a wealth of prominent, independent part-writing but not formal polyphony.

DAVID FULLER/R

Obbligo [obligo] (It.: 'obligation'). A 17th-century term indicating a compositional problem or task which the composer chooses to treat throughout a piece. An example is Frescobaldi's *Ricercar ottavo* (from *Ricercari, et canzoni francese fatte sopra diversi oblighi*, 1615), in which the voice parts have the 'obligation' to avoid conjunct motion entirely ('obligo di non uscire mai di grado'). More frequently the term indicates that the subject or theme – usually written at the head of the composition in solmization syllables, as in Frescobaldi's *Ricercar quarto, obligo mi re fa mi* (1615) – forms the chosen structural basis of the piece. In such pieces the 'obligation' is to maintain consistently the identity of the theme, which may be treated imitatively or canonically as a kind of migrant cantus firmus, or as an ostinato in one voice (e.g. Frescobaldi's *Ricercar con obligo del basso come appare* in *Fiori musicali*, 1635). Romano Micheli's *Musica vaga*

et artificiosa continente motetti con oblighi, et canoni diversi (1615) contains several five-voice motets in which the performer must resolve an 'obligation' set by the composer; *Veni sponsa Christi*, for example, has four written parts and the 'obligo' of a fifth part consisting of a six-note cantus firmus on the plainchant melody which is to be repeated five times to as many different mensurations. Paolo Agostini wrote a number of canonic masses with *obblighi* (published in 1627). An eight-voice Agnus Dei 'con obbligo sopra la sol fa mi re ut' (ed. in G.B. Martini: *Esemplare ossia Saggio fondamentale pratico di contrappunto*, ii, Bologna, 1775/*R*, pp.295ff) has the hexachord *obbligo* treated canonically in the upper two voices while the remaining six voices are derived from two one-in-three canons. Romano Micheli's 20-voice canon *Dialogus annuntiationis* (1625), with 30 *obblighi*, forms a highpoint in complexity in treating such pre-established restrictions.

□

Oberek [obertas]. Polish folk dance in triple time, with a rhythmic character similar to the MAZURKA, but distinguishable by its rapid tempo. The term 'obertas' is first recorded by Adam Korczyński (*Lanczafty*, 1697), with the now preferred 'oberek' dating from the 19th century. The dance originates from the Mazovia region, and with its increasing popularity has in some areas overtaken the KRAKOWIAK. Today it is usually performed by an instrumental group of violins, drum and harmonium. It is a whirling, circular dance for couples with stamping and kneeling figures. These figures are indicated by the music, which is performed with much rubato and freedom in the placing of accents within the bar. Several of Chopin's mazurkas have *oberek* characteristics, and there are also examples by Wieniawski, Szymanowski (the third of his Four Polish Dances of 1926), Statkowski and Bacewicz.

For bibliography *see* MAZURKA.

STEPHEN DOWNES

Oberheim, Thomas Elroy (*b* Manhattan, KS, 7 July 1936). American designer of electronic instruments. His name is primarily associated with the range of synthesizers designed by him and manufactured since 1974 by Oberheim Electronics, first in Santa Monica, California, then (from *c*1980) in Los Angeles. While working as an electronics engineer for a small computer company in the late 1960s Oberheim built amplification equipment for musicians in his spare time. He was asked to construct a ring modulator, and the success of the original device led to requests for others. In 1971 Maestro marketed both Oberheim's ring modulator and his phase shifter; Oberheim Electronics was set up in connection with their production. In 1973, when he was an agent for ARP synthesizers, Oberheim devised a digital sequencer (DS-2) and the following year he and Jim Cooper developed the 'Synthesizer Expander Module', a small monophonic synthesizer with two oscillators. In 1974–5 Oberheim marketed the first polyphonic synthesizers, the three-octave Oberheim 2-Voice and four-octave 4-Voice; these were based on the expander module (one module for each voice) combined with a keyboard developed by the newly formed E-mu Systems. The 8-Voice (one or two manuals) and less popular 6-Voice followed soon afterwards. The company then produced two programmable synthesizers, the monophonic OB-1 (1976) and the polyphonic OB-X (1979). Several variants of the latter followed, as well as (up to 1985) a further expander module, the Matrix 6 and 12 synthesizers which were based on it, a digital sequencer and an electronic percussion unit.

In 1985 Oberheim lost control of the company he had founded, which became part of ECC Development Corporation in Los Angeles; he left the company in 1987. After producing the Matrix 1000 and a sample player, Oberheim/ECC went bankrupt in 1989. It was briefly owned by Suzuki, then relaunched in 1991 by Gibson Guitars in North Hollywood and later Oakland, California; it is currently owned by the Italian electronic organ manufacturer Viscount.

In 1987 Oberheim founded Marion Systems in Lafayette, California, specializing in sampler and synthesizer modules, and carrying out external design work (including non-musical consulting). In 1999 he launched the first product from his new company Sea Sound.

HUGH DAVIES

Oberklang (Ger.). *See under* KLANG (ii).

Oberlender [Oberländer]. German family of woodwind instrument makers, active in Nuremberg. Johann Wilhelm Oberlender (i) (bap. 14 March 1681; bur. 25 Oct 1763) founded the family tradition of making woodwind instruments. He was granted master's rights as a wood turner in 1705, and was first mentioned as a turner of flutes in 1710. He soon rose above the rank of craftsman; documentary evidence shows him holding such positions as member of the Greater Council (1719) and sworn master of the turners' guild (1721–2). After the middle of the century, at the latest, his advanced age probably meant that he was no longer working himself, but he was still employing travelling journeymen around 1750. Salomon Heckel (1719–91), a town musician and turner, took over the workshop after Oberlender's death.

Heckel's advertisement stating that from now on 'Oberlender's musical wind instruments may only be obtained from him' drew a protest from Oberlender's son, Johann Wilhelm Oberlender (ii) (bap. 12 Sept 1712; bur. 29 Nov 1779), who had become a master in the turners' guild in 1735. That this date coincided with the death of Jacob Denner led to the now discarded assumption that Johann Wilhelm (ii) had taken over Denner's workshop. However, economic and personal problems prevented him from achieving success. His professional

failure was due in part to the keen competition in Nuremberg, where several workshops were active concurrently, including those of his father and of another brother, Wendelin Oberlender (bap. 4 April 1714; bur. 17 March 1751). Also trained by his father, Wendelin was granted master's rights in 1738. At his funeral he was described as 'the honourable Wendelin Oberlender, experienced in his art, Vicarius of the town musicians, also oboe and flute maker'.

The last member of the family to be active in instrument making was Franz Adolf Gabriel Oberlender (bap. 11 March 1748; bur. 19 May 1805), the son of Johann Wilhelm Oberlender (ii). He received master's rights in 1774, but made instruments only as a sideline. Documentary sources usually describe him as a turner, gatekeeper and dealer in musical instruments.

After the Denners, the Oberlender family was probably the most important in the history of woodwind instrument making in Nuremberg. Their position is due primarily to the work of Johann Wilhelm (i), who was active during the period when woodwind instrument making in Nuremberg was in its heyday. Following the examples of the successful J.C. Denner and J. Schell, Oberlender specialized in woodwind instruments of high quality; he also profited from the high reputation of Nuremberg instruments. His master's mark ('I.W. OBERLENDER' in scroll, 'OB' and 'ND' as ligatures, with an 'O' underneath) imitated the marks of Denner and Schell. Attribution of the more than 50 extant instruments to their individual makers is still unsatisfactory, since masters' marks were inherited in Nuremberg, a fact that has been overlooked in the past. Extant instruments (see Young) include: flageolets; recorders of various pitches, including some with strikingly carved decorations (not, however, done in the Oberlender workshop itself); transverse flutes (including a tierce flute and a flauto d'amore); oboes (including oboes d'amore); and clarinets. The tierce flute and the clarinets are among the earliest specimens of their kind.

The instruments changed in style but also declined in quality through the generations. Those which can be dated with certainty to an early period show clearly the characteristics of a 'Nuremberg School'; in particular, they may be compared with instruments from the Denner workshops, their rivals then as now.

MARTIN KIRNBAUER

Oberlin, Russell (Keys) (*b* Akron, OH, 11 Oct 1928). American countertenor and teacher. He was educated at the Juilliard School of Music (diploma 1951). Oberlin was a founding member in 1952 of the New York Pro Musica with Noah Greenberg, and also appeared as a countertenor with numerous opera companies, orchestras and ensembles, and in theatrical productions. Admired for his virile, sweet tone and subtle phrasing, he was a leading exponent of early music, and through his many recordings and appearances helped to popularize not only music at that time unknown but also the repertory of the countertenor voice. In 1961 he sang Oberon in the first Covent Garden production, and the US première in San Francisco, of Britten's *A Midsummer Night's Dream*. In the mid-1960s he turned to teaching, and appeared as lecturer and lecture-recitalist at colleges and universities throughout the USA and abroad. In 1971 he was appointed professor of music at Hunter College, CUNY, and director of the Hunter College Vocal Collegium.

PATRICK J. SMITH

Oberlin College Conservatory of Music. A conservatory attached to a private college in Oberlin, near Cleveland, Ohio, USA. The college was founded by Congregationalists in 1833. In 1837 George N. Allen, a student, was designated instructor of sacred music; he later became a professor (1841–64), and in 1865 two of his students, John P. Morgan and George W. Steele, established a conservatory which was joined to the college in the following year. Under the directorship (1871–1901) of Fenelon B. Rice the conservatory attained a position of national prominence which it still holds. Karen Wolff was appointed Dean in 1991. The conservatory enrolled about 550 students and had a faculty of about 75 in the mid-1990s. The college awards, on recommendation from the conservatory, BM and MM degrees in performance, composition, music education, music history, historical performance, electronic and computer music and jazz studies, and also a diploma in performance. An electronic music studio and a collegium musicum are among the available facilities. The library has over 110,000 books and scores, and over 42,000 sound recordings.

BRUCE CARR

Obermayer, Joseph (*b* Starnberg, nr Munich, 17 Oct 1878; *d* Starnberg, 13 July 1966). German harp maker. Obermayer established his harp making concern in Munich in 1928, and produced his first instruments in the 1930s. His factory was bombed during World War II, but he re-established himself in 1944 in Kufstein, Austria. In 1952 Obermayer moved his factory to his home town, and he was joined there by his chief assistant from Kufstein, Maximilian Horngacher. After the sudden death of Obermayer's son in 1960, Horngacher was gradually trained to take over the business; this he did on Obermayer's death in 1966.

Obermayer produced three styles of harp. Shortly before his death he developed and built a fourth type in a more modern style, without the traditional gilding. Horngacher continued to produce all four models; in 1970 he was awarded a gold medal for exceptional craftsmanship by the state of Bavaria. Individually hand-built, the Obermayer-Horngacher harps are particularly notable for their reliability, their stability of pitch, the meticulous precision of their mechanism and their brilliant sound. This latter property may be attributable to the tuned cast-metal ribs, rather than the usual wooden ones, which are used in the construction of the harp's sounding-box.

Oberthür, Charles [Karl] (*b* Munich, 4 March 1819; *d* London, 8 Nov 1895). German harpist and composer. The son of a maker of strings for musical instruments, he

was educated in Munich, studying the harp with Elisa Brauchle and composition with George V. Röder, music director at the Munich court. In the autumn of 1837 Charlotte Birch-Pfeiffer engaged him as harpist for the Zürich theatre, where he remained until 1839. He then made a concert tour of Switzerland and Germany, after which he was a chamber musician at the court of the Duke of Nassau in Wiesbaden; he composed two operas, *Floris von Namur* and *Der Berggeist des Harzes*, which were performed at the Wiesbaden court. From 1842 to 1844 he was solo harpist at the court theatre in Mannheim, where a dispute with Vinzenz Lachner culminated in Oberthür's giving up his position.

English friends in Mannheim urged Oberthür to go to London, where he received support from Moscheles and in 1844 performed with success. He settled there in 1848, meanwhile giving concerts on the Continent and staying at Frankfurt in 1847–8. He was an unrivalled virtuoso, and his concerts were always well received. In London he became solo harpist at the Italian Opera but cancelled his contract to devote himself to composition and teaching. He became harp professor at the London Academy of Music, founded in 1861, and was widely known as a teacher; his method, *Harfenschule für doppelte und einfache Bewegung* op.36 (later published as *Universal Method for the Harp*), is still used by teachers. A prolific composer, he wrote 351 works with opus numbers and more than 100 unnumbered works. His compositions, which reflect his experience as a concert performer, include many transcriptions for harp, about 30 collections (mainly for harp), trios, quartets, about 40 piano works and 27 duos for harp and piano, as well as many vocal and orchestral works.

ALICE LAWSON ABER-COUNT

Oberwerk (Ger.: 'upper department'). The upper chest and manual of a German organ, often (since *c*1840) provided with SWELL shutters, able by its position to take larger pipes than the BRUSTWERK and other minor chests of a WERKPRINZIP organ. In many sources (e.g. the autograph registrations in Bach's Concerto BWV596) *Oberwerk* denotes HAUPTWERK, i.e. the main chest above the player, as opposed to the Rückpositiv (CHAIR ORGAN). Praetorius (1619) used other phrases such as 'Oben in der Brust' or 'oberste Positiff' if he wished to refer to the *Oberwerk*. Schlick (1511) disparagingly mentioned small subsidiary chests placed within the main case, but the *Oberwerk* found on such organs as Kampen (1523) was a major department. That called *boven int werck* at Amsterdam Oude Kerk in 1543 had two chests and took all the colour stops away from the *Hauptwerk*, which was thereby kept to a size convenient for builder and bellows-blower. Such a department was very useful when it had its own keyboard and became highly developed, those in the big four-manual organs of Schnitger (*c*1690) still full of flutes, full-length reeds and other colours giving variety. The *Unterwerke*, *Seitenwerke*, *Echowerke* and *Kronwerke* ('under, side, echo, crowning, departments') found in later Baroque and Romantic organs are of much less musical significance.

PETER WILLIAMS

Obey, Ebenezer [Chief Commander Ebenezer] (*b* Idogo, 1942). Nigerian performer. At the forefront of the modernization of JÙJÚ music in Nigeria. Obey joined the Fatai Rolling Dollars band in 1958. He made his first recordings in Lagos in 1963 and since then has made over 90 commercially released recordings and singles. Similar in style and influence to 'KING' SUNNY ADÉ, Obey has an instrumentarium that includes Hawaiian steel guitar and is generally thicker, drawing on vocal call-and-response forms, reflecting his personal *miliki* (enjoyment) style, a combination of African and Western musical materials. Obey introduced three guitars (tenor, lead and rhythm) to the typical *juju* ensemble. He first appeared with his International Brothers band in 1964, introducing a slower music rooted in Yoruba drumming traditions. An accomplished guitarist, Obey long performed within the tradition of praise-singing, drawing on Christian values as well as economic and political issues. He became an international success in the 1980s with his Inter-Reformers Band which has consisted of up to 20 musicians at any given time; Obey remains the best-selling musician of modern *juju* in Nigeria.

GREGORY F. BARZ

Obiols, Mariano (*b* Barcelona, 26 Nov 1809; *d* Barcelona, 10 Dec 1888). Spanish composer. He began his studies in Spain but went abroad in 1831, becoming a protégé of Mercadante, with whom he toured Europe. His first opera, *Odio e amore* (two acts, libretto by F. Romani), had a successful run at La Scala beginning on 5 September 1837. In the same year Obiols returned to Barcelona to teach at the recently formed Conservatory, becoming its director in 1847, and during the next two decades dedicated himself mostly to teaching, administration and conducting. Not until 1874 did he produce another opera, *Editta di Belcourt* (four acts, libretto by F. Fors de Casamayor), first performed at the Gran Teatro del Liceo on 28 January. Though its italianate features were in harmony with the conservative repertory of the major Spanish theatres, *Editta* represented a compositional path abandoned by many of Obiols's younger contemporaries, such as Bretón and Pedrell. Pedrell's *El último Abencerraje*, in which Moorish and Spanish musical elements are prominent, was produced at the Liceo just a few months

after the première of *Editta*. Obiols also wrote works for choir, orchestra and chamber ensemble, as well as a *Método de solfeo* and *Ejercicios para canto*.

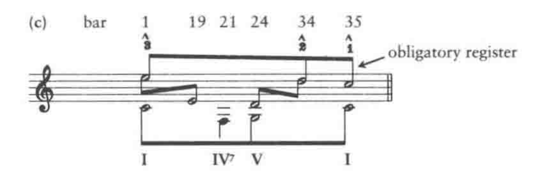
ROLAND J. VÁZQUEZ

Obizzi, Domenico (*b* ?Venice, 1611–12; *d* after 1630). Italian composer and singer. He was employed as a singer at S Marco, Venice, from 16 April 1627 until 1630. He had important connections with influential Venetian patrons. When he was only 13 a motet by him for solo voice and continuo, 'Jubilate Deo', appeared in the collection *Ghirlanda sacra* (RISM, 1625[2], 2/1636[2]), edited by Leonardo Simonetti, a musician at S Marco. In 1627 he published in Venice his *Madrigali concertati a 2–5 voci con il basso continuo . . . libro primo* and his *Madrigali et arie a voce sola . . . libro primo* op.2. The dedications state that he was then 15 years old, that from the age of nine he had been living under the protection of the Venetian patrician Lorenzo Loredano, and that Girolamo Mocenigo, another patrician and important patron of Monteverdi, was his sponsor at his confirmation. Many of the texts Obizzi set were the work of Pietro Michiel, a Venetian patrician and later co-founder of the illustrious Accademia degli Incogniti. Obizzi's music is well crafted and shows mastery not only in the fusion of affective madrigalian techniques with lilting tunefulness within the same strophic aria, but also in the way short epigrammatic madrigal texts are dramatized through clever repetitions of text and music. (R. Miller: *The Composers of San Marco and Santo Stefano and the Development of Venetian Monody (to 1630)*, diss., U. of Michigan, 1993)

COLIN TIMMS/ROARK MILLER

Obligate Lage (Ger.). *See* OBLIGATORY REGISTER.



Obligato. *See* OBBLIGATO (i).

Obligatory register (Ger. *obligate Lage*). In Schenkerian analysis (*see* ANALYSIS, §II, 4), the register in which the URLINIE, or fundamental melodic line, makes its stepwise descent to the tonic from the 3rd, 5th or octave above. The term may also be applied to the supporting lower voice, which presents the bass arpeggiation (*see* ARPEGGIATION (ii)).

'Obligatory register' is most often invoked in connection with a general principal (which Schenker called the 'Gesetz der obligaten Lage') which binds every primary elaboration (PROLONGATION) of the fundamental line and bass arpeggiation to the registers in which they unfold, and every secondary or subsequent prolongation to the respective register of the prolongation from which it is derived. The techniques most often encountered in the 'freeing' of lines from the registers to which they are tied involve movement into a different octave: ascending and descending REGISTER TRANSFER, the raising and lowering, respectively, of a line by one or more octaves; and COUPLING, the joining of two lines lying one or more octaves apart.

In the first prelude from book 1 of Bach's *Das wohltemperirte Clavier*, for instance, the register of the fundamental line is determined by the *e″* established in bars 1–4 (ex.1*a*) and brought down an octave to *e′* (bar 19), which resolves to *d′* (bar 24); the low *d′* is then

Ex.1
(a) outline of bars 1–4 (b) bars 34–5

brought back to the higher octave (*d″* in bar 34) so that the last two bars of the prelude (ex.1*b*) can complete the descent of the *Urlinie* to *c″*, i.e. in its original, 'obligatory' register. The coupling *e″–e′/d′–d″* (ex.1*c*; after Schenker, 1935, fig. 49/1, which shows the entire prelude at a higher level) thus serves to reinforce this register, as well as providing expansion into the lower octave.

Schenker argued that the law of obligatory register applied to both the fundamental line and the bass arpeggiation; but subsequent writings about long-range registral coherence both by Schenkerians (Oster, 1961) and non-Schenkerians (Rosen, 1971, pp.34f and 349), have mainly been concerned with examples of 'melodic' connections.

Oblique motion. In PART-WRITING, the melodic movement of one part against another part that remains stationary.

Oboe (Fr. *hautbois*; Ger. *Oboe*; It. *oboe*). Generic term in the system of Hornbostel and Sachs for an aerophone with a double (concussion) reed (for detailed classification *see* AEROPHONE). The name is taken from that of the principal treble double-reed instrument of Western art music (see §II below).

I. General. II. The European treble oboe. III. Larger and smaller European oboes.

I. General

1. Oboes. 2. Reeds.

1. OBOES. The AULOS of ancient Greece may sometimes have had a double reed, and some kind of reed aerophone was known in North Africa in pre-Islamic times. Instruments of the SURNĀY type became established with the spread of the Arab empire around the end of the first millennium CE; they were possibly a synthesis of types from Iran, Mesopotamia, Syria and Asia Minor. From there the instrument, then used in a military role, spread into conquered areas and areas of influence: to India, and later, under the Ottoman empire, to Europe (around the time of the fifth crusade, 1217–21; there may already have been bagpipes with double reeds there) and further into Asia (to China in the 14th century). As the instrument spread, it came to be made of local materials and fashioned according to local preferences in usage, shape and decoration: the ŚAHNĀĪ of north India has a flared brass bell; the SARUNAI of Sumatra has a palm leaf reed

and a bell of wood or buffalo horn; the ALGAITA of West Africa is covered with leather and has four or five finger-holes.

The *surnāy* is the oboe of traditional music in the Islamic world; instruments of this type and with local names are played in the Near East, Turkey, south-east Europe, North Africa and many parts of Asia. The *surnāy* consists of a wooden conical tube widening at the end into a flared bell, a tuning-fork-shaped section (*nazik*) which is inserted fork end down into the instrument, a staple, inserted into the top of the instrument, a metal lip disc (PIROUETTE, a name taken by Hornbostel and Sachs from Mersenne) which may be part of the staple or separate from it and attached to it, and the reed, which fits over the top of the staple and is taken entirely into the mouth when playing. The tube usually has seven finger-holes and a thumb-hole. The instrument of the Middle East is made in three sizes. It has a loud and brilliant tone and is used for outdoor celebrations. It is usually played in small ensembles: with a double-headed drum (*ghayṭa* with *ṭabl* in North Africa (*see* GAITA (i)), *zurna* with *davul* in Turkey); in Egypt three *mazāmīr* (sing. *mizmār*) play with one or more drums, two of the *mazāmīr* acting as drones; in Macedonia a large *zurla* acts as a melody instrument, a smaller one as a drone, a reverse of the usual pattern. The technique of circular breathing is commonly used. The SUONA of China, which has a large flaring metal bell, and the European SHAWM are descendants of the *surnāy* (and have related names). The *śahnāī* of North India resembles the *surnāy* but is distinct in not having a lip disc. Large oboes of the *surnāy* type include the NĀGASVARAM, a wooden conical oboe of South India about 95 cm in length, with seven finger-holes, played with drums and *ottu* (a drone oboe with no finger-holes) for festivals, and the *rgya-gling* of Tibet, played in identical pairs for Buddhist rituals.

A small type of double-reed instrument originated in China where it was known as *bili*; it became the GUAN of China, the HICHIRIKI of Japan (imported to Japan in the 8th century), and the P'IRI of Korea. Instruments of this type are made in a variety of sizes. The *guan* has a cylindrical bore. The *hichiriki* has a reverse conical bore with seven finger-holes and two thumb-holes; the reed is made of a length of reed stalk, flattened and scraped. Such instruments are characterized by their capacity for subtle ornamentation and flexible pitch.

Rustic oboes without finger-holes, used for signalling or as noise makers, are found in England and France. The WHITHORN (England) and the *bramevac* (France) are made of a strip of coiled bark bound together with thorns; the reed is made of green bark. There are also idioglot oboes (with the reed formed from the material of the tube); they have been found in Europe, Korea and Malaysia. The *hodugi* of Korea is a tube of bark removed from a slender branch. At one end the upper layer of bark is shaved down to make a reed. It may have finger-holes and the sound may be modified with open or cupped hands.

2. REEDS. The reed is not long-lasting and so tends to be made of a plentiful local material. The reeds of the modern Western oboe, and of most other European double-reed instruments, are made of a slip of the stem of a large semi-tropical grass (*Arundo donax*) folded in half, the two halves bound together and scraped thin to vibrate. *Arundo donax* grows around the Mediterranean Sea, in Spain, France and Italy (and also in other places with a similar climate such as California and South America). The *p'iri*, the *guan* and the *hichiriki* have reeds of flattened and scraped bamboo. The reeds of the *surnāy* and many related instruments are made from a section of soft cane, bound at one end and flattened at the other to an oval; when the reed is not in use a protective cover may be placed over the end to maintain the correct shape. The guard, spare reeds and staples, and a metal mandrel for making reeds are strung together and hung from the *śahnāī* during performance. The *charumera* of Japan has a reed of corn stalk. Many instruments of South-east Asia have reeds of palm or other leaf. The *selompret* of Indonesia has reeds of thin plates of bamboo cut into a fan shape and tied together in two sets of three; the reeds of the *pī* of Thailand are similar, but made of palm leaf. The *hnè* of Myanmar has a composite double reed made from young leaves of toddy palm, which are soaked, smoked, folded and cut to shape; six to eight fan-shaped layers are bound with a thick cord. (*See also* REED.)

Other oboes of Western music include the basson d'amour, BASSOON, cromorne (*see* CROMORNE (i)), curtal, DOLZAINA, HAUTBOIS D'ÉGLISE, HECKELPHONE, RACKET, SARRUSOPHONE, SORDUN, TARTÖLT, tenoroon and TRISTAN SCHALMEI. The *cleron pastoral*, cornamusa (*see* CORNAMUSA (i)), CRUMHORN, HAUTBOIS DE POITOU, SCHREYERPFEIFE, SCHRYARI and some types of KORTHOLT and SHAWM are WIND-CAP INSTRUMENTS, oboes in which the reed is enclosed within a rigid wooden cap. Some bagpipes have double reeds; *see* BAGPIPE.

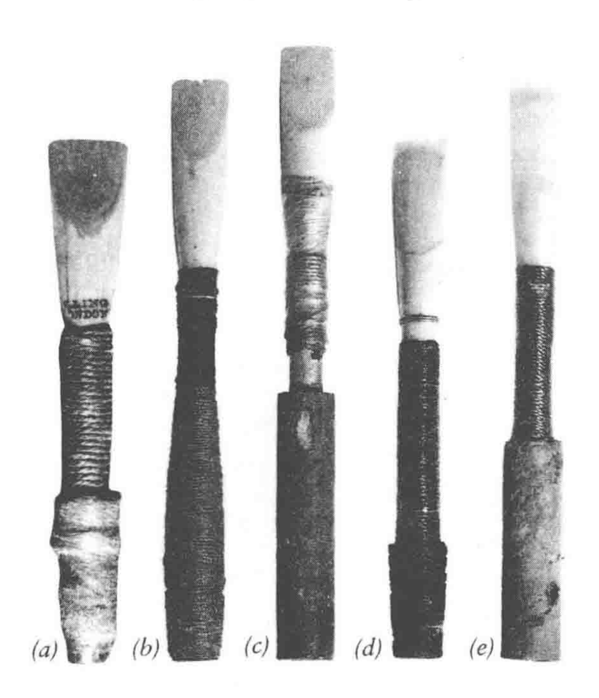
II. The European treble oboe

1. Introduction. 2. History to 1800: (i) Introduction (ii) Before 1670 (iii) 1670–1700 (iv) 1700–30 (v) 1730–70 (vi) 1770–1800. 3. The 19th century: (i) Characteristics and repertory (ii) Additional keys, 1800–40 (iii) Interactive mechanisms, 1840–60 (iv) The Conservatoire-system oboe. 4. The 20th century: (i) Instruments and playing styles (ii) Repertory and performers (iii) Technique (iv) Alternative playing styles.

1. INTRODUCTION. The oboe family, as used in Western music, consists of a group of conical-bore double-reed woodwind instruments in a variety of sizes. The most common member of the family, and the one usually referred to as the oboe, is the treble instrument in C. The term 'hautboy', one of a number of spellings in use during the early history of the instrument and found occasionally into the early 20th century, has been revived to designate the two-or three-key oboe in use from the mid-17th century to the early 19th; it will be so used here. A terminology for identifying the parts of the oboe appears in fig.1.

The oboe consists of a slender tube of wood some 60 cm long, in three sections united by tenon-and-socket joints. The modern oboe is made of grenadilla, occasionally of other woods, ebonite or plastic, and the hautboy usually of boxwood or fruitwood. The joints of the hautboy are generally decorated with turnery. The bore of the modern oboe, which is narrow and conoidal, expands fairly regularly for about five-sixths of its length and then opens out more rapidly to form a moderate bell (fig.1*b*). This expansion takes the shape of a smooth curve or a succession of cones, according to the formulae adopted by different makers and worked out experimentally by them. The effective length of the tube is made



1. Diagrams comparing the bores and placement of holes on three oboes: (a) hautboy; (b) modern French; (c) modern Viennese

variable by means of 16 to 20 side holes, six of them directly under the player's fingers and the rest controlled by a mechanism of keys which is sometimes most ingenious and complicated. At least four systems of KEYWORK have been applied to the oboe. Since World War II the Conservatoire system, developed in France and adopted by the Paris Conservatoire in 1882, has become an international standard.

The hautboy (fig.1*a*) has a contraction rim at the end of the bell, retained also in its descendant, the modern Viennese oboe (fig.1*c*). It has eight side holes, six under the control of the fingers, with holes three and four often split into two smaller twin holes, and keys for *c′* and E♭, the latter sometimes duplicated. Additional holes and keys for chromatic notes were added to this basic design during the 19th century.

Oboes are sounded by means of a reed formed of two hollowed-out blades of thin 'cane', actually the semi-tropical grass *Arundo donax* or *Arundo sativa* (fig.2). These are bound face to face with thread to a narrow

2. Oboe reeds from the late 18th century to the 20th: (a) late 18th century, by Thomas Ling; (b) by Triébert, c1850; (c) modern French; (d) modern Viennese; (e) modern American (private collections)

tapered metal tube, slightly flattened at the tip, termed a 'staple'. Although the dimensions of the reed may not match the volume of the missing end of the instrument's conical bore, the reed nevertheless functions as an extension of the bore. At their free ends, the blades are scraped down to a feather edge. When placed between the lips and blown through, the blades of the reed vibrate together, alternately opening and closing the elliptical chink between them and thus transmitting bursts of energy to the air column in the body tube. The proper management of this very delicate apparatus is probably the most difficult part of oboe technique for the learner to acquire or for the teacher to impart.

On the hautboy, notes outside the basic scale are obtained by 'resistance fingerings' – cross- or forked fingerings and half-holed fingerings. The hautboy overblows an octave, giving a range of at least two octaves (*e'–d'''*). The compass of the modern oboe extends from *b♭* to *a'''* – in all, 36 notes, of which the first 15 are fundamental notes. Acoustically, the remainder are harmonics of the first 15 and are produced by changes of 'lip' pressure on the reed, assisted by the use of speaker or octave keys.

Intonation, tone-colour and dynamics are modified by the combined control of breath and embouchure pressure. Because the oboe requires very little air, the player is able to perform long phrases in one breath, but must learn to exhale stale air before inhaling. Articulation is achieved by stopping the vibrations of the reed with the tongue.

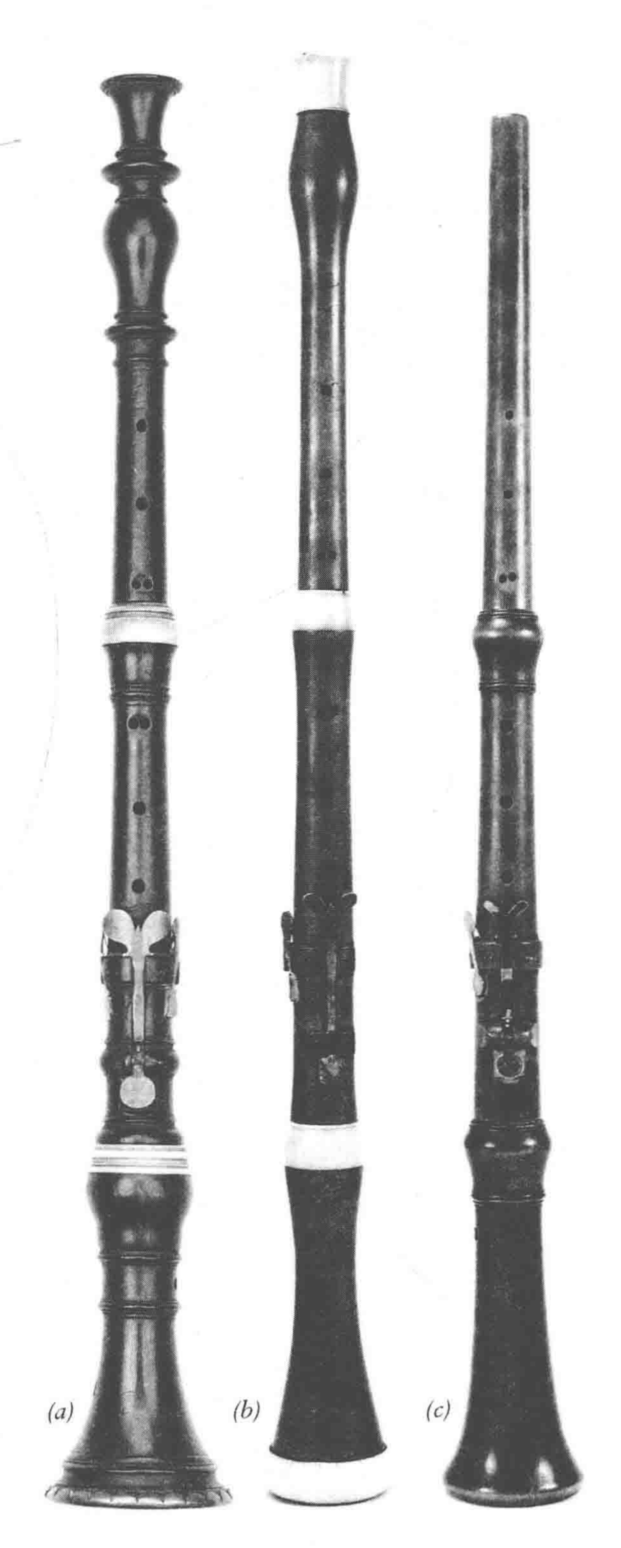
In addition to the treble or soprano oboe in C, the family includes a number of deeper-toned members (fig.3). Lower oboes have appeared in a variety of forms, often with a bulb-shaped bell (see §III). The modern family includes the oboe d'amore in A, the english horn in F and the bass oboe in C. Smaller oboes were built for military use in the 19th century, and in the late 20th century a small oboe in F, the musette, was developed to complete the family.

2. History to 1800. The term 'hautboy' has been adopted here to refer to the form of oboe that gradually separated itself from the Shawm in the first half of the 17th century and flourished until the first part of the 19th, when it was supplanted by the keyed oboe. Although the hautboy was revived in the 1960s for use in ensembles of historical instruments, only its past history will be considered here.

(i) Introduction. The normal size of hautboy was the treble, which gave a seven-fingered C. It was usually 58–9 cm in length and was made in three separate joints coupled by tenons and sockets, the top and centre being of about equal length and the bell somewhat shorter (see

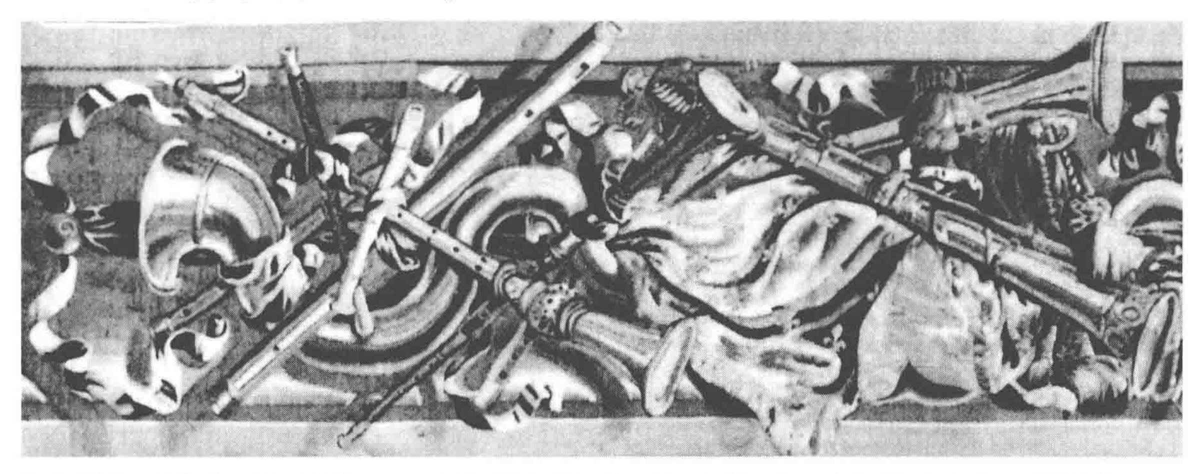
3. The modern oboe family (by F. Lorée): (left to right) musette, treble oboe, oboe d'amore, english horn, baritone oboe

fig.1*a*). It had a conical bore with steps at the joints. The outer joints usually featured mouldings. There were six finger-holes, a key for E♭ (sometimes doubled), an open-standing and articulated key for *c′* (the lowest note), and two vent holes placed opposite each other on the bell. The larger tone holes were undercut (i.e. they expanded inwards). The bell normally had a thick contraction rim, called a 'lip', at the bottom.



Of an estimated 15,000 original treble hautboys, about 750, made between about 1680 and 1820, were known to survive at the end of the 20th century. The majority (about 85%) are made of boxwood, which also appears to be the wood of hautboys shown in paintings of the time. Other materials used include ebony, ivory and fruitwoods. Darker stain was sometimes used, and some early instruments imitate tortoiseshell. Close to half the surviving hautboys have ivory tips; others have ferrules of brass or silver or are tipped with horn or bone. The fourth hole was sometimes twinned (i.e. two small holes were drilled next to each other), as was the third.

The hautboy's outward form was based on concepts of architectural moulding. Physical features such as the shape of the keys, the type of wood, the presence of ornamental mounts or twin holes, the turning profile and turning details, and the shape of the bell, varied with time and from workshop to workshop (fig.4).



No reeds made earlier than the late 18th century survive, and little written information on reeds and reed-making exists from before about 1780. It was not unusual for players (even some professionals) to purchase ready-made reeds from instrument makers. Pictures indicate that, dimensions apart, reeds were made much as they are for the key-system oboe (see fig.11 below). A staple, or metal tube, was used to connect the two blades of cane to the bore of the instrument; the reed could be separate or fixed permanently to the staple. The cane was shaped with parallel sides for at least half its length. Reeds must have varied considerably, as they do now (see fig.2), and no single way of making them can by itself be considered 'historical'. In general terms, reeds tended to become narrower and shorter during the course of the 18th century as the bore became correspondingly smaller and both tessitura and pitch moved upwards.

Throughout its history the hautboy shared with the other woodwind certain techniques that seem stylistically remote today. It used an elaborate system of paired tonguing patterns, the *flattement* or finger vibrato (not the modern breath vibrato), and the *messa di voce*. These techniques were used throughout Europe, and descriptions and demonstrations can be found in sources and handbooks to the end of the 18th century.

(ii) Before 1670. In all European languages the hautboy's name was either taken over directly or transliterated from the French *hautbois* (pronounced 'oh-bway' in the 18th century). Later German and English sources described the hautboy as having originated in France. Lully probably began using an early form of hautboy in his ballet *L'amour malade* in 1657; such an instrument was introduced into the French military in 1663. The few surviving sources from this period indicate that the hautboy was a new conception, the result of a fundamental redesign. This change is difficult to date because in French both shawms and hautboys were called 'hautbois'. The shawms described by Michael Praetorius in 1619 were played with a pirouette and had a range of an octave and

4. Three hautboys: (a) by C. Rijkel, Amsterdam, c1700–26 (Gemeentemuseum, The Hague); (b) by Thomas Lot, Paris, 1734–c1787; (c) by W. Milhouse, Newark, c1765 (Bate Collection, Faculty of Music, University of Oxford)

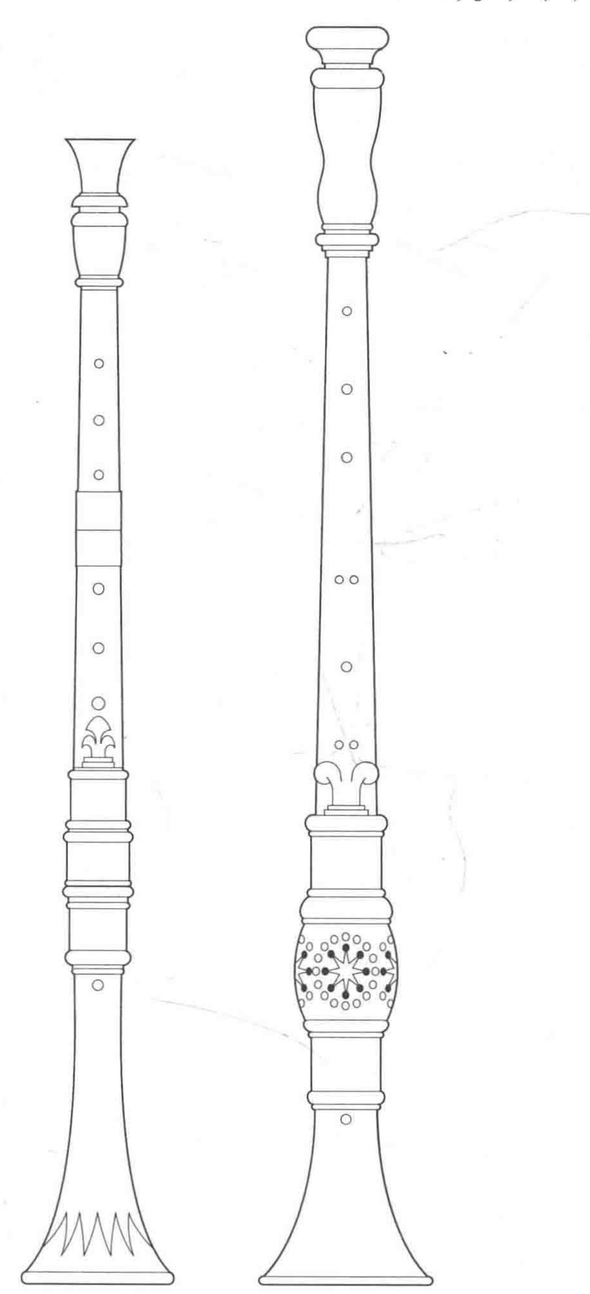
5. Panel F from the border of the Gobelins tapestry 'L'air',1669–c1680, (from the series 'Les elemens' after Charles Le Brun, 1664); (Palazzo Pitti, Florence)

a 5th. Shawms had been played as an independent family, or consort; Lully's combining of wind with strings to form an 'orchestra' was thus a break with traditional practice. The reed instrument had to match the range and pitch of its new partner, the violin; it had to function well in more than a few tonalities, it needed a direct control of a wide range of dynamics, and it had to blend easily with the general sound. None of this had been required of the shawm.

The bore of the shawm was thus lengthened, and its tone holes were repositioned further down the instrument's length and drilled smaller. This had several effects. It increased the effectiveness of cross-fingering (also called 'forked fingering') and half-holing, which was how the accidentals were played. Examples are the notes *b♭′* and *a♭′*: whereas *b′*, *a′* and *g′* were produced by closing respectively the top hole, the top two holes and the top three holes (or 1, 1 2, 1 2 3), *b♭′* was played 1 3, and *a♭′* used the half-hole fingering 1 2 3. These fingerings produced greater back-pressure and played less freely than the open-fingered notes. Not only did they feel different to play, their sound was covered or veiled, and they produced the characteristically uneven sound of Baroque woodwind scales, not unlike a singer using different vowels for each note.

To compensate for the greater built-in resistance caused by the hautboy's small tone holes and cross-fingerings, the reeds were wider and scraped thinner than those of the key-system oboe. The player thus used a lower pressure, which made it easier to perform the short intense musical gestures, quick and extreme changes of dynamics and tone, and frequent starts and stops demanded by the music written in the 18th century. The complex dynamic nuance of the Baroque period and the phrasing it implied was gradually abandoned in the 19th century in favour of the 'long line' phrase – an approach better served with the narrower, harder reeds of the key-system oboe and the greater, more constant pressure needed to play them.

These changes also caused the new treble instrument to sound a 4th lower than the treble shawm and a major 2nd above the alto. The lower pitch and covered fingerings darkened and decentralized the instrument's tone, helping it to blend.



This process has been attributed to woodwind players at the French court (members of the Hotteterre and Philidor families are mentioned). It evidently took place in stages. The shawms described by Mersenne in 1636 possessed a range of two octaves, and one of them appears to have had no pirouette. By the 1660s two new types of instrument that shared characteristics of both shawm and hautboy were shown on tapestries made by the royal Gobelins studios (figs.5 and 6). These protomorphic hautboys retained the shawm's fontanelle to cover the key, but had twin 4th and 6th tone holes and, apparently, only a single pair of vent holes. The longer-belled instruments (which were also featured in another Gobelin of the same decade) resemble Mersenne's shawms, but they are about the same acoustic length as later treble hautboys at *A″* (392 Hz). The shorter-belled ones look very much like his *Haut-bois de Poitou* and, being considerably longer, were probably pitched a 5th lower.

After the production of *Les plaisirs de l'île enchantée* in May 1664, the hautboy seems to have vanished from Lully's next 14 large-scale ballets and *comédies-ballets*. It did not reappear until 1670, with *Le bourgeois gentilhomme*. It is thus possible that a new model, the definitive hautboy first shown in Blanchet's engraving of 1672 (see fig.24 below) was developed during this period.

(iii) 1670–1700. The new instrument is also shown in a Gobelins tapestry made in 1684 (fig.7). The fingering used by the player is fictitious but is obviously inspired by a cross-fingering.

From the mid-17th to the late 18th century the French court employed 35 woodwind players in the *grande écurie*, most or all of them hautboists. No other European court used so many hautboists, many managing with two or three. The Opéra functioned separately from the court, and other musical activities took place in Paris that used hautboys.

Both Lully's monopoly of power and the revocation of the Edict of Nantes forced many musicians to leave France. Other countries were very receptive of French music, musical style, playing techniques and players, and the new hautboy was quickly adopted all over Europe. It was first heard in England in 1675 and was being used in English military circles by 1678. In 1677 the court at Turin was employing a military band of six hautboists, some of whom had French names. French hautboy players arrived in Madrid in 1679. A number of German courts hired French hautboists in the 1680s. The hautboy was

6. Schematic drawing by Marc Ecochard of the treble and alto protomorphic hautboys in the borders of the Gobelins tapestry shown in fig.5

being played in Vienna by 1697 at the latest, and it was admitted to the *cappella* of S Marco, Venice, in 1698, effectively replacing the cornett.

As the instrument took root abroad, local musicians were sent to France for instruction. And by the 1690s 'French' hautboys were being made in Germany, England and Holland. In some cases (like that of Christoph Denner and other Nuremberg makers) they were direct copies; in others, French makers (like Peter Bressan) emigrated to other countries. By the late 17th century Amsterdam was supporting a thriving woodwind-making industry.

Once the new hautboy had spread over Europe and had lost its primary French association, neither its playing style nor the way it was made had any particular national character. Players frequently circulated between countries, bringing with them techniques of playing and instruments of the latest design.

In its earliest decades, the hautboy was often heard in bands, continuing the consort tradition of the shawm. Repertory consisted of marches, dance suites and ceremonial music, much of which was played by heart and is now lost; surviving scores include the Philidor manuscript (*F-Pn* Rés.F.671). The normal formation was 2 treble hautboys, 2 tenors and 2 bassoons, but, starting early in the 18th century, horns often replaced the tenor hautboys, making a band of 2 hautboys, 2 horns and 1 or 2 bassoons.

Hautboys also doubled strings in the orchestra and provided variety by playing short 'trios' by themselves. In Lully's works they inherited the symbolic attributes of shawms and appeared in direct connection with events occurring on stage; their presence was associated with certain dramatic situations, especially pastoral scenes.

The earliest chamber music that used the hautboy was usually conceived 'en symphonie', that is, it could be played on any treble instrument or combination of instruments. This music included the trios written in the 1690s by François Couperin, Marin Marais and Jean-Féry Rebel. In the same decade Agostino Steffani, Johann Kusser and Reinhard Keiser began writing obbligatos in opera arias featuring the hautboy, many of them exceptionally beautiful; they represent the earliest solo use of the instrument.

(iv) 1700–30. In Venice the hautboy had been used sporadically in operas during the last decade of the 17th century. Ignazio Rion, who played Handel's solos in Rome, had taught the hautboy at the Pietà orphanage in 1704–5. Other notable Venetian players included Onofrio Penati, Ludwig Erdmann and the girls at the Pietà, including Pellegrina 'dall'Oboe', for whom Vivaldi wrote some of his concertos and chamber music.

Among makers in France were Pierre Naust, the Hotteterres (nine individuals from three generations were at work during this period) and Jean Jacques Rippert. The elder Thomas Stanesby had worked in London since 1691, and his son also began making instruments about 1714. Building on an old craft tradition, Nuremberg was the first German centre for makers of the new French woodwind instruments; Christoph Denner and Johann Schell were making recorders and hautboys in the 1690s, and three hautboys survive by Benedikt Gahn, who died in 1711. Denner's eldest son Jacob opened his own workshop in 1707. The woodwind maker Joannes Maria Anciuti set up shop in Milan at this time.

In Amsterdam Richard Haka founded a school of makers that included Coenraad Rijkel, Jan Steenbergen and Abraham van Aardenberg, among at least ten others. The number of surviving Dutch hautboys from this period is remarkable. The only other region with as many is Germany. Considering the relatively small number of players who were active in the Dutch Republic, it must be assumed that some German, English and even French hautboists played Dutch hautboys.

The hautboy had one quality that made it unique among the instruments of the early 18th century: it was the sole instrument to be used in every imaginable kind of music. Philipp Eisel wrote in 1738, 'It is used in the

7. Detail from the Gobelins tapestry 'Danse des nymphes' (left side), fifth in the series 'Sujets de la fable', 1684 (Musée du Louvre, Paris)

battlefield, in opera, in social gatherings, as well as in churches'.

The period 1700–30 contained the greatest quantity as well as some of the most profound and varied solo music of any period in the hautboy's history. It was rich in solo sonatas and suites with basso continuo, concertos, and obbligato solos for oboe with voice. Italian composers did not feature the obbligato hautboy in vocal scores as much as Handel or J.S. Bach, but they were probably responsible for starting the vogue for the solo hautboy concerto continued by, for example, Benedetto Marcello, Tomaso Albinoni and Vivaldi. France produced almost no concertos or vocal works with solo hautboy, but provided many solo and trio sonatas.

Tutors, written for amateurs, appeared from 1688 onwards. The information they offer is usually rudimentary; professional players probably received their training directly from masters rather than from books.

Fingering charts of the period generally give the range as *c′–d‴*. From early on there is mention of the possible use of *b* and of notes above *d‴*. Early solos exploit the entire range but usually stay within a compass of *d′* or *e′* to *b♭″*. Until the Classical period, fingering charts indicate that the high notes up to *b″* were fingered like their lower octaves, and *c‴* was played 'all open'.

Choice of key was of prime importance. Each scale had a specific, individual sound, and different fingering combinations (including special fingerings for trills and other ornaments) determined its difficulty. Tonalities with too many cross-fingerings (i.e. those with more than four accidentals) were impractical and avoided. Any piece that used A♭ or G♯ frequently was awkward, as it involved the use of the half-hole on 3; the combination *e♭″* to *d♭″* set the technical limit of the hautboy because it involved moving the little finger between the two keys and was only imperfectly solved with alternative fingerings.

In relative volume, the hautboy was regularly equated with the violin, transverse flute and recorder in trio sonatas, and with the voice in arias. In the orchestra, the ratio of hautboys to violins varied greatly, from to 1:1 to

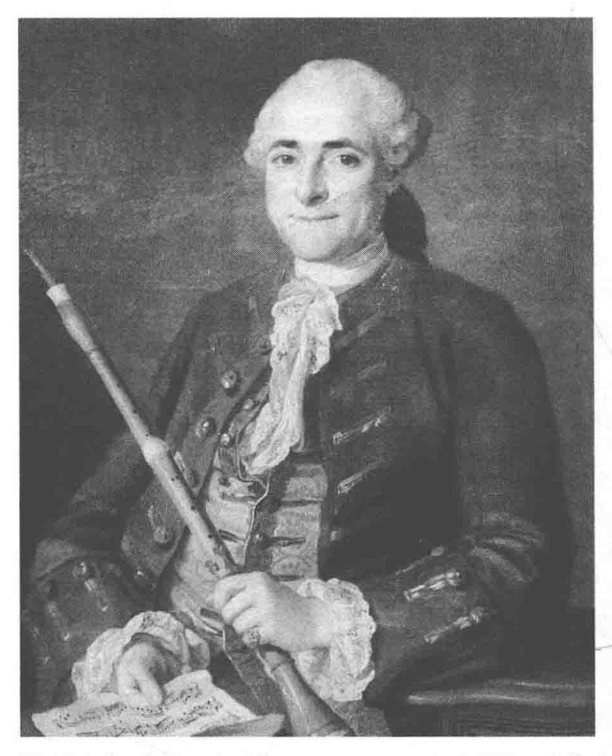
1:11. Hautboys were regularly muted by putting a piece of cloth, paper, damp sponge, cotton wool or wood in the bell.

Records of the *grande écurie* list the many hautboists who performed at the French court (fig.10). Titles to those posts were sold or passed on to younger family members, and generations of Rousselets, Destouches, Hotteterres, Pièches, Philidors, Descoteaux and others filled them. Among the leading hautboists in Germany in this period were François La Riche, Michael Böhm, Peter Glösch, J.C. Richter, Jacob Denner, Jacques Loeillet and Alois Freymuth. It was primarily court musicians who were soloists, although Stadtpfeifer were responsible for church music; Caspar Gleditsch was Bach's soloist at Leipzig,

10. The Douze Grands Hautbois from the 'grande écurie' at the coronation of Louis XV: detail from an engraving by Nicolas-Henry Tardieu (soon after 25 Oct 1722) from the series 'Le sacre de Louis XV'



and the solos Bach wrote for him in his sacred works are the greatest single monument to the talent of any hautboist in the history of the instrument. Bach must also have written chamber music with hautboy, but it is lost; the hautboy concertos (BWV1053, 1055, 1056, 1059 and 1060) survive only in arrangements for harpsichord. At the London opera, where Handel worked from 1711, hautboists (all foreigners) included B.J. Loeillet (i), J.C. Kytch, J.E. Galliard and Peter La Tour (the two last using hautboys made by Colin Hotteterre, principal at the Paris Opéra). In 1729 Giuseppe Sammartini, one of the foremost woodwind players of his day, settled in London.

Inventories of the Naust-Delerablée workshop (probably the most important French maker of the 1720s and 30s) list a number of prominent woodwind-playing clients. Some German players could well have been playing French or Dutch hautboys, but most probably obtained them from the Nuremberg makers, or from J.H. Eichentopf and J.C. Sattler in Leipzig. The principal source of hautboys from the Spanish Netherlands (now Belgium) was that of the Rottenburgh family, which produced many excellent instruments from about 1700. Hautboys continued to flow from the workshops of Amsterdam.

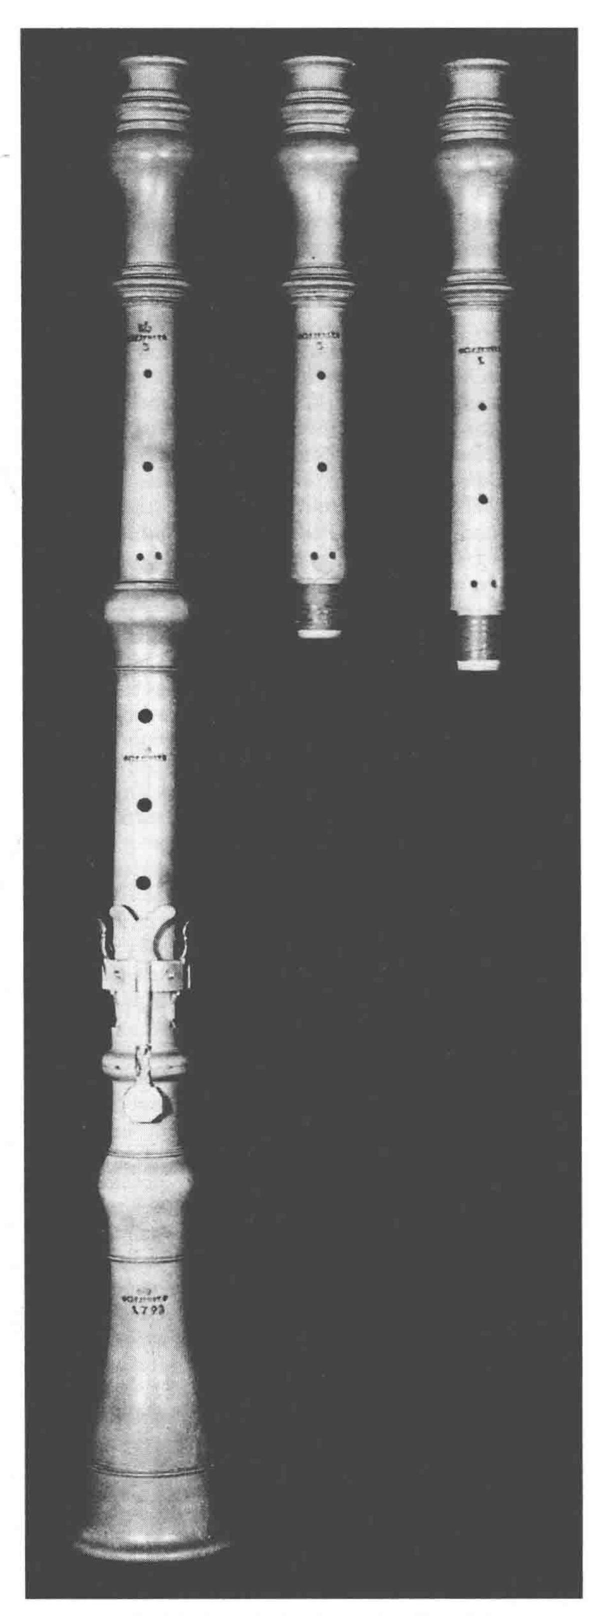
(v) 1730–70. This period saw the fragmentation of the archetypal 'French hautboy' into several new models. By the 1730s the Italians had developed the straight-top and, somewhat later, the type associated with Palanca (see below). The straight-top became popular in England. The French, meanwhile, developed another type that looks as if it had been stretched lengthwise; these instruments are among the longest hautboys that survive, and the swellings at the balusters and bell flare are very gradual and 'streamlined' (fig.11). The music of this period was mostly played on these new models. As different as they were in outward turning style and pitch level, the hautboys of this period generally had one important feature in common: a distinctly narrower bore. While the earlier models had an average minimum bore of 5·95 mm or larger, the new ones scarcely averaged wider than 5 mm. The bores of hautboys in the period 1760–1820 were on average about 4·8 mm, and that of the modern key-system oboe is about 4·2 mm.

Hautboy playing was dominated at this time by great Italian virtuosos: wherever one looks, Italians were playing solos in important musical centres. In Paris the appearance of the Besozzi brothers at the Concert Spirituel in 1735 changed the French hautboy world decisively. In Germany Italians like Giovanni Platti, Antonio and Carlo Besozzi, the Ferrandinis, Gioseffo Secchi and Vittorino Colombazzi transformed the hautboy's image. In England Sammartini left a lasting impression on players and audiences.

By mid-century, solo genres such as sonatas and obbligatos with voice were less frequently used. Concertos were the dominant solo medium, and it was at this time that the first hautboy quartets (hautboy and string trio without continuo) began to appear. The hautboy appeared regularly in the orchestra as a soloist, but over the course of the 18th century its relation to the violin changed. Originally it doubled the violin in tutti passages, but by mid-century orchestral composers were starting to give the wind a more harmonic function in the form of held chords against moving violin lines. As hautboy parts became simpler, the violins were gradually given more complex figuration, until by the Classical period the two instruments had taken on quite independent functions.

11. (a) An hautboist: portrait by an anonymous artist, ?c1750, with (b) detail of reed from the same picture (Stiftelsen Musikkulturens Främjande, Stockholm)

Foreigners, including the Catalan brothers Joan Baptista and Josep Pia, became popular in Paris. Virtuosos of international renown appeared in Italy: Alessandro Besozzi at Turin, Matteo Bissoli in Padua, and Gaetano Besozzi at Naples (the last went on to have a brilliant career in Paris). In England in the 1740s Sammartini and Thomas Vincent were frequent soloists in public concert series. After Sammartini's death in 1750 Redmond Simpson emerged as London's pre-eminent hautboist.



In France the Naust-Delerablée workshop was continued from 1734 by Thomas Lot. He and Charles Bizey were the principal French woodwind makers of the period. Among the more interesting German makers were David Denner (who worked until mid-century, using his father Christoph's workshop stamp), the younger Wilhelm Oberlender and Thomas Gottlieb Crone. In London Thomas Stanesby (ii) worked until about 1754 and was succeeded by his assistant, Caleb Gedney. J.J. Schuchart, who may have worked for Bressan, established his shop shortly after the latter's death in 1731.

Alternative joints on hautboys (called 'Muttationen' in Austria) began to appear in the 1760s (fig.12). Such joints, usually three in number, may have been used principally by travelling soloists; they allowed for small pitch changes (about a comma, or a ninth of a whole tone). In military bands starting in the 1750s the hautboy was gradually replaced by the clarinet as the principal instrument. In many cases the players were probably the same but had simply switched instruments.

(vi) 1770–1800. By the 1770s the new 'Classical' hautboy was in vogue; it differed from its predecessors not only in outward form but also in its smaller bore, thinner walls and diminutive tone holes. The beginnings of such attributes can be seen in instruments made in Italy in the previous generation, especially those by Carlo Palanca of Turin. A year after Antonio Besozzi was appointed principal hautboy at Dresden in 1738, Augustin Grenser moved to Dresden, and Jakob Grundmann followed him in the early 1750s. These two makers developed a model that was the prototype almost everywhere for the rest of the century. The earliest surviving Grensers and Grundmanns closely resemble the instruments of Palanca and Giovanni Panormo.

The tone of the Classical hautboy was narrower and more focussed. It played more softly, especially in the upper register, and was extremely sensitive to corrections in intonation and to choice of fingering; it also played the high notes more easily. The hautboys of this period were built to be agile and mercurial rather than, as in earlier generations, rich and sensuous. Pitch was moving towards a relatively universal standard of *a′* = 440, which was in place by about 1770. It was probably no accident that *a′* = 440 had been traditional in Venice and northern Italy; its adoption all over Europe was no doubt the result of the important role of travelling Italian virtuosos in the preceding period. By 1770 the new 'long' high-note fingerings were in general use (see below).

As orchestral parts became increasingly simplified, the more enterprising players wrote concertos for themselves and began touring; hence the remarkable number of bravura pieces for hautboy and orchestra written in the second half of the 18th century. A number of travelling virtuosos left music for the instrument, including Joseph Fiala, Georg Druschetzky, Franz Joseph Czerwenka (recipient of Beethoven's variations on 'La ci darem la

12. Oboe in C, with alternative head joints, by J.G. Liebel, 1798 (Dayton C. Miller Collection, Library of Congress, Washington DC)

mano'), Ignaz Malzat (who probably wrote the 'Haydn' concerto), Carlo Besozzi (with J.C. Fischer, the best-known hautboist of his day), J.F. Braun, L.A. Lebrun, Fischer, and Friedrich Ramm (recipient of Mozart's Quartet). In the Habsburg lands prominent composers, including Mysliveček, the Wranitzky brothers and Vanhal, also wrote important works. Most of the solo and chamber genres that had previously provided showpieces had now fallen out of favour; the dominant genres were the hautboy quartet and quintet, which effectively replaced the solo sonata and the trio. Despite the popularity of these forms, the quantity of new compositions for solo hautboy was on a steady decline in the second half of the century.

By this period, the hautboy began to cede some of its former orchestral territory to the clarinet. The conscious use of instrumentation to create tone-colour meant that no specific wind instrument predominated in the orchestra, as the hautboy had formerly done. By 1802 François-Joseph Garnier wrote of the hautboy, 'The usage that most of the great masters made of it in their learned compositions attest sto its excellence and is a daily reproach to the present taste, which seems to neglect it'.

Starting about that time, solos began to show a preference for sharper tonalities, a higher tessitura and an extended upper range. Mozart's Quartet for oboe and strings K370/368*b*, for instance, shows a mean range about a major 3rd higher than Bach's average for hautboy solos. Upward slurs of intervals larger than a 3rd (virtually unplayable on earlier hautboys) were required more frequently, explaining the general adoption of long high-note fingerings based on harmonics, and the eventual addition of a speaker key. The note *f‴* appears first in a sonata by Bissoli written about 1750, but it was still exceptional when Mozart used it in his Quartet in 1781. L.J. Francoeur noted the use of *g‴* as early as 1772, but it did not appear in a fingering chart until 1792 (Wragg: see Haynes, 1978). Lebrun (who died in 1790) avoided *g‴* in one of his concertos. In 1802 Garnier discouraged the use of notes above *d‴* in his *Méthode* written for for the two-key hautboy.

In France the principal hautboists of this period were François Sallantin and Gaetano Besozzi. Sallantin was the first professor of oboe at the Paris Conservatoire (for which institution Garnier wrote his *Méthode*), and François Devienne's Sonatas opp.70 and 71 (1793) are dedicated to him; they are unusual in French music for being specifically for hautboy. In 1776, after a successful career in Munich, Secchi returned to Turin to replace the aging Alessandro Besozzi. Giuseppe Ferlendis was the principal hautboist at Salzburg (Mozart wrote the concerto for him there) and later played in Vienna and Venice. Sante Aguilar was active at Bologna, 1761–1808. Besides Fischer, leading players in London included John Parke and his brother W.T. Parke.

In the latter part of the 18th century, members of the Lot family, Prudent, and Christophe Delusse were the most celebrated makers in France. Andrea Fornari began making hautboys at Venice some time before 1791. Among several active makers in Germany, the Dresden makers Grundmann and his assistant Johann Friedrich Floth, together with Grenser and his nephew Heinrich, dominated the market in much of Europe during the last quarter of the 18th century (nearly a fifth of all the hautboys that now survive are by these makers). Many English hautboys from this period have also survived, made to meet the demands of a large amateur clientèle; William Milhouse had the best reputation. By this time instruments were also being made in Vienna and Prague by such makers as Friedrich and Martin Lempp and Jakob Baur. Haydn preferred the hautboys of the Viennese maker Rocko Baur.

From the 1780s additional keys began to appear on the hautboy. Keys had been used for centuries, usually to close holes beyond the reach of the fingers, but dedicated key systems did not find acceptance until the Industrial Revolution. The purpose of many of the new keys was to eliminate cross-fingerings by providing a separate tone hole, opened by its own key, for each semitone. This development affected fingering technique, but, more basically, it also altered the sound and character of the instrument: accidentals were clearer, so that the whole scale became brighter and more focussed. A few cross-fingerings remained (the forked *f′* is still used on the key-system oboe), but they came to be used as alternatives or for special effects. The advent of the key systems indicates a rejection of the basic characteristic of the hautboy and thus represented a turning-point in the history of the oboe.

3. The 19th century. During the 19th century the oboe changed more than in any other period. Most accounts have dwelt on the mechanism, with little consideration of other less obvious alterations and how they influenced the instrument's playing characteristics. Taken together, these changes not only allowed the hautboy to meet the technical demands of new musical aesthetics but also affected its pitch, timbre, carrying power, intonation, balance of registers and ultimately its character and function. In the 19th century the oboe remained a specialist's instrument. Because of the difficulties associated with reeds and the patience required to produce an acceptable tone quality, the oboe never became popular as an amateur instrument and was little used in domestic music-making. Oboe classes in conservatories across Europe were small, and the size of the market was responsible for consistently high production costs.

(i) Characteristics and repertory. By the mid-19th century the oboe had lost the dynamic power of the hautboy, rendering it unsuited to military and ceremonial music, while in the orchestra it fought a losing battle against the increasing power of the brass and string sections. Players saw themselves as successors to the tradition established by the Besozzis, Lebrun and Fischer, all renowned for their virtuosity and sweet tone. The Romantic attitude to the oboe was summed up by Berlioz:

> Candour, artless grace, soft joy, or the grief of a fragile being, suits the hautboy's accents; it expresses them admirably in its cantabile. A certain degree of agitation is also within its powers of expression; but care should be taken not to urge it into utterances of passion – the rash outburst of anger, threat or heroism; for then its small acid-sweet voice becomes ineffectual, & absolutely grotesque . . . The theme of a march, however manly, grand or noble, loses its manliness, its grandeur, and its nobility, if a hautbois deliver it.

Cantabile became the oboe's characteristic mode of expression: according to the French oboist Henri Brod, 'great composers use the oboe soloistically only in melodic passages, and most often in slow tempos' (1825–35, i, 1). Characteristic examples include the soaring line of Florestan's aria in *Fidelio* (Act 2 scene i), 'Tristesse' in

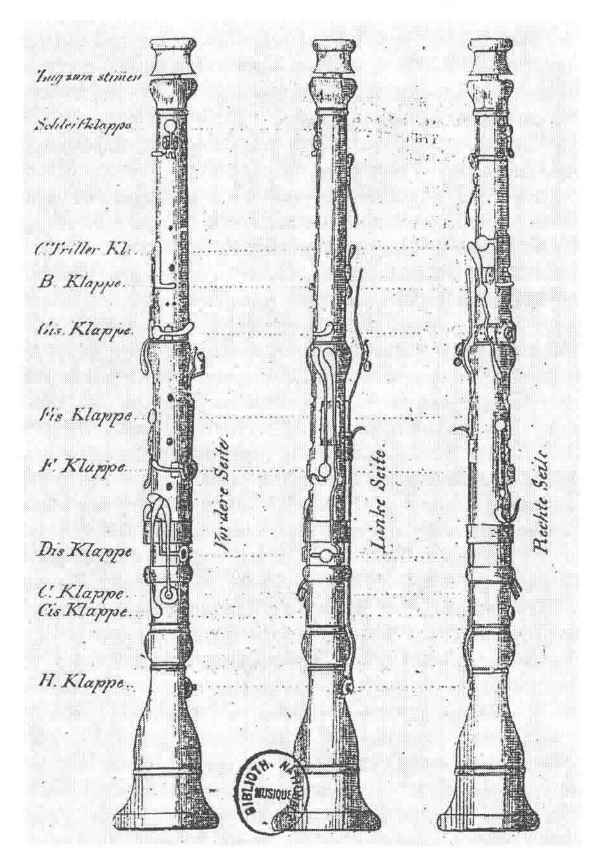
Berlioz's *Roméo et Juliette*, the solo at the beginning of the slow movement of Brahms's Violin Concerto and many examples in Wagner's scores, such as the moment in Act 2 of *Tannhäuser* where, in the words of Richard Strauss, 'no other instrument could reveal the sweet secret of love's innocence in such affecting tones' (*Instrumentationslehre*, 1904).

Both lyricism and virtuosity had a place in the concerto and in chamber music. Oboe with string trio or quartet was a favourite combination in the early 19th century. A profusion of concertos, *pièces de salon* and operatic fantasies emanated from the Paris Conservatoire, many written by the professors for their own and their students' use. Few concertos were written outside France; those by Kalliwoda and Bellini were exceptions. Among the works for oboe and piano, the *Drei Romanzen* op.94 by Robert Schumann (1849, with clarinet and violin as alternatives) are the most important; these pieces are more lyrical than virtuoso. At the end of the century, music by the Italian oboe virtuoso Antonio Pasculli (1842–1924) introduced an unprecedented level of virtuosity (e.g. the *Fantasia sull'opera Poliuto di Donizetti* and the *Grand concerto sul I vespri siciliani di Verdi*). The oboe's pastoral associations were perpetuated in works such as Brod's *Sur le retour du petit Savoyard* for oboe and piano (*c*1835) and the *Notturno Alpenreigen und Rondoletto pastorale* by Rudolf Tillmetz as well as in the 'Scène aux champs' in Berlioz's *Symphonie fantastique*.

Most of this music was written by lesser-known composers or by oboists for their own use. Judging from quantity and the difficulty of the music, many oboists reached a high technical standard. That few prominent composers produced solo or chamber music for the instrument was perhaps due at least in part to the limited range and expressive capabilities of the oboe relative to other instruments: it was considered unequal on its own to the aspirations of Romantic expression.

The independent traditions of oboe making that arose in France and Germany came about to meet different musical demands. While the French oboe quickly lost the qualities associated with the hautboy, the construction of the German oboe encouraged a more robust tonal character. By 1840 most modern oboes of the two schools had almost identical keywork, but were distinguished by other features of construction. The German oboes had a slightly wider bore and the keys were supported on wooden mounts, which tended to damp resonance; and these characteristics, together with the use of relatively hard reeds, produced a dark sound. The profile of the French oboe was more streamlined and it was played with lighter, narrower reeds. The sweet, bright tone of the French oboe added brilliance in the orchestra, while the heavy, dark tone preferred in the German lands was better able to blend with other instruments. Other European countries gravitated towards one or other of the two schools: Italy towards the German school and England likewise, until French influence began to predominate around the middle of the century. Oboe methods of the 19th century dwell on technical rather than musical aspects and contain much information relevant to the chronological development of the instrument.

(ii) Additional keys, 1800–40. For over a century two keys had served the oboist's needs, and although the technology for adding keywork was available, it was rarely applied. The development of keywork was stimulated by the challenge of adapting to the new musical style together with the economic viability provided by the Industrial Revolution. The oboe was the last wind instrument to be equipped with additional keywork, but this does not mean that it was disadvantaged: the double reed provided it with the flexibility to overcome the limitations of minimal keywork. Some oboists thought that too many keys could damage tone quality – Gustave Vogt (1781–1870) was one of the most outspoken on this issue. By the mid-1820s the evenness of tone provided by keyed fingerings was widely accepted, but cross-fingerings continued to be used for much of the century. Not all oboists stayed abreast of the latest developments, and orchestration manuals cautioned composers against demanding techniques available only on the most mechanically advanced instruments.



The exact circumstances and order in which keys were added to the oboe are difficult to track: priorities varied according to local preference. The first keys were added by German makers. A small percentage of the oboes made in Dresden by Heinrich Grenser (1764–1813), J.F. Grundmann (1727–1800), J.F. Floth (1760/61–1807) and his apprentice C.G. Bormann (1770/71–1839) have up to ten keys. In 1823 the oboist Wilhelm Braun considered four keys essential (C, C♯, E♭ and the speaker key), and a further four advisable. Two years later Josef Sellner (1787–1843), professor of the oboe at the Vienna Conservatory, published his *Theoretisch-praktische Oboeschule*, which promoted the 13-key oboe he had developed in collaboration with the maker Stephan Koch (fig.13). This model did not force other oboes into immediate extinction but was to remain the most advanced Austrian/German oboe for the next several decades.

French oboists were more cautious about adding keys; developments in the first two decades of the century concentrated on improving the much-admired oboes of Christophe Delusse (*fl* 1781–9; fig.14). François Sallantin (1775–1861), first oboe at the Opéra to 1812 and professor at the Conservatoire to 1816, added two keys, which Gustave Vogt, his pupil and successor, described in his *Méthode* (*c*1816–25) as essential for correct intonation, although he rejected the addition of further keys. However, by 1825 Vogt, then the pre-eminent player in France, had adopted a seven-key instrument (Musée de la Musique, Paris, 481/E263) similiar to the oboes described in methods by his pupils Brod (1825–35) and Auguste Vény (1828). French builders of the period such as Guillaume Triébert, Brod and F.G. Adler (*d* 1854) also respected the Delusse tradition (fig.15).

Two-key oboes remained in use in Italy perhaps longer than in other countries; Andrea Fornari continued to make such instruments until 1832. The virtuoso solos in Rossini's operas – notably *La scala di seta* (1812) and *La gazza ladra* (1817) – were written for Baldassare Centroni (1784–1860), who for most of his career played a two-key oboe.

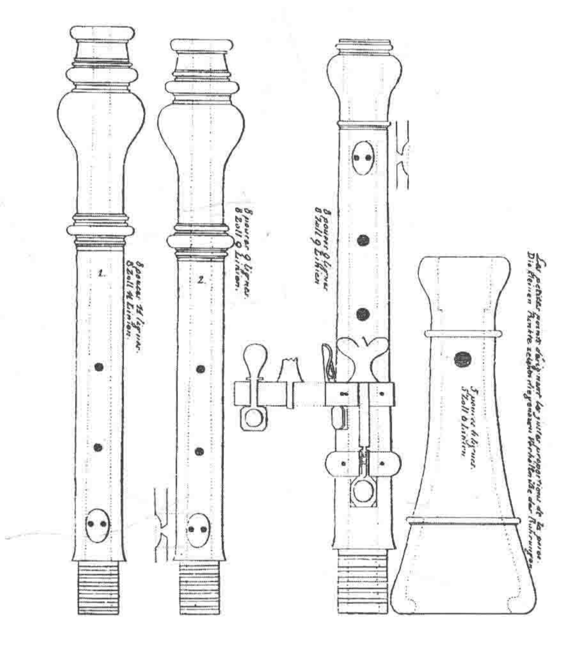
The keys added in this first phase served six main functions: to extend the range; to modify the tuning of certain notes; to provide alternatives to cross-fingerings; to improve the high notes; to improve trills; and to expand the range of tonalities in which the instrument was technically fluent and tonally effective.

The range of the hautboy in late 18th-century instructions is *c′* to *f‴*, fully chromatic except for *c♯′*. A *c♯′* key

13. Sellner-system oboe: illustration from a review of Sellner's 'Theoretisch-praktische Oboeschule' (1825) in 'Cäcilia', iv (1826)

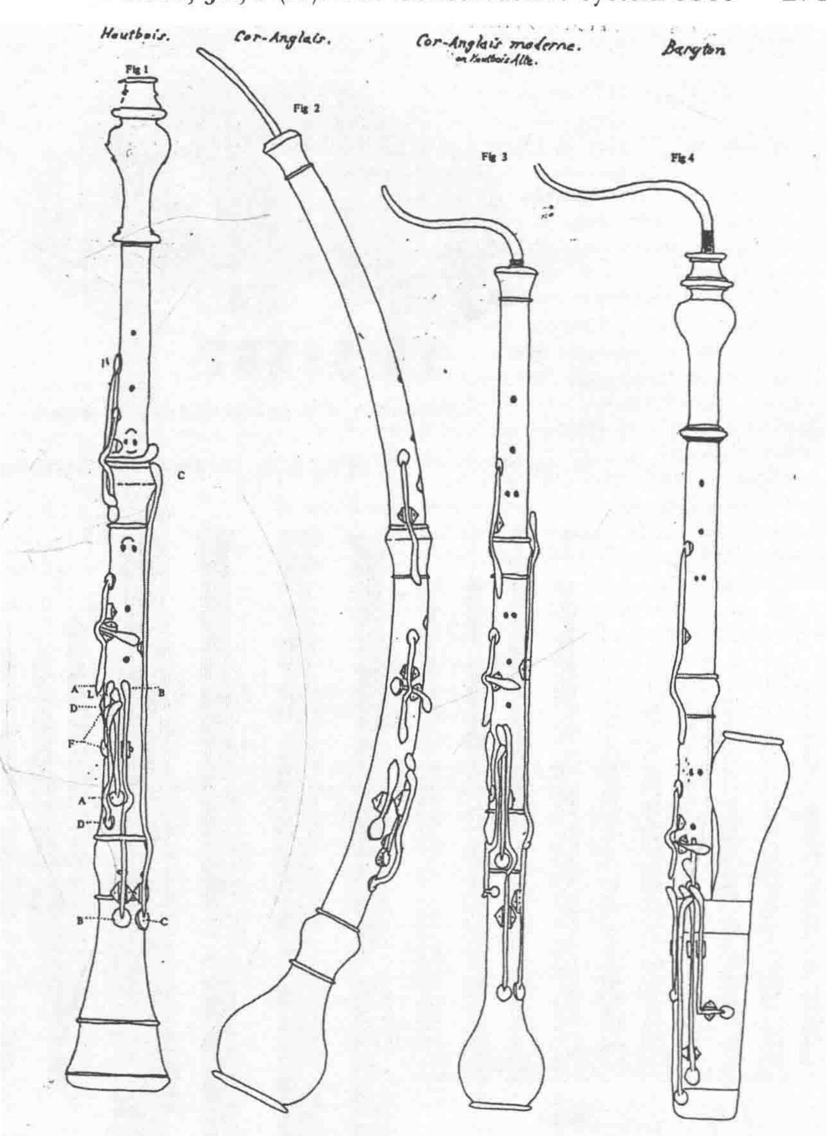
was an early addition on German oboes, but the note continued to be unavailable in France until about 1825. A key to close the vent holes on the bell to produce *b* was added to some German oboes in the first decade of the 19th century, but it did not appear on French oboes until Brod's model of 1835. Brod is also known to have made oboes descending to *a*, by which he intended to improve the overall tone of the instrument as much as to increase its range. The most widely accepted upper limit of the oboe's range in the 19th century was *g‴*. Sellner extended it to *a‴*, but this note was never called for in the music of the time.

The tuning compromises inherent to the hautboy were not always compatible with 19th-century intonation and could be eliminated with keys. The practice of distinguishing enharmonic equivalents with different fingerings was retained in France by contrasting cross- and keyed fingerings, with the higher of two fingerings for a particular pitch assigned to the sharpened note.



Evenness of tone became an important component of Romantic musical aesthetic. Keys could be used to reduce the variation in the tone of different notes, to correct intonation without requiring adjustments to embouchure or breath pressure, and to simplify certain passage-work.

It was discovered about 1800 that opening a small hole near the top of the bore as a high note was attacked improved the note's response. In Germany the key that covered this hole had two names: *Schleifklappe* ('slur key') referred to its use as an aid in playing upward slurs and *hohe F-Klappe* to its use in producing high notes, particularly *f‴*. The first French instruments with such a speaker key (*clef d'octavier*) were made by Brod in the late 1830s. Brod also devised a pierced plate to provide the correct venting, to overblow *d″* and *e♭″*.



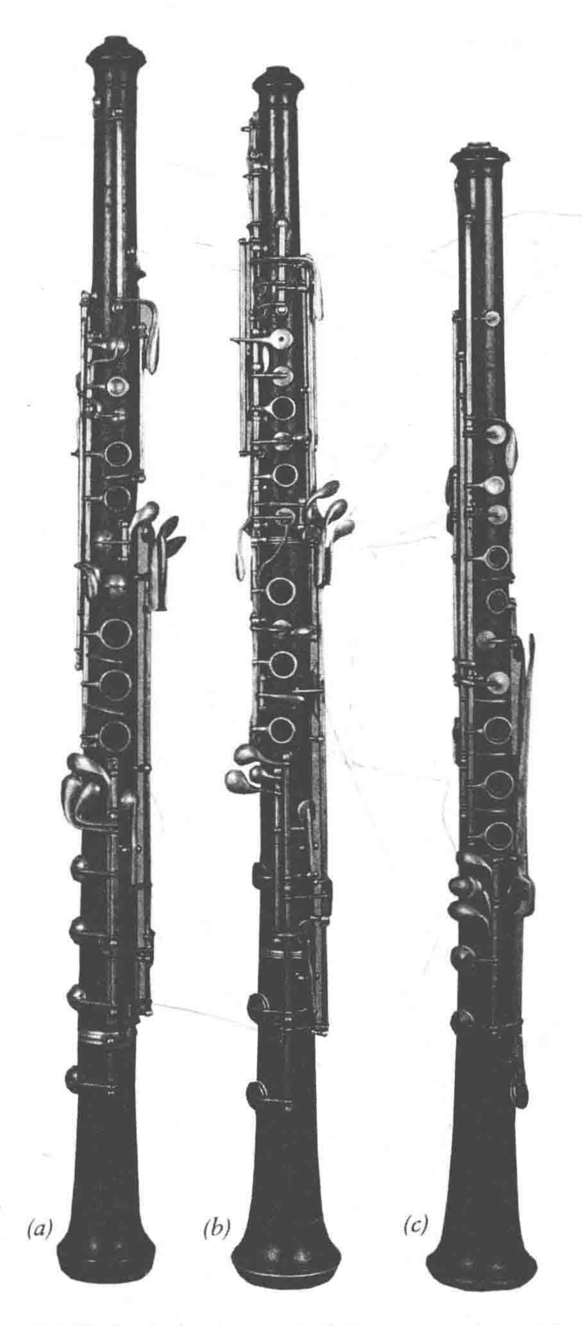
On the hautboy, many trills require one of the pitches to be 'bent' in tune by the player. Trill keys such as the *c′* key on the Sellner oboe provided more acceptable intonation.

The duplicate E♭ and F keys on the Sellner oboe greatly facilitated playing in tonalities with more than three sharps or flats, such as the D♭ major cantabile theme in the second movement of Schubert's 'Unfinished' Symphony (1822). Austrian and German compositions for solo oboe, written for such instruments, tend to be in tonalities further removed from C major than works by French composers. Although keys helped to produce a more even tone, they had little effect on the overall volume of the instrument. In addition, in this phase of the oboe's development the keys were not always ideally placed for rapid execution.

(iii) Interactive mechanisms, 1840–60. The second phase of the oboe's development was centred on France, stimulated by the flourishing school of virtuosity at the Paris Conservatoire during the tenure of the distinguished professors Vogt (tenure 1816–53), S.-X. Verroust (1853–63), C.-L. Triébert (1863–7), F.-C. Berthélemy (1867–8), Charles Colin (1868–81) and Georges Gillet (1881–1919). Makers aimed to improve the facility of execution by simplifying fingerings and to make the tone even more uniform over the compass of the instrument. Frédéric Triébert (1813–78) was responsible for a series of innovative designs, in which he addressed these problems by revising the layout of the keys and adopting interdependent mechanisms (*see* KEYWORK). The Triébert

14. Delusse oboe from F.-J. Garnier's 'Méthode raisonnée pour le haut-bois' (1802)

15. Oboe, english horn, cor anglais moderne and baryton from Brod's 'Méthode pour le hautbois', pt 2 (1835)



catalogue of 1862 advertised all *systèmes* created over the preceding 20-year period (fig.16). The profile of the more modern oboes was streamlined to accommodate the increasingly complex system of keys. By 1840 axles and posts had supplanted metal saddle key supports, and rings (*brilles*) had been added to facilitate *f♯′*, *b♭′* and *c″*.

No national schools of playing developed outside France, and, apart from a few virtuosos such as Philipp Barth, Sellner and F.E. Thurner (1785–1827), the market for oboes in Germany and Austria was made up predominantly of orchestral musicians, for whom 10- to 13-key oboes were sufficient. Most mechanical developments introduced in France in the 1840s were not adopted in Germany until after the middle of the century. C.T. Golde of Dresden (1803–73) made impeccably tuned oboes which, typically for German oboes of his time, had independent key mechanisms supported by wooden blocks, and simple levers rather than the rods found on French oboes.

(iv) The Conservatoire-system oboe. The central figures in the final stage of the development of the modern French oboe were Frédéric Triébert and A.-M.-R. Barret (*c*1803–79, from 1829 first oboe at Covent Garden). In the second edition of his *Complete Method for the Oboe* (1862) Barret announced a new design created in collaboration with Triébert (fig.17). On the new instrument the range was extended downwards to *b♭*; like Brod, Barret argued that lengthening the bell improved the tone of the instrument. The fingerings of the first octave were now used for the second octave, with the addition of an octave key for *a″* to *c″*; this simplified the fingering for *b♭″*, *b″* and *c‴*, notes formerly produced as modified 3rd harmonics of *e♭′*, *e′* and *f′* respectively. The facility gained by the simplified fingerings was, however, achieved at the expense of stability of pitch, tone quality and projection. The addition of new keys and new links between keys made trills available on all pitches throughout the compass of the instrument. Barret also devised a thumb-plate to activate the *b♭′* and *c″* keys. Many features of Barret's design were incorporated into Triébert's 'système 6' (1872); French players, however, preferred to

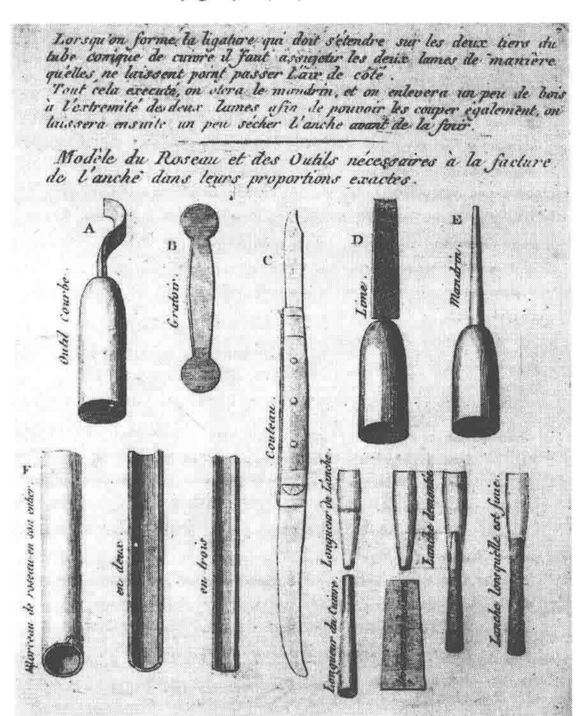
16. 17. *(a) Triébert Boehm oboe, c1862; (b) Barret-system oboe, c1862; (c) L.-A. Buffet Boehm oboe, c1844 (Bate Collection, Faculty of Music, University of Oxford)*



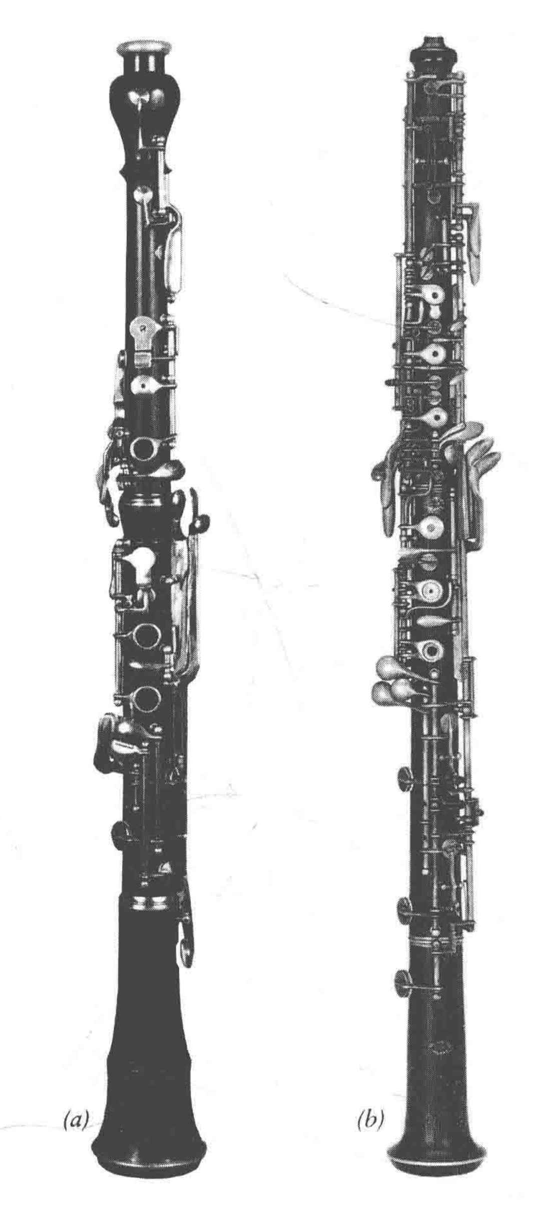
maintain the freedom of the thumb, so the *b♭′* and *c″* keys were operated by the index finger of the right hand.

After the death of Frédéric in 1867, the firm of Triébert changed hands several times. It was declared bankrupt in 1881, at which time the foreman, François Lorée (1835–1902), established his own workshop to continue the Triébert tradition. In the same year Georges Gillet adopted Triébert's 'système 6' as the official instrument of the Paris Conservatoire. It was, however, some time before this 'Conservatoire system' oboe became established as an international standard. In Belgium it was not until the last decade of the century that it superseded previous models. In England Alfred Morton (1827–98) made hybrid oboes with the wider bores of German oboes and French keywork. By 1860 Central European makers had added rings on holes 5 and 6; few further changes are noticeable in German oboe designs until the end of the century. The Austrian oboe was the least affected by French developments and retained most features of the Sellner-Golde tradition, with modifications by Josef Hajek (1849–1926), whose instruments were championed by the Viennese oboist Richard Baumgärtel (1854–1941). Pasculli was one of the first Italian oboists to use a French oboe. He played a Triébert 'système 3' to the end of his career in 1884, 45 years after the model was created.

Concurrently with the development of the Conservatoire-system oboe, some makers developed a radically new oboe based on the theories of Theobald Boehm. Initially there was much optimism about the new design – it would improve the oboe's faulty tuning by doing away with the 'acoustic monstrosities of forked fingerings and half-holings' (Fétis, *Rapports du Jury international, Exposition universelle, 1868*) – but the success of these instruments was short-lived. In the 1840s and 50s the oboist A.J. Lavigne (1816–86), an ardent supporter of Boehm's principles, participated in the three projects to realize a Boehm oboe (see fig.18). The tonal results were incompatible with the oboe's established character, and each attempt only exacerbated the oboe's reedy tone. The Boehm-system oboe continued to be used only in military music, where its simplified fingering, increased power and improved intonation were appreciated. Although it failed to supplant traditional designs, the Boehm experiment served to affirm the desired characteristics of the French oboe.

Like their 18th-century predecessors, early 19th-century makers favoured the superior acoustic properties of boxwood, which was, however, a soft wood with a tendency to warp. By the 1840s makers were experimenting with other woods in an attempt to find a more stable support for the delicate interactive key systems. The Triébert catalogue of 1862 recommended boxwood only for oboes with minimal keywork, preferring rosewood, grenadilla and ebony for all other models. In 1890 Gillet's revision of Brod's tutor suppressed all reference to boxwood, naming in its place pallisander, grenadilla and ebony. Of these, grenadilla wood has proved the most serviceable.

As much as the instrument itself, oboe reeds changed decisively over the course of the 19th century. The earliest detailed reed-making instructions are found in F.-J. Garnier's *Méthode* of 1802 (fig.18). Other early instructions appear in the method books of Sellner (1825), Brod (1825–35) Clemente Salviani (*Metodo completo per oboe*, Milan, 1848) and Giuseppe Cappelli (*Metodo teoretico-pratico*, Milan, 1853). During the 19th century reeds became narrower, made from cane of smaller-diameter tubes, gouged increasingly thinner (see fig.2 above). Like the instruments, reeds did not follow a simple chronological evolution but varied according to national preference, the French reeds being the smallest and lightest. A gouging machine invented by Brod revolutionized reed making by providing more uniform results than had been possible by scraping the interior of the cane by hand, and resulted in the abandonment of the tapered gouges seen in some hautboy reeds. Changes to the instrument also influenced



18. Oboe reeds (before and after binding) and reed-making tools: engraving from F.-J. Garnier's 'Méthode raisonnée pour le haut-bois' (1802)

reed design. With the addition of the speaker key, reeds no longer needed to respond to the changes of air pressure to overblow the high notes, and the dimensions of the staple were less critical because intonation in the upper octave could be adjusted with less risk of the notes dropping to the lower octave. As cross-fingerings require light and flexible reeds, only when these fingerings became virtually obsolete did harder reeds come into use.

As at the end of the 18th century, most orchestras in the 19th century had two oboes. The english horn was usually played by one of the oboists, more rarely by an additional player. This configuration was expanded to three oboes and english horn in some of Wagner's late works (e.g. *Parsifal*). The tradition of tuning to the oboe is documented from the beginning of the 19th century. According to Vogt and Fétis (*Manuel des compositeurs*, Paris, 1837, p.117), the narrow bore of the oboe made it less susceptible than other wind instruments to pitch variation caused by temperature fluctuations.

4. THE 20TH CENTURY.

(i) Instruments and playing styles. At the end of the 20th century the Conservatoire-system oboe was used by soloists and orchestral musicians throughout the world. For over 120 years since its invention in 1872 this design has been forced (with only minor modifications) to adapt to performing music from the 17th century to the present day. Richard Strauss's enthusiasm for the French oboe's superior mechanism, evenness of tone, facility in extreme ranges and ability to blend with other instruments (1904, p.164) was probably responsible for its adoption in Germany. The first oboist to promote the use of the French instruments there was Fritz Flemming (1872–1947), professor at the Berlin Hochschule für Musik from 1907. By 1920 most German oboists had followed his example. His influence is evident in the playing of Karl Steins (*b* 1919) and Lothar Koch (*b* 1935), whose dark, voluminous sound, produced by playing a French oboe with German reeds, was an unmistakable part of the sound of the Berlin PO during the tenure of Herbert von Karajan. Vienna has remained the only place to resist French influence. The modern Viennese oboe, descended from the instruments of Sellner and Golde, was made in the 20th century by Hermann Zuleger and Yamaha (fig.19*a*). It is characterized by a wide, non-continuous bore, thick walls, a fingering system that incorporates cross- and harmonic fingerings, and short, wide reeds inserted into a tapered reed well. Shorter than the French oboe, the Viennese oboe does not usually have

19. (a) Modern Viennese oboe by Hermann Zuleger (Bate Collection, Faculty of Music, University of Oxford); (b) experimental oboe by Romeo Orsi, Milan, 1918–30 (private collection)

a key for *b♭*; Mahler's scores provide alternative versions for French and Viennese oboes. At the end of the 20th century some Viennese oboes were being made with Conservatoire-system keywork.

Attitudes towards modifying the Conservatoire-system oboe have remained exceptionally conservative, with the result that defects in the French design have remained unsolved on the modern instrument. The intonation of the upper octave and the lowest notes is still problematic, and the tone of *b♭″* to *c‴* remains poor. A few small modifications have been made. Early in the century *plateaux*, or pierced keys, were installed above the six finger-holes. This innovation, called the 'Gillet' system after Georges Gillet, who proposed it to Lorée, assists the execution of certain trills and encourages a dark tone-colour. A third octave key, for playing in the extreme high register (*e‴* and above), has been added to some oboes. Extra tuning vents have been added to correct the pitch of notes affected by the lengthening of the bell to accommodate *b♭*. In the late 1980s and early 90s the walls of the top joint were thickened, increasing sonority and projection. The only resistance fingering used on the modern oboe is the forked F, which is still required for certain successions of notes. With the exception of rare examples in rosewood, 20th-century oboes are made of grenadilla. There have been sporadic experiments with synthetic substances, but these have not been widely used outside the production of student models. Isolated attempts to redesign the oboe have included an oboe made about 1930, signed 'Prof Romeo Orsi Milano', with added tuning holes, a network of automated octave keys and duplicate key systems for the low notes (fig.19*b*). The extra weight of the encrustation of keywork alone limited the practicality of this design. In the 1920s and 30s attempts were made to make the oboe more accessible to doublers in dance bands. The English firms Louis (established 1923) and Boosey & Hawkes (established 1930) created oboes with saxophone fingerings, and the Berninger-Adler oboe (1928) employed a single-reed mouthpiece. Neither enjoyed more than limited success. Likewise a system devised by the English oboist Arthur Forman to improve intonation of E and F by repositioning holes 5 and 6 has not been pursued. Persistent attempts to find an adequate synthetic substitute for reed cane have failed. Many oboists use commercially gouged and shaped cane, which they tie and scrape themselves; others personalize the process from an earlier stage, shaping, or gouging and shaping, the cane to their own specifications. There are many descriptions of the process (see Bourns, 1998). Reed-scraping machines have further mechanized reed making.

At the end of the 20th century the market was dominated by three French manufacturers: Lorée (see fig.3 above), Marigaux (established 1934) and Rigoutat (established 1922). The monopoly of French makers did not result in the total suppression of national styles. Although virtually identical mechanically, each company's instruments possessed unique tonal qualities adapted to specific schools: Lorée oboes were being used in North America to the almost total exclusion of other makes; Marigaux was supplying the German market with oboes of darker tone; and Rigoutat was making instruments with the more delicate tone preferred in France. National differences also existed in technique and reeds, although during the 1990s even these were becoming less apparent. Slight variations in key mechanisms existed in some traditions. Of these, the most important is the thumb-plate open-hole system used extensively in Britain. Although directly affecting only *b♭′* and *c″*, this system influences the tonal balance of the whole instrument. However, the Conservatoire-system oboe has always had a number of English adherents, Terence McDonagh (1908–86) being one of the most renowned. In the Netherlands the Stotijn system (named after a famous Dutch family of oboists) was developed; it has a special automatic octave-key mechanism. The Prestini system, developed by the Italian firm of the same name, assigned the keys for *b* and *b♭* to the left thumb.

Vibrato, which began to be used in France in the last decade of the 19th century, may have been introduced partly to compensate for the loss of resonance resulting from the narrow bore of the Conservatoire-system oboe. Strauss (*Instrumentationslehre von Hector Berlioz*, 183) may have been referring to vibrato when he observed: 'The French tone, though thinner and frequently tremulant [*oft vibrierend*], is much more flexible and adaptable'. Fernand Gillet (1882–1980), following the example of his uncle Georges, used throat vibrato discreetly in his *premier prix* examination in 1897 (Post, 1982, p.36). Leon Goossens (1897–1988), inspired by the violinist Fritz Kreisler, is considered the first oboist to have used diaphragm vibrato as a regular adjunct to tone production. It was well into the 20th century before vibrato was accepted by all schools; by the end of the century constant vibrato had transformed the tonal character of the oboe.

(ii) Repertory and performers. In the 20th century the oboe re-emerged as a solo instrument, stimulating composers to write concertos, solos and ensemble chamber music for it. This development was largely inspired by the playing of a number of fine oboists. French composers continued to write for the professors of the Conservatoire and their pupils; Saint-Saëns's Oboe Sonata (1921), written for Louis Bas (1863–1944), is an important work from the early 20th century. Goossens, who studied with Charles Reynolds (1843–1916) and the Belgian Henri de Busscher (1880–1975), forged a model career as orchestral musician, soloist and teacher. Known for the silken tone of his playing, his supple phrasing and control of vibrato, Goossens inspired more works than any other oboist of the 20th century. Arnold Bax's Quintet for oboe and strings (1922) was the first of the works dedicated to him; later came an incomplete suite by Elgar and concertos by Leon's brother Eugène (1927), Gordon Jacob (1933) and Vaughan Williams (1944).

The most important compositions of the middle of the century include concertos by Strauss (1945), Martinů (1955) and Zimmermann (1952), and sonatas by Wolpe (1932), Hindemith (1938), Dutilleux (1947), Schuller (1951) and Poulenc (1962). Britten's *Six Metamorphoses after Ovid* op.49 for solo oboe was written in 1951 for Goossens's pupil Joy Boughton (1913–63). This work, in particular the two-part writing exploiting the oboe's different registral and dynamic capabilities in no.5, 'Narcissus', influenced many later compositions for solo oboe: Krenek's *Sonatine* (1956), John Exton's *Three Pieces* (1972), Stoker's *Three Pieces* (1973) and Dorati's 'Fugue à 3 voix' from *Cinq pièces* for solo oboe (1981).

From 1960 the enormous versatility and phenomenal technique of the Swiss virtuoso Heinz Holliger (*b* 1939) brought prominence to the oboe in a wide range of

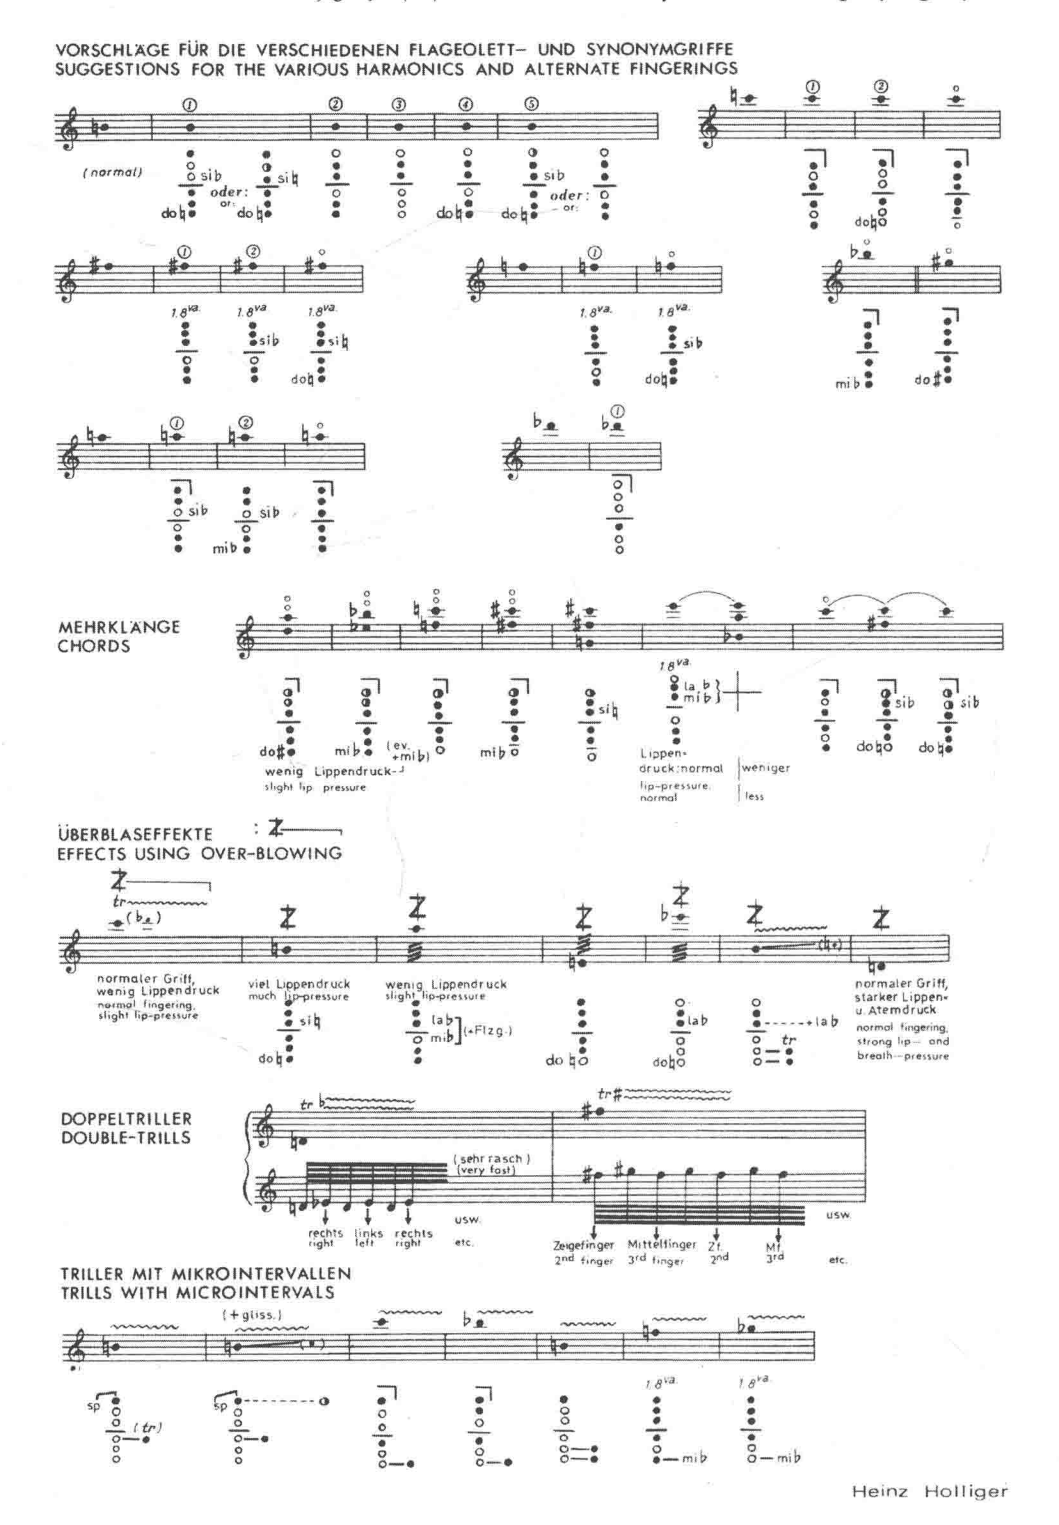
musical styles. Without ignoring the Baroque and Classical repertory, Holliger has revived unknown works of the 19th century and maintained an important position in contemporary music as both a performer and a composer for his instrument. Works written for him include Jürg Wyttenbach's Sonata (1961), Castiglione's *Alef* (1965), Penderecki's Capriccio for oboe and strings (1965), Berio's *Chemins IV* (1975, based on *Sequenza VII*) and Carter's Quintet for piano and wind (1992). Works for oboe and harp for performance with his wife Ursula include Carter's *Trilogy* (1944) and double concertos by Henze (1966) and Lutosławski (1990). Of his own oboe compositions, *Mobile* (1962) and *Siebengesang* (1967) are important.

Other noteworthy European oboists of the 20th century are Pierre Pierlot (*b* 1921), Maurice Bourgue, appointed professor at the Paris Conservatoire in 1979, and the Swiss-born Thomas Indemühle (*b* 1951), who earned a reputation as a teacher in the Netherlands and Germany. A number of women became prominent players: in England, Janet Craxton (1929–81) and Evelyn Rothwell (*b* 1911), and in the USA, Lois Wann and Nora Post, the latter noted as a performer of contemporary music.

The Frenchman Marcel Tabuteau (1887–1966), principal oboist of the Philadelphia Orchestra under Stokowski and Ormandy, exerted immense influence, establishing an 'American' style of oboe playing which has developed apart from European influence. The characteristic tone of the American school is generated by reeds with more bark scraped from the cane and a posture with the oboe held closer to the body than in other traditions. Tabuteau's many distinguished pupils have held principal chairs in orchestras across the USA, notably John Mack in the Cleveland Orchestra, Harold Gomberg (1916–85) in the New York PO, Robert Bloom (1908–84) in the NBC SO and, from 1934, the Bach Aria Group, and John de Lancie (*b* 1921) in Philadelphia. Other well-known American oboists include Joseph Marx (1913–78), Ray Still (*b* 1920), principal in the Chicago SO 1954–96, Robert Sprenkle and Humbert Lucarelli. At the end of the century prominent players included Richard Woodhams of the Philadelphia Orchestra, Joseph Robinson of the New York PO and Alex Klein of the Chicago SO.

(iii) Technique. 19th-century études – divorced from their obsolete accompanying technical remarks – remained the mainstay of the oboist's practice routine, supplemented by études of ever-increasing technical difficulty by such French oboist-composers as Louis Bleuzet (1874–?1940), Albert Debondue (1895–1984) and Roland Lamorlette (1894–1960). Lawrence Singer's *Metodo* and Holliger's *Pro musica nova: Studien zur neuen Musik* equipped the oboist with avant-garde techniques. From the 1960s the exploration of non-conventional sounds expanded the technical requirements of the oboist. Many of these new techniques are described in Holliger's performance notes printed with the score of Berio's *Sequenza VII* (1969; fig.20).

The range of the oboe has been extended to *a‴* and beyond. Extremely high notes, devoid of the oboe's reedy sound, can be produced by placing the teeth on the reed. Although Sellner provided a fingering for *a‴* in 1825, it was over a century before the pitch became usable; the presence of this note caused the first performance of Wolpe's *Suite im Hexachord* (1936) to be delayed until the 1950s. Notes below *b*♭ have been demanded in some works, for example in Wilfred Josephs's *Solo Oboe Piece* (1974).

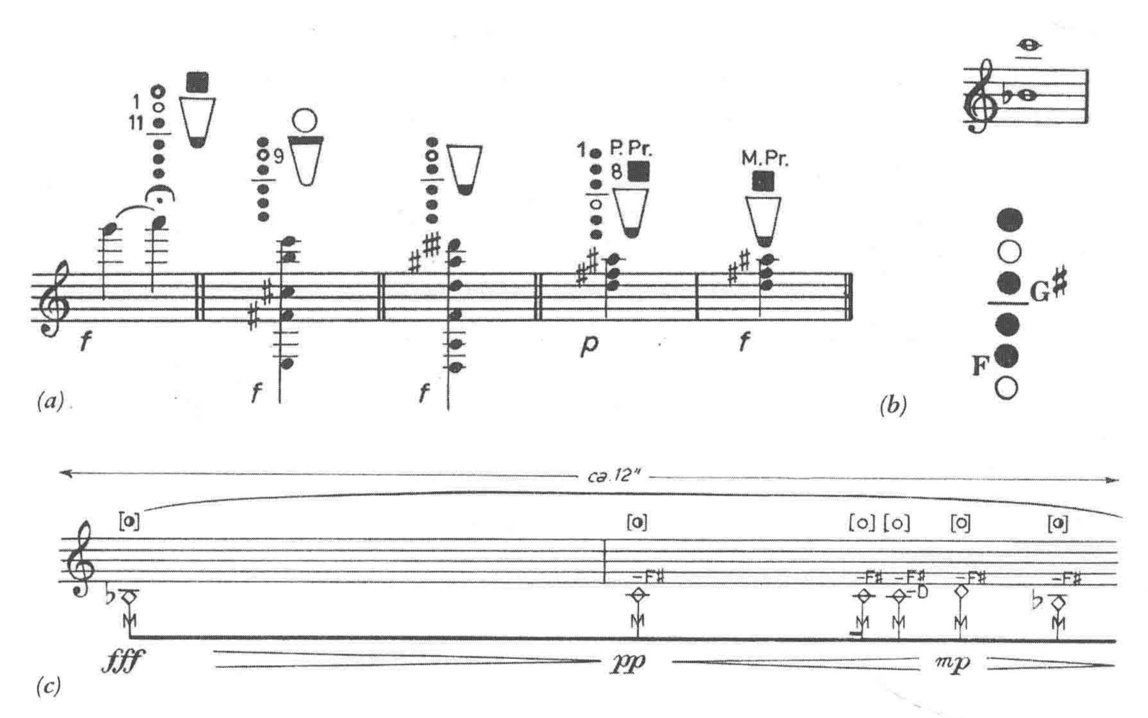


In the 20th century alternative fingerings were used for their colouristic possibilities. Harmonics have been in use since at least 1909, when Georges Gillet provided fingerings in *L'enseignement supérieur du hautbois*. A *bisbigliando*, or timbral trill, can be achieved on the oboe by oscillating between alternative fingerings producing the same pitch. Alternative fingerings are used to create a *Klangfarbenmelodie* at the beginning of Berio's *Sequenza VII*, where the oboist colours an electronically generated pedal with six different fingerings of *b′*. Glissandos, quarter-tones and other microtonal effects can be produced by partly closing the tone holes; because this technique is hampered by the *plateaux* system, some contemporary music specialists have preferred oboes with open holes. Double trills exploit duplicate keys.

Other new playing techniques have also been developed. The protrusion of the reed in the player's mouth makes double-, triple- and flutter-tonguing more difficult on the oboe than on other wind instruments; consequently these became an essential part of the oboist's technique only late in the century. Flutter-tonguing can be produced either with the tongue or in the throat. Stravinsky's marking 'Flatterzunge' in *The Rite of Spring* was probably envisaged as a means for the oboist to articulate rapid scales rather than as the timbral effect intended by later composers. Vibrato is sometimes specified at different speeds. Breath noises, key clicks and other percussive effects are featured in Holliger's *Cardiophonie* (1971), and other composers have called for the reed or instrument to be played on its own. Takemitsu's *Distance* for oboe and *shō* (1972) develops a polyphonic interplay between the performer's singing and playing.

Circular breathing became a regular part of the oboist's technique in the 1970s. The oboe reed provides the necessary resistance to allow the player to inhale while playing, the cheeks acting as a reservoir. Uninterrupted passage-work such as in Pasculli's *Le api*, for example, suggests that the technique had been developed much earlier by isolated players, but since the appearance of works like Globokar's *Atemstudie* (1972) circular breathing has become essential.

MULTIPHONICS have been used in many compositions. Bruno Bartolozzi's *New Sounds for Woodwinds* (1967) has been a seminal source-book. In collaboration with the oboist Lawrence Singer, Bartolozzi determined the audible pitches in each multiphonic and developed a number notation for the fingerings (fig.21*a*). Other forms of notation have included a simplified version of Bartolozzi's system (see Post, 1982; fig.21*b*) and a tablature specifying fingerings, and breath and lip pressure (Holliger, *Studie über Mehrklänge*, 1971; fig.21*c*). Double harmonics, the most consonant of multiphonic possibilities, are produced by isolating two partials generated from a single fundamental. 'Rolling tones' (*rollender Töne*), introduced in Klaus Huber's *Noctes intelligibilis lucis* (1961), are produced by the disruption pattern between slightly out-of-tune harmonics.



A variety of electronic devices and techniques have been applied to the oboe, manipulating its sound by amplification, artificial reverberation, tape delay and ring modulation. All of these techniques are required in Włodzimierz Kontonski's Concerto for oboe and orchestra (1972).

20. Heinz Holliger's playing instructions for the performance of Berio's 'Sequenza VII' (©1971, Universal Edition)

With the rise of the english horn as a permanent member of the orchestra, a third oboist has become essential in the 20th-century orchestra. However, it is common for 20th-century scores to call for a larger oboe section. Both Schoenberg's *Gurrelieder* (1901) and Igor Stravinsky's *Symphony of Psalms* (1930) require four oboes and one english horn.

(iv) Alternative playing styles. The last 30 years of the 20th century saw the revival of performance on historical

21. *Multiphonic notations: (a) Bartolozzi system, from L. Singer, 'Metodo per oboe' (1967); (b) N. Post, 'Multiphonics for Oboe' (1982); (c) H. Holliger, 'Studie über Mehrklänge' (1971)*

oboes – primarily the hautboy, but also 19th-century models. Pioneers were Michel Piguet (*b* 1948), Bruce Haynes (*b* 1942), Paul Goodwin and Han de Vries (*b* 1941). As these players were trained in a variety of schools, a number of different reconceptualizations of the oboe in the 18th and 19th centuries have emerged. Some players, such as de Vries, have also had important careers as modern oboists, but many have restricted their interests to pre-20th-century oboes and music. Among makers of hautboys are Paul Hailperin (Germany), Toshi Hasegawa (Netherlands), Olivier Cottet (France) and Sand Dalton (USA).

The oboe has not been absent from jazz or popular music: the best-known representatives have been Bob Cooper (*b* 1925) in jazz and Paul McCandless of the New Age group Oregon. At the end of the 20th century Rigoutat was developing a new system of amplification for the oboe, hoping to encourage its use in popular music.

III. Larger and smaller European oboes

1. Introduction. 2. Early lower oboes: (i) Haute-contre de hautbois (ii) Taille de hautbois (iii) Quinte de hautbois. 3. Mezzo-soprano oboes: (i) Oboe grande (ii) Oboe d'amore. 4. Tenor oboes: (i) The taille (de hautbois) in the 18th century (ii) Vox humana (iii) Oboe da caccia (iv) English horn (v) Alt[h]oboe. 5. Bass oboes and larger forms: (i) Bass oboe (ii) Sub-bass and contrabass oboes. 6. Smaller oboes.

1. Introduction. Lower oboes began to appear at the court of Louis XIV in the mid-17th century, at the same time as the treble instrument. They were needed to play the middle parts between treble oboe and bassoon in the five-part, later four-part, double-reed consort. But while the treble oboe spread rapidly throughout Europe and soon developed into a solo instrument and an integral member of the orchestra, the lower oboes followed a more erratic course, in some places disappearing completely for a time from the musical scene. The mezzo-soprano oboes were favoured during the late 17th and early 18th centuries but then faded from view, not to re-emerge until the 20th century. The tenor oboe, which had more variants than the other sizes, was continuously in use from the 17th century. Bass oboes, always less widespread than the others, have appeared occasionally as ensemble instruments. By the late 20th century each member of the family had become a soloist in its own right.

One feature common to all modern lower oboes is the bulb-shaped bell (Fr. *pavillon d'amour*; Ger. *Liebesfuss*). It was first applied to the tenor instrument about 1700 and to the mezzo-soprano about 1720. Such bells were used on shawms and bagpipes from the Middle Ages onwards; small bulb-belled shawms are depicted in the *Cantigas de Santa María*, from the court of Alfonso X of Spain (late 13th century; fig.22), and bulb bells appear on both the drones and chanters of bagpipes from Iberia to eastern Europe. The bulb bell has long been considered the source of the distinctive tone of the modern english horn and other lower oboes. While this is still open to debate, it is clear that the voicing of the bell affects the tonal quality and response of the instrument as a whole.

2. Early lower oboes.

(i) Haute-contre de hautbois. A mezzo-soprano oboe in A. It was used to play the second line (which sometimes descended to *a*, too low for the treble instrument) in the five-part ensemble music of the Lullian era. There are no extant examples. Personnel lists for Louis XIV's Douze Grands Hautbois reveal that there were usually two players of the haute-contre in the ensemble (*see* Paris, §V, 1(i)), and Sébastien de Brossard (*Dictionaire de*

22. Double-reed instrument with a bulb bell and clappers; miniature from the 'Cantigas de Santa María', Spanish, c1270–90 (E-E b.I.2, f.295v)

musique, 1703) mentioned the instrument, although he did not provide a separate entry for it. Lully used the haute-contre de hautbois in stage works, including *Les plaisirs de l'île enchantée* (1664), *Atys* (1676) and *Persée* (1682), and in instrumental music (*Airs de Carrousel*, 1686). It fell out of use in the late 17th century as interest shifted to the four-part ensemble of two oboes, tenor oboe (taille de hautbois) and bassoon and the trio of two oboes and bassoon. Although the second line in these ensembles was usually taken by a treble oboe, the part itself continued to be referred to as 'haute-contre', a practice that has led to doubt about the existence of the haute-contre de hautbois. However, by the late 17th century the instrument had been carried to other parts of Europe, where it would take on new forms during the early 18th century.

(ii) Taille de hautbois. A tenor oboe in F, a 5th below the treble, employed to play the third line in the wind ensembles and orchestras of Lully's time and later. Like the haute-contre, the taille de hautbois had a straight body with two keys and an open bell. It may have made its first appearance in Lully's *Alcidiane* (1658); he also used it in *L'impatience* (1661), *Les noces de village* (1663) and *La princesse d'Elide* (1664). A true solo part appears in Pascal Collasse's *Enée et Lavinie* (1690). Along with other members of the oboe family, the taille de hautbois was carried to England, Germany and the Netherlands, where it was employed in orchestras and wind ensembles (fig.23). The term TAILLE survived into the 18th century as a designation for a middle part in an ensemble work or for an instrument that played such a part.

(iii) Quinte de hautbois. A basset oboe in D, a 3rd below the taille de hautbois and a 5th below the haute-contre, apparently the fourth voice in the five-part double-reed ensemble during the early experimental years of the Lullian era. No examples are extant. Its existence is inferred by analogy with the recorder family of the time, which included haute-contres, tailles and quintes, and on a single piece of iconographical evidence: the frontispiece of Pierre Borjon de Scellery's *Traité de la musette* (1672), which depicts an *hautboïste* of the period with his 'full kit', including what might be a quinte de hautbois (fig.24). This instrument is equipped with keys, probably modelled on those of the musette and designed to assure reasonable intonation. The instrument did not survive the experimental years.

3. MEZZO-SOPRANO OBOES.

(i) Oboe grande (It., also *oboe luongo*, *oboe basso*; Fr. *grand hautbois*; Ger. *grosse [H]oboe*). The 18th-century designation for the haute-contre de hautbois, a mezzo-soprano oboe with an open bell, made in A and B♭ versions. It was used in central Europe in *Hautboisten* bands and other ensembles: Johann Fischer, J.C. Pez and Telemann, for example, scored for it in wind music; J.G. Hoffman, G.A. Homilius and Telemann, among others, used it in church cantatas. The instrument in A was favoured for music in keys with several sharps, and the instrument in B♭ for keys with several flats; the treble in C did not play well in tune in these keys. The oboe grande was used in a number of works by Italian composers, beginning in the 1720s. Porpora's *Angelica* (1720) and Vinci's *La caduta de' Decemviri* (1727) have parts for a pair of 'oboi lunghi', and Conforto's *Livia Claudia vestale* (1755) includes a solo for the instrument. By the late 18th century it was not much in evidence, although the Viennese oboist-composers Johann Went and Josef Triebensee wrote for it. In the 19th century a few oboes in B♭ were made for use in bands. In 1874 Victor-Charles Mahillon produced a pair of open-belled 'hautbois

23. Bell of an oboe by Beukers, c1690, depicting musicians playing (left to right) hautboy, bassoon, taille de hautbois and hautboy (Victoria and Albert Museum, London)

24. Frontispiece from Pierre Borjon de Scellery's 'Traité de la musette' (Lyons, 1672): engraving by Thomas Blanchet; the long instrument on the ground beside the player is thought to be a quinte de hautbois

d'amour' in A, with 19th-century keywork, for the first London revivals of J.S. Bach's works; similar instruments were also made in Germany around the same time.

(ii) Oboe d'amore (It.: 'oboe of love'; Fr. *hautbois d'amour*; Ger. *Liebes[h]oboe*). A mezzo-soprano oboe in A with a bulb bell (fig.25*a*), developed in south-central Germany during the second decade of the 18th century. The tone of the oboe d'amore, described as 'more sombre than the treble, but less weighty than the tenor', was exploited by J.S. Bach, Telemann and their contemporaries. Unlike the oboe grande, which was primarily an ensemble instrument, the oboe d'amore was used as a solo and obbligato instrument. The earliest extant specimen, dated 1719 (Musikmuseum, Stockholm), is by J.G. Bauer (1666–1721) of Leipzig. That city appears to have been a centre for oboe d'amore making; there are a number of extant instruments by J.H. Eichentopf and J.C. Sattler, both of whom were also active there about 1720.

The rich harvest of solo, concertante, obbligato and chamber music produced for the oboe d'amore in Germany during the late Baroque testifies to a strong interest in this new tone-colour. Soloists such as J.C. Gleditsch of Leipzig, who worked with Kuhnau, then Bach, and J.M. Böhm (*fl c*1685–1753) of Darmstadt, who worked with Graupner and Telemann, developed the new instrument as a distinctive solo voice. Bach used it with special effectiveness. His earliest surviving score to include it (*Die Elenden sollen essen* BWV75) dates from 1723, after his arrival in Leipzig. He achieved a particularly striking effect in the opening chorale of *Meinen Jesum lass ich nicht* BWV124 (1725); there a solo oboe d'amore weaves an obbligato around the choral lines. One of his best-known solos for the instrument is that in the alto aria 'Qui sedes' in the B minor Mass. Telemann's output includes solo concertos for the instrument and a triple concerto for flauto d'amore, oboe d'amore and viola d'amore as well as obbligato parts in vocal works for church and stage. Interest in the oboe d'amore began to flag in the 1740s, and by the 1760s few works were being written for it. The instrument was heard occasionally during the second half of the 18th century: a concerto by Dittersdorf (*c*1778) and several other works from this period with orchestral parts for it are preserved (*D-Rtt*), and instruments are known to have been made by Grundmann of Dresden (1774) and Otto of Neukirchen (1799).

Renewed interest in the music of J.S. Bach led to the development in the late 19th century of a new version of the oboe d'amore with 'modern' keywork and bore proportions. After first producing mezzo-soprano oboes with open bells, Mahillon began to make instruments with bulb bells; both types earned him medals at the Paris Exposition of 1878. Shortly thereafter, the Berlin firm of C.W. Moritz began to make *Liebesoboen* for performances at the Berlin Hochschule für Musik and the Bach summer festivals then becoming popular in Germany. Other makers followed, including François Lorée, who produced the first French oboes d'amore in the 1880s. The first modern composer to use the new instrument was Richard Strauss, who scored for it in his *Symphonia domestica* op.53 (1903). During the 20th century the instrument was used in the orchestra by many composers, including Mahler ('Um Mitternacht', orchestrated 1904–5), Debussy ('Gigues', *Images*, 1913), Holst (*A Somerset Rhapsody* op.21 no.2, 1906–7), Ravel (*Boléro*, 1928), Havergal Brian and Ligeti. Holbrooke, Koechlin and Ligeti have written solo and chamber works for it.

4. Tenor oboes.

(i) The taille (de hautbois) in the 18th century. At the end of the 17th century the taille de hautbois had the same profile as the treble oboe, but about 1700 the instrument began to be fitted with a bulb bell (fig.25*b*), probably by German makers. The taille served as the middle voice of the double-reed consort in France, northern and central Europe, England and Italy. In France it was used in theatre and concert works until the middle of the 18th century, and after that its use waned. In Germany it was called for in numerous church cantatas (for example, J.S. Bach's *Falsche Welt, dir trau ich nicht* BWV52). The taille de hautbois probably arrived in England in 1673, along with the first treble oboes; there it became known as the 'tenner hautboy'. Henry Purcell was the first English composer to take an interest in the instrument, scoring for it in *The Prophetess, or The History of Dioclesian* (1690) and other theatre music. By the 1720s horns had replaced tenor oboes in wind bands. However, a preference for the older consort instrumentation was retained in some locations, and tailles continued to be made for several more decades. The instrument had disappeared by about 1780. The bulb-belled version was revived half a century later when Henri Brod developed the *cor anglais moderne*, the prototype of the modern english horn. The open-belled version enjoyed a brief reincarnation as Wagner's 'Althoboe' (see (v) below).

(ii) Vox humana (Lat.: 'human voice'; It. *voce umana*). A tenor oboe in F, pitched a 5th below the treble, in use

25. *(a) Oboe d'amore by P. Wolraupier, 18th century (Musée des Instruments de Musique, Brussels); (b) bulb-belled taille de hautbois ('taille d'amour') by Lindner, Augsburg, c1705 (Musée de la Musique, Paris); (c) vox humana, Richard Milhouse (ii), Newark, c1775 (Leslie Lindsey Mason Collection, Museum of Fine Arts, Boston); (d) oboe da caccia by J.T. Weigel, Breslau, c1720 (Musikinstrumenten-Museum der Universität Leipzig; (e) angular english horn, J.T. Uhlmann, Vienna, c1825 (Bate Collection, Faculty of Music, University of Oxford); (f) bass oboe by Charles Bizey, Paris, c1749 (Musée de la Musique, Paris); (g) bass oboe by Triébert, Paris, c1860 (Bate Collection, Faculty of Music, University of Oxford)*

in the mid- to late 18th century. It is characterized by a narrow and largely unadorned profile, two-part construction (with the bell integral with the lower joint; fig.25*c*), minimal flare at the bell aperture and an angular crook to support the reed. It has two keys and six single finger-holes. The name of the instrument was apparently derived from the eponymous organ stop. Long associated exclusively with England, the vox humana is now known also to have been used in southern Italy.

The vox humana appeared in England just as the 'tenner hautboy' was giving way to the horn. It may have been invented by Thomas Stanesby (ii), the earliest active of the known makers of the instrument, who was also the author of a fingering chart for it. The first known appearance of the vox humana was in a concert at the Drury Lane Theatre, London, in May 1733; according to an advertisement, duets were to be performed on a pair of these new instruments. Though heard occasionally in the theatre, the vox humana was used primarily in the double-reed bands often employed in lieu of organs in poor provincial churches. One such band at Swalcliffe, north Oxfordshire, purchased a vox humana, reeds, a reed case and a fingering chart from Thomas Collier in 1783. This church supported a double-reed ensemble until 1815. A similar type of ensemble was used in Swiss churches around the same time (*see* HAUTBOIS D'ÉGLISE).

During the 1770s and 80s Gregorio Patria, an Italian living in Dublin, performed with success there on the vox humana, 'a new Italian instrument'. The vox humana was a favoured instrument in southern Italy, especially Naples, in the era before the english horn became common there. Paisiello included it in church and theatre music performed in Naples and Rome, primarily in the 1760s and early 1770s, and Sacchini and G.F. de Majo also wrote for it. The only known Italian maker of the vox humana was Giovanni Panormo of Naples, whose instruments have more flaring bells than the English models, a doubled third hole for C♯ and carved ivory rosettes at the bell aperture. By the 1780s the vox humana had been supplanted by the english horn. The term 'vox humana' was sometimes used for the english horn in Italy and England in the late 18th and early 19th centuries; it is often unclear which instrument was being referred to.

The vox humana was also made in a larger size, pitched in C, a 4th below the tenor instrument. Such instruments were probably used in lieu of bassoons to play the bass parts in church bands. An unmarked example with an octave key and keys for C, C♯ and E♭, three-part construction and vent holes in the bell is preserved in the Museum of Fine Arts, Boston.

(iii) Oboe da caccia (It., also *oboe di silva*; Fr. *hautbois de chasse*, *hautbois de forêt*; Ger. *Jagd[h]oboe*, *Jagdhautbois*, *Wald[h]oboe*, *Waldhautbois*). A curved, leather-covered tenor oboe in F with a broadly flaring bell, in use between 1720 and about 1760 (fig.25*d*). It was produced by only a few makers and used in a small number of places in central Europe. The one-piece body of the oboe da caccia is strongly curved, sometimes in a complete semicircle. It was constructed by cutting a row of small wedges along the back of a straight instrument, then bending the body into an arc. The joins were usually pinned and the body sealed and covered with a leather binding, often decoratively tooled. The curved shape and flaring bell give the instrument a horn-like appearance, hence its name. The most distinguished maker of the oboe da caccia was J.H. Eichentopf of Leipzig, who made instruments with brass rather than wooden bells.

Bach began to use the oboe da caccia shortly after his arrival in Leipzig, where he found a fine soloist in J.C. Gleditsch. The instrument has a gentle and expressive nature, which Bach understood perfectly; one of the most striking moments in the *St Matthew Passion* is the soprano aria 'Aus Liebe will mein Heiland sterben', accompanied only by a solo transverse flute and two oboes da caccia. Other composers who wrote for the instrument include J.F. Fasch in Zerbst and Graupner in Darmstadt; in Munich G.B. Ferrandini wrote three symphonies for a pair of oboes da caccia with strings and continuo. Although the instrument had a distinctive sound, it was still considered a tenor oboe and as such was also used to play parts marked 'taille'.

(iv) English horn (Fr. *cor anglais*; Ger. *englisches Horn*, *Englisch-Horn*, *Englischhorn*; It. *corno inglese*; in the 18th century the instrument was also known as: Fr. *hautbois anglois*, *corne d'anglois*, *cor de chasse anglais*; Ger. *englische Wald[h]oboe*, *englisches Waldhorn*). The tenor oboe in F, a 5th below the oboe, in use from the early 18th century to the present. Its keywork corresponds to that of the oboe of its day and the reed is mounted on a short crook. It was created when a bulb bell was added to an oboe da caccia body shortly after 1720, possibly by J.T. Weigel of Breslau. Late 18th-century english horns were more gently curved than Baroque models, and by about 1790 some were being made in angular form, resembling contemporary basset-horns. Both curved and angular forms were made into the 19th century (fig.25*e* and fig.26).

The open-belled straight tenor oboe and particularly the flare-belled oboe da caccia reminded people of the angels' horns depicted in medieval and later religious imagery, especially in German-speaking central Europe. In Middle (High) German, the word *engellisch* meant 'angelic' (as *engelgleich* in modern Hochdeutsch). With the Middle German word for 'England' being *Engellant*, the word *engellisch* also meant 'English'. These dual meanings naturally became conflated, and 'angel's horn' thus became 'English horn'. This unlikely epithet remained with the curved, bulb-belled tenor oboe even after the oboe da caccia had faded (*c*1760) and in the absence of any better denominations.

Music for the english horn has been notated in a variety of ways. In Italy, during the late 18th century and the first half of the 19th, the parts were notated in the bass clef an octave below sounding pitch, because the instrument was often played by bassoonists. Elsewhere parts were notated at pitch in the alto clef (the method also preferred by Bach for the oboe da caccia parts). In France they were notated in the mezzo-soprano clef, to be read as if in the treble clef in order to effect the correct transposition. In modern notation the player reads from the treble clef, fingering the notes as on the oboe; the instrument sounds a perfect 5th below. In modern scores, however, the part is often notated at sounding pitch.

During its early years the english horn was used interchangeably with other tenor oboes, and few works were written specifically for it; most of those known came from Poland or Saxony, near the birthplace of the instrument. It began to be specified more frequently by the late 1740s; the Viennese version of Jommelli's *Ezio* (1749) called for a pair. One of the first composers to

26. F.-C. Berthélemy (1829–68), professor of oboe at the Paris Conservatoire, 1867–8: engraving by A. Collette from Sigismond Stern's 'Manuel général de musique' (Paris: Brandus, 1850); the english horn being played and the oboe on the table are by Triébert

exploit the instrument was Gluck, who began to use it in 1755, scoring for a pair in *La danza*. In *Orfeo ed Euridice* (1762) a pair of english horns appears in Orfeo's aria 'Piange, il mio ben così', an operatic lament; this foreshadows the use of the instrument in the works of many of Gluck's followers, particularly Berlioz. Joseph Haydn had a pair of english horns available to him at the Esterházy court and he used the instrument in a number of works, including Symphony no.22 ('The Philosopher', 1764), in which two english horns replace the usual oboes. Others who scored for the instrument in the mid- to late 18th century included Bonno, Hasse and Starzer in Vienna, Michael Haydn in Salzburg, who treated the instrument as a soloist in several works, and the player-composers Joseph Fiala, Joseph Lacher, Ignaz Malzat, Josef Triebensee and Johann Went.

In the German-speaking parts of Europe, the most significant english horn player of the late 18th century was Philipp Teimer (Filip Matyas Tajmar, 1761–*c*1817), the youngest of three oboe-playing brothers. He served, with his brothers and father, in the musical establishment of Prince Johann Joseph Schwarzenburg (who maintained a *Harmonie* with pairs of oboes, english horns, horns and bassoons), and also appeared frequently as a soloist. A number of trios for oboes and english horn, including possibly Beethoven's op.87, were written for the three brothers. Other works written with Teimer in mind include the Singspiel *Babylons Pyramiden* (1797) by Johann Mederitsch and Peter Winter, in which the english horn plays a role analogous to that of the flute in *Die Zauberflöte*, Salieri's Requiem of 1804 and Hummel's cantata *Lob der Freundschaft* (1807), which includes an extraordinarily difficult obbligato part rising to written *g'''*. Another well-known english horn player of the late 18th century was the oboist-composer Giuseppe Ferlendis (1755–1810), who was so closely associated with the instrument that he was credited in several sources with its invention. His success as a performer was probably due at least in part to the excellent curved instruments made for him by the Venetian maker Andrea Fornari (1753–1841).

The english horn was usually associated with Italian opera in the late 18th century, and the majority of instruments were made in cities that supported Italian opera houses, among them Vienna, Dresden, Milan, Venice and Lisbon. Towards the end of the century Venice became an important centre for english horn writing; perhaps not coincidentally, Ferlendis was employed there between 1778 and 1801. Among the composers who wrote operatic scores with english horn for performance there were Bianchi, Cimarosa, Simon Mayr, Traetta, Sarti and Zingarelli. While in some of these works the english horn rivals the voice in virtuosity, the obbligato parts by Bianchi and Sarti, although occasionally florid, are essentially lyrical. The singing style would soon become accepted as the most effective for the instrument.

The english horn did not become established in France until the early 19th century. The first important player of the instrument there was Gustave Vogt (1781–1870), soloist at the Opéra and the leading French oboist of his day. Vogt's english horn playing was highly praised by critics such as Castil-Blaze and F.-J. Fétis, and many solos were written for him, including that by Rossini in the Overture to *Guillaume Tell* (1829). From 1810 Vogt worked with the firm of Guillaume Triébert to improve the instrument. Triébert's english horns were initially patterned after the curved, two-keyed models made in Italy at the end of the 18th century. The firm soon began to add its own keywork and other refinements, and its instruments gained a high reputation. Later instruments have a straight lower joint and a curved upper joint, and those made by Frédéric Triébert from about 1860 are entirely straight.

Vogt's playing was greatly admired by Berlioz, who exploited the special character of the instrument from his earliest works; in his *Huit scènes de Faust* op.1 (1828–9) the english horn was associated with absence and melancholy, an idea continued in the *Symphonie fantastique* (1830), which also linked the instrument with pastoral scenes. More than any other composer, Berlioz helped to form the character of the english horn as an instrument creating 'feelings of absence, of forgetfulness, of sorrowful loneliness' (*Grand traité d'instrumentation*).

Henri Brod (1799–1839), Vogt's successor at the Opéra, became dissatisfied with the muffled sound and unwieldy shape of the contemporary english horn and by 1823 had begun to collaborate with the Triéberts in an attempt to modernize it. By 1830 he was making instruments himself, developing a straight tenor oboe, the 'hautbois-alto', which was easier to hold and more resonant than the old instrument. He later renamed this

instrument the 'cor anglais moderne' (see fig.15). François Lorée, who had been Triébert's chief of staff, opened his own workshop in 1881 and began to make english horns based on Brod's straight-form model. In the hands of this maker, the instrument reached its modern form.

The english horn was little known in Germany and Austria in the early to mid-19th century. German orchestration texts of the first half of the century scarcely mention the instrument, composers did not use it, and Mendelssohn was unable to find a pair for his Berlin revival of the *St Matthew Passion* in 1829. Wagner, who had heard the english horn in Paris, was the first German composer of the era to make extensive use of it. As Kapellmeister at Dresden he had in his orchestra Rudolf Hiebendahl (*c*1818–90), one of the first German oboists of the period to develop an interest in the instrument. Wagner's first score to include it was *Der fliegende Holländer* (1843), in which it was employed in the overture. In both *Tannhäuser* (1845) and *Tristan und Isolde* (1865) it imitates a shepherd's pipe. *Lohengrin* (1850) had the first 'symphonic' part for the english horn; the instrument was used as a full member of the orchestra, not only for special effects. Other composers who wrote for the instrument included Schumann (*Manfred*, 1848–9) and Liszt, especially *Der nächtliche Zug* from the two episodes from Lenau's *Faust* (1856–61) and *Christus* (1866–72).

The english horn continued to be heard regularly in Italian opera all over Europe, including in areas where it otherwise had no exposure. Rossini made much use of the instrument, particularly in the operas he wrote for Venice, including *La scala di seta* (1812), *Tancredi* (1813), *Il signor Bruschino* (1813) and *Sigismondo* (1814). Significant obbligatos also appear in two of his scores for Naples, the *Messa da gloria* (1821) and *Zelmira* (1822). Rossini's younger colleague Bellini requested the instrument in *Il pirata* (1827) and *Bianca e Fernando* (revised version, 1828). The former uses the corno inglese to enhance the tragic mood in the heroine's mad scene and prayer. Later composers used the instrument to advantage in similar settings. In Donizetti, for example, the unique voice of the english horn is heard to excellent effect in *Gabriella di Vergy* (composed 1826, rev. *c*1838), *L'esule di Roma* (1828), *Anna Bolena* (1830), *La fille du régiment* (1840), *Maria Padilla* (1841) and *Maria di Rohan* (1843). Verdi was certainly familiar with most of these works, and he began scoring for the instrument early in his career, notably in *Nabucco* (1842). Other outstanding uses of the corno inglese in his output occur in *Giovanna d'Arco* (1845), *Attila* (1846), *Un ballo in maschera* (1859), *Don Carlos* (1867) and particularly in *Otello* (1887). Mercadante's *Il giuramento* (1837) is another work in which, as in most of the Italian Romantic repertory, the instrument is used to underscore a tragic situation. The instrument was used similarly in French opera (Halévy, *La Juive*, 1835). In Russia Glinka laid the groundwork for use of the instrument there in his *A Life for the Tsar* (1836).

Concert works of this era to include the instrument used it, as in opera, as a pastoral or sentimental instrument. Mercadante included it in at least four symphonies from the 1850s and 60s, and Saint-Saëns also scored for it in two of his early symmphonies. Franck's Symphony in D minor (1886–8) has a continuous symphonic part as well as an elegiac solo in the second movement. Dvořák wrote frequent solos for the english horn; that in his Symphony no.9 ('From the New World', 1893) well exploits the nostalgic and elegiac character of the instrument. In Richard Strauss's colourful scoring the english horn was treated as an essential member of the orchestra. The Scandinavian nationalists were also attracted to it. In *The Swan of Tuonela* (1893) Sibelius used the english horn as the voice of the swan, singing over a sombrely coloured orchestra. The english horn was also used to create an exotic mood, imitating the reed pipes of the Middle East and Asia (Saint-Saëns, *Samson et Dalila*, 1877, and Borodin, *In Central Asia*, 1880).

By the beginning of the 20th century the english horn was established as a solo voice within the orchestra. Most of the orchestral works of the first half of the century continued to exploit the Romantic sentiments associated with the instrument. A mysterious mood is created in C.M. Loeffler's *A Pagan Poem* (1906), scored for large orchestra with english horn, piano and offstage solo trumpets; Janáček's *Taras Bulba* (1915–18) and Rodrigo's *Concierto de Aranjuez* (1939) exemplify the nostalgic, Vaughan Williams's *Pastoral Symphony* (1921) the pastoral, and Rachmaninoff's *The Bells* (1913) the tragic. The most substantial solo works of the period are Carter's *Pastoral* (1940) and Hindemith's Sonata (1941), both with piano.

During the second half of the century the english horn was often included in chamber and orchestral music, and many concertos were written for it. While the traditional character of the instrument was often set aside in concert music, it was retained in many film scores; those of Virgil Thomson, Hugo Friedhofer, David Raksin, Miklós Rózsa and Victor Young contain some outstanding parts. The Concertino op.4 (1982) for english horn and strings by Arne Running is particularly well written for the instrument, and the Australian oboist-composer Graham Powning has written an effective and interesting quartet for four english horns, among his many ensemble works for double reeds.

Important players of the 20th century included Hans Hadamowsky (1906–96) of the Vienna PO, Leo van der Lek (1908–99) in Amsterdam, James McDonagh (*d* 1933) and his son Terence (1908–86) in London, Paul Brun and Paul Taillefer (*b* 1912) in Paris, Peter Henkelman (1882–1949), John Minsker (*b* 1912) and Louis Rosenblatt (*b* 1928) in Philadelphia, Louis Speyer (1890–1980), to whom many works were dedicated, in Boston, and Thomas Stacy (*b* 1938), who has commissioned and given first performances of many works for the instrument in New York.

(v) Alt[h]oboe. A tenor oboe in F, with an english horn body and a clarinet-like bell. Some time between 1872 and mid-1875 Wagner had the Bayreuth woodwind instrument maker J.S. Stengel (1803–85) build this new oboe to his specifications. It was meant to provide a more penetrating sound than the english horn, in effect extending the oboe section into the tenor register. In the first edition of *Siegfried* (1875), Wagner specified that the new *Altoboe* was to replace the english horn in all future performances of his scores. However, the instrument is specifically called for only in *Parsifal* (1882). It was used at Bayreuth with some regularity, especially between 1882 and 1894, but it seems to have fallen out of use by 1896. A single specimen from Stengel's workshop survives (Kunsthistorisches Museum, Vienna) and there are several

by other makers, including two by Joseph Pöschl (1866–1947) with both *Altoboe* and english horn bells (Musikinstrumentenmuseum im Münchner Stadtmuseum; private collection). During the last quarter of the 19th century and the first quarter of the 20th 'Altoboe' was sometimes used in Germany as an alternative term for the english horn.

5. Bass oboes and larger forms.

(i) Bass oboe. A large oboe pitched an octave below the treble. The instrument has also been known as the baritone oboe, after Triébert's bass oboe of 1825, which he called 'hautbois baryton' by analogy with the baritone voice. The modern bass oboe is an enlarged english horn equipped with a bulb bell and a bassoon-like crook, on which the reed is placed. Music for the instrument is notated in the treble clef, sounding an octave below written pitch. A few instruments in this range survive from the 18th century, including a specimen from about 1700 by J.C. Denner of Nuremberg in the form of an enlarged treble oboe (Germanisches Nationalmuseum, Nuremberg). Two instruments made by Charles Bizey in Paris about 1749 have a bassoon-like boot and wings with obliquely drilled tone holes, and an open oboe-like bell (see fig.25*f*). About 1825 Triébert began to make bass oboes patterned, apparently, after Bizey's instruments, but with added keys and bulb bells (fig.25*g*). Brod received a medal for a straight bass oboe at the Paris Exposition of 1839. No period music for this instrument survives. It is not known how it was used; it may, perhaps, have been played in wind ensembles.

The first modern bass oboe was built by François Lorée about 1889. Lorée's instrument was straight-formed, like the model designed by Brod 50 years before, and equipped with the latest keywork. The first composer to interest himself in the new instrument was Delius, who became familiar with the instrument during his years in Paris (1888–96). Through him the instrument became known in England, where it was used by a number of composers, including Holst, Brian and Tippett. It has been used in chamber music and film scores in Europe and America. The first solo concerto for the instrument, *East Coast* by Gavin Bryars, was written in 1994.

(ii) Sub-bass and contrabass oboes. Only a few experimental oboes have been made to play in this register, for which there was already a successful instrument, the bassoon. Several 18th-century sources, including Majer and Walther, mention an oboe in this register, and according to Garsault (1761) it was known in its day as the *basse de cromorne* (*see* Cromorne (i)). An enormous contrabass 203 cm in height, with a sounding length of 267 cm, a huge brass crook and nine keys, was made by Christophe Delusse before 1781 (Musée Instrumental du Conservatoire, Paris). According to the *Almanach musical* of 1781, the instrument was used in place of the bassoon at the Opéra for six months. Pierre wrote that Lorée had proposed to complete the oboe family with an instrument two octaves below the treble, but that plan was never realized.

6. Smaller oboes. In the mid-19th century S.X. Verroust, who had taught at the Gymnase Musical Militaire, advocated the use of a range of hautbois pastoraux, small oboes with a penetrating tone, in military music. These instruments, pitched in A♭, G, E♭ or D♭, were suited to tonalities preferred by the clarinets and the brass instruments. They are often used to play the difficult high oboe part in the third of Canteloube's *Chants d'Auvergne*. Similar instruments were made in Germany and the USA (where they were called Oboettes). At Heinz Holliger's behest, Marigaux created a full Conservatoire-system 'musette' in F for use in contemporary music. The instrument is required in Maderna's *Grande aulodia* for the flute and oboe (1970), in which the oboist is also required to play the oboe, oboe d'amore and english horn.

Oboe d'amore [oboe luongo] (It.). A mezzo-soprano oboe in A with a bulb bell. *See* OBOE, §III, 3(ii).

Oboe grande (It.). A mezzo-soprano oboe in A or B♭ with an open bell. *See* OBOE, §III, 3(i).

Oboezug (Ger.). *See* LUTE STOP.

Oborin, Lev (Nikolayevich) (*b* Moscow, 28 Aug/11 Sept 1907; *d* Moscow, 5 Jan 1974). Russian pianist and teacher. He studied with Yelena Gnesina until 1921 and then graduated from Igumnov's piano class at the Moscow Conservatory in 1926, having also studied composition with Myaskovsky, Konyus and Catoire. In 1927, aged 19, and whilst still a postgraduate pupil of Igumnov, he won first prize at the inaugural Chopin Competition in Warsaw. His playing was noted for its maturity and lack of idiosyncrasy. Oborin began teaching piano at the conservatory in 1928, and seven years later was appointed professor, a post he held for nearly 40 years. The celebrated duo partnership with the violinist David Oistrakh dated from 1943 and during the same period they formed a trio, with Knushevitsky as cellist. The three played together until the latter's death in 1963.

Oborin, like Igumnov, was a staunch advocate of Russian music, particularly Tchaikovsky's, though his recordings of the complete Beethoven violin sonatas with Oistrakh have won universal acclaim. Impeccable in technique, his very balanced style was essentially modern. He held the strong belief that an artist should concern himself with contemporary music, and consequently he gave many first performances, including the Khachaturian Piano Concerto, which he recorded with the composer. A popular and successful teacher, Oborin's catholic approach to the repertory is mirrored in that of his pupils, the most famous of whom is Vladimir Ashkenazy.

JAMES METHUEN-CAMPBELL

Obouhow, Nicolas [Obukhov, Nikolay] (*b* Ol'shanka, Kursk province, 10/22 April 1892; *d* St Cloud, nr Paris,

13 June 1954). Russian composer. He studied for a while at the Moscow Conservatory from 1911 (counterpoint with Il′insky and the piano with Strakhov) before entering the St Petersburg Conservatory in 1913, where he studied with Kalafati, Maksimilian Steinberg and Nikolay Tcherepnin. His first acknowledged works date from 1913: these include the songs published as *Quatre mélodies* by Rouart et Lerolle in Paris in 1921. In 1915 he developed his own form of notation in which the need for accidentals is obviated by the use of noteheads in the shape of crosses; this system, similar to that invented by Golïshev during the same period, was used by Obouhow in all of his works written after the middle of 1915 and gave rise to a great deal of journalistic polemic. The only performance his works received in Russia during his lifetime took place at an evening sponsored by the journal *Muzïkal′nïy Sovremennik* in 1916. Boris de Schloezer, a close friend of Skryabin's who later knew Obouhow in Paris, was present at the concert and described the composer as 'a pale young man, with gazing eyes' who 'confused the audience' (de Schloezer, 1972).

In 1918 Obouhow left St Petersburg with his wife and two children; they eventually settled near Paris a year later. There he encountered financial difficulties which were only alleviated by the intervention of Ravel, who found him a publisher (who in the end printed only a small number of his works) and introduced him to people who gave him 'the possibility to devote himself to his work in peace' (de Schloezer). The 1920s saw a handful of performances, most notably that of the *Predisloviye knigi zhizni* ('Introduction to the Book of Life') under Koussevitzsky. During this and the next decade Obouhow put into practice ideas for electronic instruments he had conceived as early as 1917: the *efir* and *kristal* ('ether' and 'crystal') he had described in Russia eventually gave rise to the croix sonore, and even though he built and wrote for the ether, it was with the croix sonore that he gained most attention. He found an exponent of the instrument in his pupil Marie-Antoinette Aussenac-Broglie who had also performed some of his piano music; she demonstrated the instrument around France and Belgium. Similar to both the theremin and the ondes martenot in that pitch production is reliant upon the distance of the performer's arm from the instrument, the croix sonore was the subject of a film of 1934. During the mid-1940s his notation again provoked heated discussion, this time in Paris; a book containing works from the 18th to the 20th centuries in Obouhow's notation was published by Durand. In 1947, his *Traité d'harmonie tonale, atonale et totale*, which had already interested Honegger, was published, while a year later he lectured on this subject in the Russian Conservatory in Paris. Obouhow spent his last years incapacitated by a mugging that occurred in 1949, after which he composed only a few works.

Obouhow's total output is dominated by vast works of which the most notorious – notwithstanding the gargantuan *Troisième et dernier testament* and *La toute puissance* – is the *Kniga zhizni* ('The Book of Life') on which he worked from around the time he left Russia until at least the mid-1920s. Described by the composer as 'l'action sacrée du pasteur tout-puissant regnant' it was intended to be performed (or 'accomplished') uninterruptedly every year on the night of the first and on the day of the second resurrection of Christ. Obouhow did not consider himself the composer of this work; instead, he saw himself as the person permitted, by divine forces, to 'show' it. Parts of the score, one version of which is nearly 2000 pages in length, are marked in the composer's blood. The music is preceded by a lengthy exposition in archaic Russian, while the work concludes with one section the score of which unfolds into the form of a cross and another, taking the shape of a circle, which is fixed onto a golden and silver box decorated with rubies and red silk. (Nicholas Slonimsky, in his memoir *Perfect Pitch*, relates that the composer's wife, driven to despair by Obouhow's obsessive behaviour regarding this piece, attempted to burn – or 'immolate', in the composer's terminology – the manuscript but was interrupted in her crime.) Much of the instrumental writing is characterized by the alternation of chorale-like material (often ornamented by filigree arpeggiation) with tolling patterns, building to textures of considerable rhythmic and contrapuntal complexity. The vocal parts – as with his writing for the voice in most of his other works – have huge tessituras and are scattered with glissandi and instructions for screaming or whispering. The style which consistently characterizes this magnum opus is prevalent in all of his mature works and has its roots in the songs and piano miniatures he wrote in Russia. Taking as a starting point the language employed by Skryabin in his middle and late-period works, Obouhow evolved a harmonic technique based on the systematic configuration and manipulation of 12-note chords or harmonic areas. The sonorities resulting from this 'total harmony' are often broadly octatonic and frequently have a quasi-dominant character due to the prevalence of diminished fifths in their lower registers. Although longer structures appear to unfold in a schematized yet organic manner, the detail of musical procedure is curiously static. Obouhow saw his work as a musical articulation of his strongly-held religious beliefs and would sometimes sign his manuscripts 'Nicolas l'illuminé' or 'Nicolas l'extasié'. Possibly inspired by Vladimir Solov′yov's idea of *sobornost′* (collective spiritual or artistic experience), Obouhow sought to abolish the distinction between performers and audience, giving both groups instead the status of equal participants. Obouhow mostly used his own texts which are frequently inspired by the book of Revelation or the Apocrypha. It is thus no coincidence that the only poets whose work appealed to him spiritually and compositionally were Solov′yov and Bal′mont, since it was the former's orthodox mysticism that significantly informed the apocalyptic vision of the latter. In addition to these sources, mention should be made of Obouhow's use of two verses by Musorgsky; it is between his work and that of Messiaen that Obouhow's visionary language can be placed.

texts by the composer unless otherwise stated

VOCAL

With orch: Kniga Zhizni/Le livre de la vie, solo vv, 2 pf, elec insts, orch, 1918–mid 1920s, also red. solo vv, 2 pf: Chemin, Préinduction, Induction, Liturgie, Extase, Avènement, La source et la calice; Izstupleniye, poem, chorus, orch, before 1924, also red. pf; Predisloviye knigi zhizni [Introduction to the Book of Life] (K. Bal′mont, N. Obouhow), female v, male v, orch, ?1925, also arr. 2 solo vv, pf 4 hands with material from Nichego ne zhdi [see VOCAL (1v, pf)]; Prezhde vsego lyubov′ yest′ voda zhizni [Above All Love is the Water of Life], S, pf, orch, 1927; L'énonciation du jugement dernier, 3rd version [see VOCAL (with 2–5 insts)], solo female vv, chorus, ether, orch, early 1930s, ?inc.; La toute-puissance (Le

miracle s'impose, deuxième étude), chorus, 3 pf, org, orch, mid-1930s, also version for female solo vv, male chorus, 2 pf; Le troisième et dernier testament (Victoire par l'amour: l'avant propos du Livre de la vie), 5 solo vv, 2 pf, croix sonore, org, orch, 1946, also versions for (5 solo vv, 2 pf, bells)/(4 solo vv, pf) with 2–5 insts: Le Pasteur tout puissant règne, female v, miracle, pf, 1930: Ton royaume du ciel est sur la terre, Ton nom est sanctifiée; L'énonciation du jugement dernier: La confession; La communion, female v, other solo vv, croix sonore, ether, pf 4 hands, early 1930s, rev. with chorus in 7 final bars [incl. movt Vous me voyez]; Chant des sphères, 4vv, croix sonore, pf, 1934 [incid music for radio play by C. Larronde]; Hymne mondiale, female v, croix sonore, pf 4 hands, mid-1930s, rev. for female v, chorus, croix sonore, org, orch; Le tout puissant bénit la paix, female v, croix sonore/vc, pf, mid-1930s, also version without female v; Pour le salut du monde un seul roi, female v, croix sonore, pf, mid-1930s, Troisième étude rev. in 7 movts as La toute puissance, also version for female v, chorus, croix sonore, 2 pf/pf 4 hands; Salut et victoire par la paix, male v, ether, pf, before 1934; Pour le tabernacle, pour le marriage: 1, L'agneau est immolé, 2, Vous êtes les feuilles, les fruits d'un arbre seul, female v, croix sonore/vc, pf, ?1935; L'agneau et le pasteur, croix sonore/vn, female v, pf, 1948, also version without female v; Immortel espoir – l'union avec Dieu, female v, croix sonore/vc, pf, ?1948; Eternal souvenir (Tous sauvées par l'Agneau immolé), croix sonore/vc, female v, pf 4 hands, after 1948, 3 versions

1v, pf: Bayushki bayu (Bal'mont), 1913, also orchd; Kolïbel'naya [Berceuse] (Bal'mont), 1913; Kolïbel'naya Blazhennago – u uzgoloviya myortvoy (Bal'mont), poème liturgique, ?1913 (1921); Na vershine gornoy (Bal'mont), op.1, 1913, also orchd; 2 stikhotvoreniya (Bal'mont), 1913 (1921), also orchd: Ya budu zhdat' tebya [I will Await Thee], Nichego ne zhdi [Await No-One]; 3 stikhi [3 Verses] (Bal'mont, V. Solov'yov), 1914; V molchan'i zabïvsheysya nochi [In the Silence of Forgotten Nights] (Bal'mont), 1915; Chanson tsigane d'après la mélodie de S. Steinmann (M. Musorgsky), ?1918, rev. as Chanson d'après une mélodie tsigane, rev. again as Variations d'après une mélodie tsigane; Pastïr nashe utesheniye, 1918 (1921); Liturgicheskaya poema/Poème liturgique, 1918 (nos.1 and 2 pubd 1921): Agnets nashe ugrïzeniye [The Lamb is Our Salvation], Pastïr nash ugrïzeniya [The Shepherd is Our Conscience], Zvezdolikiy [The Starry-Faced-One] (Bal'mont), Zvezdolikiy rev. for female v, 2 male vv, female chorus, pf, rev. again for same forces with ether, cristal; Lyubov' yest' voda zhizni [Love is the Water of Life] (Musorgsky, Obouhow); Prezhde vsego lyubov' yest' voda zhizni [Above All Love is the Water of Life], S, pf 4 hands/2 pf, 1927, also orchd

INSTRUMENTAL

Chbr: Bog zhivoy [God is Alive], vn, pf, 1915; La couronne universelle et victorieuse, croix sonore, pf, before 1930; L'absolu, ondes martenot, pf 4 hands, version for ether, pf 4 hands, also orchd; Par la peine de la tristesse surgit le ravissement de la joie, ondes martenot, pf, early 1930s; Pouvoir majique de la Trinité triomphante, croix sonore, pf, early 1930s; Nous sommes ton corps collectif, Tu es notre sang uni (Le tout puissant), ether, pf, ?1932 [to be perf. with Pour le tabernacle and Réconcilions nous]; Réconcilions nous, ether, pf, 1932, rev. for croix sonore/vn, pf, 1947, also inc. version with female v and further version with male v, incl. En quoi il est fautif; La tout puissant est dans la justice pour l'amour, pour l'avènement du roi du monde (Le miracle s'impose, étude no.1), croix sonore, pf, mid-1930s; Le tout puissant bénit la paix, croix sonore, pf, mid-1930s, also version with female v; Pour tous: amour propreté, ordre, travail: unic chemin de bonheur, ether, pf, 1933; Hymne des vivants: notre salut est en lui, croix sonore, pf, before 1934; Les quatre pâles divins, croix sonore, pf, before 1934, 3 versions of 2nd movt; Pour le salut du monde un seul roi (Le miracle s'impose), croix sonore, pf 4 hands, before 1937, also version with chorus; Le roi du monde viendra et vous sauvera par l'amour, croix sonore, late 1930s [possibly frag. of lost work]

Pf: 6 préludes, 1914–15; Conversion, 1915: Crime, Remords, Larmes de sang, Inspiration sublime; Eternel, 5 movts, 1915: Clarté profonde, Lumière noire, Rayons divins, Statue, Cendres; Ikona [Icons], 1915: Sozertsaniye [Contemplation], Skorb [Grief], Upokoyeniye [Repose]; 2 pièces, 1915: Les astres parlent, Reflet sinistre; Prières, 1915; Révelation, 3 pieces, 1915; 6 tableaux psychologiques, 1915; 10 tableaux psychologiques, 1915; Création d'or, 2 pieces, 1916; Invocations I–II, 1916; Prichta Gospodnya: vïshyol seyatel' seyat' [A Parable of the Lord: The Sower Went Out to Sow], 1917; Raspyatiye – Blazhenstva (Crucification de la Béatitude), 1917; Tsel' svyashchyonno – dveystviya votsarivshagosya pastïra vsederzhatelya (Le but de l'action sacrée du pasteur tout-puissant), 2 pf, 1v opt., mid-1920s; La source de la vie c'est la paix, before 1931; Intronisation, 2 pf/pf 4 hands, 1931, also arr. solo vv, chorus, orch; Hostie, before 1933; Couronnement, 2 pf/pf 4 hands, before 1934 [to be played with Intronisation]; La toute puissance, 2 pf/pf 4 hands mid-1930s, also versions for 2 solo vv, chorus, croix sonore, pf 4 hands (movts 1–4), for same forces with org, orch and for this ens with 3 pf; Aimons-nous les uns les autres, fragment du Livre de la vie, 1942 (1943), also extended version of section entitled L'heure est proche, réveillons-nous; Adorons Christ, fragment du troisième et dernier testament, 1945, 5 versions; La paix des reconciliés: vers la source avec la calice (1948); Le temple est mesuré, l'esprit est incarné, 1952 (1953)

Other: Douze gammes [explaining Obouhow's theory of total harmony], 3 versions

JONATHAN POWELL

Oboussier, Robert (*b* Antwerp, 9 July 1900; *d* Zürich, 9 June 1957). Swiss composer and critic. He studied at the Zürich Conservatory with Vogler, Jarnach and Andreae, and with Jarnach in Berlin, where he also attended the conducting class at the Hochschule für Musik. After a few years of independent activity as a composer in Florence and Munich he turned to music criticism in Paris. In 1930 he was made Berlin music critic of the *Frankfurter Zeitung* and in 1933 music editor of the *Deutsche allgemeine Zeitung*. From 1939 he lived in Zürich as a critic, becoming director of the newly founded Zentralarchiv Schweizerischer Tonkunst in 1942; in 1948 he was appointed vice-director of SUISA, the Swiss performing rights society. As a composer Oboussier was greatly influenced by Busoni's 'junge Klassizität', gradually freeing himself from Regerian late Romanticism. The conservatism of Swiss society forced Oboussier to conceal his homosexuality from even his closest friends. He was murdered by a casual sexual acquaintance.

WORKS
(*selective list*)

Vocal: Trilogia sacra (R.M. Rilke), solo vv, chorus, orch, 1925–9; Antigone (recit, aria and elegy, Sophocles), A, orch, 1938–9; 3 psaumes, solo vv, chorus, orch, 1946–7; Amphitryon (op, after Molière, H. von Kleist), 1948–50; 4 Old English Songs, chorus, 1953

Orch: Pf Conc., 1932–3, rev. 1944; Sym., 1935–6; Chant de deuil, 1942–3; Introitus, str, 1946; Vn Conc., 1952–3

FRITZ MUGGLER/CHRIS WALTON

Obra (Sp.). A general term for a musical work, as in Antonio de Cabezón's *Obras de música* (1578). In various Spanish and Portuguese manuscripts of around 1700 it was applied more specifically to a TIENTO, for example the *Obra de lleno 1° tono* by Antonio Martín y Coll (*E-Mn*).

Obradović, Aleksandar (*b* Bled, 22 Aug 1927). Serbian composer. He studied composition with Mihovil Logar at the Belgrade Academy until 1952. After being a professor at the Stanković Music School in Belgrade (1953–4), he became an assistant (1954), a lecturer (1961) and in 1969 a professor at the Belgrade Academy. He was general secretary of the Yugoslav Union of Composers (1962–6). He pursued further studies in 1959–60 in London with Berkeley and in 1966–7 at the Columbia-Princeton Electronic Music Center. He was rector of the University of Arts in Belgrade from 1979 to 1983, and held other administrative posts.

Obradović's music has always shown a bold harmonic quality and a concentration on tightly-knit formal structures. His earlier works show his use of extended tonality, rich orchestration and motivic linking of parts, notably in the Symphony no.1. After his studies with Berkeley he frequently used 12-note methods. The Symphony no.2 reconciles these with tonal elements, while the apocalyptic *Epitaf H* combines 12-note working with quotations from Beethoven's Ninth Symphony; his later symphonies have continued these trends within modified symphonic structures. During his studies at Columbia he developed his electronic music techniques (already used in *Epitaf H*), and used them to good effect in the *Elektronska tokata i fuga* and the dramatic but terse *Mikrosimfonija* for orchestra and tape.

NIALL O'LOUGHLIN

Obraztsova, Yelena (Vasil'yevna) (*b* Leningrad [now St Petersburg], 7 July 1937). Russian mezzo-soprano. While still a student at the Leningrad Conservatory, she appeared with success at the Bol'shoy as Marina; in 1964 she became a soloist there. Her voice, of beautiful, full timbre, was controlled with unusual flexibility and lightness; she was an effective and spontaneous actress, notably in such roles as Marfa (*Khovanshchina*), Konchakovna (*Prince Igor*), Amneris, Eboli, Carmen and Lyubasha (*The Tsar's Bride*). She was also successful in contemporary opera, particularly as Hélène (*War and Peace*) and Oberon (Britten's *A Midsummer Night's Dream*). Her international appearances included those at San Francisco, the Metropolitan (during the Bol'shoy company's visit in 1975) and La Scala (as Massenet's Charlotte in 1976). She sang Azucena at Covent Garden in 1985, and made her début as a producer in the Bol'shoy's 1986–7 season with *Werther*. In 1973 she was made a National Artist of the RSFSR, and in 1976 was awarded the Lenin Prize.

I.M. YAMPOL'SKY

Obrecht [Hobrecht], **Jacob** (*b* Ghent, 1457/8; *d* Ferrara, shortly before 1 Aug 1505). South Netherlandish composer. In the 1480s and 1490s he was Europe's leading composer of cyclic masses, of which he wrote nearly three dozen. In addition he left a sizeable oeuvre of motets and songs, many of which continued to circulate widely, along with his most famous masses, during the first half of the 16th century. In the last years of his life Obrecht was frequently mentioned in one breath with Josquin des Prez. The latter was to outlive him by 16 years, however, and has come to be seen as the more significant representative of his generation.

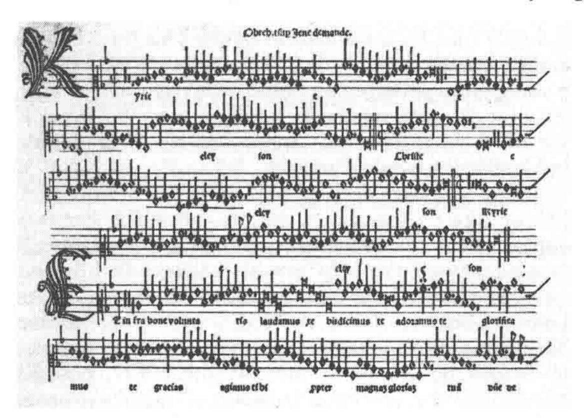
1. LIFE AND EARLY REPUTATION. The text of Obrecht's motet *Mille quingentis* reveals that he was the son of a Guillermus Hobrecht who died on St Cecilia's Day (22 November) 1488. The father has been identified as the trumpeter Willem Obrecht who was permanently employed by the city of Ghent from 1452 until his death in 1488, and whose intermittent service in Burgundian court circles can be documented from 1454 to 1470. The composer appears to have been the only child of Willem's first marriage. His mother Lijsbette Gheeraerts died around the age of 20 in July 1460; his stepmother, by 1464, was Beatrijse Jacops. Obrecht's portrait gives his age as 38 in 1496, suggesting a date of birth in 1457/8.

Nothing is known about the composer's education, although it must have been suitable to prepare him for

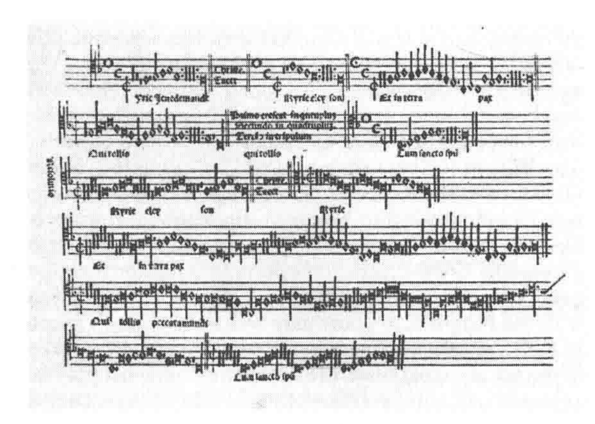
the priesthood. He is mentioned with the academic title of master – a degree normally obtained at or above the age of 20 – by 1480. (The Jacob Obrecht who was enrolled at Leuven University in 1470 is not identifiable with the composer, since his father was a Jacob Obrecht, not Willem.) There is no direct information about Obrecht's musical education, although it is likely that he was initially trained to become a professional trumpeter like his father. This would have involved a thorough grounding in the practice of contrapuntal improvisation over memorized tunes. Willem Obrecht's connections with the Burgundian court may well have brought Jacob in early contact with Antoine Busnoys, who had worked in the ducal chapel since 1467. Busnoys' influence may be apparent not only in Obrecht's selection of mass cantus firmi (most famously from such songs as *Je ne demande* and – if it is by Busnoys – *Fortuna desperata*), but also in the style of what may well be his earliest mass, *Petrus apostolus*.

There is no documentary support for the assumption that Obrecht worked at Utrecht in the late 1470s. (This was suggested by 19th-century music historians on the basis of Glarean's credible report that Obrecht had been the teacher of Erasmus, and Beatus Rhenanus's claim that Erasmus had served as a choirboy at 'Trajectum', probably Utrecht or Maastricht.) However, the composer was active as choirmaster at the St Gertrudiskerk in Bergen op Zoom in 1480–84, as documented by the annual accounts of the Guild of Our Lady based in that church. An unnamed mass by Obrecht, composed probably during these years, is known to have reached the court of Duke Ercole d'Este of Ferrara by 1484. During the same years, Tinctoris apparently mentioned Obrecht in his *Complexus effectuum musices* among the most renowned musicians of the century: 'For who has not heard of Johannes Dunstaple, Guillelmus Dufay ... Johannes Okeghem, Anthonius Busnois ... Jacobus Obrechts?' (Some scholars have wondered whether Obrecht's name might have been inserted by a later scribe, especially since the only surviving source for this passage was copied in the composer's birthplace in 1504.)

In September 1484 Obrecht accepted a position as master of the choirboys at Cambrai Cathedral. Within several months after his arrival there, however, he sought to obtain the succentorship at the collegiate church of St Donatian in Bruges. Once the latter position had been secured, he postponed his departure for several months, meanwhile discharging his responsibilities at Cambrai to the evident dissatisfaction of the cathedral chapter (in July 1485 he was formally reprimanded by the canons for an outbreak of scabies among the choirboys). Obrecht was finally installed at Bruges on 13 October 1485, and summarily dismissed at Cambrai upon his return there. An audit of his account books revealed a deficit that could not be accounted for. The chapter agreed to settle by purchasing music manuscripts copied by the composer, at a price reduced by the sum he owed the cathedral.



During his early years in Bruges, Obrecht is known to have composed the masses *De Sancto Martino* and *De Sancto Donatiano* (for endowments that took effect in 1486 and 1487 respectively), and very probably the *Missa 'Salve diva parens'*, whose earliest surviving source has been dated 1487. In August 1487, the chapter of St Donatian granted the composer six months' leave of absence to travel to Ferrara at the invitation of Duke Ercole d'Este. He must have overstayed his leave considerably, for ten months later, in June 1488, we find him passing through Bergen op Zoom on his return from Italy. Obrecht did not come back to Bruges until 15 August of the same year. This was approximately three months before the death of his father.



After a summary decision to dismiss him in May 1490 (whose direct reasons are unclear, and which does not appear to have been implemented), Obrecht was finally granted remission from his post in January 1491. By June 1492 he was active as choirmaster at the church of Our Lady at Antwerp, filling the vacancy left after Jacobus Barbireau's death in the previous year. Obrecht returned to Bergen op Zoom in June or July 1497, possibly attracted by the increasingly generous musical patronage in that city. However, 18 months later, in December 1498, he took up his old post of succentor at St Donatian, Bruges. He continued to occupy this position until serious illness forced him to submit his resignation in September 1500. The chapter granted his request, but shortly afterwards rewarded him with three benefices in acknowledgement not only of his valuable services to the church but also of his fame as a composer.

By June 1501 Obrecht was back again at Antwerp, where he served as a choirmaster at the church of Our Lady until June 1503. A payment recorded by the treasury of the Emperor Maximilian I reveals that he was in Innsbruck in October 1503. Apart from this isolated record, however, nothing is known of the composer's whereabouts between his departure from Antwerp in June 1503 and his final appointment as *maestro di cappella* at Ferrara in September 1504. At Ferrara he served Duke Ercole d'Este, one of his most enthusiastic admirers, until the latter's death in January 1505 left him once again without a position. After an unsuccessful attempt to obtain a post at Mantua, Obrecht died of the plague at Ferrara in late June or July 1505.

20th-century historians have often commented on the restlessness of Obrecht's musical career. The composer appears to have been perpetually in pursuit of a position commensurate with his artistic talents and international reputation. The erratic pattern of his career movements may not be unrelated to the lack of professional responsibility he could exhibit (at Cambrai, for instance) when tempted by new career prospects. Although Obrecht was hardly the only musician of his time to be neglectful of routine duties or to treat his employers badly, there is no other 15th-century composer of comparable stature whose career seems to have been so persistently dogged by problems like these.

Any assessment of Obrecht's personality ought to take into account his relationship with his father, which appears to have been of special significance. *Mille quingentis*, the musical prayer of commemoration for Willem Obrecht, is an extraordinary gesture – even for a period when all Christians, following the fifth commandment, were expected to pray for their deceased parents. The 'public' nature of the motet, as well as its ambitious literary and musical style, suggest a concern to immortalize Willem's name, and thereby perhaps to redeem an emotional debt of some kind. The work may well repay closer analysis in the light of the composer's biography. Another aspect that deserves mention is the apparent speed at which Obrecht composed, and his readiness to part from works immediately after finishing them. He

Beginning of the superius (above) and tenor (facing page) parts of 'Je ne demande' from 'Misse Obrechte' (Venice: Petrucci, 1503)

was alleged to have written a mass in one night, a feat 'at which learned men were astonished'. Glarean, on whose testimony we rely for this report, contrasted this with the creative habits of Josquin, who was said to keep polishing and revising his compositions for years before allowing them to circulate publicly. This comparison may underline an element of generosity in Obrecht's musicianship, and in any case suggests an impressive confidence in his artistic abilities. Whereas Josquin has often been perceived, even by his contemporaries, in terms of the personality-type of the 'melancholic', obsessively preoccupied with his art, the more outgoing, 'sanguine' temperament of Obrecht seems to be reflected in the musical vigour and exuberance of his best-known masses, and is expressed in his own comment (in the motet *Inter preclarissimas virtutes*) that '[I am] jubilating always in my songs'. Modern psychology does not endorse the humoral personality-types that were current in Obrecht's time, but such categorization played an important part in shaping the early images of composers, if only by determining what contemporaries chose to remember (or fabricate) about them and what they chose to neglect. The point here is that Obrecht and Josquin were seen, from an early date onwards, to have fundamentally different creative temperaments.

There were other perceived differences between the two composers as well. Towards the end of Obrecht's life, critical reflection on music became increasingly preoccupied with issues of excess versus moderation, to a degree unknown before the 1480s. These issues played a major part in early comparisons between Josquin and Obrecht. It was high praise indeed when Tinctoris, in the early 1480s, ranked Obrecht among the masters 'whose compositions, distributed throughout the whole world, fill God's churches, the palaces of kings, and the houses of private individuals, with the utmost sweetness'. This comment is typical of mid-15th-century attitudes, for which there could seldom be enough 'sweetness' in musical composition and performance. Scarcely 30 years later, however, 'the utmost' in sweetness could easily be felt to be too much – as it evidently was for the humanist writer Paolo Cortese, who noted in 1510 that Obrecht 'has sown more of the keenest sweetness in music, with skilful harmony, than would have sufficed to please the ear'. A comment like this implies a responsibility on the part of composers to avoid excessive use of musical ingredients which are pleasing and beneficial only when used in moderation – just as listeners (including the most powerful princes) could at this time be publicly taken to task for excessive and decadent indulgence in music. Against this light, Glarean surely meant to pay Obrecht a compliment when he commented, in 1542, that 'all the works this man has left have a certain wondrous grandeur and an intrinsic quality of moderation'. The Swiss theorist once again implied a contrast with Josquin, to whom he ascribed excessive and ostentatious pursuit of *raritates* – an eccentric taste for the unusual, the farfetched, and the bizarre. (For Cortese, on the other hand, it was Josquin who had put more *doctrina* in his music than any other composer.) Glarean held up Obrecht as 'one who displayed his talent, but without pretence, as if he preferred to await the judgement of the listener rather than to preen himself'.

As these quotations indicate, it may well have been through comparisons with Josquin that Obrecht's early image (and to some extent Josquin's in turn) acquired its distinctive profile. It is worth adding that such comparisons were not always decided in Josquin's favour. Contemporaries praised Obrecht as 'nulli secundus' almost as habitually as modern historians have ranked him 'second only to Josquin'. Not in every case can we dismiss such early testimony as mere commonplace. A good example is provided by the Bruges singer Jean Cordier, who declared to the chapter of St Donatian in 1487 that Duke Ercole I of Ferrara 'takes much delight in the art of music, and favours the musical composition of [Obrecht] above other compositions'. It is hard to assume that Cordier, who had just returned from northern Italy, would have knowingly testified to a falsehood, or that Ercole was completely unaware of Josquin's music at this time.

Ercole was to hire Josquin as the highest-paid musician in the history of his chapel, in 1503, but allowed him to go within twelve months (even though it was at his discretion to decide otherwise, and to have the composer seized if he left without his permission), only to appoint Obrecht in the same position five months later. There is no record of any meeting between Obrecht and Josquin, though it is clear that they responded to each other's music (as in their respective masses on *Fortuna desperata* and *Malheur me bat*, or in the openings of *Inviolata* and *Salve sancta facies/Homo quidam*). However, even such apparent gestures of respect cannot conceal the fact that the two composers were seen to have little in common. It may be no coincidence that none of the compositions

by Obrecht is found with a misattribution to Josquin in any surviving source.

2. The modern image. In the modern period a new image of Jacob Obrecht has emerged, albeit one that has undergone significant changes over the past 125 years or so. To some extent these changes may reflect the shifting intellectual preoccupations of Renaissance musicology during that period. Yet this cannot explain everything: after all, there has been a deep underlying continuity in the modern images of such composers as Ockeghem or Josquin. Obviously the stability of any image depends on the degree of coherence it can provide when the evidence itself is contradictory, ambiguous, or incomplete. In Obrecht's case, apparently, no image has succeeded in doing this; it is important to understand why this should have been the case.

Like many Netherlandish masters, Obrecht first emerged as a distinctive musical personality from the pages of Ambros's *Geschichte der Musik* (iii, 182–7). Ambros, as is well known, adopted the language and values of Romantic music criticism in his discussion of Renaissance music history. Most revealing in this regard (certainly in comparison with later histories of music) was his tendency to typify composers and works in terms of their perceived individualistic qualities. Ambros sought to develop an intimate personal understanding of each composer and his music, even when concrete historical evidence to support such understanding was lacking. He communicated his perceptions in richly evocative poetic language, thereby shaping the image of masters and masterpieces for decades to come.

Interestingly, Ambros characterized Obrecht in terms similar to those he used for Ockeghem. Obrecht, in his judgement, was 'a great, profound, serious and manly master, whose works show, almost throughout, a strain of stern loftiness'. The works on which he based this opinion were the ones he found in prints issued by Petrucci and various German publishers – a small but probably representative sample of the oeuvre available to 16th-century audiences. In these pieces he discerned a musical sensibility that encompassed, among others, the 'deeply serious, somewhat dark' but 'on the whole magnificent' writing of the *Missa 'Grecorum'*, the 'uncommonly intimate' expression of the *Missa 'Salve diva parens'* (a work that sounded to him as if it breathed 'a gentle melancholy'), and the 'powerful grandeur' and 'robust joy' of the *Missa 'Fortuna desperata'*. The overriding impression, for Ambros, was one of majestic grandeur. This perception may well have been influenced by Glarean's judgment that the works of Obrecht 'have a certain wondrous grandeur and an intrinsic quality of moderation'. Curiously, however, what Ambros passed on to the 20th century was, above all, his impression of Obrecht's spiritual depth. Reference books and music histories noted this as a prominent quality in his music up to and even beyond the Second World War.

Yet the image of Obrecht as a Renaissance *Tondichter*, as a Romantic musical poet *avant la lettre*, was short-lived. The Ockeghem-like qualities that Ambros and others ascribed to him gave way, in the postwar decades, to a perception of Obrecht as primarily a musical architect, as a formalist to be admired more for his abstract musical thinking than for significant depth of feeling. It is hard to establish how and why this change should have taken place. Quite possibly, however, the publication of the complete works under the editorship of Johannes Wolf in 1908–21 played an important part. This made Obrecht, by some margin, the first 15th-century composer whose oeuvre could be studied as a unified corpus. Apart from anything else, the *Werken* provided a scholarly basis for questioning Romantic perceptions based merely on samples of pieces, thus allowing scholars to revise Ambros's image at a comparatively early date. It did not take long for such a revision to appear. In his Leipzig dissertation of 1925, Otto Gombosi adopted a notably more objectivist, scholarly tone than previous commentators had done. His remarkable study offered penetrating insights into selected pieces by Obrecht and his contemporaries, but it did so at the expense of the individualism perceived by Ambros. Gombosi's new insights did not blend into a distinctive, coherent image of the composer – certainly not one that possessed the poetic qualities so admired in the 19th century.

The impression of spiritual profundity was in any case hard to reconcile with the discovery, published by André Pirro in 1927, that Obrecht had been neglectful of routine duties at Cambrai Cathedral, and in fact had embezzled money from the cathedral. History books have told and retold this episode many times (which has often been thought to reflect a character flaw), with the inevitable effect, certainly in the long run, of calling into question the sincerity of Obrecht's musical expression. It became less easy now to infer the composer's personality simply from the aesthetic qualities of his music in the way Ambros had done, and as historians would continue to do until the present day in the cases of Ockeghem and Josquin. One way to vindicate Obrecht as a composer, however, was to give new emphasis to his accomplishments on the 'purely musical' level. It may be no coincidence that scholars in the postwar decades began to draw attention to aspects of Obrecht's music that had previously attracted little notice: the element of calculation and clever contrivance in his cantus-firmus layouts, for example, or the apparent facility and (at times) almost naïve simplicity of his part-writing. Neither of these aspects is conspicuous in all or even most of Obrecht's compositions, and several of his most significant works (e.g. the *Missa 'Sicut spina rosam'* or the six-voice *Salve regina*) do not attest them at all. Even so, a new image of Obrecht began to take shape: that of a cold constructivist and *Vielschreiber*, whose prominence in music history owes more to the clever ingenuity of his tenor manipulations and to the sheer bulk of his output than to genuinely inspired or truly innovative masterpieces. This would now set him apart from the other composers of his generation. Obrecht came to be seen as the loner of the Josquin generation, as a curiously single-minded individual who doggedly stuck to old-fashioned practices, to the point of having little or no influence on subsequent composers. (As early as 1929, Heinrich Besseler had characterized him as the 'genialer Außenseiter' of the Renaissance; to some extent that is what he has remained ever since.)

Not surprisingly, perhaps, the postwar decades have left a substantial body of research on the formal layouts and cantus-firmus procedures in Obrecht's masses and motets. This research seems to have been motivated, at least in part, by perceived parallels between the *Kanonkünste* of the Franco-Flemish composers and the avant-garde serialism of the 1950s. It may also have been promoted by the rigorously empiricist orientation of

Anglo-American musicology during the Cold War decades, an orientation which typically privileged aspects that are susceptible to empirical verification. On these latter terms a composer like Ockeghem was bound to remain an elusive figure – and this, if anything, intensified the romanticized image of a 'mystic' already conferred on him by pre-war musicologists. Obrecht's works, on the other hand (at least those of his works that scholars chose to study), seemed to give all their secrets away in rational designs of one kind or another – ingenious tenor manipulations, symmetrical formal layouts, tonal structures and numerological schemes. Postwar musicology found its methodological preoccupations richly rewarded in Obrecht's music, and repaid him by canonizing the new image of the composer, one in which his music seemed to offer little else of historical (or even musical) interest besides the much-analysed rational designs. Significantly, the Obrecht mass that has been most often recorded since the 1950s is *Sub tuum presidium*, the very model of a complex mathematical design in 15th-century music.

All this is not to deny that Obrecht's music was still appreciated, especially for the flair and direct appeal of his melodic invention. Yet in most cases such appreciation was expressed merely as a qualification of the predominant image. In his *Music of the Renaissance*, for instance, Gustave Reese concluded his discussion of the composer with the afterthought: 'in addition to the technical proficiency shown in his music, its sheer loveliness makes him one of the greatest figures in a great generation'. And it is perhaps significant that the only attempt to analyse Obrecht's contrapuntal writing in any detail, Manfred Bukofzer's brilliant study of the *Missa Caput*, did not inspire similar attempts in other pieces so much as helped to solidify the postwar image of the composer. Bukofzer compared Obrecht's setting with the *Caput* masses of the English anonymous (then thought to be Du Fay) and Ockeghem. For obvious reasons he was concerned especially to bring out the stylistic differences between the three works. Given this objective, the deep kinship between Obrecht and Ockeghem once perceived by Ambros was bound to give way to a stark polarity – between the perceived inwardness and spirituality of Ockeghem, and the outward show and flamboyance of Obrecht. Bukofzer's impression of 'boundless exuberance and inexhaustible vigor', 'lusty virility', 'ceaseless rhythmic drive', and much else, has found its way into numerous postwar accounts of Renaissance music history, usually in connection with the composer's perceived facility (and rarely without reference to Glarean's 'mass in one night' anecdote).

The image that has remained, fairly or unfairly, is that of a man with a curiously singleminded tendency to play with outmoded ideas, whose music may show a great contrapuntal facility, but lacks the spiritual depth of an Ockeghem, let alone the innovative vision of a Josquin. The 1980 Grove article on Obrecht, written by Edgar Sparks, could be viewed in this light. The article presented virtually the opposite of the image sketched by Ambros more than a century previously. In some respects it was a reworking of the chapter on Obrecht in the author's magisterial study *Cantus Firmus in Mass and Motet, 1420–1520*. The composer is portrayed as a man whose significance to the history of music lies chiefly in the realm of tenor manipulation, and whose historical position must be assessed largely on those terms. Just as in the case of Reese, the acknowledgement of the aesthetic value of Obrecht's music appears as an afterthought, qualifying the image rather than defining it.

Much has happened in the twenty years since: the appearance of the third complete works edition, under the editorship of Chris Maas (published in 1981–99), the availability of more and more of his music in recorded performances, fresh archival research in all the major musical centres in which Obrecht is known to have worked, new datings for several of his works (on the basis of both archival and manuscript evidence), and research into the local chant traditions from which the composer may have selected his cantus firmi. If anything, the trend in Obrecht studies has been to contextualize our knowledge of the composer and his music – to deepen our understanding of the surroundings in which he lived and worked, and to ground new interpretations of his music more firmly in a knowledge of medieval liturgy, devotional practices, preaching and exegesis, social history, scholastic and humanist learning, biographical evidence, and much more. A wealth of historical material has been brought to bear on Obrecht's music, prompting fresh readings and interpretations of such works as the masses *Sub tuum presidium*, *Sicut spina rosam*, *De Sancto Donatiano* and *De Sancto Martino*, and such motets as *Mille quingentis*, *Factor orbis*, *Salve crux*, *Inter preclarissimas virtutes*, *Beata es Maria* and others. As a result of all this, Obrecht has begun to shed the one-dimensional image of a rigid constructivist and has come to be seen rather as a man of his time, a thoroughly medieval mind whose music embodies and articulates the values of the society in which he lived. In many ways, it is the fundamental 'otherness' of the medieval experience to which his works are now seen to offer uniquely revealing windows. (In this regard, the trend in Obrecht studies seems to parallel a similar trend in Du Fay research.) This contextualized image of Obrecht may as yet lack the coherence of previous images, yet a compelling visual counterpart has become available with the breathtaking portrait of the composer, which emerged unexpectedly in 1991.

The revival of many of Obrecht's compositions on sound recordings, especially by English *a cappella* ensembles in the 1990s, has opened up yet other dimensions to the composer's musicianship. When his works are heard in performance, the technically superlative part-writing reveals, in addition, an unparalleled ear for sonority and vocal timbre. Motets such as the five-part *Salve crux* and especially the six-part *Salve regina* have emerged as awesome edifices of sound, and may do much to explain Ambros's perception of Obrecht as 'a great, profound, serious and manly master, whose works show, almost throughout, a strain of stern loftiness'. Even the four-part music, including many of the cantus-firmus masses, turns out to be far more effective in performance than its often unassuming appearance on paper might suggest. In sound, Obrecht's use of the musical idiom of his time seems so inexhaustibly imaginative and inspired as to reduce the notorious tenor manipulations to virtual aesthetic irrelevance. The effect of all this on the modern image of Obrecht cannot be calculated as yet.

Over the past century, the music history of Obrecht's generation has usually tended to be construed in terms of the lives and oeuvres of the most important masters, or of the major genres and styles current at the time. However,

one could with equal justification conceive that history as the complex of mentalities, sensibilities and attitudes towards music that prevailed in European society, and which conditioned the reception of composers' works. The trend in recent Obrecht research has been to incorporate more and more of the latter within the framework of the former – to the point where the very privileging of such categories as 'author', 'work', 'style' and 'genre' has begun to seem problematic in light of what we know about musical experience in the period itself. To contextualize Obrecht and his works is inevitably to acknowledge that musical meaning and value may have been context-dependent rather than immanent in the artwork itself. To give an example, if the four-voice *Salve regina* is a prayer to the Virgin, *Quis numerare queat* a sermon, *Mille quingentis* an epitaph and *Inter preclarissimas virtutes* a 'letter of application', then obviously it is problematic to appraise one work as intrinsically better or more successful than another without regard to its purpose or function. Each of these motets was conceived for a different audience – the Virgin, a congregation, posterity, an unknown music patron – and these differences are likely to have borne on Obrecht's choices of musical style and construction. As this example illustrates, then, evaluative comparisons – not only between works but also between composers such as Obrecht and Josquin – must take into account such qualifying distinctions as between, say, urban and courtly, humanist and scholastic, private and public, votive and communal, sacred and secular, Flemish and Italian, 1490s and 1510s. The trend in Renaissance music research over the last decade or so has been to do exactly this. Ultimately that trend may cause the dissolution of the received images for Obrecht and Josquin. But for now the potential gains in historical understanding seem to outweigh the losses.

3. MUSIC: THE EARLY YEARS. One of the most significant developments in Obrecht studies over the last twenty years has been the discovery of new datings and *termini ante quem* for several of the composer's works. This has involved some unexpected surprises, notably in the case of *Missa 'Fortuna desperata'*. This work had always been thought to be among Obrecht's latest works, and is indeed remarkable for the breathtaking novelty of its conception (ex.1). Watermark evidence reveals that this piece must have circulated in Germany as early as 1489–93, along with several other masses that are closely related to it in style: *Rose playsante*, *Je ne demande* and the anonymous *N'aray-je jamais*. These masses, and several others like them, represent the core of Obrecht's mass oeuvre, and share a contrapuntal idiom that was identified as the 'mature style' by Wegman (1994). Watermark evidence confirms that this style must have been fully developed by the early 1490s, around the midpoint of Obrecht's professional career. It does not appear to have undergone significant changes until the very last years of his life. There are no direct models for the style in the works of other composers, nor does it seem to be anticipated in those Obrecht masses that can be securely dated in the late 1480s (*De Sancto Donatiano*, *De Sancto Martino* and *Salve diva parens*). As far as the masses are concerned, it is the most distinctively Obrechtian style, and the one for which he became internationally famous in the 1490s. It can be seen in some of the motets as well, most clearly in *Inter preclarissimas virtutes*.

That Obrecht's mature style should have developed, and been brought to perfection in masses like *Fortuna desperata* and *Rose playsante*, at such an early stage in his career is indeed a remarkable discovery. It is one of two recent developments which have prompted a major reassessment of Obrecht's historical position vis-à-vis Josquin – the other being the discovery that Josquin's career started much later than previously thought, in the late 1470s rather than the late 1450s. Several significant Josquin pieces that had been dated before about 1480 to accommodate the two decades he was believed to be active in Milan (1459–79) must now be assumed to be much later. With few exceptions, their copying dates and *termini ante quem* do not predate the mid-1490s, that is, at least half a decade after Obrecht's mature masses were already circulating in eastern Germany. In view of this, the emergence of Obrecht's mature style in these masses, which include such masterpieces as *Fortuna desperata*, *Rose playsante*, *Malheur me bat* and *Libenter gloriabor*, must be regarded as one of the most important developments in the music history of the 1480s and 1490s.

Quite how Obrecht arrived at his mature style is hard to determine, since so few of his remaining works can be dated on external grounds. It is possible to suggest datings based on internal, stylistic evidence, but these are inevitably open to the danger of circularity: although our perception of Obrecht's compositional development should ideally be based on a secure chronology of his works, we may never be able to arrive at a chronology without some hypothetical idea of how he developed as a composer. Then there is the additional problem (which may affect the motets more than the masses) that Obrecht's stylistic choices at any point may have been dictated by context and function rather than by purely compositional considerations. Despite these caveats, however, there are several works for which it can be plausibly suggested that they must be early – mainly because they rely on compositional conventions that were current in the 1470s and disappeared in the next decade. A good example is the *Missa 'Petrus apostolus'*. Despite the late date of its main source, a German print of 1539, the style of this setting is a faithful imitation of Busnoys' masses *L'homme armé* and *O crux lignum triumphale* (both of which began to circulate in the 1470s). Like these latter works, its contrapuntal idiom is exceedingly smooth and polished, yet has a quality of urgency and drive that derives from the persistent tendency (so typical of Busnoys) to create and resolve suspended dissonances between pairs of voices in quasi-cadential fashion. (This quality had been notably absent in Ockeghem's masses from the 1460s and 1470s, such as *De plus en plus* or *Ecce ancilla Domini*, whose dense layers of sound typically moved at glacial pace.) Given the likelihood that Obrecht was personally acquainted with Busnoys by the late 1460s, it stands to reason that he would have modelled his first efforts after the masses for which the latter had become most famous. Of course, it cannot be ruled out that the *Missa 'Petrus apostolus'* might have been composed at a later date, though in that case it would have represented a consciously historicizing gesture, or at least an attempt to emulate an identifiable older style.

This latter possibility must be assumed in the case of another early mass, *De Sancto Donatiano*, which was written for a Bruges endowment in 1487. The style of this work is a faithful imitation of Ockeghem's *Missa 'Ecce*

Ex.1 Obrecht: *Missa 'Fortuna desperata'*, Kyrie I

ancilla Domini' (1470s) and in fact the music makes several explicit allusions to that work. Significantly, Obrecht made no effort to transform Ockeghem's style or to assimilate it to his own idiom. The result is a setting that, had it survived anonymously, might well have been mistaken for a work by the older composer – in the same way that the *Missa 'Petrus apostolus'* is a stylistic twin of Busnoys' *Missa 'O crux lignum'*.

It seems significant that Obrecht, at the beginning of his career, should have been concerned to pay musical tributes of this kind. In the case of the *Missa de Sancto Donatiano*, however, the gesture is likely to reflect not so much a sense of artistic loyalty arising from personal acquaintance (as was probably true in the case of Busnoys), but rather an awareness of the historical status of past masterpieces – a status that Obrecht's emulation helped solidify. Another work that seems to pay tribute to Ockeghem is the *Missa de Sancto Martino*, written at Bruges in 1486: the first Kyrie quotes the head-motif of the latter's *Missa 'Mi-mi'*. However, one can still discern the influence of Busnoys as well: just as in the *Missa 'Petrus apostolus'* Obrecht tended to state and restate his cantus firmi in schematic fashion, occasionally by means of mensural transformation.

Ex.1 *continued*

The clues provided by these three datable masses may allow us to suggest early dates for several other settings. The *Missa 'Sicut spina rosam'* makes even more sustained allusions to Ockeghem's *Missa 'Mi-mi'* than *De Sancto Martino*: the head-motif of the older mass is once again quoted in the first Kyrie, and the bass of the Kyrie is quoted literally in the Agnus Dei of Obrecht's setting. *Sicut spina rosam* has several other features in common with *De Sancto Martino*, most notably the tendency to incorporate extended literal quotations of the cantus firmus in the introductory duos of individual movements. This tendency can be observed already in the *Missa 'Petrus apostolus'*, but it is expanded here to a degree unprecedented in Obrecht's (or any other composer's) oeuvre. Similar examples can be found in the masses *Beata viscera*, *O lumen ecclesie* and *Ave regina celorum*, all of which are likely to date from the 1480s.

If any trend can be witnessed in these early works, it is one towards increasing expansiveness – the very opposite of the measured concision of the later, mature masses. The sense of urgency and drive that was characteristic of Busnoys' idiom seems to have disappeared soon after the *Missa 'Petrus apostolus'*, giving way to a sense of tranquillity and poise more typical of Ockeghem's cantus-firmus masses. Some Busnoys-inspired devices still retain a token presence, particularly the literal imitation or restatement of cantus-firmus material in different voice-parts (migration is especially prominent in *O lumen*

ecclesie and *Sicut spina rosam*), but Obrecht tended to expand the scale on which these are applied – to the point where the devices are more easily detected on paper than heard in performance. The extreme in this regard is the *Missa 'Sicut spina rosam'*, a sombre, dense piece in the style of Ockeghem, organized by extended migrations and imitations of the cantus firmus on various hierarchical levels.

A similarly expansive composition, but one in which the influence of Busnoys' contrapuntal idiom can be discerned much more clearly, is the six-part *Salve regina*, a work of awesome power and depth. One might well hesitate to date a setting for six voices in the mid-1480s, yet there is little else about this work to justify such hesitation. The stylistic trend in the late 1480s and 1490s (exemplified by Obrecht's mature masses) was to be towards leaner, more lightly-textured polyphony. As if to make up for the loss of rich vocal sonority, composers increasingly invested their works with a purposeful compositional logic – witness, for instance, the more sensitive treatment of openings and endings, the increasing reliance on motivic imitation, and the careful positioning and handling of climactic points in the course of the musical argument. None of this can be observed as yet in the six-part *Salve regina*. By later standards this work seems almost self-indulgent in the degree to which it revels in slowly drifting layers of consonant sonority – 'more of the keenest sweetness', as Cortese was to put it, 'than would have sufficed to please the ear'. More than any other work in Obrecht's oeuvre, the *Salve regina* exemplifies an older aesthetic that might be called the 'wall of sound'. (This aesthetic was not abandoned in England, as one can tell from the motets in the Eton Choirbook. On the continent, the predilection for unrelentingly dense counterpoint was to return again after the 1510s, especially in the works of Gombert and Willaert. Significantly, the German theorist Hermann Finck, writing in praise of Gombert in 1556, described Josquin's music as 'thinner' (*nudior*) than modern taste approved, whereas Gombert 'avoids pauses, and his work is rich with full harmonies and imitative counterpoint'.)

The change towards the newer aesthetic can be observed in several motets by Obrecht that are likely to date from the later 1480s. If one considers, for instance, *Factor orbis* or *Salve crux*, one is struck immediately by the degree to which Obrecht has endowed the extended passages in reduced scoring with significant compositional interest of their own. It is true that one can still hear those passages as preludes or interludes between the cantus-firmus based stretches in full scoring. Yet while the latter are admittedly magnificent examples of sonorous part-writing, and show Obrecht at his best, they are typically less expansive, and dissolve so smoothly into the passages in reduced scoring as to discourage the impression that they constitute the core of the musical argument. From here one can see the direct path to still later tenor motets such as *Laudemus nunc Dominum*, *Mater patris* and *O preciosissime sanguis*, none of which is likely to predate the 1490s.

By the late 1480s, when Italian musical sources had barely begun to register the presence of Josquin (aside from a handful of songs only his *Ave Maria ... virgo serena*, *Domine non secundum* and the four-part *Salve regina*), Obrecht had a justifiable claim to being the most versatile and prolific composer in Europe. As far as the masses are concerned, the masterpiece of these years was *Salve diva parens*, a virtuoso display piece of breathtaking complexity and contrapuntal resourcefulness. This setting is the nearest Obrecht ever came to writing a freely-composed mass: although one can recognize passing resemblances between the tenors of the various movements, if these reflect a pre-existing melody it was clearly ornamented to such a degree as to obscure it beyond ready identification. The *Missa 'Salve diva parens'* seems to have found its way to Italian sources by 1487; its early transmission to the peninsula may do much to explain the invitation to the composer extended by Duke Ercole d'Este later that year. There is a string of other masses that can be or have been dated in the late 1480s with varying degrees of plausibility: *Adieu mes amours*, *Ave regina celorum*, *De Sancto Johanne Baptista*, *Caput*, *L'homme armé*, to mention only a few. One is not surprised to learn from the fabric accounts of St Donatian that the rate at which masses were copied in the choirbooks increased sharply after Obrecht's appointment in 1485 and declined almost as sharply after his departure in 1491. It is true that the accounts seldom specify titles or composers, and hence not every mass was necessarily composed by Obrecht. Still, even if one allows for possible contributions by other composers, the sheer quantity of mass cycles copied in 1485–91, 22 (of which eight were specifically designated as 'new'), suggests the likelihood that these years were among the most prolific in Obrecht's career.

Several motets may be associated with this period as well. *Mille quingentis*, the musical prayer commemorating Willem Obrecht, is likely to date from 1489 or shortly thereafter, since it refers to the year of Willem's death, 1488, in the past tense. It is a tenor motet in the old style, based on a threefold statement of the Introit for the Requiem mass, *Requiem eternam*, identically notated though rhythmically varied by means of mensuration changes. Just as in Josquin's later *Nymphes des bois* (commemorating Ockeghem), the plainchant has been transposed down a step, to accommodate the plaintive Phrygian modality of the setting. The contrapuntal idiom of the Corpus Christi motet *Discubuit Jesus* is reminiscent of *Mille quingentis* (compare, for example, bars 15–16 of the former with bars 20–21 of the latter, the frequent octave leaps in the top part, as well as the almost mannered use of suspensions in dotted rhythm), though the treatment of the plainchant itself is quite different: it is freely elaborated in the various voices and, with the exception of the first 14 bars, there is no literal imitation or migration of cantus-firmus material anywhere in this piece. (Similar freedom of treatment is evident in the three-part settings of *Salve regina* and *Alma redemptoris mater*.) If *Discubuit Jesus* was written in the 1480s, as seems likely, its apparent stylistic relationship to *Mille quingentis* underlines an important point: given the variety of functions and occasions for which Obrecht wrote his motets, it is hard to generalize about his stylistic profile in these works. For that reason it may often be more useful to evaluate his motets in terms of their probable ritual or devotional function and context rather than their position in a hypothetical compositional development. Many motets might equally well have been written for Bergen op Zoom, Cambrai or Bruges, and undoubtedly entered the repertory in all these places during the 1480s: the three-part and four-part *Salve regina* settings, *Ave regina celorum* (one of several late 15th-century motets based

on the famous setting by Walter Frye), and the four-part Marian prayer *Cuius sacrata viscera*. The three-part *Salve regina* is written in an unrelentingly exuberant style reminiscent of some of Obrecht's songs (especially *Tandernaken*, with which it shares the opening bar).

There is a strong case, on the other hand, for suggesting that other motets originated specifically in Bruges. *Omnis spiritus*, a cento of various prayers and acclamations, includes a supplication 'for our king'. For the Brabant towns of Antwerp and Bergen op Zoom this might have implied a date in the period 1486–93, when Maximilian I was King of the Romans, but it would seem to point more plausibly to Cambrai or Bruges, both of which were under French royal rule. The musical style is unambitious, yet it was undoubtedly dictated by the nature of a specific occasion, probably a public procession of thanksgiving. The contrapuntal idiom of the St Basil motet *O beate Basili/O beate Pater* frequently reminds one of *Missa de Sancto Donatiano*, with which it shares a plainchant melody *O beate pater Basili* (texted *O beate pater Donatiane* in the mass). The two inner voices of the first part elaborate this melody in strict canon (a procedure found already in the first section of the six-part *Salve regina*), whereas the outer voices carry the text of the Magnificat antiphon *O beate Basili*. Reinhard Strohm has convincingly associated this piece with the veneration of St Basil in Bruges; its style seems consistent with a date in the late 1480s. The Holy Blood motet *O preciosissime sanguis* must likewise originate from Bruges, where it would almost certainly have been written for the Basilica of the Holy Blood, or perhaps for the annual Holy Blood procession on 3 May. However, this is clearly a later work: although based on a plainchant cantus firmus (stated three times in long note-values in the tenor), the vigorous idiom characteristic of the mature style, the prominence of chordal, declamatory passages, as well as the mensural layout (¢ throughout, with no opening section in perfect tempus), suggest a date in Obrecht's second Bruges period, 1498–1500.

The overall picture is one of stylistic variety. As choirmaster in Bruges and other towns in the southern Netherlands, Obrecht was a composer who responded sensitively to what the nature of the occasion required. For this reason, the style of his Middle-Dutch songs may point to a specific type of occasion as well. Most of them are lively, animated pieces in a style that is almost reminiscent of the later Parisian chanson: frequent homophonic declamatory passages, modest use of imitation, and a generally simple harmonic style with regular cadences apparently articulating the phrase structure of the text. Although few of these pieces survive with any text beyond the incipit (and several may well have been conceived for instruments), the lighthearted nature of the opening words confirms that we may be in the realm of popular urban entertainment: 'When all the world lives in joy', 'The hail and the cold snow', 'I wear my cap awry', 'I heard the bells toll', 'Let yourself be pleased, dear John', 'Where are you, John? Who is calling us?' and others. Such pieces could well have been written for the morality plays that the singers of St Donatian were permitted to stage every year. Other songs strike a more serious note. *Lacen adieu* ('Alas, farewell, sweet company') seems to have circulated in Germany by the late 1470s, and may well be the earliest surviving work by Obrecht. The varied repetition of bars 13–35 in bars 37–55 may reflect the structure of the original poem, which has not come down to us. Like *Moet my lacen* and probably *Tmeiskin was jonck*, it seems to reflect the more selfconsciously serious environment of the chambers of rhetoric which flourished in Bruges, Ghent, Antwerp and other towns in the southern Netherlands. Still other secular pieces may have been conceived as *Spielmusik* for city minstrels, as Strohm has suggested, though in many cases we cannot tell whether that conception would have been authorial or scribal. Several of Obrecht's textless pieces could easily have been lifted from otherwise lost cantus-firmus Masses, where they might have originated as the Christe, Pleni, Benedictus, or second Agnus Dei. (The 'Qui cum patre' of the *Missa 'Salve diva parens'* circulated for decades as such a work.) No such explanation can be advanced for *Nec michi nec tibi*, however, which is the nearest in Obrecht's oeuvre to a work that seems inherently instrumental in idiom.

4. MUSIC: THE MATURE STYLE. The advent of the mature style, in masses composed around 1490 or shortly before, represents the central turning-point in Obrecht's career. It is at this point that he fundamentally reconceived the parameters of his style, developing what can only be described as a new artistic vision (typified in ex.1 by the first Kyrie of the *Missa 'Fortuna desperata'*). The older aesthetic of the 'wall of sound' disappears completely: cantus-firmus based passages in full scoring tend to move at varying rates of rhythmic and harmonic activity, ranging from drawn-out homophonic passages, usually at key phrases of the mass text, to stretches of almost frenzied contrapuntal activity. The allocation of these different passages typically reflects a purposeful musical design – though one, significantly, that is seldom dictated by the shape of the predetermined cantus firmus, and indeed may encompass long stretches in which the tenor is not heard at all. Instead of a conventional alternation between sharply contrasted passages in full and reduced scoring, standing side by side as monolithic stretches of relatively undifferentiated counterpoint, Obrecht now tended to treat the beginning or ending of a tenor statement as one of several steps in a continuing musical development. To achieve a cumulative effect, for example, he might pre-empt the first phrase of the cantus firmus in a series of imitations, of which the tenor entry then constitutes the concluding statement (see, for instance, ex.1, bars 1–17). Typically, however, the tenor entry is not treated as the culmination of such a development, as it usually was in the previous generation: that point now tends to be deferred until later in the cantus-firmus statement (ex.1, bars 29–31), sometimes even over a tenor passage that may not obviously invite it. It might be too much to say that Obrecht had become wholly indifferent to the structure of the cantus firmus, but he does seem to have sought the challenge of creating musical designs which, although accommodating the structural voice-part, owed little or nothing to its predetermined shape and layout.

As if to step up that challenge (or perhaps to display his sheer resourcefulness), Obrecht now preferred to treat pre-existing melodies in the most rigidly schematic fashion – employing techniques of mensural transformation, augmentation, inversion, retrograde, sampling and segmentation, and thereby forcing himself to operate within the constraints of the utterly arbitrary end results. This new preference represents a significant break from his

earlier practices. After the *Missa 'Petrus apostolus'* Obrecht had moved away from schematic procedures, prominently applying free elaboration in masses such as *Beata viscera*, *Sicut spina rosam*, *De Sancto Donatiano*, *Salve diva parens*, and (if it is early) *Adieu mes amours*. Now, however, the procedures returned, though with the musical stakes greatly increased. To create a 'wall of sound' around a predetermined cantus firmus (as in the masses *Petrus apostolus* or *De Sancto Martino*) would have posed no particular challenge to a composer of Obrecht's skill. (In his earliest works, the principal artistic challenge for him had been to maximize the variety of consonant sonority within an unchanging polyphonic texture.) To invent a purposeful and coherent musical design, on the other hand, was a task to which few composers beside himself would have been equal. Obrecht was not to be outdone in this regard until the publication of Josquin's *Missa 'Hercules dux Ferrarie'* in 1505. By then, he himself had all but completed the corpus of his mature masses, which included such cycles as *Plurimorum carminum* I and II, *De tous biens playne*, *Fors seulement*, *Grecorum*, *Pfauenschwanz* and *Je ne demande*, and which had culminated in such masterpieces as *Fortuna desperata*, *Libenter gloriabor*, *Malheur me bat* and *Rose playsante*.

Although there are important differences between these works, their common stylistic profile can be recognized by a number of distinguishing traits: (1) the markedly increased emphasis on cadences, often effected by restatements of the same cadence in regular succession (ex.1, bars 1–13), or, at climactic points, by stretching out a cadential progression over a longer passage (bars 15–17 and 28–31); (2) the articulation of the musical discourse in self-contained phrase units, arranged in chains and often linked through literal restatements of the same material (bars 1–17 and 31–49); (3) the use of textural changes and cadences to underscore that articulation; (4) the almost unrelentingly exuberant melodic style, in which individual lines keep outlining triadic figures with formulaic rhythmic patterns, and frequently initiate motivic sequences or repetitions; (5) the sensitivity to tonal relationships across larger formal periods.

However, the mature style is more than the sum of its distinguishing traits. The key-word is *design*, and the traits themselves acquire their significance only in the context of Obrecht's new sense of formal musical design. He has decisively moved away from the mid-century aesthetic in which (to exaggerate slightly) the sonority of each moment had to speak for itself, and carried no implications beyond the inevitability of its having to give way to the next sonority. (If formal expectations played any role at all in that aesthetic, they usually had to do with one of three things: the periodic shifts between full and reduced scoring, the structure of the text, or such short-term organizational devices as imitation and sequence.) In Obrecht's mature style, on the other hand, it is the position of each moment within an overarching musical design that determines how it will be treated, and (one assumes) how listeners were encouraged to hear it. Thus, what was important about the ending of a piece is not that it marked the moment at which the performance discontinues, but rather that it established closure in terms of the work as a whole. That is why the final cadences of individual movements tend to receive extraordinary emphasis in Obrecht's mature masses, and in some cases get a separate coda section all to themselves. (This latter tendency can be observed already in the Gloria and Credo of the *Missa 'Ave regina celorum'*.) Similar sensitivity is apparent in the opening sections, however, which Obrecht was likewise careful to treat in a fashion appropriate to the overall compositional design (as in ex.1, bars 1–17).

The historical and musical significance of all this could hardly be overestimated. Apart from anything else, Obrecht's mature style embodied a fundamentally new conception of the nature of the musical work. To appreciate this, it may be useful to make a comparison with mid-century styles of composition in the cantus-firmus mass, as exemplified, for instance, by the influential English *Caput* mass. Compositions that dwell on kaleidoscopic successions of consonant sonorities do not encourage being construed as works (though modern analysis habitually attempts to do so), but rather as performative events. In performance their style might not have been distinguishable in many cases from that of polyphonic improvisations – and the latter, of course, are by definition not works. Listeners did not seek to discern 'the composer's voice', but rather heard and valued the actual voices of singers – and it is these, invariably, to which they drew attention in their eyewitness reports, to the virtual exclusion of works and authors' names. Obrecht's mature masses, on the other hand, seek to communicate at every turn their status as works by making transparently audible the compositional logic devised by the author. Listeners were thus encouraged to discern that logic 'beyond' the consonant sonorities in whose particular arrangement it is expressed.

In this sense the mature masses could be said to invite 'understanding' on the part of their listeners – a novel concept first articulated by Tinctoris in his *Complexus effectuum musices* (early 1480s):

> For the more one has attained perfection in [music], the more one is delighted by it, since one apprehends its nature both inwardly and outwardly: inwardly through the intellective faculty, through which one understands proper composition and performance, and outwardly through the auditive power, through which one perceives the sweetness of consonances.

As this comment implies, there was nothing to be 'understood' about consonant sonority *per se* – except (for those who had read Boethius) its basis in arithmetical proportion, though even this revealed God's creative purpose rather than that of any human composer. Obrecht's mature style, on the other hand, foregrounded the composer's creative purpose by shifting the aesthetic focus onto intelligible compositional design. In this design one might discern the composer's voice resounding, as it were, through the singers' voices. And it was this design that would now come to be regarded as the defining dimension of the musical work *qua* work, and the touchstone of its intrinsic quality – reducing consonant sonority to a mere surface quality, satisfying only to the undiscriminating ears of inexperienced listeners. Once again the underlying ideology had already been articulated by Tinctoris in his *Complexus effectuum musices*: 'However, music brings less joy to those who perceive in it nothing but sound, and who indeed are delighted only through the outer sense'. In Obrecht's mature masses, too, consonant sonority is no longer its own justification: it can be too much of a good thing, and hence it must be handled with discretion, lest it might distract from the musical argument. The masses are notably leaner and thinner-textured than previous settings (in ex.1, for instance, only a third of the section is fully scored), and

the individual lines tend to be differentiated more sharply – making an early work like the six-part *Salve regina* seem almost excessively luxurious by comparison. (It was undoubtedly a piece of the latter kind that Cortese had in mind when he expressed reservations about Obrecht's motet style.)

The point here is not that Obrecht was somehow implementing a programme for stylistic renewal advanced by Tinctoris, but rather that both were responding in different ways to fundamental changes in aesthetic sensibility affecting European musical culture at large. The conceptualization of the musical work as object (*res facta*) and the increasing valuation of musical authorship, involving notions of personal style, authorial intention and creative freedom, are phenomena that can be traced back to the 1470s if not earlier. Moreover, the mature style was not without precedents in either Obrecht's own works or those of others. Even an older figure like Ockeghem – the prime representative of the 'wall of sound' aesthetic in the 1460s and 1470s – experimented with leaner textures and a more purposeful sense of musical design in his late *Missa 'Au travail suis'*. And the concern with musical closure had already been anticipated in the well-known phenomenon of the 'drive to the cadence': as illustrated, for example, by Ockeghem's *Missa 'Ecce ancilla Domini'* (and by Obrecht's emulation of that work, the mass *De Sancto Donatiano*), this was the stepping up of rhythmic and melodic energy before its release in the final cadence. Early sensitivity about musical closure is suggested also by a closely related device: the 'sounding out' of individual voice-parts within the final sonority (as, for example, in the Naples *L'homme armé* masses), as if to mitigate the harsh abruptness of the cadence. These two devices, the drive to the cadence and the sounding out of voice-parts, were typical of the Ockeghem-Busnoys generation and disappeared gradually thereafter. (Spectacular late examples can still be found in Obrecht's masses *Caput* and *L'homme armé*, and some works by Isaac.)

However, not even these precedents can obscure the fact that Obrecht's contribution in the years around 1490 represented a fundamentally new artistic vision, and was unparalleled in its originality. This is not to imply a negative view of the older aesthetic, which we have typified here, for the sake of comparison, in terms of the idea of the 'wall of sound'. The point is that the very paradigms of musical composition, perception and judgement changed profoundly during the 1470s and 1480s, rendering any direct comparison across this major shift problematic. In terms of the new aesthetic sensibilities, however, Obrecht's mature style represented a strikingly imaginative response. For that reason it must count as one of the most significant developments in the history of late-15th-century musical style.

5. LATER COMPOSITIONS. The picture of stylistic consistency and homogeneity presented by the mature style gives way to one of greater diversity in the later motets. Among these, the four-part *Inter preclarissimas virtutes* seems to offer the closest parallel to the mature masses. It is based on a chant fragment (*Estote fortes in bello*, from the Common of Apostles and Evangelists) which is notated and treated exactly as in such segmentation masses as *Je ne demande*, *Rose playsante* or *Malheur me bat*: five successive statements in each of the first two sections, sixfold augmentation in the first statements followed by successive reduction until the notes have the same durations as the other voices. *Inter preclarissimas virtutes* was conceived a musical 'letter of application' addressed to an unnamed ecclesiastic, presumably a pope, evidently with a view to securing his patronage.

The five-part *Laudemus nunc Dominum*, written for the dedication of a church, must have existed by 1496, when it was singled out for its prominent declamatory writing by the theorist Johannes Herbenus of Maastricht. It is a characteristically joyful and exuberant work which, although based on a conventional scaffold tenor, sounds remarkably modern in its regular alternation between rapid text delivery in the homophonic declamations, and the breathtaking energy of the more contrapuntally involved passages. The cantus firmus drops in and out with little apparent effect on the musical argument as a whole. The five-part *Mater patris* is very similar in musical conception. Although one of its voices is no longer extant, the work is similarly based on a cantus firmus in long note-values, around which the other parts enunciate the text of the Marian hymn *Mater patris* with unrelenting energy and drive. Like many later works by Obrecht (including *Inter preclarissimas virtutes* and several of the mature masses) this piece is conceived in C almost throughout, with no opening section in perfect tempus as had been customary up to the 1490s. The same is true of *O preciosissime sanguis*, which provides perhaps the best illustration of Obrecht's mature tendency to create musical designs that owe little or nothing to the structure of the cantus firmus: the two plainchant melodies in the tenor pursue their predetermined course within a musical context that seems to follow a logic entirely of its own.

If the four-part *Salve sancta facies/Homo quidam* was composed for an endowment in Bruges, as Strohm has suggested, it must surely date from Obrecht's second period of activity there in 1498–1500. Just as in the *Missa 'Malheur me bat'*, which existed by 1497, the pre-existing melody (the responsory *Homo quidam* for Corpus Christi) is stated in the top voice. The contrapuntal context in which it is embedded is strikingly similar to that in the mass. (Compare, for instance, bars 142–5 of the Credo with bars 22–5 of the motet.) The setting begins with a point of imitation that apparently provided the inspiration for the almost identical opening of Josquin's *Inviolata, integra et casta es* (1510s), which in turn was to be imitated by several other composers.

New stylistic directions are apparent in two other late motets by Obrecht, both printed by Petrucci in 1505. The four-part *Quis numerare queat* is conceived as a musical sermon (addressed to 'you Frenchmen' in the most authoritative source), and was evidently written for a service of thanksgiving after the cessation of war – possibly the withdrawal of an invader or the ending of a civil war. The poem was set to music also by the French court composer Loyset Compère, who turned it into a conventional tenor motet based on a canonically treated cantus firmus. Obrecht's setting, on the other hand, was freely composed, and cast in a style that can only be described as rhetorical. Syntactical units of the text are articulated by firm cadences or half-cadences, simultaneous rests or changes of musical procedure. Key phrases are projected by homophonic, declamatory writing or underlined by striking musical gestures: imitations, triple rhythms and changes in texture. The occasion for the piece may have been the Peace of Etaples (November

1492), which ended a shortlived invasion into France by Henry VII of England. Obrecht is known to have travelled through France in 1492.

The four-part *Laudes Christo redemptori*, a freely-composed setting of the text of a sequence for Easter, could well be among Obrecht's latest works. The motet is almost prophetic in its consistent application of the technique of pervading imitation, with individual points of imitation articulating phrases of the text. Highly significant (and in Obrecht's oeuvre unique) is the wider spacing of the voice-parts, and the tendency to avoid crossings between them. The motet was apparently conceived in the so-called *a voce piena* texture, in which each of the voices occupies a distinct modal range, which was to become universal in the 16th century.

As this brief survey suggests, Obrecht seems to have shifted the focus of his creative ambitions in later years to the motet. It was in this genre that he developed new ideas and approaches, and partook in later trends. (It is perhaps significant that Cortese was to single out Obrecht as one of the major motet composers of his time, a view that has often puzzled modern observers.) In the masses, on the other hand, it would appear that the composer had made his mark by the early 1490s, and was content thereafter to continue operating within the framework of the mature style. The only major exception may have been the *Missa 'Sub tuum presidium'*, a work of immense structural complexity, apparently written for the feast of the Assumption. It is based on a recurring plainchant cantus firmus, laid out in the top voice with almost uncompromising strictness, along which other plainchants are added in the course of the setting, gradually thickening the initial three-part texture until the culmination in the seven-part Agnus Dei. As Marcus van Crevel discovered several decades ago, Obrecht introduced two minor modifications into the otherwise rigid cantus-firmus groundplan, thereby fixing the overall length of the work at exactly 888 semibreves (with Kyrie and Gloria taking up 333 semibreves, and Credo, Sanctus, and Agnus Dei 555).

If any masses could be said to date from Obrecht's final years, they are likely to include such settings as *Si dedero*, *Cela sans plus* and especially *Maria zart*. While they still exemplify Obrecht's predilection for scaffold tenors, his musical engagement with pre-existing models now extended far beyond questions of cantus-firmus treatment and layout alone. In all three settings, material from the models infuses the other voices to such a degree (whether freely elaborated or quoted literally) that one is almost tempted to speak of parody in the cases of *Si dedero* and *Cela sans plus*. To the extent that Obrecht now departed from the idiom of the mature style, he seems to have done so mainly in response to the style of the pre-existing models. *Maria zart* is a special case in this regard, since the model, a German devotional song, was monophonic. The mass is likely to date from 1503 or 1504, when the composer is known to have passed through the very region where the devotional song *Maria zart* originated, the Tyrol, and where several other settings of the melody, including an anonymous three-part mass, turn up in the 1500s. The immoderate length of the work (it takes up more than an hour in modern performance) is dictated by the cantus-firmus layout, arranged by means of Obrecht's favourite device of segmentation. Contrary to his mature masses, however, the composer made no attempt to compose large-scale formal designs around the tenor, for instance by breaking up the counterpoint in self-contained phrase units or by introducing extended literal imitations and migrations. While the contrapuntal voices still take little notice of the presence or absence of the cantus firmus, they do so with no other apparent aim than that of extending melodic lines, or motivic imitations and sequences, almost indefinitely. In one sense this brings him closer to the 'wall of sound' aesthetic of earlier years – save that the voice-parts do not actually combine to create a wall so much as engage in a ceaseless interplay of sharply individualized melodic lines. A curious work, with no obvious precedent or later influence, it leaves one with the impression, as do most of his other late works, that Obrecht still had a great deal to offer when he died in his late 40s.

6. Conclusion. In 1980 it was still possible for Edgar Sparks to observe that Obrecht's 'influence on later music was slight' (*Grove6*). This view is premissed on several assumptions that can no longer be sustained without qualification. One of these was that Obrecht was a member of 'the Josquin generation', and consequently that the 'later music' in which his influence should supposedly be apparent must include the works of Gombert, Willaert and Clemens non Papa. However, it is a simple matter of fact that Obrecht died in 1505, 16 years before Josquin, and that more than half of Josquin's oeuvre does not actually begin to turn up in sources surviving today until after that date. Another assumption was that Josquin's career began in 1459, and hence that several of his most significant works might have been written as early as the 1460s. However, it has now been established beyond question that no document before the mid-1470s mentions Josquin as a professional musician (or indeed at all). Moreover, less than a fourth of Josquin's works actually survive in sources copied before about 1500. The evidence of the sources thus confirms what is already apparent from other evidence, especially the virtual absence before 1500 of contemporary comments mentioning Josquin as a composer of any eminence. Simply put, his breakthrough as a composer is likely to have come only in the very last years of the century, about 10 years after Obrecht's breakthrough in the late 1480s. And the corollary is inevitable: that the 'later music' in which Obrecht's influence could have been apparent must include about half of Josquin's oeuvre even if the influence was only posthumous.

There is in fact a compelling case for suggesting that Obrecht was a major influence on Josquin. The style of the *Missa 'Hercules dux Ferrarie'*, surely not written before the early years of the 16th century, would have been inconceivable without the precedent of Obrecht's mature masses. Josquin borrowed and transformed the fundamental conception of the mature style, as outlined above, in a setting whose artistic merit is not diminished by its debt to Obrecht. Likewise, one can still discern in the opening of a late motet such as *Benedicta es* (whose transmission begins in the late 1510s, and which is likely to date from that decade) the influence of very similar openings in the masses *Fortuna desperata* (see ex.1) and *Libenter gloriabor*. Of course, the possibility of Obrecht's influence on Josquin can only be a working hypothesis, one that cannot be fully tested until several major problems of chronology and authenticity in Josquin's oeuvre have been resolved. For now it has the merit of being consistent with the evidence, despite the obvious

conflict it poses to the long-held assumption that Josquin should be credited with every major innovation that occurred during his lifetime. On the other hand, it is unlikely that we shall ever be able to appreciate the exact nature and scope of Josquin's contribution until we have identified the influences he underwent.

No such obstacles exist in Obrecht scholarship. His debts to Busnoys and Ockeghem are transparently audible in his early works, and the *Missa 'Adieu mes amours'* may well reflect a similar debt to Weerbecke and Josquin. It is precisely because of these well-established influences that we may expect to move towards a better appreciation of Obrecht's own voice – not only in these early compositions, but especially in his mature and late works, which did so much to raise the cultural prominence of 'the composer's voice' in 15th-century music.

WORKS

Editions: *New Obrecht Edition*, ed. C. Maas and others (Utrecht, 1983–99) [M]
Werken van Jacob Obrecht, ed. J. Wolf (Amsterdam and Leipzig, 1908–21/*R*) [W]

Misse Obreht (Venice, 1503)
Concentus harmonici quattuor missarum … Jacobi Obrecht (Basle, [*c*1510])

MASSES

Incipit or Title	*No. of parts*	*Edition*	*Remarks*
Missa 'Adieu mes amours'	4	M i, 1	c.f. monophonic chanson, or possibly Josquin's setting
Missa 'Ave regina celorum'	4	M i, 31	c.f. T of Walter Frye's motet
Missa 'Beata viscera'	4	M ii, 1	c.f. plainchant comm for BVM; 'Cum sancto' inc.
Missa 'Caput'	4	M ii, 33	c.f. final melisma of plainchant ant Venit ad Petrum for Maundy Thursday; modelled on anon. English mass; alternative Agnus Dei probably by Obrecht as well
Missa 'Cela sans plus'	4	M xiii, 1	on Lannoy's chanson
Missa de Sancto Donatiano	4	M iii, 1	c.f. various chants, mostly associated with St Donatian; several references to Ockeghem's Missa 'Ecce ancilla Domini'; may have been composed together with a Missa de Sancto Adriano (apparently lost, but perhaps = conjecturally attrib. Missa sine nomine)
Missa de Sancto Martino	4	M iii, 35	c.f. various plainchant ants from the office of St Martin of Tours
Missa 'De tous biens playne'	3	M iv, 1	c.f. T of Hayne van Ghizeghem's chanson
Missa 'Fors seulement'	3	M iv, 25	c.f. T (top v) of Ockeghem's chanson
Missa 'Fortuna desperata'	4	M iv, 49	c.f. T of ?Busnoys's song
Missa 'Grecorum'	4	M v, 1	c.f. unidentified, possibly a 14th-century monophonic chanson in the style of Machaut; sequence 'Victimae paschali laudes' quoted in 'Osanna'
Missa 'Hercules Dux Ferrarie'	4	—	lost; mentioned by Glarean (1547[1]), 296; see Wegman (1994), pp.189–90
Missa 'Je ne demande'	4	M v, 35	c.f. T of Busnoys's chanson; segmented c.f. treatment
Missa 'L'homme armé'	4	M ii, 1	c.f. T of Busnoys's mass on monophonic chanson
Missa 'Libenter gloriabor'	4	M ii, 35	c.f. plainchant ant for St Paul, with verse (Psalm tone 8) in 'Christe', 'Qui tollis' and 'Pleni'; Agnus Dei inc.
Missa 'Malheur me bat'	4	M vii, 1	c.f. Dc of Malcort's chanson; segmented c.f. treatment; also attrib. Agricola
Missa 'Maria zart'	4	M vii, 39	c.f. monophonic devotional lied; segmented c.f. treatment
Missa 'O lumen ecclesie' ['O quam suavis']	4	M viii, 1	c.f. probably plainchant Corpus Christi ant 'O quam suavis', retexted as Dominican ant 'O lumen ecclesie' in *I-Rvat* S.M.M.26
Missa 'Petrus apostolus'	4	M viii, 43	c.f. plainchant Magnificat ant for SS Peter and Paul
Missa 'Pfauenschwanz'	4	M ix, 1	c.f. T of instrumental piece by Barbingant
Missa plurimorum carminum (i)	4	M x, 1	c.f. T (and 1 Dc) of 22 chansons by Barbireau, Basin, Binchois/Du Fay, Bosfrin, Busnoys, Compère/Pietrequin, Ghizeghem, Josquin, Ockeghem and anon.
Missa plurimorum carminum (ii)	4	M x, 47	c.f. Dc of five chansons by Barbireau, Compère, Martini and Rubinus
Missa 'Regina celi'	4	—	lost; mentioned as having been composed for the court of Maximilian I at Innsbruck in 1503
Missa 'Rose playsante'	4	M ix, 47	c.f. T of chanson by Dusart or Caron; segmented c.f. treatment
Missa 'Salve diva parens'	4	M xi, 1	c.f. unidentified but related, both metrically and melodically, to c.f. of Févin's Missa 'O quam glorifica' (see Strohm, 1985)
Missa 'Scaramella'	4	M xi, 51	c.f. monophonic Italian song; T and Dc missing, but c.f. layout and treatment reconstructed by Wegman (1994), p.280n
Missa 'Sicut spina rosam'	4	M xi, 91	c.f. 2nd section of plainchant resp Ad nutum Domini for BVM; B of Kyrie of Ockeghem's Missa 'Mi-mi' quoted in Agnus Dei
Missa 'Si dedero'	4	M xii, 1	c.f. T of Agricola's motet; segmented c.f. treatment
Missa 'Sub tuum presidium'	3–7	M xii, 51	c.f. plainchant ant for BVM, with parts of six further chants mostly from the Assumption
Missa 'Veci la danse Barbari'	4	M xii, 89	c.f. T of anon. chanson; all movements except Credo inc.; Credo possibly by Adam Rener

CONJECTURALLY ATTRIBUTED MASSES

Missa de Sancto Johanne Baptista	4	CMM, xcv/1 (1982), 1	anon. in *I-Rvat* C.S.160, attrib. Obrecht by Wegman (1989, 1994); c.f. chants associated with St John the Baptist; rhythmic layout adopted from Busnoys' Missa 'L'homme armé' in a manner similar to Obrecht's own Missa 'L'homme armé'
Missa 'Gracioulx et biaulx'	4	M xiii, 45	ascription removed in only source, *I-MOe* α.M.1.2, attrib. Obrecht by Staehelin (1973, 1975) on grounds of style and presence in a series of Obrecht masses; c.f. T of Barbireau's chanson
Missa 'Je ne seray plus'	3	M xiv, 1	anon. in all sources, attrib. Obrecht by Ward (1977) on grounds of close structural and stylistic similarity with Missa 'Fors seulement'; c.f. Dc of Phillipet des Pres' chanson
Missa 'N'aray-je jamais'	4	M xiv, 23	anon. in all sources, attrib. Obrecht by Staehelin (1975) and Just (1975) on grounds of close structural and stylistic similarities with Missae 'Malheur me bat', 'Maria zart', 'Rose playsante', 'Si dedero' and conjecturally attrib. 'Je ne seray plus'; c.f. T of Morton's chanson; segmented c.f. treatment
Missa [sine nomine]	4	—	anon. in *I-Sc* K.1.2, ff.148*v*–156*r*, attrib. Obrecht by Wegman (1994), p.166n, on the basis of close parallels in c.f. layout and treatment with Missa de Sancto Martino, as well as transmission next to Missa 'Beata viscera'

RITUAL WORKS

Magnificat	4	M xv, 94	uses 5th-tone and 8th-tone melodies; questioned by Finscher (*MGG1*)
Ave maris stella	3	M xv, 9	1st stanza of Marian hymn
Cuius sacrata viscera	3	M xv, 25	2nd stanza of Marian hymn Assunt festa jubilea
Cuius sacrata viscera	4	M xv, 27	2nd stanza of Marian hymn Assunt festa jubilea
Hec Deum celi	5	M xv, 51	2nd stanza of Purification hymn Quod chorus vatum
Omnis spiritus	2–4	M xvi, 43	Office preces and responses
Benedicamus in laude	4	M xv, 23	troped Benedicamus Domino

MOTETS

Alma redemptoris mater	3	M xv, 1	
Ave regina celorum	4	M xv, 11	c.f. T of Frye's motet, combined with extensive allusions to plainchant Marian ant in Dc
Beata es Maria	4	M xv, 17	
Discubuit Jesus	4	M xv, 28	A lacking; questioned by Finscher (*MGG1*)
Ego sum Dominus			contrafactum of Alma redemptoris in 1542[8]
Factor orbis/Canite tuba	5	M xv, 34	c.f. plainsong Advent ant; also quotes numerous other chants, mostly associated with Advent and Nativity
Inter preclarissimas virtutes/Estote fortes in bello	4	M xv, 55	c.f. beginning of plainchant ant for Common of Apostles and Evangelists
Largire nunc mitissime			contrafactum of Lacen adieu in *CZ-HKm* II A 7
Laudemus nunc Dominum/Non est hic aliud	5	M xv, 69	c.f. three plainchant ants from Matins of Dedication of a Church
Laudes Christo	4	M xv, 84	
Mater patris/Sancta Dei genitrix	5	M xv, 104	c.f. unidentified; Quintus lacking
Mille quingentis/Requiem eternam	4	M xvi, 1	commemoration of Obrecht's father; c.f. plainchant int from Mass for the Dead
O beate Basili/O beate Pater	4	M xvi, 12	c.f. plainchant ant for St Basil; also quotes other chants from this office
O preciosissime sanguis/Guberna tuos famulos	5	M xvi, 23	c.f. from plainchant hymns Christe qui lux es and Te Deum laudamus; Quintus lacking
Parce Domine	3/4	M xvi, 48	
Parvulus nobis nascitur			contrafactum of Rompeltier in late German sources; attrib. Johann or Nikolaus Herman
Precantibus diva virgo			contrafactum of Wat willen wij in *CZ-HKm* II A 7
Quis numerare queat	4	M xvi, 50	poem of thanksgiving after conclusion of peace; also set to music by Compère
Regina celi	2	M xvi, 63	mensuration exercise
Requiem			c.f. of Mille quingentis, as sole incipit in 1504[1], *I-Fc* Basevi 2439
Salve crux arbor vitae/O crux lignum triumphale	5	M xvi, 65	c.f. from plainchant Holy Cross seq Laudes crucis attollamus
Salve regina	3	M xvi, 85	
Salve regina	4	M xvi, 97	alternatim setting
Salve regina	6	M xvi, 104	alternatim setting
Salve sancta facies/Homo quidam	4	M xvi, 119	c.f. plainchant resp for Corpus Christi
Si sumpsero	3	M xvi, 134	also attrib. Agricola
Vita dulcedo			incipit of polyphony in 4-v and 6-v Salve regina

SECULAR WORKS

Adiu, adiu			alternative incipit of Meiskin es u in *I-Fn* Magl.XIX.178
Als al de weerelt in vruechden leeft	4	M xvii, 1	text incipit only
Den haghel ende die calde snee	4	M xvii, 5	text incipit only
Fors seulement	4	M xvii, 66	c.f. T (top v) of Ockeghem's chanson
Fuga	4	M xvii, 100	probably instrumental; canon 3 in 1 + semibreves only in sixfold augmentation
Helas			alternative incipit for Nec michi nec tibi in *I-PEc* 431
Helas mon bien	3	M xvii, 71	text incipit only
Ic draghe de mutse clutse	4	M xvii, 8	text incipit only
Ic hoerde de clocskins luden	4	M xvii, 12	text incipit only
Ic ret my uut spacieren	4	M xvii, 17	text incipit only; ? on monophonic song
Ic weinsche alle scoene vrauwen eere	4	M xvii, 20	also attrib. Stoltzer
In hebbe gheen ghelt in mijn bewelt	4	M xvii, 23	
J'ay pris amours	4	M xvii, 73	on Dc and T of anon. chanson
Lacen adieu, wel zoete partye	4	M xvii, 27	text incipit only; melodic texture untypical
Laet u ghenoughen liever Johan	4	M xvii, 30	text incipit only; c.f. also used in Weerbecke's 'O salutaris hostia'
La tortorella è semplice uccelletto	4	M xvii, 94	? on monophonic song
Ma bouche rit	4	M xvii, 84	c.f. T of 1st part of Ockeghem's chanson; possibly a mass section
Marion la doulce	3	M xvii, 86	
Meiskin es u cutkin ru	4	M xvii, 35	
Moet my lacen u vriendelic schijn	3	M xvii, 36	questioned in M: melodic treatment untypical
Nec michi nec tibi	2/3	M xvii, 97	probably instrumental; Ct added; text (?title) from 1 Kings iii: 26; also attrib. 'Virgilius'
Rompeltier	4	M xvii, 38	on monophonic tune preserved with various German texts; questioned in M: attrib. weak, textural monotony untypical
Se bien fait	4	M xvii, 89	text incipit only
Sullen wij langhe in drucke moeten leven	3/4	M xvii, 40	text incipit only; A possibly added
Tandernaken	3	M xvii, 42	text incipit only; on monophonic dance or instrumental tune
Tant que nostre argent dura	4	M xvii, 92	text incipit only; on ?monophonic chanson
Tmeiskin was jonck wel van passe	3/4	M xvii, 45	Ct added; also attrib. Isaac, Japart
Tsat een cleyn meiskin	4	M xvii, 48	text incipit only
Waer sij di Han?	4	M xvii, 53	text incipit only
Wat willen wij metten budel spelen	4	M xvii, 57	text incipit only
Weet ghij wat mijnder jonghen hert deert	4	M xvii, 62	text incipit only; questioned in M: dissonance treatment and form untypical
[textless] (i)	3	M xvii, 102	instrumental piece, possibly mass section
[textless] (ii)	3	M xvii, 104	c.f. not identified; instrumental piece, possibly mass section
[textless] (iii)	3	M xvii, 108	c.f. not identified; instrumental piece, possibly mass section
[textless] (iv)	3	M xvii, 111	probably conceived as a song
[textless] (v)	?3	M xvii, 114	only B extant

DOUBTFUL AND MISATTRIBUTED WORKS

Incipit or Title	*No. of Parts*	*Edition*	*Sources of attribution to Obrecht*	*Remarks*
Benedictus	2	M xviii, 31	G. de Baena: *Arte novamente inventada* (Lisbon, 1540)	intabulation of duo from unidentified mass; unique source suspect
Judea et Jerusalem	4	M xviii, 1	*D-Dl* 1*D*/*505*	chant treatment, form untypical; possibly by Issac
Passio Domini nostri Jesu Christi	4	M xviii, 9	1538[1] and dependent MSS	probably by Longueval; also attrib. 'Jo. ala Venture', La Rue
Pater noster	4	W vi, 131	*D-LEu* Thomaskirche 49, 51	by Willaert; ed. in CMM, iii/2 (1950), 10
Si dedero (i)	3	M xii, p.xvii	1536[13], 1538[9] (*D-Bhm* copy)	by Agricola; also attrib. Isaac, Verbonnet; see Picker (1965), pp.161–2
Si dedero (ii)	3	M xviii, 48	G. de Baena: *Arte novamente inventada* (Lisbon, 1540)	intabulation of work based on Agricola's motet; parody in motet untypical of Obrecht, and he is unlikely to have composed two masses on Si dedero
Si oblitus fuero	4	W vi, 97	*D-Dl* 1/*D*/*505*	by Ninot le Petit; see Smijers (1935)
Een vraulic wesen	3/4	W vii, 61	*CH-SGs* 462, 463	3 original vv probably by Isaac; also attrib. Barbireau; added A possibly by Obrecht (alternative added Ct not ascribed to him)
La stangetta	3	W vii, 45	*D-Z* LXXVIII, 3	probably by Weerbecke; also attrib. Isaac
Mijn hert heeft altijt verlanghen	4	W vii, 64	*CH-SGs* 463	by La Rue; see Picker (1965), p.122
O vos omnes	4	W vi, 173	*CH-SGs* 463	by Compère (with primary text O devotz cueurs or Tant ay d'ennuy); see Picker (1965), p.143'

ROB C. WEGMAN

O'Brien, Dan. *See* BRYANT, DAN.

Obrovská, Jana (*b* Prague, 13 Sept 1930; *d* Prague, 4 April 1987). Czech composer. Born into an artistic family, she had a short but significant musical career. She studied the piano with Berta Kabeláčová, music theory with Jaroslav Řídký and composition with Emil Hlobil at the Prague Conservatory (1949–55), where her graduation composition, an acclaimed Piano Concerto, revealed her talent for concertante forms. She worked as an editor for the Supraphon music publishing house in Prague. She was married to the guitar player Milan Zelenka. Her guitar pieces show a delicate stylization: *Passacaglia-Toccata* won the prize at the international guitar competition in Paris in 1972, and *Hommage à Béla Bartók* was the compulsory piece for the 1975 competition.

WORKS

(*selective list*)

Orch: 2 pf concs., 1955, 1960; Scherzino, wind, 1962; Concerto meditativo, gui, str, 1971; Pf Conc. 'Da Tasca', 1973; Conc., 2 gui, orch, 1977; Smutek sluší viole [Melancholy Suits the Viola], va, orch, 1978; Suita, str, 1979; Concertino, vn, va, db, str, 1981; Quasi concerto, vn, str, 1982

Chbr and solo inst: Podzimní preludia [Autumn Preludes], vn, pf, 1956; Wind Qt, 1968; Hommage à Béla Bartók, gui, 1970; Passacaglia-Toccata, gui, 1972; Suoni, b cl, pf, 1974; Str Qt, 1976; Fanfárová suita [Fanfare Suite], 13 brass insts, 1976; Tryptych, gui, accdn, 1982

Vocal: 5 songs (folk texts), 1955; Canzoni in stilo antiquo, A, gui, 1969

ANNA ŠERÝCH

Obscoenus, Paulus. *See* WÜST, PAUL.

Obst, Michael (*b* Frankfurt, 1955). German composer. After his musical studies in Mainz, he studied piano with Alfons and Aloys Kontarsky in Cologne (1977–82). As a pianist he was one of the founder members of the Frankfurt-based Ensemble Modern, one of the leading groups in contemporary European musical life; he played with them between 1981 and 1986. At the same time he embarked on a career as a composer specializing in electronic music. He worked in the electronic music studio of the Cologne Hochschule für Musik, and then obtained commissions from and spent periods of residence with electronic studios in Stockholm (Electronic Music Studio), Cologne (WDR), Bourges (Groupe de Musique Expérimentale), Freiburg (Strobel Foundation, SWF) and Paris (IRCAM). From 1986 to 1989 he was also one of Stockhausen's preferred interpreters, and played the electronic keyboard in Stockhausen's operatic cycle *Licht*. Several of his electro-acoustic works have won prizes, allowing him to embark on more extensive collaborations, in particular with IRCAM: the institute commissioned him to write the music for acoustic instruments and electronic sound to accompany the second part of Fritz Lang's silent film of 1922, *Dr. Mabuse, der Spieler*, and IRCAM also took part in the electronic realization of his chamber opera *Solaris*, to a libretto by Stanislav Lem, which had its première at the Munich Biennale in 1996. In 1997 he took up a teaching appointment (professor of composition) at the Musikhochschule in Weimar.

WORKS

ELECTRONIC AND ELECTRO-ACOUSTIC

metal drop music, 1980–81; YE-NA-JE, 1982, arr. synth, elec org, tape, 1984; Inside, 1981–2; Visioni di Medea, 1983; Kristallwelt (Teil I), 1983–5; Kristallwelt – Choral (Teil II), 1984–5; Kristallwelt (Teil III), 1985–6, arr. inst ens, tape, 1986; Intermède (für den Zyklus Kristallwelt), 1986; Kristallwelt (Teil IV), inst ens, tape, 1986; Ende gut, 1987; Poèmes, 1988; Belagerungszustand, 1989; Chansons (E. Fried), Mez, b cl/contrabass cl, synth, 2 perc, live elecs, tape, 1987, arr. Mez, tape, 1988, arr. ERIC DE VISSCHER

Obterre. *See* HOTTETERRE family.

Obukhov, Nikolay. *See* OBOUHOW, NICOLAS.

Očadlík, Mirko (*b* Holešov, 1 March 1904; *d* Prague, 26 June 1964). Czech musicologist. He studied music in Vienna with Albert Pozděna and Ferdinand Löwe and musicology, aesthetics and history at Prague University (graduated 1932), where he took the doctorate in 1946 with a dissertation on Smetana's opera *Libuše*. He worked first for Czechoslovak Radio in Prague (1928–50) as editor, head of music broadcasting and director of programmes, and edited the music supplements of the periodicals *Národní osvobození* (1928–9), *Radioamatér* (1933–5), *Volné směry* (1940–43) and *Rozhlasová práce* (1947). He was an editor in the music department of the publishing firm Melantrich (1939–45), and also founded and edited the musical periodical *Klíč* (1930–34), which played an important part in Czech musical life by defending the musical avant garde between the wars (Stravinsky, Milhaud, Berg, Schoenberg, Hindemith, Janáček, Martinů, Hába etc). In this connection Očadlík worked in the Society for Modern Music based in Prague (1927–34). He founded (1956) and edited the scholarly journal *Miscellanea musicologica*.

Očadlík taught from 1948 at the Prague Academy, becoming head of the music theory department in 1951. In the same year he began lecturing at Prague University, where he became professor (1952), head of the department of musicology (1952–9), dean of the arts faculty (1954–8) and director of the Institute for Czech Music History (from 1959). He received the DSc in 1956.

Očadlík was one of the leading figures in Czech musicology of his time. His orientation and methodology were similar to Nejedlý's, but with more attention to stylistic analysis. His attention to detail and his interest in documentary matters, moreover, has meant that many of his works have retained their usefulness. Such works include his edition of Smetana's correspondence with Krásnohorská, his critical editions of four of Smetana's librettos (*The Kiss*, 1942; *The Devil's Wall*, 1946; *The Bartered Bride*, 1951; *The Two Widows*, 1962) and his valuable lists of Czech librettos and of Smetana's letters. Although Smetana dominated his output he never wrote a comprehensive account and instead concentrated in pursuing a career as a many-sided popularizer, writing

many thousands of articles, radio programmes and lectures. His much-used concert guide, *Svět orchestru*, is typical of his accessible style.

OLDŘICH PUKL/R

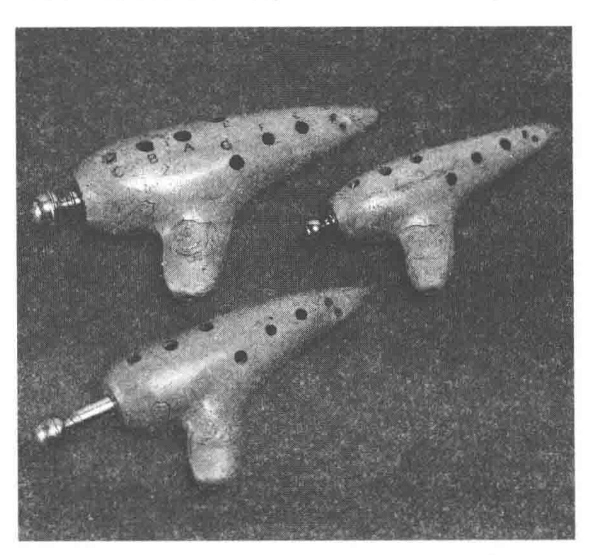
Ocarina (It.: 'little goose'). A VESSEL FLUTE with a hollow body, originally in the shape of a large elongated egg. The standard Western ocarina was invented and named in about 1853 by Giuseppe Luigi Donati (*b* Budrio, 2 Dec 1836; *d* Milan, 14 Feb 1925). The term 'ocarina' has since been applied to other vessel flutes; this article will discuss the history of the vessel flute worldwide.

Ocarinas are usually made with ducts; that on Donati's model is contained within a spout which protrudes part way along the main body of the instrument. The player's breath is directed through this extended mouthpiece to a sharp edge, causing the mass of air in the instrument to vibrate. On other shapes of ocarina, the mouthpiece may be found at any convenient point on the body and may also be incorporated into the design (e.g. in the form of a bird's tail). Ocarinas without ducts are played by directing breath over a hole. The sound of the ocarina is largely free of upper harmonics, and it cannot normally be overblown to play an upper octave. Ocarinas may be made with or without finger-holes, which may be placed anywhere on the body since the size of the hole, rather than its position, determines the tuning. The pitch of the lowest note is established mainly by the ocarina's internal volume and, to a lesser extent, by the dimensions of the mouth-hole and by the angle and strength of the player's breath. When all the finger-holes are closed, the ocarina

1. Four-hole vessel flute in the shape of a bird, Chorotega culture, Nicoya Peninsula (now Costa Rica), 300 BCE–300 CE (Liggins Collection)

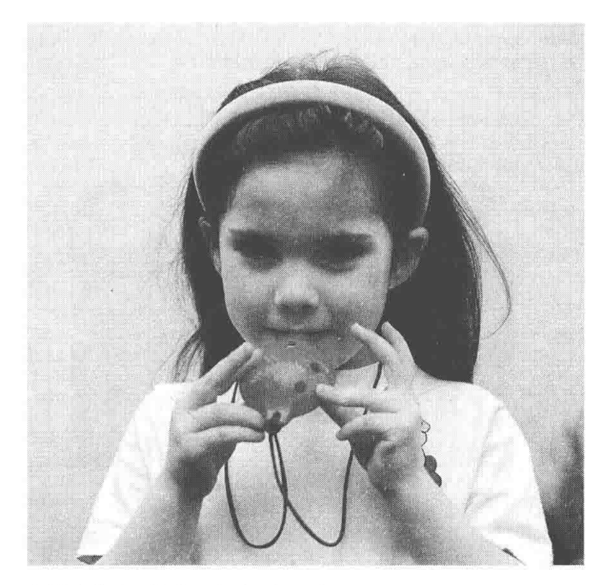
acts as a STOPPED PIPE, thus sounding about an octave lower than an open-ended flute of similar size. Vessel flutes with very few or no finger-holes are classed as whistles when used purely for bird calls or as signalling devices (e.g. cuckoo whistle, sports whistle); when used for musical purposes they are classed as flutes. The most versatile ocarinas have four or more finger-holes for playing up to 20 chromatic notes. They may be made with a single chamber or with multiple chambers for playing more than one note simultaneously.

The earliest predecessors of the ocarina were made of natural materials such as stone, wood, bone, shell and gourd. By 4000 BCE the Chinese were making clay whistles and early versions of the XUN. Throughout Latin America, pre-Columbian clay vessel flutes were made in large numbers and various forms, including those of animals, birds (fig.1) and people. In Africa, vessel flutes are made mainly from gourds and fruit shells. The *rhonge* is a vessel flute of the Tsonga people, made of a ripe dry sala fruit, played mostly by herd-boys (*see* SOUTH AFRICA, §I, 4(i)). Kenyan bushmen blow into animal shells or cupped hands to imitate the call of the honey-guide bird. Whirling aerophones in the form of gourds tied to lengths of twine and swung through the air to make a sound as they travel (a distinctive note is produced internally by a hole cut in the side) have been found in the rainforests of the Amazon and Papua New Guinea.



In Europe, by the mid-19th century, clay bird-whistles had become popular as children's toys, and were sold at markets and fairs. Donati's ocarina was a transformation of the simple clay whistle, having up to 10 finger-and thumb-holes and tuned to a full Western scale. By 1863 Donati had joined with others to perform five-part harmony on different-sized ocarinas. They played traditional tunes from their home region and arrangements of popular themes from Italian opera. Donati continued to make ocarinas in Budrio, while his fellow performers toured concert halls across Europe from 1870 onwards. They amazed audiences with their wonderful sound, skilful execution and unusual appearance dressed as the 'Mountaineers of the Apennines' (fig.2). Some of these performers became makers themselves, returning to Budrio, where the tradition of ocarina making and playing continues to the present day. Others went on to establish manufacturing and sales in other parts of Europe, including Paris and London. Donati's success led him to move to larger premises in Bologna; he eventually settled in Milan, where he continued making ocarinas into his old age.

The basic form of the Italian ('submarine') ocarina has remained largely unchanged, although its length can vary from as little as 6 cm to 48 cm. In Eastern Europe, a simplified seven-hole version has been made. Further adaptations in other parts of Europe and Japan include the addition of tuning-slides (fig.3), keys to cover the larger holes, and the splitting of the smaller holes for playing semitones. In the USA, Bing Crosby was one of many who played the ocarina ('sweet potato pipe') as a novelty instrument in the era of jazz and swing. Its portability made it a favourite instrument with generations of children. American servicemen brought bakelite ocarinas to Europe during World War II; plastic versions eventually took their place alongside those made of clay, porcelain and metal.



The 'English' ocarina, along with the 'four-hole system' of tuning, was first developed in the early 1960s by the ethnomusicologist and musical inventor John Taylor (*b* Wolverhampton, 12 Sept 1940). In 1963 he discovered that a diatonic octave could be played by cross-fingering four holes of different sizes; the resultant four-hole system became a standard method of tuning and by the 1970s had spread to many parts of the English-speaking world through Taylor's students and friends. The system comprises one small, one medium and two large finger-holes. A pentatonic scale is sounded by opening one hole at a time; cross-fingering and half-covering holes produces a full chromatic octave. Like its Italian predecessor, the English ocarina has been developed in a number of ways. Its range has been extended by the addition of extra holes, and different sizes of body have been made to produce

3. Ocarinas with tuning-slide by Ercole Mezzetti, Paris, 1880s

4. *Girl playing 'Poly-oc' school ocarina*

consorts ranging over five octaves. The four-hole system has been adapted for one hand by placing three holes on top and one underneath, resulting in the development of sophisticated double-chambered instruments. Although other tuning methods are known, the Italian and English systems are the most widely used, as is reflected in the range of published music, teaching methods and recordings available. During the 1980s the 'Poly-oc' plastic four-hole ocarina (fig.4) was developed by John North Langley (*b* Adelaide, 26 Nov 1944) specifically for use in schools along with ocarina tablature.

Ocarinas have been used to play most types of music. The most distinguished exponent, Mosè Tapiero, made more than 30 recordings before World War I and demonstrated a virtuosity usually associated with more complex instruments.

Očenáš, Andrej (*b* Selce, central Slovakia, 8 Jan 1911; *d* Bratislava, 8 April 1995). Slovak composer and teacher. After graduating from the teachers' institute in Banská Bystrica he studied composition with Alexander Moyzes and conducting with Josef Vincourek at the Academy of Music and Dramatic Art in Bratislava (1932–7); thereafter he took part in Novák's master classes at the Prague Conservatory. Appointments followed in the music department of Bratislava radio (1939–50) and at the Bratislava Conservatory (1943–73), which he directed between 1950 and 1954. From 1956 to 1962 he was head of music at Bratislava radio, and was teacher of composition at the Academy of Music thereafter. He received several state awards, including the title National Artist (1978).

After a period of experimentation culminating in the neo-classical Piano Suite no.2, Očenáš drew his inspiration from folklore, which, in a refined form, became one of the permanent aspects of his compositional style. In comparison with Moyzes and composers of his own generation, the use of folk material in Očenáš's music is more straightforward, his musical imagination being decisively affected by the archaic modality of folksong and by the mysterious world of folktales and myths. While Janáček-like compactness is typical of his less extensive pieces (eg. *Nová jar*, 'A New Spring', and *Fresky*, 'Frescoes'), his programmatic compositions tend to be monumental and assertive, which, after 1948, was in tandem with the requirements of socialist realism. His works from the latter half of the 1950s and from the 60s, namely chamber pieces, show a trend towards introversion (i.e. *Poéman o srdci*, 'Poem of the Heart') and a typically direct confrontation between material derived from folk music (including harmonic and melodic elements as well as figures typical of folk instruments) and a textural sound world (i.e. *Ruralia slovaca*). The last period of his career saw a return to large, monumental forms and variations of tried and tested procedures.

WORKS
(selective list)

Stage: Na zbojníckom tanci [At the Brigands' Ball] (pantomime, 4, Očenáš after L'. Ondrejov), 1941; Jánošikova smrt' [Jánošík's Death] (stage cant. J. Botto), 1948; Marína (stage cant. A. Sládkovič), 1948; Vrchárska pieseň [Highlander Song] (ballet, 4, Očenáš, after O. Jariabek), 1956; Román o ruži [Novel About a Rose] (choreog. sym., 3), op.41, solo vv, chorus, orch, 1970

Vocal: Prortoctvá [Prophecies] (cantata, tetralogy, P. Országh Hviezdoslav), op.6, chorus, orch, 1949–52; Marína (cycle, A. Sládkovič), op.15, chorus, 1957; Pamätníky slávy [Memorials of Glory] (R. Fabry), sym. poem tetralogy, T, chorus, orch, 1961; Ako hviezdy padajú [As the Stars Fall] (P. Koyš), song cycle, op.31, high v, pf, 1964; O zemi a človeku [Of the Country and Man] (V. Mihálik, M. Válek, V. Mayakovski), sym., op.43, chorus, orch, 1970; Miloval som t'a [I loved you] (laudatorio, A. Plávka, J. Kostra), op.46, solo vv, chorus, orch, 1973; O vlasti [About the Native Land] (cycle, P. Koyš), op.48, chorus, 1973; Cesta k slnku [The Way to the Sun] (cycle, P. Koyš), op.56, Mez, chorus, orch, 1980

Orch: Povesti o rodnom kraji [Legends about the Native Land], Suite, op.3, 1943; Vzkriesenie [Resurrection], trilogy of sym. poems, op.4, 1945, rev. 1953 as op.8; Mójmu národu [To my People], sym. cycle, op.5, 1947; Vc Conc., op.7, 1952; Ruralia slovaca (orig. Rozlúčka s mladost'ou) [Farewell to Youth], suite, op.19, cimb, chbr orch, 1957; Pf Conc., op.20, 1959; Concertino, op.27, fl, str, pf, 1962; Sinfonietta, op.35, 1966; Plamene mája [The Flames of May], ov., op.45, 1973; Vn Conc., 1974; Československá preddra [Czechoslovak Ov.], op.53, 1977

Chbr: Obrázky duše [Pictures of the Soul] (Str Qt no.1), 1942; Pf Trio, op.36, 1967; Fresky [Frescos], op.37, vn, pf, 1967; Poéma o srdci [Poem of the Heart], op.38, vn, 1967; Donquijotská suita [Quixotic Suite], op.40, vn, vc, 1969; Etude Qt, op.42, str qt, 1970; Ozveny št'astia [Echoes of Happiness], op.54, str qt, 1981

Kbd: L'udové pastorálie zo Seliec [Folk Pastoral from Selce], org, 1949; Nová jar [a New Spring], op.11, pf, 1954; Mladost' [Youth], suite, op.14, pf, 1956; Organové pastely [Organ Pastels], op.26, org, 1961; Portréty [Portraits], op.39, org, 1968; Zvony [Bells], pf sonata, op.44, 1972; Svadobné tance [Wedding Dances], op.52, pf, 1977

Principal publishers: Opus, Slovenské vydavatel'stvo krásnej literatúry, Sloveknský hudobný fond, Supraphon, Štátne hudobné vydavatel'stvo

VLADIMÍR ZVARA

Ocharte [Ochart], **Pedro** (*b* Rouen, 1531–2; *d* Mexico City, 1592). Mexican music printer of French origin. Of the 13 known liturgical books with music printed in Mexico City between 1556 and 1589, the earliest in the New World, six were printed by Ocharte. He lived in Rouen until 1546 or 1547, when he moved to Seville; he probably emigrated to Mexico about 1549. In 1561–2 he married María de Figueroa, daughter of the printer Juan Pablos whose press he leased for two years from 1563, following Pablos's death; later he apparently bought it. In 1563 Ocharte printed a *Psalterium Chorale* for Dominican use (unknown until 1963, when a copy was found in an Amerindian village in Guatemala). In 1568 he issued a *Manuale Sacramentorum, secundum usum almae Ecclesiae Mexicanae*, duplicating one printed by Pablos; most of the plainchant in it is for the Office for the Dead. A *Graduale Dominicale* paid for by Ocharte and printed by Antonio Espinosa was probably published before 1572; a copy found in an Amerindian village contains five pre-Tridentine sequences not in later Mexican versions.

In 1572, when he was finishing the printing of 100 passioners ordered by the Bishop of Michoacán (in a press run of 310), Ocharte was imprisoned by the Inquisition; he arranged for Espinosa to finish the printing. This passioner was unknown until a few leaves from the book were found in an Indian village in the 1930s. An *Antiphonale Dominicale* that Espinosa began printing in 1572 at Ocharte's expense was finished about 1575. Three editions of a new *Graduale Dominicale* were published in 1576, one printed by Espinosa at Ocharte's expense and two by Ocharte himself; this, issued as a result of Pius V's 1571 reform, was said to include graduals, alleluias, tracts, offertories and communions by Juan Hernández (1545–1621). In 1584 Ocharte published a *Psalterium, An[t]iphonarium Sanctorale, cum Psalmis & Hymnis*, including illustrative prints (some hand coloured), probably for use by the Jesuits. A copy of his 1589 *Antiphonarium de tempore*, probably for Franciscan and Dominican use, contains marginal notations indicating that chant was accompanied by organ in some Mexican churches. Except for Juan Navarro's passioner of 1604, this was the last collection of music printed in Mexico before the 18th century.

JOHN KOEGEL

Ochetus (Lat.). *See* HOCKET.

Ochman, Wiesław (*b* Warsaw, 6 Feb 1937). Polish tenor. After studying in Warsaw he made his début in 1959 as Edgardo (*Lucia di Lammermoor*) in Bytom, where he was engaged until 1963, then sang at Kraków, Warsaw and Berlin. In 1967 he was engaged at the Hamburg Staatsoper and the following year made his British début at Glyndebourne as Lensky, returning as Don Ottavio and Tamino. In 1972 he sang Alfredo (*La traviata*) at Chicago and Cavaradossi at San Francisco, in 1973 Idomeneus at Salzburg and in 1974 Henri in *Les vêpres siciliennes* at the Paris Opéra. Henri was also the role of his Metropolitan début in 1975, when he also sang Alfred in the centenary performance of *Die Fledermaus* at the Theater an der Wien, Vienna. His plangent tone was particularly suited to Slavonic music, and his repertory included Grigory/Dmitry (*Boris Godunov*), Andrey Khovansky and Vasily Golitsïn (*Khovanshchina*), Lensky, Hermann (*The Queen of Spades*), the Prince (*Rusalka*) and both Laca and Števa in *Jenůfa*. He sang the Shepherd in the first performance of Szymanowski's *King Roger* on the American continent (1981, Buenos Aires), and also recorded the opera. Gradually abandoning the Mozart and lighter Italian roles he once sang so stylishly, Ochman acquired a new, heavier repertory with such roles as Erik, Florestan, Herod and Fritz in Schreker's *Der ferne Klang*. His other recordings include Hermann, the Prince, Narraboth (*Salome*), Laca, Idomeneus, Jontek (*Halka*) and Stefan (*The Haunted Manor*).

ELIZABETH FORBES

Ochs, Phil(ip David) (*b* El Paso, TX, 19 Dec 1940; *d* Far Rockaway, NY, 9 April 1976). American singer-songwriter. Born to an American father and a Scottish mother, he showed early musical promise as a clarinettist and was introduced to pop music by his brother, inaugurating a passion for Presley. Ochs studied journalism at Ohio State University where he learnt radical politics and began playing the guitar in a folksinging duo, the Sundowners. His first song, *The Ballad of the Cuban Invasion*, was written in the wake of the Bay of Pigs affair. By the early 1960s he had joined the burgeoning folk music scene in Greenwich Village and was involved in *Broadside* magazine with Bob Dylan. Journalism informed his songwriting and, like Woody Guthrie, Ochs's work both celebrated and criticized America, the latter bringing him into conflict with the Nixon administration.

Inevitably compared to Dylan – his album *All the News that's Fit to Sing* (Elektra, 1964) was reviewed favourably alongside *Freewheelin'* – Ochs was left behind as Dylan's popularity rose and musical fashions changed in the late 1960s. Perhaps his best-known song is *There but for Fortune*, a hit for Joan Baez in 1965. He never ceased to champion causes, organizing a benefit for Chile in 1974 and a concert to mark the end of the Vietnam War the following year. However, he increasingly misused alcohol and drugs and, in a fit of depression, hanged himself.

LIZ THOMSON

Ochs, Siegfried (*b* Frankfurt, 19 April 1858; *d* Berlin, 5 Feb 1929). German chorus master and composer. While studying chemistry in Heidelberg he learnt the piano and

was a part-time répétiteur at the theatre. In 1877 he moved to Berlin for further study at the Hochschule für Musik, where his teachers included Friedrich Kiel (theory), Joachim (ensemble playing) and Adolf Schulze (choral singing). Following his dismissal he studied privately with Kiel and Heinrich Urban. In 1882 he founded a choral society with 11 members, which became known as the Philharmonischer Chor during the 1887–8 season; its membership eventually grew to over 400. Bülow was an admirer of Ochs's work, and conducted the choir in several concerts between 1889 and 1892. In 1920 it dissolved because of financial difficulties but was largely absorbed by the choir of the Hochschule, where Ochs had become director of the oratorio department. His compositions include a three-act comic opera, *Im Namen des Gesetzes*, produced at Hamburg in 1888 (vs, Berlin, 1888), choral works and many songs; only his humorous piano variations on *'s kommt ein Vogerl geflogen* have survived.

In his concerts Ochs concentrated on the works of Schütz, Bach, Handel, Beethoven, Schubert and Brahms; he gave the first Berlin performances of Bruckner's *Te Deum* and works by Wolf, and was particularly celebrated for his performances of the *St Matthew Passion*. Noted for his extreme care in rehearsing, fine musicianship and natural sense of style (especially in early music), in 1928 he conducted the first Schütz work ever recorded (*Saul, Saul, was verfolgst du mich?*); his other recordings include works by Bach, Handel, Mozart and Mendelssohn. He had a special interest in Bach, as can be seen in his editions of the *St Matthew Passion* and the cantatas *Christ lag in Todesbanden* BWV4 and *Du Hirte Israel, höre* BWV104. The arioso *Dank sei Dir, Herr*, allegedly from an unspecified cantata by Handel and published in 1905, seems to be a composition by Ochs and not just an arrangement by him (as Ochs claimed). His writings include a four-volume treatise on choral singing and an autobiography.

MARTIN ELSTE

Ochsenkun [Ochsenkhun], **Sebastian** (*b* Nuremberg, 6 Feb 1521; *d* Heidelberg, 20 Aug 1574). German lutenist. His father Jörg was a trumpet maker and barber in Nuremberg. Wolf Ochsenkun, a lutenist who was married in Nuremberg in 1530, presumably belonged to the same family. Ochsenkun's teacher was Hans Vogel, who died before 1558 and may have been a lutenist at the court at Munich. In 1543–4 Ochsenkun was in the service of the Count Palatine, Ottheinrich, at Neuburg an der Donau, where he probably remained in service. He is again mentioned in the retinue of Ottheinrich at Heidelberg in 1552, where the latter had resided from 1544 to 1552 after the loss of his Neuburg principality. Ochsenkun's *Tabulaturbuch* of 1558 was published in Heidelberg, where Ottheinrich had returned in 1556 as elector and where he remained until his death in 1559. In his introduction Ochsenkun referred to the elector as his lord and the initiator of the publication.

The *Tabulaturbuch* contains no original compositions for the lute; its intabulations include 29 motets, 38 sacred and secular German songs, five madrigals and four chansons. The book includes an interesting cross-section of the repertory of the musicians of the Hofkapelle, with compositions by the court organist Gregor Peschin, the court secretary, printer and musician Johann Kilian, composers of the Heidelberg circle (Stephan Zirler, Jobst vom Brandt and Caspar Othmayr), and Wilhelm Breitengraser of Nuremberg. Of the major composers in the collection, Ludwig Senfl predominates, represented by 14 pieces; nine motets of Josquin are intabulated, including *Praeter rerum seriem*, *Pater noster* and *Stabat mater*. Other composers represented are Sermisy, Mouton and Crecquillon. Texts are supplied for all the pieces: Isaac's *Innsbruck* appears with the text *Herr Gott, lass dich erbarmen*; its tenor part is used as the bass in *Sih lieb ich muss dich lassen* by Kilian. Ochsenkun's intabulations reproduce the original vocal lines exactly in score; lively ornamentation is tastefully added. The book contains an interesting portrait of Ochsenkun, which shows his right hand placed almost at right angles to the strings, suggesting a technique well suited to the difficulties of polyphonic playing.

KURT DORFMÜLLER

Ochswald, Henrique. *See* OSWALD, HENRIQUE.

Ockeghem [Okeghem, Hocquegam, Okegus etc.], **Jean de** [Johannes, Jehan] (*b* Saint Ghislain, nr Mons, *c*1410; *d* ?Tours, 6 Feb 1497). Franco-Flemish composer. A native of Hainaut, he spent most of his active career in the service of the French royal court. Alongside Binchois, Du Fay, Busnoys and Josquin, with whom his name is linked

in documents of the time, he is considered one of the greatest composers of the 15th century. Of the many forms in which his name appears, 'Ockeghem' has been given modern preference on the basis of a supposed facsimile of his signature published by Giraudet (1885) from a document now apparently lost. However, 'Okeghem' is the spelling most often found in the payment registers and other documents stemming from the French court and in the sources most central to the area in which he lived.

1. Early life and career. 2. Service at the French court. 3. Reputation. 4. Masses. 5. Motets. 6. Secular works.

1. Early life and career. A recently discovered reference to Ockeghem in the payment records of the parish church of St Martin in Saint Ghislain, near Mons, identifies him as a 'natif' of that place and records the establishment of an obit that was celebrated continuously from the 16th century until the end of the *ancien régime* (van Overstraeten, 1992). As the name suggests, the family may have originated in the town of Okegem on the Dendre, less than 50 km to the north in East Flanders. Persons so named can be traced to nearby Ninove as early as 1165, and to Termonde [now Dendermonde], about 25 km to the north of Okegem, from 1381. These include a certain Jan van Ockeghem who is cited in documents of Termonde from 1385 until 1416 (Bovyn, 1970). It is yet to be determined, however, whether any of them is directly related to the composer. The documents in Saint Ghislain confirm, instead, the assertion made in 1511 by the poet and historiographer Jean Lemaire de Belges, himself a proudly self-proclaimed 'natif de Haynault', that Ockeghem was his neighbour ('voisin') and countryman ('de nostre mesme nation'). Latin verses by Pierre Paul Vieillot (Senilis), secretary at the court of Louis XI, also stress the composer's origins in Hainaut (Strohm, 1997).

Given his place of birth, it is possible that Ockeghem began his musical training in Saint Ghislain itself, conceivably as a choirboy in the parish church where he founded the obit. It seems more probable, however, that he received most of his early education in nearby Mons at one of the churches with a musical establishment capable of providing such instruction. These include – significantly, in view of the circumstances linking Ockeghem to Binchois – those of St Germain and Ste Waudru, which were probably both served by the same group of choristers.

The date of Ockeghem's birth has yet to be established, and in the absence of unequivocal documentation estimates have ranged from 1410 (or earlier) to 1430. A clear preference for about 1420 seems to have emerged in the biographical literature (Plamenac; *RiemannL12*; van den Borren, 1948–51; Picker, 1988), but Ockeghem could have been born as much as a decade earlier. A personal and affectionate relationship with Binchois, attested by Ockeghem's *déploration* on Binchois's death in 1460 and his compositional reference to a Binchois chanson (Gallagher, 1995), may go back to a period when both were still resident in Hainaut. If so, the two may have become acquainted even before Binchois, who served as organist at Ste Waudru from 1419, left Mons for Lille in 1423. That would suggest, in turn, that Ockeghem, if a choirboy at the time (hence between 7 and 15 years of age), could have been born as early as 1405 and hardly later than *c*1415.

The earliest documentation of Ockeghem's activity as a musician is for the year beginning 24 June 1443, when he was numbered among the *vicaires-chanteurs* at the church of Our Lady, Antwerp. The nature of that appointment indicates that his training was by then fully completed. At the same time, his irregularity in attending the services in which the choir was involved and the lack of evidence for subsequent contact with the city or any of its churches suggest that his ties to Antwerp were neither close nor lasting.

His next known appointment was at the court of Charles I, Duke of Bourbon, whose principal residence was in Moulins. In the accounts for 1446–8 Ockeghem is listed first among the seven singers of the ducal chapel, preceded only by the *premier chapelain* and three priests (Vayssière, 1891), indicating that he was by then an accomplished musician whose skills and gifts were fully recognized. Because the payment records of the court are fragmentary, it is unclear whether, as seems likely, he entered the duke's service directly after his stay in Antwerp, in the summer of 1444, or somewhat later. Similarly, there is no way to determine from the documents currently known, whether he continued as a member of the ducal chapel until he joined the musical establishment of Charles VII at the French royal court some time in 1451, as seems most plausible, or had an interim appointment elsewhere. Since Binchois was employed at the ducal court of Burgundy from the 1420s until he retired to Soignies in 1453, it is perhaps worth noting that the Duchess of Bourbon was Agnes of Burgundy, the sister of Duke Philip the Good; Ockeghem's appointment to the Bourbon chapel may therefore have been facilitated in some way by that connection.

2. Service at the French court. Ockeghem is first mentioned by name among the chapel singers of the French court in the payment records for the fiscal year ending 30 September 1453, implying that he had been there at least since the previous October. The accounts for 1452 do not list the chapel singers individually, but the total number of chaplains was unchanged, and an 18th-century copy of the original documents specifies that Ockeghem was 'new in 1451'. When his name first appears on the chapel rolls, he is already listed first among the singer-chaplains who were not priests, a clear indication that his reputation as both singer and composer was by then already solidly established. Moreover, during the years of royal service that followed (nearly half a century), his situation only improved. In January 1454 Ockeghem presented his royal patron with a book of music as a New Year's gift and received in return four ells of scarlet cloth worth 44 livres. The account in which the exchange is recorded refers to the composer as *premier chapelain* of the royal chapel, the first known use of that title. The fiscal summary drawn up the following September indicates that later in the year he had also been awarded a special gift of 180 livres, the equivalent of his annual salary, and a similar supplement was apparently granted regularly in subsequent years (Perkins, *JAMS*, 1984).

Ockeghem again offered Charles VII a New Year's gift in 1459, this time a chanson 'most richly illuminated', and the king reciprocated with the sum of 44 livres (33 écus). However, the single most generous mark of Charles VII's evident esteem for his first chaplain came, it would seem, between November 1458 and July 1459. As nominal abbot of the wealthy collegiate church of St Martin, Tours, where Ockeghem had already been installed as

prévôt de la Varenne some time prior to 21 March 1458 (Higgins, 1987), the king named Ockeghem to the high and richly remunerated office of treasurer of the church – perhaps prompting the composer's gift. As was usual in such cases, there was initial resistance from the canons in Tours. But hearings on the matter before the *Parlement* of Paris seem to have simply petered out some time in 1462, possibly due to the influence of the crown (by then Louis XI), and there is no further indication of a challenge to Ockeghem's possession of the dignity from any side. Charles died in July 1461, having just previously decreed Ockeghem's release from the usual requirement of residence in Tours in connection with his new dignity, and Ockeghem was among the officers of the royal household for whom black robes and hoods were made for the king's obsequies.

During the long reign of Louis XI, Ockeghem's service in the royal chapel continued without interruption, and his favour at court seems only to have increased. As the king was increasingly in residence at his favorite hunting lodge at Plessis-lez-Tours, Ockeghem must have been able to reconcile more easily his functions in the royal chapel with his duties as treasurer of St Martin. In addition he was named to a canonry at the cathedral of Notre Dame, Paris, in 1463, a benefice that remained in dispute in the courts for more than four years. As Ockeghem was apparently never present for deliberations of the chapter nor involved in any meaningful way with either the musical or the administrative life of the cathedral, it has been suggested that his nomination was largely a ploy of Louis XI's ecclesiastical politics (Wexler, 1997). Whatever Ockeghem's purpose in the matter, he relinquished his claim to the canonry at Notre Dame in 1470 in a three-way permutation that gave him instead a chaplaincy at the collegiate church of St Benoît, Paris, a prebend he also appears to have held *in absentia*.

Relatively good relations between Louis XI and Philip the Good of Burgundy at the beginning of Louis's reign, apparently made it possible for Ockeghem to visit his homeland. The records of Cambrai Cathedral indicate that while in the area he paid a visit to Du Fay, whom he may have known since his youth and met on earlier occasions (1452 and 1455) during formal meetings between the royal court of France and the ducal court of Savoy while Du Fay was still in the service of Duke Louis. Ockeghem is known to have been in Cambrai on 2 June 1462, when the cathedral's *Office du Four et du Vin* recorded a gift to him of six loaves of bread, but there is nothing to suggest how long he might have stayed. In 1464 he was again in Cambrai, having travelled north with the court of Louis XI, and between 20 February and 5 March he was a guest in Du Fay's house (Wright, 1975).

It was presumably in Cambrai, and perhaps on this occasion, that Ockeghem, who was identified as a sub-deacon as late as 1463, was ordained a priest; Vatican registers dating from 1472 refer to him as *presbyter Cameracensis diocesis* (a priest of the diocese of Cambrai), indicating that he had been ordained during the intervening years (Roth, 1994). Since Cambrai was his home diocese, it is not surprising that he would have gone there for the ordination, but his reasons for waiting until so late in his life before postulating for the higher office remain unclear. It has been suggested that he did so, finally, to assure the peaceful possession of his dignity as treasurer of St Martin (Roth, 1994), but this seems unlikely so long after all resistance had apparently evaporated. It is also possible that he sought the ordination in order to be able to assume the office of *maître de chapelle*, which was usually reserved for an ecclesiastic of elevated rank, and thus enter the inner circle of the king's council; significantly, he is first identified by this title in court records in 1465 (Perkins, 1997). Interestingly, Ockeghem's ongoing attachment to his home diocese is apparent in his support for the Collège de Cambrai in Paris; he is listed 11th in a printed necrology (undated, but probably 18th-century) among the three founders and 14 benefactors for whom students there were instructed to pray daily.

Through this same period, from 1460 at the latest until at least 1465, Ockeghem must also have had frequent contact with Antoine Busnoys. An entry in a papal register for 28 February 1461 refers to Busnoys as holding a chaplaincy in the cathedral of St Gatien, Tours, in circumstances indicating that he had already been there for some time (Starr, 1992). By 1465 he was a choir clerk and *heurier* at St Martin, where he was made a sub-deacon on 13 April (Higgins, 1986). Given Busnoys' long stay in the city of Tours and his association with the church where Ockeghem held one of the principal dignities, it is virtually certain that the two musicians were well acquainted. Moreover, in light of Busnoys' encomium to Ockeghem in the motet, *In hydraulis* (text and commentary in Perkins, *JM*, 1984), which was probably completed between 1465 and 1467, it appears likely that Ockeghem played a significant role in the musical development of his younger colleague.

In January 1470 the king's treasury paid Ockeghem 275 livres tournois to cover expenses for a trip to Spain. It seems likely that this disbursement was authorized in connection with one or both of the diplomatic embassies sent by Louis XI to the court of Henry IV of Castille under the direction of Cardinal Jean Jouffroy, Bishop of Albi. The mission of the first, which reached Córdoba in late May or early June 1469, was to dissuade the Castilians from joining an alliance with England and Burgundy against France. Friendly relations were to be cemented by means of a marriage between Louis' brother, Charles, Duke of Guyenne, and Henry's sister Isabella, who had just been declared heir to his throne. Isabella, who preferred a union with Ferdinand of Aragon, was more than reluctant. She eluded Henry's attempts to take forcible custody of her person and resisted the arguments of the eloquent Jouffroy, who sought her out for a face-to-face interview at her retreat in Madrigal before leaving Spain in August.

The news of Isabella's marriage to Ferdinand on 18 October prompted Louis XI to send the cardinal back to the court of Castile, this time to wed the Duke of Guyenne by proxy to the eight-year-old Juana la Beltraneja (the queen's daughter), who was to be declared heir to the throne of Castile in Isabella's place. The embassy reached Burgos towards the end of July 1470, and the nuptials were celebrated (with a proxy standing in for the duke) during the week of 20–26 October 1470 (Märtl, 1996). It is not clear from the lapidary entry in the account books if Ockeghem participated in both embassies or just one of them, and if only one then which of the two. It is still uncertain whether his role was primarily a musical one. It is possible that in those circumstances he was expected to function as a member of the royal council; in a document

of 1477 he is referred to as a *conseiller* to the king and he may have been entrusted with other matters as well.

Whatever Ockeghem's part in these diplomatic initiatives, the most intriguing evidence of his presumed involvement is musical: his reworking of Johannes Cornago's *canción, ¿Qu'es mi vida preguntays?*. However, even though the principal source for Ockeghem's sacred works, the Chigi Codex (*I-Rvat* Chigi C.VIII.234), was on the Iberian peninsula from some time after 1514 through to the end of the 16th century, his music seems generally not to have been well known in Spain; aside from the Cornago arrangement, Spanish sources include only his *Missa 'Au travail suis'*, the tract of his Requiem, *Sicut cervus*, and the widely travelled combinative chanson, *S'elle m'ameralPetite camusette* (Russell, 1979).

A letter in flattering terms addressed by Duke Galeazzo Maria Sforza of Milan to 'Domino Johanni Oken' on 3 November 1472, requesting assistance with the recruitment of singers for the ducal chapel, gave rise to speculation that the composer may have spent time in Italy just before his appointment at the royal French court (*VanderStraetenMPB*). Ockeghem was undoubtedly the intended recipient of Galeazzo's letter, but he would not have needed to cross the Alps in order to make the duke's acquaintance. Sforza had taken an auxiliary troop of soldiers to Louis XI's aid in 1466 (Brenet, 1911) and may have made a point, given his musical proclivities, of becoming acquainted with the king's distinguished *maître de chapelle*. Alternatively, the letter may have resulted from another diplomatic mission of Cardinal Jouffroy, whom Louis XI sent in early 1471 for private discussions in his name with Galeazzo (Märtl, 1996). There is, in any case, nothing in Ockeghem's known works to suggest that he was familiar with the indigenous musical traditions of northern Italy.

In the summer of 1484 Ockeghem visited Bruges and Dammes. Brenet (1911) suggested that the primary purpose of the journey was again to assist with the negotiations undertaken by the French court that resulted in the alliance, concluded on 25 October 1484 between Anne of France and her consort Pierre de Bourbon (as regents for the 14-year-old Charles VIII) on the one hand, and the Three Members of Flanders – Ghent, Bruges and Ypres – (acting on behalf of the 6-year-old Philip the Fair) on the other. That may well have been the case, but her main argument, that because Ockeghem was not travelling alone, he must have been on royal business, is not convincing; a person of his rank and class would not have gone any distance without a retinue. In any case, his visit to Bruges may have been for more personal reasons: Busnoys had recently been named *maître de chapelle* at the city's church of St Saviour. In addition, the banquet at St Donatian in honour of his presence suggests that Ockeghem may have had earlier contacts with its clergy. It is perhaps significant that Binchois, with whom Ockeghem may have become acquainted while still in his youth, had held a prebend there in 1430–31.

Following the death of Louis XI in 1483, Ockeghem's place and role in the royal chapel are difficult to determine; the payment registers for the chapel musicians are missing from 1476 until well after Ockeghem's death. However, he is identified as usual in the document recording his visit to Bruges as the king's *premier chapelain*, and Guillaume Crétin used the same designation in his *Déploration*. In addition, Ockeghem is identified as *prothocapellanus* of the royal chapel in one of a series of executorial letters prepared at the papal court for the signature of Innocent VIII on 28 July 1486, apparently at the request of Charles VIII (Roth, 1994). These were requests for benefices in a variety of ecclesiastical institutions made individually on behalf of 20 members of the king's chapel. Ockeghem was to be given preference for the next prebend available at Bayeux Cathedral (Perkins, *JAMS*, 1984), but there is as yet no evidence that any of these 'expectatives' was ever granted.

The only mention of the composer in court documents relating to the reign of Charles VIII simply indicates that he was among those present when the king observed the ritual of washing the feet of the poor on Maundy Thursday in April 1488. By contrast, his name continues to appear regularly in documents drawn up at St Martin, Tours, until 1494. In March 1487 he prepared his testament, bequeathing his property and revenues to the chapter of the collegiate church. His death on 6 February 1497 is known only through the king's nomination of his successor as treasurer of St Martin, Evrard de la Chapelle, who also served at the royal court.

3. Reputation. Ockeghem's passing was lamented by some of the most celebrated poets and musicians of the time: Crétin, his colleague in the court chapel, wrote a lengthy *déploration* in French; Jehan Molinet, perhaps in response to Crétin's exhortation to join in the poetic expression of grief, wrote similar poems in both the vernacular and Latin. His French lament, *Nymphes des bois*, was later given a poignant musical setting by Josquin, who may have added a descriptive verse of his own (Lowinsky, 1968). The humanist Erasmus, perhaps at the request of his patron, Henri de Berghes, Bishop of Cambrai, composed a Latin *naenia*, *Ergone conticuit*, that was subsequently set to music by Johannes Lupi (*see* Lupus) (Margolin, 1965). Ockeghem is also included among the musicians for whom supplication is made to the Virgin in Compère's famous motet, *Omnium bonorum plena*.

The man described in these various works is exceptionally engaging: honest, virtuous, kind, generous, charitable and pious. Francesco Florio, writing in Tours in the 1470s, long before Ockeghem's death, declared:

> I am sure you could not dislike this man, so pleasing is the beauty of his person, so noteworthy the sobriety of his speech and of his morals, and his graciousness. He alone of all the singers is free from vice and abounding in all virtues.

At about the same time, apparently, Pierre-Paul Vieillot (Senilis), secretary to Louis XI, penned in Latin an epigram and a curious series of epitaphs in honour of the composer in similarly laudatory terms (Strohm, 1997). Crétin, some two decades later, praised Ockeghem's wise and just administration of his dignity at St Martin, his charitable generosity and his exemplary Christian virtues.

His reputation as a singer of extraordinary skill (Milsom, 1997) and a master among composers was well established during his lifetime. Johannes Tinctoris dedicated to him (and to Busnoys) his *Liber de natura et proprietate tonorum* of 1476, and the following year, in his *Liber de arte contrapuncti*, he listed Ockeghem first among the most excellent composers of his generation, those whose works were distinguished by exceptional sweetness and beauty. In his *De inventione et usu musice* of 1481 Tinctoris also praised Ockeghem's bass voice as the finest he knew. Florio, similarly, asserted that

Ockeghem was superior to all of his colleagues in the royal chapel as both singer and composer. Molinet, who was himself both poet and musician, praised the 'subtle songs, the artful masses and the harmonious motets' of Ockeghem, Du Fay, Binchois and Busnoys, placing Ockeghem first among them.

In his elaborate lament Crétin had a personified Musique refer to Ockeghem as her son, the 'pearl of music'. He put in the mouth of Orpheus the expression 'flower of musicians', in that of Pan the epithet 'pillar of music' and he caused Tubal, 'the ancient father', to praise him for having mastered 'all the secrets of subtlety'. The poet also spoke of Ockeghem's 'elevated style, in which no imperfection is found'. Jean Lemaire de Belges, in a letter published in 1513, credited Ockeghem with having ennobled music just as Crétin himself had enriched and exalted the French language. Nicole le Vestu, in a *chant royal* written in 1523 for the Rouen *puy*, described Ockeghem as 'most learned in the mathematical arts, arithmetic, geometry, astrology and music'; he praised his motet for 36 voices, which he termed a *chef d'oeuvre* of nature, for its 'sweetness' and its 'delicate harmony'. As late as 1567 the Italian humanist Cosimo Bartoli declared, in his *Ragionamenti accademici* (published in Venice), that Ockeghem was 'almost the first in these times to rediscover music, which was nearly dead, just as Donatello rediscovered sculpture'. It is not certain that Bartoli knew any of Ockeghem's music first hand, but the composer's reputation was clearly such that the Italian author did not hesitate to place him at the *fons et origo* of the cultural reawakening that, in accordance with the common historical view of that age, has come to be called the Renaissance.

Ockeghem's reputation among the composers of his age is perhaps best illustrated neither by the encomia of poets nor the praise of theorists, but by the numerous works of the 15th and early 16th centuries either based directly on an earlier piece of his or quoting substantively from his music in ways both technically and symbolically significant (Jas, Picker, 1997). These include the masses that derive a tenor cantus firmus (and more) from one of his chansons (e.g. *Au travail suis*, *D'ung aultre amer*, *Ma bouche rit*, *Malheur me bat*) as well as the numerous reworkings of *Au travail suis* and *Fors seulement* (Picker, 1981). Of particular significance in this connection for developments in the Low Countries are the borrowings in the masses of Obrecht and La Rue.

As Ockeghem's music disappeared from the practical sources in daily use, knowledge of his existence, and of his extraordinary contrapuntal skills, came to be transmitted solely by the theorists of the 16th century. Writers from Aaron to Zacconi, and in particular German schoolmasters such as Heyden, Ornithoparcus and Wilfflingseder, commented on the exceptional achievements of the *Missa cuiusvis toni*, the *Missa prolationum* and the canonic chanson, *Prenez sur moi*. This tradition was carried into the 17th century with the publications of the Italian theorists Rossi (1619) and Liberati (1685), undoubtedly long after any of the authors had occasion to hear in performance either those works or others by the 15th-century composer.

This distorted perspective caused Ockeghem's music to be viewed rather negatively by 18th-century scholars such as Charles Burney and Nicolaus Forkel. Although they appreciated Ockeghem's contrapuntal genius, they were

Miniature illustrating Nicole le Vestu's prizewinning chant royal at the Rouen Puy in 1523 (F-Pn fr.1537, f.58v); the poem concerns Ockeghem's composition of a motet for 36 voices, the performance of which is depicted. The composer is presumably the elderly figure with glasses, though the painting postdates Ockeghem's death by more than 20 years

clearly put off by what seemed to be an excessive emphasis on contrapuntal 'artifice'; Burney opined that 'learning and labour seem to have preceded taste and invention' and Forkel characterized *Prenez sur moi* as 'unsingable'. As critics they were clearly insensitive to Ockeghem's *suavitas*, the sweetly agreeable sonorities that had so charmed Ockeghem's immediate contemporaries, fellow musicians and patrons alike.

Not until the 19th century did historians such as A.W. Ambros begin to rehabilitate Ockeghem's reputation, refuting the negative judgments of the previous age in the light of romantic aesthetics and focussing on his 'inherent musicality' and 'singing soul'. More recent assessments by Pirro (1940), Van den Borren (1948–51) and especially Plamenac (*MGG1*) have been based on a broader knowledge of Ockeghem's compositions and a more balanced appreciation of his role in the development of the musical genres and styles of the 15th century. Nevertheless, attempts to define and characterize his contributions have led to strikingly different, even contradictory views (Bernstein, 1994). Ockeghem has been variously seen as the inventor of the imitative style (Riemann, 1907–13), as an arch-cerebralist with little or no interest in musical expression, and as a profound mystic whose music supposedly reflected the religious fervour and the aesthetic attitudes of northern Europe, in particular those of the *devotio moderna* as espoused by

the Brethren of the Common Life, and expressed in the *De imitatio Christi* of Thomas à Kempis (Besseler, 1931).

Although lacking any historical foundation, this notion has led to the widely held but highly questionable view that Ockeghem's compositional procedures are 'irrational', his melodies 'unpredictable' in their rise and fall and his counterpoint without easily discernible contours and seams. Bukofzer (1950) went so far as to assert that Ockeghem 'renounces with amazing consistency all customary means of articulating a composition: cadences, profiled motives, symmetrical phrase structure, lucid interrelation of parts, imitation, sequences, prominence of one voice over others, and so forth' (Bernstein, 1997).

It is increasingly clear, Bukofzer notwithstanding, that close study of Ockeghem's music inevitably reveals the presence and carefully planned use of all of these elements, however subtly treated or – at times – carefully disguised. While certain of the features mentioned are much more in evidence in some works than in others, his composition is invariably grounded in some rational, usually ingenious conception, the most striking examples of which are the *Missa prolationum* and the *Missa cuiusvis toni*. In their execution, however, his underlying designs are usually artfully concealed in accordance with two of the principal aesthetic ideals of the period, as articulated, for example, by Tinctoris: *subtilitas* and *varietas*. Consequently, the 'unfamiliar features of Ockeghem's style' that, in the words of Bukofzer, 'baffled past generations', continue to pose problems for the present as well, and these difficulties will only be resolved by means of a deeper, fuller understanding of the conceptual matrix and the aesthetic ideals that inform this composer's music generally.

4. MASSES. Although the number of known works attributed to Ockeghem is surprisingly small in view of the length of his life and the esteem in which he was held, his masses constitute an imposing repertory. In addition to the earliest surviving polyphonic requiem and an isolated Credo, there are 13 cyclic Ordinaries, of which three appear to be partial settings. Unfortunately, it is rarely possible to date Ockeghem's compositions with any precision, either from biographical details or from the evidence of the sources. One of the two masses for three voices may, however, be among the earliest; the cyclic structure produced by similar voice ranges, modal finals and mensural patterns recurring from one section to the next is reinforced by a head-motif rather than the tenor cantus firmus that tended to dominate continental mass composition beginning in the 1440s. Also noteworthy is a surprisingly consistent use of imitation, more so than in the presumably later four-voice masses. The implication is that if Ockeghem mastered imitative techniques early in his career, he made a conscious decision to employ them less predictably in subsequent works. The other three-voice cycle, the *Missa quinti toni*, which is characterized by exclusively binary mensurations and homogeneous textures, may date instead from the early 1470s, like its putative twin in the Vatican manuscript San Pietro B 80 (now attributed to Colinet de Lannoy), and reflect a renewed interest in three-voice mass composition during that decade (Wegman, 1987; Kirkman, 1997).

The remaining masses fall into two separate categories. The first and larger group consists of cyclic Ordinaries based on pre-existent material, either sacred or secular. The smaller group – equally important historically – comprises masses that seem to have been primarily freely composed. Turning first to the cantus-firmus compositions, one of the earliest is undoubtedly the *Missa 'Caput'*, which Ockeghem modelled on the presumably English mass, once thought to be by Du Fay. With the exception of the Kyrie, the successive sections follow closely the structure of the earlier mass. But while Ockeghem adopted the rhythmicization of his model for the cantus firmus, he shifted it to the lowest voice, thus displaying his contrapuntal skills (and perhaps a special affection for his own voice register).

Perhaps his most straightforward treatment of a cantus firmus is deployed in the *Missa 'L'homme armé'*. The mensural rhythms given to the famous tune in its polyphonic setting as a combinative chanson with *Il sera pour vous* are taken over into the mass with only minor differences. The borrowed tune is thus easily recognized even when, as in the Osanna and the third Agnus Dei, the values are prolonged in comparison with the movement of the other voices. The clarity of presentation of the cantus firmus makes even more effective its abandonment at the end of each major section as all four parts join to accelerate into the closing cadence. The cantus firmus is transposed (as in the 'Caput' mass) – to the lower 5th in the Patrem and to the lower octave in the Agnus Dei – reflecting again the composer's tendency to favour the bass register. Ockeghem's choice of range also provides a relatively early indication of the downward extension of the vocal registers that is one of the notable innovations of his musical style. In addition, Ockeghem appears to have imbedded into his counterpoint, as a kind of musical gloss on the pre-existent melody, references not only to the cantus of the combinative chanson but also to his own rondeau, *L'autre d'antan*, presumably in both cases because of the military imagery of the vernacular texts (Perkins, *JM*, 1984).

In what are probably later works, Ockeghem varied the treatment of the cantus firmus, assimilating it increasingly to the rhythmic and melodic activity of the other voices and thus moving towards a homogeneity of texture among the parts that was ever more characteristic of his mature style. In the *Missa 'De plus en plus'*, for example, each movement opens with a literal quotation of the tenor of Binchois' rondeau in extended values, but the borrowed melody is then paraphrased so freely as to make it virtually indistinguishable from the surrounding voices. (In this case, interestingly, Ockeghem repeated the first phrase of his cantus firmus at the end of each statement, probably in order to retain the orientation towards mode 8 on G with which the chanson opens rather than to follow its change to mode 2 on D.)

For the *Missa 'Ecce ancilla Domini'*, the only surviving cyclic Ordinary by Ockeghem to use a plainchant melody as its tenor cantus firmus, the composer followed essentially the same pattern as in the *Missa 'De plus en plus'*. In addition, this mass makes use of two innovative compositional procedures that anticipate the practice of following generations. One is the brief but quasi-systematic sequential treatment of the rising figure for the Amen at the conclusion of the Gloria, which helps to convey a sense of closure. The other is recourse to mimetic gestures not unlike those that were to become so common in the secular music of the next century to illustrate individual words and conceits of the text. In the Credo, for example, 'et ascendit in celum' is set to a steadily

rising line, 'sedet ad dexteram Patris' to a descending one that settles into a cadence.

Ockeghem's treatment of the cantus firmus in the *Missa 'Au travail suis'* (based on the tenor of a rondeau ascribed to both Ockeghem and Barbingant) is more original still. Whereas he presented the borrowed melody completely and with reasonable fidelity in the Kyrie (even though he altered its mensuration), in the following sections reference to it is reduced to little more than a head-motif. In addition, his extensive reliance in this work on homophonic textures removes it even further from the traditional pattern for cantus-firmus masses.

The incomplete cycle for five voices (*sine nomine*), which is based on plainchants for the Kyrie, Gloria and Credo, makes even more extensive use of syllabic declamation on repeated pitches (in the manner of the chants themselves). The liturgical melody is heard most frequently in the tenor, but it permeates the polyphony through imitation in the Kyrie, and in the Credo by migrating from voice to voice.

Ockeghem's two other partial cycles, the *Missa 'Ma maistresse'* and the *Missa 'Fors seulement'*, are both based on chansons of his own and appear to be late works as well. In these masses the voices take over material from more than one part of the model simultaneously and keep the borrowed lines in their original relationship to one another as other voices weave new counterpoints against them. *Ma maistresse*, a virelai, begins with a short mensuration canon between cantus and tenor that becomes a head-motif between superius and contratenor in the mass. The Kyrie is based primarily on the tenor of the chanson, carried by its bass, while its tenor quotes short excerpts from the cantus of the model. By contrast, the Gloria (the only other surviving section) borrows from the cantus for its contratenor, while its bass draws upon the virelai's tenor. The resulting permeation of the part-writing by material derived from the chanson is greater than in any other of Ockeghem's masses except the *Missa 'Fors seulement'*. Here the tenor of the chanson has been adopted as a fundamental cantus firmus throughout, but the other voices are quoted extensively as well. Ockeghem may not have been the first to have quoted from several voices of a polyphonic model at once, but his ingenious and original use of these procedures clearly helped to prepare the way for the widespread adoption of similar procedures in the 'imitation' or 'parody' masses of the 16th century.

Ockeghem's polyphonic Requiem has special historical significance as the earliest surviving setting. Each section is based on the corresponding plainchant, and the melodies, which are carried in the superius and only lightly embellished, are treated in the manner that had become conventional early in the 15th century for liturgical polyphony such as hymns, *Magnificats* and psalm settings. The numerous subsections for two or three voices give an impression of sober simplicity, but their skilful alternation with full four-voice textures achieves the cumulative effect that is characteristic of much of Ockeghem's music. The work culminates with the offertory in which a more consistent use of full textures, together with more recondite mensural schemes and contrapuntal procedures, contributes to a sense of climax and closure.

The small group of masses that were apparently freely composed includes the compositions made famous over the centuries by the recurring discussions of fascinated theorists. Each is unique in its own way and without clear historical precedent; consequently their place in the development of the genre, individually and collectively, is difficult to determine. The *Missa cuiusvis toni* is not unduly complex in its contrapuntal style despite the practical problems involved in reading the work as notated with each of several modal finals as the determinant of scalar structure and modal orientation. The mass is designated by the composer as 'in any mode'; Glarean categorized it as a 'catholicon', meaning it 'might be sung in many modes, almost at the will of the singers'. Most discussions interpret the mass as intended to exemplify the four regular finals, *re*, *mi*, *fa* and *sol* (see Houle, 1992; Perkins, 1993), but an interpretation on three finals, *ut*, *re* and *mi*, was suggested by Glarean (see van Benthem, 1996; Dean, 1996). Since such a mass could have been used repeatedly and, if performed from changing finals, still have sounded somehow different from one time to the next, it may have been intended for ferial use. By contrast, the *Missa prolationum* may well be the most extraordinary contrapuntal achievement of the 15th century; using all four of Philippe de Vitry's prolations simultaneously, it presents a series of canons whose interval of imitation expands from the unison progressively through to the octave in accordance with a complex combination of verbal instructions, rests and mensural signs. Surprisingly, the result is a graceful, euphonious composition that gives the listener no hint of the intricate technical problems it embodies.

Ockeghem's purpose in writing such a pair of masses may have been didactic as well as musical. Taken together, they constitute a practical exemplification of the modal and mensural doctrine of 15th-century theory, a musical counterpart to treatises such as those written by Tinctoris. If the (much more modest) canonic chanson, *Prenez sur moi*, is seen in a similar light as a thorough-going exercise in solmization, the three compositions cover in a comprehensive and engaging way the fundamentals of music as taught at the time: hexachordal and modal systems, notation, mensural usage and of course composition (Perkins, 1990).

Perhaps nowhere does Ockeghem show more clearly his mastery of the cyclic mass as a polyphonic genre, nor the genius of his own style, than in the *Missa 'Mi-mi'*. Here he has reduced the head-motif to the most concise of gestures, the falling 5th (E to A, *mi* in the natural and soft hexachords, respectively) in the bassus. If that figure refers at the same time to the tenor of his virelai, *Presque transi*, as has been claimed (Miyazaki, 1985), the allusion is both brief and characteristically subtle; for most of its substance the work seems to be essentially freely composed. Ockeghem deployed a typical pattern of changing mensurations throughout, mostly involving perfect and (diminished) imperfect tempus, coupled with skilfully wrought contrasts in texture and sonority. Internal cadences are often concealed by the continuous flow of interlocking melodic lines, and the ends of major sections are approached with lively rhythms and dotted figures that generate a strong sense of climax. This mass also has a surprising number of text-related compositional devices, such as contrasting registers – low for 'suscipe deprecationem nostram' and high for 'Qui sedes ad dexteram Patris' (Gloria); superius and altus for 'Pleni sunt celi' followed by tenor and bassus for 'et terra' (Sanctus) –

strict imitation for 'Et unam sanctam catholicam' and black notes in extended values for 'mortuorum' (Credo). It exemplifies in full measure the 'varietas' and 'subtilitas' that characterize Ockeghem's artistic aesthetic. It may also give some indication of the extent to which the humanistic passion for epideictic oratory – intended more to move than to persuade – had begun to influence Ockeghem's compositional manner. A close relationship with Cardinal Jean Jouffroy, as is suggested by the shared embassy to the court of Castile and by the cardinal's central role in procuring papal benefices for Ockeghem and his companions in the royal chapel, could have acquainted Ockeghem with the growing enthusiasm for rhetorical studies in humanistic circles. Jouffroy completed his education at the University of Pavia, where he studied rhetoric with Lorenzo Valla (who became his lifelong friend), and was himself both a scholar and an accomplished orator (Perkins, 1997).

5. MOTETS. Ockeghem's motets, though few in number, display perhaps even greater inventiveness than his masses, no doubt because the genre was itself in a state of stylistic redefinition during much of the 15th century. For most of the known repertory, Ockeghem followed a growing tradition in setting Marian texts, either liturgical (in which case the plainchant melody is usually adopted as well) or devotional. The *Salve regina* that appears to be securely attributed to him presents the chant with melodic coloration, but in the bass (as in the *Missa 'Caput'*) rather than, as conventionally, in the tenor. In his *Alma Redemptoris mater* the antiphon melody is heard in an upper voice, as in a treble-dominated plainsong setting, but with the addition of a fourth part in an unusually high range above it.

By contrast, neither *Ave Maria* nor *Intemerata Dei mater* shows any trace of a borrowed melody. Nonetheless, the latter, like both the plainsong settings and the cantus-firmus motets, reflects the influence of the polyphonic masses; it is divided into sections with contrasting mensurations, and the structure is further articulated (especially in the 2nd and 3rd sections) by introductory duos or trios in changing combinations of voices. In addition, its syllabic declamation and homophonic textures are much more common in Ockeghem's masses than in his motets. Exceptional, however, even for Ockeghem, who was to become famous for his exploration of modal relationships and possibilities, is the succession of finals to the sections of *Intemerata* from D through A to E (on which all three sections begin).

Ockeghem's motet-chanson, the *déploration* on the death of Binchois, has an archaic flavour; in ballade form, it combines the treble-dominated style, polytextuality and cantus-firmus-based structure that were all characteristic of the medieval motet tradition. Though clearly not the first of its kind, the work appears to have defined in significant measure the functional and compositional conception of the genre for subsequent generations (Meconi, 1997). *Ut heremita solus* is analogous in a sense to the *Missa cuiusvis toni* and the *Missa prolationum* in its use of a complex puzzle canon to generate the tenor and regulate its manipulation, but stylistically it stands apart from the other motets of Ockeghem's known authorship (see Lindmayr, *AcM*, lx, 1988, for explanation of its resolution). It makes consistent use of short motifs sequentially elaborated in a manner most unusual for him, suggesting that it was – paradoxically for a motet – intended for instruments. It is, in addition, so idiosyncratic in style that Ockeghem's authorship has been questioned (Lindmayr-Brandl, 1997). The attribution to Ockeghem is implied in Crétin's *Déploration*; the work may have been Ockeghem's reply to Busnoys' '*In hydraulis*'.

Celeste beneficium and *Gaude Maria*, which are found only in a set of mid-16th-century part-books in the Proske Musikbibliothek, Regensburg, are now thought to be by another, later composer, despite their ascription to 'Johannes Okegus'. This is not only because of the lateness of the source and the unusual form of the name (although also used by Erasmus), but more importantly because the sub-genre of the responsory-motet with its aBcB pattern apparently did not become current until the 1530s. Nevertheless, *Celeste beneficium*, the text of which is probably a contrafactum, recalls *Ut heremita* by the treatment of its cantus firmus and, even more particularly, by the character of its melodies and counterpoint. *Gaude Maria* is perhaps less typical of Ockeghem because of its systematic use of syntactic imitation, but some of the traits of his mature style are present, most notably the customary sweep of the melodic lines, the energy of the rhythmic figures and the imaginative freedom with which the cantus firmus has been treated. By contrast, the *Salve regina* (ii), a relatively conventional plainchant setting with the liturgical melody in the superius, is surely a case of mistaken attribution due to speculation concerning the name (Basiron) that was partially trimmed from the margin of *I-Rvat* C.S.46 (Lindmayr, 1988).

6. SECULAR WORKS. Ockeghem adhered most consistently to tradition in his secular works, perhaps in part because the compositional conventions were more firmly established for the chanson than for mass or motet. Even in this well-trodden field, however, his creative imagination asserted itself. More generously represented in the surviving sources than his sacred music, and better contextualized by contemporaneous repertory, his songs can be seen as central to his own artistic development and to his contribution to the evolving styles and genres of the period (Fallows, 1997). The majority of his works on texts in the vernacular follow the *formes fixes* that had been in use for more than a century. At least 16 are rondeaux; four others, *Ma bouche rit*, *Ma maistresse*, *Presque transi* and *Tant fuz gentement resjouy*, are virelais with only a single complete stanza (as was customary at the time judging from the works of Busnoys and other contemporaries who adopted the form). Ockeghem apparently wrote in most instances for three parts, but two of his pieces were originally for four parts; they were not merely supplied later with an optional contratenor as was the case for many chansons of the period.

The predominant texture of Ockeghem's chansons derives from the treble-dominated solo song characteristic of the genre in the 15th century, but there are significant exceptions in addition to the strictly canonic *Prenez sur moi*: *L'autre d'antan* was clearly conceived as a duo between cantus and tenor and in *Fors seulement l'attente* the cantus and tenor share the same range and much of the same material. For *Petite camusette* the lower three voices are all based on the eponymous *chanson rustique*. These three works exhibit a good deal of the imitative counterpoint typical of the chanson repertory of the period, but elsewhere Ockeghem restricted imitation to the beginning of just a phrase or two, as in *Ma bouche*

rit, or avoided it entirely, as in the quasi-homophonic *Presque transi*.

Ockeghem's treatment of the vernacular poetry was also largely conventional. He set it line by line, providing for each verse a self-contained melodic phrase. When, as at the beginning of both *D'un aultre amer* and *Presque transi*, he weakens the effect of the articulating cadence, it is usually in response to the syntax or sense of the text, which bridges the verses in an enjambment. Conversely, when the verse is cast in decasyllables with a clear caesura after the fourth, he often breaks the melodic line as well, as for the fourth verse of the refrain in *Ma maistresse* and the first of the second section, or for the second and third verses of *Ma bouche rit*, where both the caesura and the enjambment are respected. Most of the time the opening rhythms of a melodic phrase allow for a syllabic declamation of the text. In a few instances, however, such as *Les desléaux* and *Quant de vous seul*, the subsequent melismatic development of the line sometimes assumes a scope and an energy more like the melodic writing in the masses and motets.

Although Ockeghem generally adhered to the musical structures traditionally derived from the poetic *formes fixes*, he repeated the first line of *L'aultre d'antan* as the last, text and music, thus imposing on the rondeau an over-riding formal order that, like the light tone of the verse and the lively tempo of the music, anticipates characteristics of the chanson in the early 16th century. His setting of *Petite camusette* represents another significant departure from the courtly tradition. All four voices carry text: the lower three have the words of the *chanson rustique* upon which they are based, and the cantus has a related poem. In both style and substance *Petite camusette* is typical of the combinative chanson that became fashionable towards the end of the 15th century (Maniates, 1970).

Ockeghem also appears to have played a role in the development of an important new secular genre: an arrangement, usually florid in character, based on one or more parts from a well-known chanson, that would lead to the instrumental *canzona*. This is suggested by his composition of a second cantus for *O rosa bella*, his reworking of Cornago's *¿Qu'es mi vida preguntays?*, and in particular by his use of the tenor of *Fors seulement l'attente* as the point of departure for the *réplique*, *Fors seulement contre ce qu'ay promis*, among the first of the 30 or so compositions to rework in some way the melodic material of that chanson (see Picker, 1981). In his rondeau *Au travail suis* (attributed to Ockeghem in *F-Pn* R 57 but to Barbingant in *F-Dm* 517) at the words 'ma maistresse', Ockeghem quoted the opening of his virelai *Ma maistresse*.

Too little is known still about Ockeghem's relationships with his immediate contemporaries, but it is evident that he was familiar with musical practices and repertories at both Cambrai Cathedral and the Burgundian court chapel. He must have owed significant aspects of his development to the example of Binchois and may have been exposed to the influence of English composers on the Continent. There was ample opportunity for meaningful contact with Du Fay from the 1450s on, and it is quite likely that Busnoys profited from Ockeghem's tutelage while both were associated with musical institutions in Tours in the early 1460s. During the more than 40 years that Ockeghem served at the French royal court, however, there was no one else in the chapel who even approached his stature as musician and composer.

Like his contemporaries, he adhered to tradition, but no other 15th-century master seems to have handled with as much freedom compositional procedures such as head-motifs, cantus firmi and canonic imitation, nor to have treated established musical genres (mass, motet and chanson) with such subtly inventive creativity. He seems to have been involved with innovatory developments in a number of significant areas: word painting, modal transmutation, the exploitation of new sonorities (especially in the lower registers) and, perhaps most importantly, the contrapuntal, and hence melodic integration and equalization of the separate voices. In every respect Ockeghem achieved a level of contrapuntal skill and artistic excellence without which the extraordinary accomplishments of the next generation of composers, including such figures as Obrecht, La Rue and Josquin, might not have been possible.

WORKS

Editions: *Johannes Ockeghem: Sämtliche Werke (Messen I–VIII)*, ed. D. Plamenac, Publikationen älterer Musik, Jg.i/2 (Leipzig, 1927); rev. 2/1959 as *Masses I–VIII*, Johannes Ockeghem: Collected Works, i; *Masses and Mass Sections IX–XVI*, ed. D. Plamenac, ibid., ii (New York, 1947, 2/1966); *Motets and Chansons*, ed. R. Wexler with D. Plamenac, ibid., iii (Philadelphia, 1992) [P]
Johannes Ockeghem: Masses and Mass Sections, ed. J. van Benthem, i– (Utrecht, 1994–) [B]

MASSES AND MASS SECTIONS

Title	*No. of voices*	*Edition*	*Remarks*
Missa	3vv	P i, 15–29	sections linked by common head-motif in Sup and T
Missa	5vv	P ii, 77–82; B i/3	only Ky, Gl, Cr; each section paraphrases a plainchant from the Ordinary
Missa 'Au travail suis'	4vv	P i, 30–41	T of chanson (attrib. Ockeghem and Barbingant) used first as T c.f. (Ky), then as head-motif
Missa 'Caput'	4vv	P ii, 37–58; B i/1	T c.f. derived from final melisma of ant for Maundy Thursday, Venit ad Patrem, as rhythmicized in anon. Eng. mass attrib. Du Fay, transposed to lower octave as sounding B; head-motif links all sections except Ky; also ed. A. Planchart (New Haven, CT, 1964)
Missa cuiusvis toni	4vv	P i, 44–56; B iii/3–4	'in any mode'; variously interpreted with 2, 3 or (most likely) 4 finals; sections linked by a changing but recognizable head-motif in Sup; also ed. D. Fallows (London, 1989); G. Houle (Bloomington, IN, 1992)
Missa 'De plus en plus'	4vv	P i, 57–77; B ii/1	T c.f. based on T of Binchois' chanson, subjected to both augmentation and paraphrase

Title	No. of voices	Edition	Remarks
Missa 'Ecce ancilla Domini'	4vv	P i, 79–98; B i/2	T c.f. from 2nd half of Marian ant Missus est angelus Gabriel; Du Fay's and Regis's homonymous masses are based on different plainchant
Missa 'Fors seulement'	5vv	P ii, 65–76	only Ky, Gl, Cr; T of Ockeghem's chanson used as migrating c.f. among inner voices in various transpositions; sometimes simultaneous borrowings from Sup and Ct
Missa 'L'homme armé'	4vv	P i, 99–116	T c.f. based on T of combinative setting Il sera pour vous/ L'homme armé, heard generally in augmentation, at pitch, but as sounding B at lower 5th (Cr) and lower octave (Ag); significant quotes from Sup of the chanson and possible references to Ockeghem's L'autre d'antan; head-motif in Sup and A links Gl and Cr, echoed in Sup of San and Ag
Missa 'Ma maistresse'	4vv	P i, 117–23	only Ky, Gl; Sup and T of Ockeghem's virelai both used as c.f., T (Ky) at lower octave in B, Sup (Gl) at lower octave in Ct; quotations from the other voice in both
Missa 'Mi-mi' [= Missa quarti toni]	4vv	P ii, 1; B iii/2	head-motif, the falling figure E–A and its continuation in following 2 bars, only in B; resemblance with Ockeghem's virelai, Presque transi noted by Miyazaki (1985) confined to opening of B
Missa prolationum	4vv	P ii, 21–36; B iii/4	series of double mensuration canons beginning at the unison (Ky) and proceeding to the octave (Osanna), but reverting to the 4th (Ag I, Benedictus) and the 5th (Ag II, Ag III). Cited by Heyden (1540), Zanger and Wilfflingseder, because of its elaborate canonic structures
Missa quarti toni [= Missa 'Mi-mi']			
Missa quinti toni	3vv	P i, 1–14	all movts linked by common head-motif in all voices; 2nd motif also links Ky II with 'Qui tollis', 'Osanna'
Requiem	3/4vv	P ii, 83–97	int, Ky, grad (Si ambulem), tr, off; based on plainchant melodies, paraphrased at times and with interpolations of varying length, carried in highest voice; also ed. G. Darvas (Zürich, 1977); B. Turner (London, 1978)
Credo	4vv	P ii, 59–64, B i/3	based on the Credo I plainchant, which migrates from voice to voice; may be the Patrem de village copied in Bruges, 1475–6

MOTETS

Title	No. of voices	Edition	Remarks
Alma Redemptoris mater	4vv	P iii, 3–5	plainchant melody, transposed up 5th, embellished and varied, used as melodic c.f. in A
Ave Maria	4vv	P iii, 6–7	no identifiable c.f.
Intemerata Dei mater	5vv	P iii, 8–12	Marian text in hexameters; no identifiable c.f. but probably intended for devotional purposes; ranges unusually low; change of final for each of the 3 *partes* is without precedent
Salve regina (i)	4vv	P iii, 13–17	Marian ant with plainchant, embellished, paraphrased and transposed to lower 4th as c.f. in B, anticipatory quotations of opening phrase at pitch in Sup and T
Ut heremita solus	4vv	P iii, 18–24	elaborate canonical and hexachordal puzzle; may be Ockeghem's reply to Busnoys' In hydraulis

MOTET-CHANSON

Title	No. of voices	Edition	Remarks
Mort, tu as navré/Miserere	4vv	P iii, 77–8; B ii/1, 34–7	déploration on death of Binchois (*d* 1460); French ballade in Sup, combined with Latin text in T that concludes with words and plainchant of final phrase of Dies irae, but see B ii/1; Ct and B are textless in sources

CHANSONS

Title	No. of voices	Edition	Remarks
Aultre Venus estes	3vv	P iii, 59	rondeau quatrain in octosyllables
Au travail suis	3vv	P iii, 93	rondeau quatrain in octosyllables attrib. Barbingant in *F-Dm* 517, Ockeghem in *Pn* R 57; taken as the starting point for Missa 'Au travail suis', but see Fallows (1984)
Baisiés moy dont fort	3vv	P iii, 60	rondeau quatrain in octosyllables; only refrain of text survives
D'un autre amer	3vv	P iii, 61	rondeau quatrain in decasyllables; attrib. Busnoys in *Pn* fr.15123 is peripheral and largely contradicted by other sources
Fors seulement contre ce	3vv	P iii, 64–5	rondeau cinquain in decasyllables, perhaps intended as a *réplique* to Fors seulement l'attente, whose T, transposed to lower 12th, functions as B
Fors seulement l'attente	3vv	P iii, 62–3	rondeau cinquain in decasyllables, used by Ockeghem in his mass and widely used as a model for reworking or recomposition; see Fors seulement contre ce
Il ne m'en chault plus	3vv	P iii, 66	rondeau cinquain in octosyllables
J'en ay dueil	?3/4vv	P iii, 67–9	rondeau quatrain in octosyllables; two versions differ in ranges of lower 3 parts and composition of Ct altus, suggesting orig. written for 3 parts: Sup, T and B
La despourveue et la bannie	3vv	P iii, 70	rondeau cinquain in octosyllables

Title	*No. of voices*	*Edition*	*Remarks*
L'autre d'antan	3vv	P iii, 71	rondeau cinquain in octosyllables, but with repetition of 1st line of refrain (text and music) as last phrase; two distinct versions of Ct and 4 different mensuration signs, one of which prompted criticism from Tinctoris in his *Proportionale*
Les desléaux ont la saison	3vv	P iii, 72	rondeau quatrain in octosyllables
Ma bouche rit	3vv	P iii, 73–4	virelai with 5-line refrain and 3-line *ouvert* and *clos* in decasyllables
Ma maistresse	3vv	P iii, 75–6	virelai with 5-line refrain and 3-line *ouvert* and *clos* in decasyllables; taken by Ockeghem as starting point for his mass
Prenez sur moi	3vv	P iii, 80	canonic chanson, 'fuga trium vocum in epidiatessaron', with one part notated and the other two entering a breve apart, each time at the lower 4th; termed a catholicon by Glarean: starting pitches are not specified by clef and could imply more than one modal final; often included in 16th-century treatises; the text, a rondeau cinquain in decasyllables, is part of the canon, but only the refrain is given
Presque transi	3vv	P iii, 81–2	virelai with 5-line refrain and 3-line *ouvert* and *clos* in decasyllables; may have been starting point for head-motif of 'Missa Mi-mi'
Quant de vous seul	3vv	P iii, 83	rondeau cinquain in octosyllables
S'elle m'amera/Petite camusette	4vv	P iii, 88–9	combinative chanson with rondeau cinquain in octosyllables in Sup; lower 3 parts based on monophonic chanson or quodlibet
Se vostre cuer eslongne	3vv	P iii, 90	rondeau cinquain in decasyllables; only refrain survives
Tant fuz gentement resjouy	3vv	P iii, 91	virelai with 5-line refrain and 3-line *ouvert* and *clos* in octosyllables
Ung aultre l'a	3vv	P iii, 92	'rondeau royal', rondeau cinquain in octosyllables

ARRANGEMENTS OF WORKS BY OTHERS

Title	*No. of voices*	*Edition*	*Remarks*
Alius discantus super 'O rosa bella'	2vv	P iii, 79	1 voice concordant with discantus of the setting of Giustiniani's ballata attrib. Bedyngham or Dunstaple
Qu'es mi vida preguntays	4vv	P iii, 84–5	reworking of Cornago's 3vv setting of this canción; added to Sup and T of the earlier piece are a new B and Ct, the latter quoting initially from Cornago's Ct at the lower octave

LOST WORKS

Title	*No. of voices*	*Edition*	*Remarks*
Missa della madonna (? Missa de Beata Virgine)			T of Credo cited by Zacconi, Cerone; see P ii, p.xlii
Missa 'Domine, non secundum peccata nostra' T of Gloria cited Zacconi; see P ii, p.xlii			
Missa 'Jocundare'			T of Osanna cited by Zacconi; see P ii, p.xlii
Missa 'La belle se siet'	T and Ct of Credo cited by Tinctoris, *De arte contrapuncti*; see P ii, p.xlii		
Noel			first work in a choirbook copied for Louis XI in 1471; see Perkins, *JAMS*, 1984, p.535

QUESTIONABLE AND SPECULATIVE ATTRIBUTIONS

Title	*No. of voices*	*Edition*	*Remarks*
Missa 'Le serviteur'	4vv		c.f. mass based primarily on T of rondeau attrib. Du Fay, but with borrowings from Sup as well; attrib. Ockeghem in *I-TRmp* 88, but to Faugues by Tinctoris, *De arte contrapuncti*; ed. in DTÖ, xxxviii, Jg.xix/1, 1912/*R* and Faugues, *Collected Works*, ed. G.C. Schuetze, 1960, pp.5–46
Missa 'Pour quelque paine'	4vv	P ii, 98–115	c.f. mass based on T of anon. chanson; attrib. Ockeghem in *B-Br 5557* added by a later hand; attrib. Cornelius Heyns in *I-Rvat* C.S.51 now generally accepted
Missa [primi toni]	3vv		San (frag.) and Ag in *Rvat* San Pietro B 80, judged to be a 'twin' of Ockeghem's *Missa quinti toni* because of resemblances in texture, mensuration and general stylistic features (see Wegman, 1987) but found in *CZ-Hk* II.A.7 ascribed to 'Lanoy'
Deo gratias	36vv	P iii, 35–42	canonic work for 9 groups of 4vv each; anon. in sources but attrib. Ockeghem because 15th- and 16th-century authors credited him with a motet in 36 parts; this work does not fit the description of Ockeghem's canon by Virdung, who knew it first hand, as 6 groups of 6vv each (but see Lowinsky, 1969)

Title	No. of voices	Edition	Remarks
Celeste beneficium	5vv	P iii, 26–34	setting, in responsory form, of a text referring to the Lutheran reformation, probably a contrafactum; an apparent c.f. in T has not been identified; doubts have been raised as to Ockeghem's authorship because the unique source is peripheral and late (*c*1538), the responsory motet was not common until the generation after Josquin, and the compositional style is unlike anything in Ockeghem's other motets
Gaude Maria	5vv	P iii, 43–52	T c.f. motet in four parts, based on text and music of liturgical responsory and following its form; attrib. Ockeghem challenged on the same grounds as for Celeste beneficium, with which it is found in its only source
Miles mirae probitatis	4vv		anon., in honour of St Martin of Tours; attrib. Ockeghem suggested by Ambros, iii, 1869, p.179, because of the text and on general stylistic grounds, but rejected by Plamenac, *MGG1*
Salve regina (ii)	4vv	P iii, 53–5	setting of Marian ant with plainchant melody paraphrased in Sup; attrib. Ockeghem resulted from misreading of name trimmed from *I-Rvat* C.S.46, *recte* Basiron, whose authorship is confirmed by 1520[1] (see Dean, 1986)
Vivit Dominus	2vv	P iii, 25	imitative duo, probably a contrafactum of an internal section of an unknown mass; given lateness of the only source, 1546[15], attrib. Ockeghem cannot be taken at face value
Permanent vierge/Pulchras es/ Sancta Dei genitrix	5vv	P iii, 96–7	motet-chanson, combining rondeau quatrain in decasyllables with two Marian ants.; anon. in only source, *F-Dm* 517; attrib. Ockeghem suggested by Ambros, ii, 1864, p.534, apparently accepted by Stephan, 1937 and Plamenac, *MGG1*, but designated doubtful by Wexler, P iii
Resjois toy, terre de France/ Rex pacificus	4vv		motet-chanson in ballade form (although final 4 lines of verse do not correspond to the usual conventions for the poetic form) combined with ant for 1st Vespers at Christmas and the acclamation 'vivat rex'; text seems to reflect victories of Charles VII in final stage of Hundred Years War, or impending coronation of Louis XI soon after, leading Fallows (1976–7) to suggest attrib. Ockeghem, which he later rejected (1984); Lindmayr sees attrib. Busnoys in name partially trimmed from *F-Pn* fr.15123
Ce n'est pas jeu [= Si mieulx ne vient]	3vv		rondeau quatrain in decasyllables, attrib. Ockeghem in *I-Rc* 2856 but to Hayne in *E-SEG*, *F-Pn* 2245, and *I-Fr* 2794 (anon. in 3 other sources); ed. B. Hudson in *Hayne van Ghizeghem: Opera omnia*, CMM, lxxiv, 1977
Departés vous Malebouche	3vv	P iii, 94	? rondeau cinquain in decasyllables, refrain only; attrib. Ockeghem in *F-Pn* fr.15123 and Du Fay in *I-MC* 871 (anon. in *Bc* Q16); doubt has been cast on both ascriptions, but Fallows (1984) favours Du Fay
Malheur me bat [= Dieu d'amours]	3vv	P iii, 95	incipit only, but rondeau form, possibly quatrain; attrib. Ockeghem in 1501[1], taken over by scribe of *CH-SGs* 461 and Aaron, but attrib. Martini in *I-Fc* 2439, *Fn* B.R.229 and *Rvat* C.G.XIII.27; attrib. Malcort in *Rc* 2856, (anon. in 5 other sources); attribs. in Florentine MSS appear most reliable
Quant ce viendra	3vv		added Ct in *US-NH* 91, *I-TRmp* 91; ed. L. Perkins, *The Mellon Chansonnier* (New Haven, 1979), ii, 76–9; rondeau cinquain layé in octosyllables, tetrasyllables for interpolated shorter lines; attrib. Ockeghem in *E-E* IV.a.24, but to Busnoys in *F-Dm* 517, *US-Wc* Lab; anon. in 6 other sources; attribs. in central French sources appear more reliable
Tous les regretz	3vv		ed. Picker (1980); anon. chanson with this incipit in 1504[3] may be a setting for the rondeau cinquain in decasyllables written by French court poet Octavien de St Gelais on departure of Marguerite of Austria from France in 1493; Picker suggests music may be by Ockeghem

BIBLIOGRAPHY

EARLY WRITERS

LEEMAN L. PERKINS

Oclande, Robert. *See* OKELAND, ROBERT.

O'Connell, Kevin (*b* Londonderry, 22 Dec 1958). Northern Ireland composer. O'Connell began composing at the age of 12. At Trinity College, Dublin (BMus 1982), he studied composition with Joseph Groocock and Brian Boydell. He subsequently worked as a teacher and became a lecturer in composition at Trinity College in 1996. In 1996 he was elected to Aosdána, Ireland's state-sponsored academy of creative artists. Since leaving university he has been fortunate in gaining a number of important commissions, beginning with the Concertino for 12 Players (1984–5). The cantata *From the Besieged City* (1988–9) was commissioned by the city council to commemorate the bicentenary of the siege of his home city. It began a line of vocal works that form the cornerstones of his recent output, a line that now includes three chamber operas.

O'Connell's work is eclectic. *Einzeichnung* (1987) charts a decidedly modernist course, whereas the chamber opera *Sensational!* (1992) is full of dance rhythms and melodic lines reminiscent of Broadway. The Saxophone Sonata (1988) mixes strong, almost jazzy, rhythms with lines that sometimes echo Hindemith. But behind these shifts of style lies a common desire to contain 'unshackled, eruptive force' within a clear structural framework. This structural vigour is well exemplified by O'Connell's control over the large span and long-breathed melodies of the first movement of his fine Sonata for Cello and Piano (1993–4).

WORKS

MICHAEL RUSS

O'Conor, John (*b* Dublin, 18 Jan 1947). Irish pianist. He studied at the College of Music, Dublin (1957–69), and later with Dieter Weber at the Vienna Hochschule für Musik (1971–6), where he was awarded the top prize for piano in 1975. In 1974 and 1980 he undertook special studies of Beethoven with Wilhelm Kempff. He made his début in Dublin in 1968 and his London début at the Wigmore Hall in 1974, winning first prize in the Vienna Beethoven International Piano Competition in 1973 and first prize in the Bösendorfer Piano Competition, Vienna, in 1975. His repertory favours Mozart, Beethoven (whose complete sonatas he has recorded) and Schubert, and he has made a particular study of the works of John Field, whose complete concertos, nocturnes and sonatas he has recorded. In 1976 O'Conor was appointed professor of piano at the Royal Irish Academy of Music, Dublin. In 1986 he became a co-founder and artistic director of the Dublin International Piano Competition. He is also a frequent jury member at other major international piano competitions including Leeds, Vienna and Sydney.

JESSICA DUCHEN

Ocquet (Old Fr.). *See* HOCKET.

Octatonic. A term that is theoretically applicable to any mode or scale using eight different pitches to the octave, but which has found wide acceptance (since its adoption in Berger, 1963–4) as a designation for the scale (or pitch class collection) generated by alternating whole tones and semitones. A scalar order of the collection can begin with the semitone (the form termed 'Model A' by van den Toorn; e.g. C–C♯–D♯–E–F♯–G–A–A♯) or the tone ('Model B'; e.g. C–D–D♯–F–F♯–G♯–A–B). Only three distinct transpositions are possible: the forms given above can be transposed to begin on C♯ and D, but any further transpositions will replicate one of those three forms in its pitch class content. The collection is therefore a 'mode of limited transposition' under Messiaen's definition (1944).

The octatonic differs from other collections based on symmetrical octave partitioning (such as the whole-tone scale) in that it accommodates both major and minor triads (as well as diminished triads and dominant, minor or half-diminished 7ths) on its degrees a minor 3rd apart (i.e. on C, D♯, F♯ and A in the 'Model A' scale given above). Referentially octatonic passages dating from the mid-19th century, notably in the music of Liszt, tend to involve triadic root progressions by the minor 3rd, while some later examples of the collection (either partial or complete) result from the actual superimposition of minor 3rd- or tritone-related triads or 7th chords (the celebrated bell chord that opens Act 1 scene ii of Musorgsky's *Boris Godunov* is a subset of the octatonic). The scalar form of the collection was noted by Rimsky-Korsakov (who dubbed it the 'tone–semitone' scale – see Taruskin), and numerous 20th-century composers subsequently explored its non-triadic partitionings, notably Stravinsky and Bartók (whose piano piece 'Diminished Fifth' from *Mikrokosmos* divides the collection into two minor tetrachords a tritone apart). As well as by Messiaen (who classified it as his 'Mode 2'), the scale was used extensively

by Pijper in the Netherlands, where it became known as the 'Pijper scale'. From the 1980s onwards octatonicism received considerable attention in the literature of music analysis: while still most frequently discussed with reference to the music of Stravinsky, it has been explored in studies of Debussy, Ravel, Skryabin and Webern among others.

CHARLES WILSON

Octave (i) (Fr. *octave*; Ger. *Oktave*; It. *ottava*; Gk. *diapasōn*; Sp. *octava*). The interval between any two notes that are seven diatonic scale degrees apart (e.g. *c–c'*, *d–d'*). The term usually implies 'perfect octave', which is the sum of five whole tones and two diatonic semitones; however it also covers the augmented octave, which is the sum of a perfect octave and a chromatic semitone (e.g. *c–c♯'*, *d♭–d'*), and the diminished octave, which is a perfect octave less a chromatic semitone (e.g. *c–c♭'*, *d♯–d'*). Acoustically the octave is the simplest of all intervals, giving a frequency ratio of 2:1 (a 1:2 ratio of string length); it is also the interval between a note and its first harmonic overtone.

To Western and most non-Western musicians, two notes an octave apart are in a sense alike, being different only in their relative registers and often seeming to blend into one another. This acoustical phenomenon has made the division of the frequency spectrum into octaves fundamental to both the understanding and the notation of music. The ancient Greeks, who recognized this phenomenon, called the octave *harmonia*, later *diapasōn*; Ptolemy, writing in the 2nd century, distinguished the octave from the other perfect intervals, calling it *homophōnia* (the 5th and 4th were called *symphōnia*). In the notation developed during the Middle Ages, notes an octave or two octaves apart were given the same letter name; and it was the species of octave (i.e. the arrangement of tones and semitones in an eight-note diatonic scale) that determined the MODE to which that scale belonged. Because of its acoustical properties the octave plays a significant role in the construction and playing of instruments, particularly keyboard and woodwind instruments (for example those that have 'octave keys'), and is of fundamental importance to the concept of REGISTER, both in a theoretical sense and as it concerns instruments.

WILLIAM DRABKIN

Octave (ii). *See under* ORGAN STOP.

Octave (iii). Non-musical uses of the term, which may occasionally be found in musical contexts, include the eighth day (i.e. exactly a week) after any feast day, or the day of a feast and the entire week following it; also the first eight lines of a sonnet.

See also CONSECUTIVE FIFTHS, CONSECUTIVE OCTAVES; DIAPASON (i); DOUBLING; and HIDDEN FIFTHS, HIDDEN OCTAVES.

WILLIAM DRABKIN

Octave courte (Fr.). *See* SHORT OCTAVE.

Octave dividers. A type of signal processing unit that divides or multiplies the frequency of a signal by a factor of two, to give parallel octaves below or above the note being produced by an instrument. The unit is often operated by means of a foot-pedal. *See* ELECTRIC GUITAR, §2.

Octave transfer. *See* REGISTER TRANSFER.

Octavin (Fr.). *See under* ORGAN STOP.

Octet (Fr. *octette*, *octuor*; Ger. *Oktett*; It. *ottetto*). By analogy with the sextet, septet and nonet, the term 'octet', first used at the beginning of the 19th century, denotes a composition in the nature of chamber music for eight solo instruments. The term was first used by Prince Louis Ferdinand of Prussia, whose Octet op.12 (*c*1800, published 1808) has a central piano part and remained almost unique of its kind. Further works with piano were written by Ferdinand Ries (op.128, 1818), Anton Rubinstein (op.9, 1856) and Paul Juon (op.27, 1907); through the number of instruments alone they all tend to a more concertante style. Nor did the works for mixed wind and string instruments by Peter Winter (*c*1812), Spohr (op.32, 1814), Reicha (op.96, *c*1817) and Hindemith (1957–8), each using a different combination, have any lasting influence on the genre. Only the ensemble chosen by Schubert for his Octet (D803), written in 1824 but not published (posthumously) until 1853, developed in the late 19th century into what is still regarded as the standard combination of instruments: clarinet, horn, bassoon, two violins, viola, cello and double bass. Schubert's octet, itself stimulated by Beethoven's extremely successful Septet op.20, inspired many composers to write works for the same ensemble, not least for practical performance reasons: they have included Hugo Kaun (op.26, published in error as op.34, 1891), Ferdinand Thieriot (op.62, 1893), Heinrich Molbe (op.20, 1897), Howard Ferguson (op.4, 1933), Egon Wellesz (op.67, 1949, with english horn), Boris Blacher (1965), Iannis Xenakis (*Anaktoria*, 1969), Rudolf Kelterborn (*Oktett 1969*, 1970), Siegfried Matthus (1970), Jean Françaix (*A HUIT*, 1972), Isang Yun (1978) and Dieter Schnebel (*raum-zeit y*, arranged for eight instruments 1992–3).

The string octet for four violins, two violas and two cellos, beginning with Mendelssohn's ingenious op.20 (1825, published 1833), formed a separate tradition comprising works by Niels Gade (op.17, 1848), Carl Schuberth (op.23, 1848), Johan Svendsen (op.3, 1865–6), Carl Grädener (op.49, 1870), Joachim Raff (op.176, 1872), Woldemar Bargiel (op.15*a*, 1877), Hermann Grädener (op.12, 1881), Reyngol'd Glièere (op.5, 1900), Enescu (op.7, 1900), Ferdinand Thieriot (op.78, 1903), Bruch (1920) and Shostakovich (Two Pieces op.11, 1924–5). In some of the older compositions the influence

of the extremely light, almost scurrying inflection of Mendelssohn's Scherzo can be felt.

Spohr developed an entirely different technical concept of setting with his four double quartets (opp.65, 77, 87 and 136, 1823–47); their antiphonal structure was suggested by a work by Andreas Romberg that remained fragmentary. Similar compositions were written by Nikolay Afanas′yev (*Housewarming* and *Le souvenir*) and Mario Peragallo (Music for Double Quartet, 1948). Darius Milhaud's Octet is a curiosity: the composer specified that his 14th and 15th string quartets op.291 (1948–9) may be played separately or, simultaneously, as an octet.

Wind compositions for eight instruments (usually two oboes, two clarinets, two horns and two bassoons), traditionally entitled partita, serenade, cassation, etc., because they were played in the open air, were written for indoor performance as chamber music during the 19th century and termed octets: they included works by Beethoven (op.103, ?1792–3, published 1830), Franz Lachner (op.156, 1850, published 1872), Louis Théodore Gouvy (op.71, published 1882) and Carl Reinecke (op.216, *c*1892). Entirely different combinations of eight wind instruments are used in Stravinsky's Octet and Varèse's *Octandre* (both 1923), two important 20th-century compositions.

MICHAEL KUBE

Octobans. Drums resembling BOOBAMS.

Octobass. A large, three-string DOUBLE BASS.

Octuor (Fr.). *See* OCTET.

Oda (It.). A stanzaic form of Italian poetry often used by composers of the frottola. Each stanza consists of four iambic lines, the first three with seven syllables and the fourth, of varying length, with usually four, five or 11 syllables. In some examples the fourth line is identical with the first. All stanzas are linked by common rhymes, as in the scheme *abbc cdde effg*, or less frequently, *aaab bbbc*. The Italian *oda* bears no relation to the classical odes of Pindar or Horace but was thought, from the time of 15th-century poet-theorist Francesco Baratella, to represent the kind of 'frottola' decried by Landini in his madrigal *Musica son* ('Musica son che mi doglio piangendo, / Veder gli effetti miei dolci et perfetti / Lasciar per frottol'i vagh'intelletti'). Musically, it comes close to the *barzelletta* in its lively rhythms and clear phrases (see, for example, *Chi l'aria mai creduto* by Marchetto Cara, 1509[2], with eight stanzas, in which the voices engage in simultaneous declamation). When the last line is short (e.g. with four syllables) it is usually absorbed into the phrase for line 3, thus three phrases for four lines as in the anonymous *Audite vui fenestre*, *F-Pn* Rés.Vm[7] 676, ff.54*v*–55. As in other stanzaic frottola types, music is supplied for the first stanza only. *See* FROTTOLA, §2.

DON HARRÁN

Odăgescu [Odăgescu-Ţuţuianu], **Irina** (*b* Bucharest, 23 May 1937). Romanian composer and musicologist. After studying composition with Mendelsohn and Olah at the Bucharest Academy (1957–63), she became an editor for Editura Muzicală then taught at the Music Lyceum no.5. In 1965 Odăgescu became an assistant lecturer at the Academy, later rising to a professorial position. She studied in Darmstadt in 1972 and 1976. Her compositions blend world music traditions with more modern techniques including serialism. Characteristic elements of her scores include melodic lines of a modal character, blurred harmonic textures and a mood of lyrical contemplation which does not exclude moments of dramatic climax. In her later works, many for choir, she has employed cluster techniques. Odăgescu's writings include didactic books on score-reading.

OCTAVIAN COSMA

Odak, Krsto (*b* Siverić, nr Drniš, 20 March 1888; *d* Zagreb, 4 Nov 1965). Croatian composer. After some music lessons, with private teachers, Odak joined the Franciscan order in 1906, and when he arrived in Munich in 1911 to study theology, he continued studies in composition and organ with Hartmann (1912–13). After he left the order, he moved to Prague to study there at the conservatory with Novák (1919–22). He taught at the Zagreb Academy of Music (1922–61). His output, consisting of over 200 works, reflects the aesthetically diverse style typical of Croatian composers influenced by the modernism of the 1900s, the nationalist style prevalent between the two world wars, and the beginnings of the new music in the 1950s. All three stylistic trends are present in his works: the radical polyphony with extended tonality used in his early works, such as *Radosna noć u gradu* ('A Merry Night in the Town') (1922) and the *Madrigal* (first performed at the ISCM, Frankfurt, in 1929), hints of dodecaphony in his String Quartet no.5 (1962), the modality in his two Old Slavonic masses and numerous other sacred vocal compositions written in the period of his String Quartet no.2 (1927, which was well-received when the Amar-Hindemith Quartet performed it at the Festival of Chamber Music in Baden-Baden) and no.3 (1935), a well as the national style of *Dorica pleše* (1933) based on Croatian folklore. His fundamentally romantic Expressionism – outlined already in his op.1, the Violin Sonata (1922), awarded first prize at the diploma concert in Prague – provided a pointer towards polyphonic monumentality reminiscent of Reger and a certain programmatic element in his symphonies, particularly dominant in Symphony no.3 (1961).

EVA SEDAK

Oddo. *See* ODO.

Oddone, Carlo Giuseppe (*b* Turin, 7 Nov 1866; *d* Rivodora, nr Turin, 23 Feb 1935). Italian violin maker. He was a pupil of Gioffredo Rinaldi of Turin, for whom he worked from 1878 to 1888. He also worked as a restorer for F.W. Chanot in London from 1889 to 1891, returning to Turin in 1892 where he began to make new instruments in 1894. Except for a brief return to London, he remained in Turin for the rest of his active career. He participated in the Turin Exhibizione of 1898 as an exhibitor, displaying a quartet of instruments. He also exhibited at the Turin Exposizione Internationale of 1911.

Oddone is considered one of the most important violin makers and restorers in Italy during the first half of the 20th century. In all, he made over 244 violins, four violas, 19 cellos and two violas d'amore. They reveal a strong and personal character with precise and accurate craftsmanship. His earlier work reflects a lighter and more graceful approach, favouring the models of Amati, Stradivari and Guarneri as well as occasionally Rocca. After 1900 his work takes on a stronger and more robust character, and incorporates models of Pressenda and the bolder models of Stradivari and Guarneri. The woods used are always of the finest quality. The varnish is usually coloured a deep golden orange, although a reddish brown is sometimes seen. The edges of the scroll and corner joints on the ribs are marked out in black. After 1894 Oddone's instruments each bore his number on the label as well as his brands on the lower rib and frequently on the interior. Among those for whom he made instruments and restorations was Alfred Hill, who held his abilities in high esteem. (*VannesE*)

GABRIELE NEGRI

Ode (from Gk. *ōdē*, from *aeidō*: 'I sing'). In classical antiquity, a poem intended to be sung, usually in honour of some special occasion or as part of a play. Both Greek and Roman ode texts were set to music in the 15th and 16th centuries: some were purely didactic exercises intended to demonstrate poetic metres through mensural notation, while others apparently formed part of the general humanist homage to classical literary style. In the 17th and 18th centuries a cantata-like form called 'ode' was cultivated as a form of panegyric to the English monarch, and it eventually also became a standard part of the annual celebrations of St Cecilia's Day. Neither these odes nor subsequent musical 'odes' have any relation to the form or metres of classical models, although most share a tendency to celebrate particular events, places or men, as did most Greek odes.

1. CLASSICAL ANTIQUITY. In ancient Greece, 'ode' (aoidē, ōdē) was the generic term for either solo or choral song, embracing a wide variety of categories (e.g. HYMN, PAEAN, EPINIKION, THRĒNOS, DITHYRAMB, ENCOMIUM, PROSODION and PARTHENEIA) named according to their functions. Choral lyrics, usually accompanied by dancing, were used at festivals in honour of Apollo or particular cities (hyporchēma and paean), to honour an individual (opinikion or encomium), as processional hymns (praodion or partheneia) and to celebrate Dionysus (dithyramb).

Choral odes are strophic or triadic. In the strophic form, the metres correspond from stanza to stanza, while in the triadic form, two metrically correspondent stanzas (strophe and antistrophe) are followed by an epode employing a contrasting metric pattern. In general, the metre is complex and the tone of the text is elevated. Many of the most important composers of choral odes were from the Dorian states, including such poets as Alcman, Arion, Ibycus, Pindar and Stesichorus, but some, such as Simonides and Bacchylides, came from other regions. Monodic odes, associated with the poets Alcaeus, Anacreon and Sappho, generally exhibit a simpler metric structure with the texts treating the entire range of human experience. Horace's *Odes* and *Epodes* were fashioned after the model of earlier Greek authors, whom Horace specifically names as Sappho and Alcaeus (for the *Odes*) and Archilochus (for the *Epodes*). The Pindaric ode was widely imitated in the English literature of the Augustan age by such poets as Cowley, Dryden and Thomas Gray.

Choral odes were an essential element of early Greek drama, although the importance of the choral element in drama gradually waned as dialogue assumed a more conspicuous place. In tragedy the chorus made its entry after the prologue, processing to the *orchēstra* ('dancing area') while singing the *parodos* (*see* TRAGŌIDIA). It contributed short songs within the *epeisodia*, and odes of considerable dimensions in the *stasima* and *exodos* at the end of the play. Euripides's *Bacchae*, for example, contains five odes, four of them constructed triadically with one

introducing a new element, a refrain linking strophe and antistrophe. The parodos and exodos odes were also features of Greek comedy, which is also distinguished by the *parabasis*, an elaborate musical interlude, occurring roughly in the middle of a comedy, in which the chorus addresses the audience directly on behalf of the poet. *See also* GREECE, §I, 4.

2. HUMANISTIC SETTINGS. Some Horatian odes were set to music in medieval court circles and monastery schoolrooms; several such settings survive, including an 11th-century copy of a Sapphic ode with neumes outlining the hymn melody *Ut queant laxis*. Guido of Arezzo wrote in the *Micrologus* (xv) of metrical performances of classical poetry, probably used for didactic purposes.

It seems likely that 15th-century humanists, such as those who gathered at Marsilio Ficino's Platonic academies, may have improvised sung odes as part of their attempted reconstruction of antique practices. Indeed, Ficino prided himself on his ability to sing Orphic hymns to his own accompaniment on the 'lira' (probably a *lira da braccio*), suggesting the possibility of other attempts to evoke Greek music. It is thought that the mensurally notated melodies illustrating five classical metres printed in Franciscus Niger's *Brevis grammatica* (Venice, 1480) may have been models for such improvisation; indeed, Glarean included a number of monophonic settings of Horatian texts in *Dodecachordon* (ii, 1547), suggesting that successive stanzas ought to be embellished and altered, and recalling a performance of a long classical text he had heard in Cologne in 1508. Some frottola-like settings of classical texts, such as Michele Pesenti's *Integer vitae*, suggest that Italian taste cared little for metrical exactness; but metrically correct settings of Latin odes were nonetheless current in Italian circles. One example is a Sapphic ode by L. Curtius on planetary virtues and powers, set as a quantitatively correct duo by Gaffurius and published in his *De harmonia* (1518).

The connection between the classical ode and musical life was closer in Germany than in any other country. During the 1490s the German humanist Conradus Celtis, lecturing on Horace at Ingolstadt, commissioned a pupil, Petrus Tritonius, to compose four-voice illustrations of the 19 poetic metres in Horace's odes. Tritonius's settings, rather stiff imitations of contemporary Tenorlied style, had the virtue of conforming exactly to the classical metres. They were sung by students at the ends of lectures and were eventually printed, in an expanded form, as *Melopoiae sive harmoniae tetracenticae super XXII genera carminum heroicorum elegiacorum lyricorum et ecclesiasticorum hymnorum* (1507). The collection enjoyed great success in German schools and was reprinted in various forms. In 1534 a new set of odes by Senfl appeared, in which the tenors of Tritonius's compositions were used as superius parts and fitted with new harmonizations. Other collections of Horatian odes, similar in character to those of Tritonius and Senfl but newly composed, include one composed by 'Michael', printed for T. Billican in 1526, and Hofhaimer's *Harmoniae poeticae* (Nuremberg, 1539).

As early as 1495 Latin plays by German schoolmasters included odes. The celebrated *Ludus Dianae* of Celtis, performed in 1501, had choruses in antique metres sung at the end of each act. This use of choral odes became common in school plays on sacred or allegorical subjects, often using or referring to Horatian texts; such plays were performed by German schoolchildren throughout the 16th century and well into the 17th.

The relationship between these choruses and German chorale settings was often very close, especially when the plays were in the vernacular. Indeed, some of Tritonius's ode settings had been taken over into the chorale repertory by the mid-16th century. Early Christian texts in antique metres, such as those by Prudentius, were set by such composers as Agricola, Senfl and Benedictus Ducis, and some psalm texts were recast in Horatian metres for musical performance.

Although Glarean cited a metrically exact melody from an ode by Robert Gaugin, a piece he must have seen in his student days in Paris, no French tradition corresponding to the German cultivation of the ode can be observed. Goudimel provided music for an enormous Pindaric ode by Pierre Ronsard, music and text being published in the *Amours* of 1552–3, and he is known to have published a now lost collection of Horatian odes in 1555, suggesting that the Calvinist psalmody to which he contributed so much may owe something to humanistic concern for classical prosody. The notions of Baïf's and Ronsard's contemporaries about 'musique mesurée à la lyre' are only indirectly related to the 16th-century tradition of metrically exact ode settings, however. Instead, they seem to have been the logical continuation of earlier humanistic efforts to set classical odes, hymns and hexameters (*see* VERS MESURÉS, VERS MESURÉS À L'ANTIQUE). Exact note-for-syllable equivalence was primarily a matter for the classroom and the academy. Occasional settings of classical odes in motet style by Rore and others, along with the Virgil motets of Josquin and Willaert and the precise hexameters of Lassus's *Prophetiae Sibyllarum*, show enough care for declamation to suggest that the humanistic concern shown by academic cultivation of ode composition made a genuine contribution to 16th-century musical thought.

3. THE ENGLISH ODE. This form of extended cantata, originating shortly after the Restoration and remaining in use for at least 160 years, was most often designed as an act of loyalty to a reigning monarch, an act of thanksgiving, or a tribute to St Cecilia. Any relationship to the classical ode is slender beyond the fact that English odes are occasional and sententious works cast in the form of addresses to the object of praise, as well as being stately in structure, lyrical in expression and serious in tone.

(i) The court ode, 1660–1715. The tradition of celebrating personal events in the lives of English monarchs was an old one. It may be linked with the musical tributes offered to Elizabeth I on her progresses, and as early as 1617 Orlando Gibbons composed a 'welcome song' on James I's arrival in Edinburgh, *Do not repine, fair sun.* This work lacked the solo sections characteristic of the Restoration ode, but its resemblance to the contemporary verse anthem anticipated the later form's style. The earliest extant ode text is Ben Jonson's *A New-Yeares-Gift Sung to King Charles, 1635* (adapted from a masque text written in 1620 for James I's birthday); Jonson's panegyric poetry remained a frequent source for ode texts after the Restoration. The title of Thomas Nabbes's masque *A Presentation Intended for the Prince his Highness on his Birthday, the 29 of May, 1638, Annually Celebrated*, for the eighth birthday of the later Charles II, suggests that such celebrations were the rule, although no other examples survive: if the young prince witnessed this

and other such performances, its memory may have prompted his later encouragement of official odes.

Contrary to the general belief, then, the writing of odes was not simply a practice borrowed from the French court; the English custom was in fact established before the French one of including panegyrics of the king in opera prologues, and the independent ode was never known in France. The revival of the ode at the Restoration was prompted by the existing literary tradition, the psychological climate after the Commonwealth, and the coincidence of Charles II's birthday with the date of his return.

The lack of contemporary evidence makes it difficult to trace the ode's history in the 1660s, and in particular to say when odes were initiated. The earliest extant ones seem to be Henry Cooke's *Good morrow to the year* and Locke's *All things their certain periods have*, both probably written for 1 January 1666. Nor is it clear whether the performance of odes on royal birthdays was a regular event; birthday odes account for many of the surviving examples, but there are also 'welcome songs' on a monarch's return to London (mostly from the reign of James II), 'feast songs' for banquets, funeral odes, and odes on coronations, military victories or treaties. (Odes on St Cecilia's Day are discussed below.) It is impossible to say with whom the responsibility for producing odes lay; the writing of the texts and composition of the music does not, until 1715, seem to have been the obligation of particular court functionaries. Most texts before 1715 are anonymous, and neither the poets known to have written the remaining ones (including Flatman, Shadwell, D'Urfey, Sedley, Tate, Motteux, Prior and Wall) nor the composers of the music (Cooke, Locke, Humfrey, William Turner (ii), Blow, Henry and Daniel Purcell, Staggins, Tudway, Clarke, Croft and Handel) held any court position in common. Performances were generally given by the Gentlemen and Boys of the Chapel Royal with the King's Band of 24 violins, supplemented as necessary.

Only ten odes from 1660 to 1680 survive in complete form (one by Locke, three each by Cooke, Humfrey and Blow); each consists of verses for solo or duet (with continuo) and verses for chorus, with instrumental ritornellos. There is some echoing of motifs between successive movements; sometimes entire sections were repeated, as required by the poetic form, and the overture (or parts of it) could be used for ritornellos. Humfrey and Blow favoured the French overture rather than the Italian symphony used by Cooke.

From about 1680 the court ode began to depart from its model and take on more individuality, partly under the influence of Purcell. He and Blow shared responsibility for the provision of court odes: in James II's reign, Purcell provided welcome songs and Blow the birthday and New Year odes, a division that continued into the reign of William and Mary, though Purcell now composed occasional birthday odes. Their odes of this period show a wider range of dramatic effect and more colourful instrumentation; and the use of better vocal soloists (notably the countertenor John Abell and the bass John Gostling) led to the inclusion of virtuoso solo items. Purcell, in fact, widened the ode's expressive range with his use of ritornellos, recurring grounds, motivic relationships and broader tonal planning. The death in 1685 of Charles II, who had exerted a considerable influence on the style of court music, gave the composers a freer hand in the composition of odes; Charles's successors showed little interest in musical matters.

After Purcell's death, and eventually Blow's, the ode tradition was continued by lesser composers, including Daniel Purcell, and John Eccles, who was however capable of some degree of originality. Few odes from this period survive. The most important is Handel's written for Queen Anne's birthday in 1713: italianate in style, it nevertheless shows a marked Purcellian influence. While Handel drew on some of his previous works, including operas and oratorios, for several of its songs, he ended each item with a choral setting of the lines 'The day that gave great Anna birth, Who fix'd a lasting peace on earth'.

(ii) The court ode, 1715–1820. From 1715 to the end of the regency in 1820, the preparation of odes on the royal birthday and the New Year fell to the Poet Laureate and the Master of the King's Music. Texts were written by Rowe, Eusden, Cibber, Whitehead, Warton, Pye and Southey, and music by John Eccles, Greene, Boyce, Stanley and William Parsons. During the reigns of George I and II odes were performed twice a year, except during court mourning or, sometimes, when the day to be fêted fell on a Sunday; in George III's reign, birthday odes were given each year until 1810. Poets were outspoken about their distaste for writing odes; both Thomas Gray and Sir Walter Scott declined the laureateship to avoid the duty, and William Whitehead, Poet Laureate from 1758 to 1785 and the author of at least 50 odes, complained of the position of a poet who, 'oblig'd by sack and pension, Without a subject or invention ... Must some half-meaning disguise And utter neither truth nor lies.'

The works of Greene and his successor as Master of the King's Music, Boyce, are almost the only court odes after 1735 for which both text and music have survived. Both used the standard procedures and the idiom of contemporary dramatic works, like Handel's. Impetus was given to this use of the Handelian model not only by the general popularity of Handel's music but also by the particular enthusiasm for it of George I, II and III. Apart from Boyce's settings of some of Whitehead's longer texts, which are primarily in recitative style, the odes came to be successions of four or five affective arias or solo ensembles, accompanied by a variety of instruments whose choice was related to the text. Both *secco* and *accompagnato* recitative styles were used, and the whole was preceded by a substantial French overture or Italian symphony and concluded with a chorus. The instrumental introductions could make up half the length of the entire ode, and were usually its best music (Boyce published two collections of his overtures). J.C. Bach's single offering to the ode tradition, a birthday ode for Queen Charlotte (consort of George III) in 1762, is noteworthy as an isolated example of an extant ode in the *galant* style.

With the exception of part of Stanley's New Year ode for 1782, none of the music written for odes by Stanley or Parsons has survived, although the texts are available. Surviving descriptions of Stanley's odes suggest that the influence of Handel's dramatic style remained strong, and that the ode consisted of an alternation of recitatives and songs framed by an overture and a chorus. Parsons, the last Master to be burdened with the court ode, was chiefly renowned for his skill and good taste in adapting Handel's music to Pye's poetic texts.

In the early 18th century a parallel tradition of ode writing developed in Ireland, where the birthdays of the

monarch and consort, but not New Year's Day, were celebrated before the Lord Lieutenant (or his deputies) at Dublin Castle. Apart from an ode on Queen Anne's birthday set by Charles Ximenes in February 1707 the first group of works of this sort were by J.S. Kusser, who arrived in Dublin that year and provided his first birthday ode in 1708; over the next 20 years he composed at least 18 birthday offerings. All but the first are described as serenatas, and the frequent use of the term *serenata theatrale* in the surviving librettos (all anonymous), along with elaborate scenic descriptions and the use of characterization, suggest that the works drew heavily on the masque tradition and included dramatic action as well as costumes and scenery. The only serenata by Kusser for which the music has survived is *The Universal Applause of Mount Parnassus*, written for Queen Anne's birthday in 1711, which has a freshness and originality lacking in London court odes of the period.

After his death in 1727 Kusser was succeeded as Master and Composer of State Music in Ireland by Matthew Dubourg, many of whose odes are extant; but all the overtures are lost, and what survives of the music is of little interest apart from some occasionally elaborate violin accompaniments. He was succeeded in turn by Richard Hay and John Crosdill, but the Dublin court ode tradition died out some years before its London counterpart, the last known performance being for Queen Charlotte's birthday in 1794.

(iii) Odes for St Cecilia's Day. The largest single body of odes, besides those for royal birthdays and New Year festivities, was composed for the annual celebration of St Cecilia's Day (22 November), a practice instituted in London by the Musical Society in 1683 and observed for 30 years (except in 1688 and 1689). Thereafter, Cecilian odes continued to be performed sporadically until the end of the 18th century; some were also composed in the 19th and 20th, but not always for performance as part of the traditional celebration (see §4).

The first celebration of St Cecilia's Day was probably held at York Buildings, Villiers Street, which evidently proved too small, for subsequent events were held at Stationers' Hall, where a banquet was followed by the performance of an ode. From 1693 the feast was preceded by a choral service at St Bride's in Fleet Street during which a sermon in defence of church music was usually preached. A contemporary account appeared in the *Gentleman's Journal* (January 1692):

> On that day [22 November] or the next when it falls on a Sunday, ... most of the lovers of music, whereof many are persons are of the first rank, meet at Stationers'-Hall in London, not thro' a principle of superstition, but to propagate the advancement of that divine science. A splendid entertainment is provided, and before it is always a performance of music by the best voices and hands in town; the words, which are always in the patronesses praise, are set by some of the greatest masters in town.
